1386	paul	Nolan	nolan redshaw	EMP61	Object	THE PREMISES HAVE BEEN MARKETED FOR OVER 4 YEARS. FORREST MILL IS PARTLY DEMOLISHED ,WITH THE REMAING SECTION COMPRISING OF A SINGLE STOREY WEAVING SHED WHICH IS ONLY USED AS A LOCK UP STORE .THE SITE THEREFORE DOES NOT PROVIDE ANY EMPLOYMENT EXCEPT ON A CASUAL BASIS . IT HAS BEEN PRONE TO FLOODING AND IS NO LONGER VIABLE AS AN EMPLOYMENT SITE. IT IS ALSO TO THE REAR OF THE RELATIVELY NEW MORRISONS FOODSTORE AND IS ATTRACTING SOME INTEREST FROM RETAIL OPERATORS WHICH IS WHAT BACUP NEEDS . THE EMPLOYMENT ALLOCATION WILL DELAY THE SITE BEING REDEVELOPED . IT IS AN OPPORTUNITY SITE AND SHOULD BE ALLOCATED AS SUCH.

1537	John	McGuinness	-		Object	Does this plan aim to build on the remaining grass area down to Victoria Way. - Basically its about filling the valley with concrete and obliterating any green areas within the urban boundary.		You seem to be trying to implement a plan where nearly all patches of green within the urban boundary are built on. The hillsides may be green (for now) but all small breathing spaces seem to be a target for building on. Sustainable; how can building more houses on any green area be sustainable? Once land is lost to development, it's lost forever.

1807	Bob	Killelea			Object	<p>Representation regarding the emerging local plan Land at the former Mayfield chics site, Ewood Bridge Application is made for the inclusion of the above site within the emerging plan for housing. Most of the site was formerly occupied by Mayfield chics though the building burnt down in 2001. However, following the fire planning permission was granted for its rebuilding under no 2002/0420 and a legal start was made. Evidence of the start in the form of a partial structure is evident on the site. Thus, while the site is in Green Belt there is an extant approval for its commercial development. Since then the site has been advertised for sale for commercial purposes but apart form its occasional use for storage purposes no development has been forthcoming. That is not entirely unsurprising. A study by Nathaniel Lichfield and Partners in 2009 concluded that the site had limitations for commercial use In such circumstances, therefore, application is made for it to be allocated for housing purposes – in the knowledge that the current applicant and owner is willing to bring it forward for such a use immediately. The site is approximately 9.5acres (3.9ha) and thus might accommodate some 130 dwellings. While peripheral areas abutting the river are within the flood zone the majority of the site is not. Its allocation and then use for housing will help to meet the identified housing need within the Borough Please see appendix.</p>

Reference	EMP2.14	Large Site at Hud Hey
-----------	---------	-----------------------

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.14	Further comment
1478	N/A	N/A	Winfields Holdings Ltd and Winfield's Ltd		Object	The site at Hud Hey already incorporates non-employment uses such as a lawful retail use of the Britannia Mill and adjoining land (as confirmed by 2008/753), with residential development intruding into its northern boundary (as well as extending along its eastern boundary). Concerns have also been raised about access onto the surrounding road network, with no new access being allowed onto the A56. This restricts the nature of uses that may be achieved, particularly given the residential layout which adjoins much of the site and from which access is obtained to the north and east. - - The Council is aware of Winfield's intention of transferring its office and warehousing activities to its other local site, a short distance to the north in Acre, which would leave this site vacant (much of which has already been cleared). The recent Grade II listed status conferred upon Britannia Mill also means that uses which preserve this asset and protect its setting need to be allowed by policy, and whilst this could include employment it is more likely to comprise a mix of uses including residential (please see the separate representations with respect to Policy HS2). Any retail use would contribute to employment levels within the borough, and the consolidation and expansion of different functions a short distance to the north at the second Winfield site would retain employment within the local area. - - The existing mixed use of the site should be recognised and promoted by policy in order to ensure that it makes a meaningful contribution to the different aspirations of the emerging Local Plan. The long term allocation for employment purposes has not, however, seen the site come forward for such purposes even following its preparation in order to make it more attractive to the market. In accordance with the Government guidance, Paragraph 22 of the NPPF, the long term protection of sites such as this should be avoided if there is no reasonable prospect of them being used for that purpose. - - The aforementioned factors have not been recognised by the Employment Land Review undertaken earlier this year and which informed the proposed confirmation of the historic allocation. In the light of this, and the meaningful contribution that the site could make to other policy aspirations of equal or potentially greater importance (such as housing), the range of uses deemed appropriate should be expanded to specifically allow mixed-use and/or residential development, or the site potentially accorded no classification (allowing alternative uses to be considered on their own merits).		-

59	James	Collier	-	employment land review appendicies 1- 4, add3, add6, emp 13	Object	strong objection to redesignation of green belt and open countryside as employment land or for any other type of development. - 1. the evidence base for requirement employment land is weak: - - e.g what is the current rate of unoccupied or under utilised employment land in the borough, why are there unoccupied sites, and what options have been considered to maximise their use? - no evidence all other options have been fully considered before developing on green belt or open countryside. i.e all brownfield sites should be exhausted before considering unwarranted development on our countryside. how many existing undeveloped brownfield sites are there? - what is the genuine level of interest in new business space. i.e exactly how many businesses have indicated they are willing to invest/ pay for new business space (built on greenbelt) at current market rates (as opposed to incentivised rates) and why are they not able to use existing/ unoccupied employment space - - 2. green belt purpose is to prevent urban sprawl, there seems to be little reference to extending and moving the well defined existing urban boundaries in terms of protecting our countryside or the interests of people who live in the countryside. i.e. many people will have bought properties specifically because they are in close proximity to green belt or open countryside, - 3. what consideration is being given to rural residents, many of whom may be elderly and not have seen the poorly promoted consultation documentation online. what efforts have been made to consult with hard to reach groups? - - 4. no consideration appears to have been given to the appearance of Rossendale as people travel along the A56 through he borough, by re-developing every piece of green land within close proximity to the A56, there's a real risk Rossendale will no longer be perceived as a rural/ green valley, and this could impact the boroughs desirability as a place to live and work. our green spaces and valleys are one of the boroughs unique selling points - -		please dont rape our green spaces
71	Kathleen	Heathcote	-		Object	It was with horror I discovered the new local plan for Haslingden. The Hud Hey, Rising Bridge and Martin Croft Region is to become a large industrial estate- the northern extension of Carrs Industrial Estate. - The area earmarked consists of pristine hay meadows, fields, and a quiet residential area, with a small but 'good' thriving primary school; which will become engulfed by this development. Why would you plan for an industrial area to surround a primary school?? - There are many areas of brownfield sites which would be prime sites for development in the Haslingden area instead: dilapidated mills and former industrial sites, run down and often an eyesore, which would benefit from development. - Also, on already developed sites such as Carrs and the Rising Bridge Office development, a large number of units have been empty for years. If these are surplus to requirements why are we building more? - Why does this rural and residential area need to be destroyed by this sort of development? -		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.15	Further comment
498	John	Barnes			Not Applicable	<p>Re the plans for the future development for Rossendale Borough Council. I enclose "2" two plans of land that has been requested by three developers for future development.</p> <p>1. Land at Rising Bridge road, suggested for 24/26 no old peoples, one bedroom bungalows?</p> <p>2. Land for housing/industrial development. Please look to the inclusion of these land for the future development.</p> <p>Thanking you.</p> <p>Please see appendix for attachments</p>		
519	Kath	Lees	-	EMP2.15*, EMP2.23*, EMP2.38* employment allocation refs	Object	<p>I am seriously objecting to these plans, even though I don't fully understand the printouts, there is no need for more industrial units within this area. Carrs Industrial Estate is not fully occupied and neither are other industrial units locally fully occupied. In fact Rossendale is overrun with these units and most of them are empty. - - I personally moved into Rossendale because of the green hills, why on earth are you trying to blight the natural beauty? - - Regarding the duty of providing new housing as a council, I would suggest that we update the beautiful buildings that are sitting empty and being left to ruin. I would be very interested in how you can justify building more.</p>		I also have safety issues with regards to vehicles adding to the load that is already accessing via Hud Hey Road. The roads in Haslingden cannot cope with more traffic.
520	Brian	Flockton	-	EMP2.15*, EMP2.23*, EMP2.38* employment allocation refs	Object	<p>I have lived here for 50 years and the land behind our property is farmland and greenbelt as far as I am aware and I do not wish for industrial units to be put on there. - - The beauty of Rossendale is being ruined. I feel as though Rawtenstall is being protected to the detriment of the outlying districts. This is very concerning. - - I am also concerned about the access to and from the A56, how are the local people going to be affected? Is this going to cause more accidents? - - I also am concerned about chemicals being accepted in these units, how can we feel confident that they won't be.</p>		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.15	Further comment
669	Joan	Priestley	-		Object	I fail to understand the logic in planning to extend an industrial area that is typically under-filled with vacant units, in an area with other developments that are also under-filled, such as the office development in Rising Bridge. The area marked contains hay meadows, fields and a quiet residential area. This will have a substantial effect on the quality of life of the residents of this area, there is already more than enough industrial allocation in this area without adding to the environmental load with more industry. There are many other more suitable sites for this development, there are run down mills, former industrial sites and other brownfield sites that should be used before running riot over green land. There are already enough issues with traffic on Hud Hey Road in particular large vehicles using it when they should not be in order to bypass the motorway. Parking is a severe problem, especially if the residential parking at the end of my row of houses is made into an access road for the industrial estate extension as I have heard there are plans to do. There are flooding issues in the area which need to be considered as well. This area should be protected as Greenbelt land and not developed, as is the land closely surrounding it to the north.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.15	Further comment
1146	Ralph	Woodcock	-	EMP2.15*, EMP2.23*, EMP2.38*	Object	<p>Following the public consultation at Haslingden library, which I felt had amazing attendance due to the lack of information about the consultation. In fact the ONLY reason we were there was due to a neighbour informing us of the proposed plans, which claimed to offer public consultation (regulation 18); of which I have printed the full wording, but there is not enough space to type it. - We found the library open but no signage as to where this meeting was being held, and had to look round ourselves. Therefore first and foremost how on earth can you call this a public a participation and engagement consultation. - Carrs Industrial Estate North Extension - Why does Carrs have to be extended, there are loads of empty units as it is more than the expected 5%. I intend providing photographs to prove the vacancies we have in the area. There is also plenty of empty unused existing buildings that could be revitalized and in keeping with the period of the area. - Access to this area would also be a problem; we noted that the A56 already has access to Carrs Industrial Estate. To even consider Martin Croft Road, which is almost single tract seems absolutely ridiculous, dangerous and impossible to get two way traffic. It was also suggested that the carpark at the end of our row of houses could be converted, this I would object to passionately, as this was given by the council at least 15 years ago, and has been maintained by the lower end residents ever since, therefore we consider this our adopted land. Hud Hey Road cannot take any more traffic, this is a country road coming over the moors as Haslingden Road, into Roundhill Road and changing to 30mph Hud Hey Road, which I would like to say not a lot of drivers adhere to, unless it is the standstill traffic that we have to suffer. We have also had the issue of foreign lorries using this road as a fast track and parking up on the bridge with two wheels and the body of the lorry on the pavement leaving the remained two wheels up against the kerb, leaving no payment work walkers, never mind prams. The noise and the fumes from extra traffic would really affect the air quality in Haslingden Too. The traditional roads across the town could not take extra traffic. The field that is being considered for the extension has been used for animal grazing as long as I have lived here and we experience flooding and standing water to the bottom of the field with heavy rain. I believe there is a culvert under some properties along with the drains across the field under the right of way. It is very sad that brown field sites cannot be cleaned up and used before green field sites are considered. This should be a statutory order for development. The proposed field also has a large area of untreated Japanese Knot Weed. - Land adj Hollin Gate Farm - Has anybody been out to actually look at this land? It is surrounding a thriving local primary school. There is already an industrial estate on one side, which had been empty for months and now the council has taken over some of the units, do we really need to put these childr5en through the risk of more dangers - noise, air pollution, security and road safety? Would it not be more sensible</p>		<p>Rossendale is a beautiful area and we should be proud of what we have, not let it go to ruin and put up modern units that are not required. There is enough empty workplaces and homes that could fulfil the needs.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.15	Further comment
						<p>to put housing on it if houses area needed? Roundhill Lane is also used by traffic avoiding the A56 traffic, via Rising Bridge Road or Hud Hey Road. - Please, please, please could the local authority plan take over and refurbish empty, boarded up properties that would keep the period and make solid homes for the requirements.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.15	Further comment
1212	Michael	Heathcote	-		Object	<p>1 – Regulation 18 – Public Consultation - The ‘public’ generally had no knowledge of the existence of the plan until informed by a private citizen who found out by accident when looking for something else on line. With his neighbours and at their expense, information and maps were circulated to their neighbours, and the governors of the local school affected by the plan. All people contacted had no previous knowledge of the existence of a Rossendale Development Plan. There has been NO advertising, information, leaflets, posters in the town or local papers, and even on the evening when the consultation maps were on view in the Library there were no posters indicating that they were in the Library, which room, etc. It has been so poorly publicised and so little information available that I question its legality as a ‘public consultation’ - 2 - Northern Extension of Carr's Industrial Estate. EMP 2.23 - •An environmental survey is required before decisions are made as this is an increasingly rare hay meadow with valuable meadow species such as Yellow Rattle, and is equally bio – diverse as the adjoining land which is protected. See initial comments from Lancashire Wildlife Trust below :-Semi improved grassland. Moderately herb rich, especially in contrast to the intensive agriculture and horse grazing that surrounds it. A stepping stone habitat in the South Pennines Grassland network. - Crested dogstail - Ribwort plantain - Sweet vernal grass - Rough meadowgrass - Meadow buttercup - Red clover - Yellow rattle - Meadow vetchling - White clover - Common ragwort - Cocks foot - Common bistort - 3 Biological Heritage Site qualifying species. - Thanks X - South Pennines Grasslands Project Officer - The Wildlife Trust for Lancashire, Manchester and North Merseyside X - Less environmentally acceptable, but significant to development potential, there is a large patch of Japanese Knot Weed. - •Traffic on the A56 and Hud Hey Road in particular is already a concern , especially at rush hour times when Hud Hey Road has become a preferred alternative to Grane Road for many drivers, including large trucks, and development to this site would exacerbate the situation to a dangerous degree. Access to this site is problematic whether direct from the A56, via Hud Hey Road, or from the existing Carr’s estate. - •Noise levels would affect residents in Hud Hey Road and Martin Croft Road, whose gardens adjoin the designated area. - •The A56 has a drainage/standing water problem and water draining from hard surfaces in the area due to development would exacerbate this problem and create a dangerous surface in wet weather. - •A culvert/stream flows under the cellar of some houses on Martin Croft Road, which would adjoin the designated area. This currently drains into the field and has not caused any problems for the residents. However development could cause serious flooding problems in these properties. - •There are nearby brown field sites which need ‘cleaning up’ and would be much more suitable as industrial development sites. Could it be made statutory that development is phased so that ALL brown field sites have</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.15	Further comment
						<p>to be developed before green field, environmentally sensitive sites are released for development. - • Existing developments along the A56 corridor have a lot of empty units – that have remained empty for a number of years (in some cases 7 years or more). This constitutes much more than 5% of the existing units. There does not appear to be a need or demand for more development in the foreseeable future. - • Plans show development of employment/industrial land for the Haslingden area far outweighs that for other areas of Rossendale. E.g. Rawtenstall – approx. 5 hectares, Haslingden – approx. 14 hectares. Balance is needed!! - 3 - Land adjoining Hollin Gate Farm. EMP 2.38 - • This land surrounds on 3 sides a small, but thriving local primary school. A primary school surrounded by an industrial estate raises so many health and safety issues, they are too numerous to list in this document but would include noise, air pollution, security, road safety. - • This could lead to the closure of a good, thriving and much needed primary school at a time when more school places are needed, not fewer. - • This is currently Green Belt land which should be protected from development for future generations. - • Traffic is already a safety issue on the road outside the school because of existing developments in the area end a ‘rat run’ which cuts out the busy A56 roundabout, and allows access to the M65 as an alternative to the Grane Road. Further development would make this a major problem. - • If there has to be development at this site surely with the school, post office/corner shop and bus stop with direct bus links to Accrington, Blackburn, Rossendale, and Manchester, housing would be a much more sensible option.</p>

1223	Alwyn	Davies	-		Object	<p>"Objection to the development of Land on Area: EMP 2.15 (Land North of Hud Hey) - - Within the local plan the council has proposed an expansion of Hud Hey Industrial Estate utilising existing Green Belt Land. If this is approved employment land consisting of general, industrial, storage and distribution buildings will encapsulate my home (39 Hud Hey Road). - - I would like to outline a case for why the Land on Area EMP 2.15 should be removed from the Local Plan developed in July 2017 and will provide the rationale using evidence from the councils own Local Plan and independent evaluations/reviews. - - Firstly the local land owner of EMP 2.15 has not been contacted or consulted with regarding the sale of their land, should the land owner not be in agreement to the sale of his and hers land then this should lead to automatic removal from the local plan. I would like to request that the council keeps me the homeowner of 39 Hud Hey Road appraised of any development in relation to the land EMP 2.15 as it occurs and in advance of the next stage of the consultation process to relieve any unnecessary anxiety to us as home owners. - - The Local Plan suggests (Page 52) that proposals will be expected to take into account of the character and appearance of the local area including but not exhaustively: -• Being sympathetic to surrounding land uses and occupiers and avoiding demonstrable harm to the amenities of the local area. - •Ensuing that the amenities of the occupiers of the new development will not be adversely effected by neighbouring uses and vice versa. -• There is no adverse impact to the natural environment, biodiversity and green infrastructure unless suitable mitigation measures are proposed. - - As the land is Green Belt land which was not identified for release in the Councils Green Belt Review 2016 which was undertaken independently by LUC and the land is currently being used for grazing of Horses as part of a Riding School I would request that the council remove Land EMP 2.15 for the use of Employment Land from their draft Local Plan. The Green Belt Review 2016 states: "The relatively poor performance of the land against the Green Belt purposes is not, of itself, an exceptional circumstance that would justify release of the land from the Green Belt, we recommend that outline policy guidance or masterplans are prepared as part of the local business process. These would indicate development areas and new defensible Green Belt boundaries (existing or new features). Such approach together with specific policies for the development of the land, would help to engender public confidence and support, as well as mitigate the harm to the remaining Green Belt land." The local plan fails to address this requirement and justify why EMP 2.15 has been included in the local plan, this is in contradiction to the advice and guidance outlined in the Green Belt review 2016. Further to this the recent elimination of an Oak Tree (which further protected the Green Belt status of this land) that died has prompted local speculation of foul play and therefore I would request that the council</p>		No

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.15	Further comment
						<p>investigate this as a matter of urgency. - - In 2010 the Report to Rossendale Council on the former Draft Local Plan the Planning Inspectorate disagreed with the councils plans to remove land from the Green Belt. The inspector stated: " The detailed boundaries of the Green Belt in the area were established in 1982 and, except for minor changes made in 1995, have remained fixed since that time. I have seen no evidence to persuade me that a substantial change to Green Belt boundaries would be necessary to meet the development objectives of the CS. ... I do not consider that the council's approach to identifying locations for development by weighting its choices to avoid substantial incursions into the Green belt could be argued to be inherently flawed." - - The Habitats Regulation Assessment of the Rossendale Local Plan states that: "If no suitable alternative exist, plan makers must demonstrate under the conditions of Regulations 103 of the Habitats Regulations, that there are imperative reasons of overriding public interest (IROPI) to continue with the proposal. As the council has failed to demonstrate a viable case for change of why employment land is required within Rossendale or a case for why development of employment land of EMP 2.15 is in the public interest then I would ask the council to and without delay remove the land from inclusion from the Local Plan 2017. - - The Authority Monitoring Report (AMR) produced by the Forward Planning team in June 2017 states in relation to AVP6 Haslingden and Rising Bridge that New Housing and employment development will be encouraged within the urban boundary and should be primarily on previously developed land. This is in complete contradiction to the identification to Land EMP2.15 in the draft local plan produced only a month later. The Hud Hey industrial estate current has several vacant units, therefore it would suggest that demand in this area is not favourable to businesses. It is my view that the council should remove land EMP 2.15 and instead develop a proposal to increase utilisation of already developed space. - - The Sustainability Proposal of the Rossendale Local Plan produced by Lepus in May 2017 confirms that the land north of Hud Hey is located within the Green Belt and that none of these sites were highlighted for release in the Green Belt Review 2016. - - It states that development in the Hud Hey area has the potential to reduce population of European Protected Species associated with woodland such as bats. It states that where habitat corridors exist including Hud Hey that development would reduce these corridors, restricting movement of wildlife in these habitats. - - The report highlights that development on land in Hud Hey will impact on woodland and that loss of this woodland and the Green Belt may have a negative impact on biodiversity in this area. The Land EMP 2.15 is also located within the Rossendale Safeguarding Mineral Area. Development of sites which include GI such as woodland, grassland and allotments would result of loss of and damage to these features. Developments that fragment existing ecological networks performs negatively against Climate Change Adaption (SA objective</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.15	Further comment
						<p>7). - - The report also outlines the increased flood risk and increase of waste production will impact negatively within the area. - - The Sustainability appraisal does not support the use of land EMP 2.15 in Hud Hey therefore it would suggest that it will be more difficult for the council to justify how using this land should be overridden in the interest of the public. It is not documented within the local plan why the council has chosen to ignore the independent reports both in relation to the local plan and the green belt review. I would hope that the council remove EMP 2.15 from the draft local plan without delay. - - Finally would also like to comment on the timescales of the development of the draft local plan. - - Depus Sustainability report produced in May 2017 - - Authority monitoring report produced in June 2017 - - Draft Local Plan produced in July 2017 - - Consultation into draft local plan commenced in July 2017. - - It would suggest that a large scale strategic plan has been produced in days and it could be argued that this plan has been rushed and not properly thought out; it is my view that the people of Rossendale deserve more than the local planning team have been able to provide and I hope that it is addressed as part of this consultation proess. As a home owner and council tax payer for 35 years I am disappointed by Rossendale Councils approach to the development of the local plan and the apparent disregard for the residents of Rossendale as whilst I have focused on the land EMP 2.15 it is apparent that this has been systemic across this process as a whole. - "</p>

1820	Kelly	Holt	Lancashire County Council		Not Applicable	EMP 2.15 – A new vehicular access onto Blackburn Road would require a major earth moving exercise and the removal of mature trees within the site. An LCC retaining wall bounds Blackburn Road and the required visibility splays would be a concern. Access via the existing Industrial Estate appears unachievable without the removal of an existing industrial building.

1416	Ian	Shorrocks	Blackmores D Ltd	EMP37 (South of EMP2.19)	Object	<p>Provided in email to Local Plan team REPRESENTATIONS TO LOCAL PLAN GRANE ROAD MILL - LAND SOUTH OF GRANE ROAD, OCTOBER 2017</p> <p>1. INTRODUCTION</p> <p>1.1. Eden Planning is submitting representations on behalf of Blackmores D Ltd.</p> <p>1.2. The site the representations relate to is referred to as Grane Road Mill. The property lies to the south of Grane Road and is separated from the larger employment area of Carrs Industrial Estate (EMP 37 within the Rossendale Employment Land Review – 2017).</p> <p>1.3. The site measures approximately 3.3 Ha and lies adjacent to residential properties fronting Jubilee Road and Grane Road.</p> <p>2. CONTEXT</p> <p>2.1. Grane Road Mill lies to the south of Grane Road, physically and operationally separate from the adjacent Carrs Industrial Estate. The site is typical of an old industrial site, which has evolved over time in an ad hoc way.</p> <p>2.2. The site comprises a range of small spaces. Most of the buildings have low ceilings and poor/limited vehicular (access and no vehicular access between buildings. The buildings cannot easily be subdivided into smaller lets and due to the physical conditions.</p> <p>2.3. A further constraint is proximity to residential properties, as occupiers are concerned about restrictions to operations.</p> <p>2.4. In short, the site is not suited to modern industrial occupier requirements and demand for employment use is poor.</p> <p>2.5. Industrial agents (LM6) have provided initial advice, and confirmed that demand for the mill for continued industrial use is likely to be low, with occupiers preferring more modern industrial units well connected to the motorway network.</p> <p>2.6. Looking forward, the buildings need major maintenance and upgrades, with a number of abnormal costs, including asbestos roofs and at this stage the needed work are not viable. Redevelopment for employment use is further restricted by the cost associated with accommodating the stream that runs beneath the site.</p> <p>3. PROPOSED ALLOCATION AND ASSOCIATED POLICIES EMP2 AND EMP3</p> <p>3.1. Within the emerging Local Plan the site forms part of allocation EMP 2.19 and is proposed to be retained as an Employment Site with Policy EMP2 applying.</p> <p>3.2. The background document informing this allocation, the Employment Land Review 2017, considers the site as part of the wider Carrs Industrial Estate (EMP38). We disagree with the assessment and believe, due to the physical separation that Grane Road Mill should be assessed as a separate</p>		Emailed Direct to Local Plan team

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.19	Further comment
						<p>allocation.</p> <p>3.3. We have provided a revised assessment below which we consider more accurately reflects the subject site.</p> <p>Road Access *EMP38: Vgood *Grane Road Mill: Good</p> <p>Local Accessibility *EMP38: Vgood *Grane Road Mill: VGood</p> <p>Proximity to Urban Areas/services *EMP38: Vgood *Grane Road Mill: VGood</p> <p>Compatibility to adjoining uses *EMP38: Average *Grane Road Mill: VPoor</p> <p>Development and Env Constraints *EMP38: Good *Grane Road Mill: VPoor</p> <p>Market attractiveness *EMP38: Good *Grane Road Mill: VPoor</p> <p>Overall Rating *EMP38: Good *Grane Road Mill: Poor</p> <p>3.4. Furthermore, the Page 31 of the emerging Local Plan notes that much of the employment committed supply is of poor quality and unable to meet the needs of modern businesses, nor located where market demand is greatest. Hence there is a qualitative as well as a quantitative need to identify new land for employment.</p> <p>3.5. This reinforces our own assessment, that whilst there is a lot of buildings/sites in employment use, these rarely meet modern occupier requirements, and land should be allocated in alternative locations to meet the needs and support the economic growth of the Borough. The focus should be shifted to allocate larger Green Field sites for employment uses, allowing existing employing sites, that are constrained to come forward for alternative uses.</p> <p>3.6. Furthermore, the need for employment land must be balanced against the demand for land for housing. It is noted that within the emerging Local Plan, reference is made (page 12) to the need to release land from the Green Belt to meet housing needs. It is therefore essential, to make best use of brownfield land opportunities.</p> <p>3.7. In this regard, EMP 3 is too restrictive, and could result in the delay of bringing sites that are suitable for housing or alternative needs. This does not accord with the objectives of the NPPF which states clearly that planning should not be a barrier to economic growth or meeting housing needs. It could also be interpreted in a number of ways, ie many of the criteria are subjective. Whilst greater clarity will come forward in the SPD we raise concerns that the policy as drafted is overly restrictive and does not support the overall objective of supporting economic growth and meeting housing needs.</p> <p>4. ALTERNATIVE SCENARIO – ASSOCIATED POLICY HS1 AND HS2</p> <p>4.1. Should an alternative approach be taken towards the allocation of more suitable land for employment, it is likely that a larger proportion of the existing sites in employment use, that are no longer suitable for this use, could come forward for housing.</p> <p>4.2. This would enable to Council to seek a higher target than 20% of new housing to be provided on Previously Developed Sites, and we suggest that</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.19	Further comment
						<p>Policy HS1 should be amended accordingly.</p> <p>4.3. We note that the target is for a minimum of 4,000 dwellings over the plan period and that the SHLAA only identified land for c 3,600.</p> <p>4.4. We are specifically asking that the Grane Road Mill be added as a housing allocation. As acknowledged in the assessment provide in Section 3 above (and the ELR), the site is very accessible. The site is surrounded by existing residential properties and is close/adjacent to proposed location HS2.78 – Land off Holcombe Road. The principle of housing in this location is already considered acceptable.</p> <p>4.5. Measuring c3.3 ha, using the Councils calculation of 30 dph, the site has potential to provide around 100 dwellings.</p> <p>4.6. Furthermore, the redevelopment of the site for housing, removes an existing land use conflict and could deliver many amenity and environmental benefits, opening up the culverted river, of a prominent site.</p> <p>5. SUMMARY</p> <p>5.1. In summary, we are requesting:</p> <ul style="list-style-type: none"> ▪ Allocation EMP 2.19 be revised to remove the Grane Road Mill ▪ Grane Road Mill should be reallocated as a housing site under Policy HS2. ▪ Policy HS2 should be amended to seek a higher proportion of housing to be provided on Previously Development Sites. ▪ Policy HS3 should be revisited, as in its current form it does not provide clarity or certainty for land owners or developers, and could result in planning being a barrier to economic growth and delivery of housing. <p>5.2. These representations have been prepared in haste to meet the deadline. The developer is committed to bring the site forward for redevelopment and can provide additional information to support the submission including details of ownership and control, indicative layout plans and technical reports.</p> <p>Please see appendix for attachments</p>

59	James	Collier	-	employment land review appendicies 1- 4, add3, add6, emp 13	Object	strong objection to redesignation of green belt and open countryside as employment land or for any other type of development. - 1. the evidence base for requirement employment land is weak: - - e.g what is the current rate of unoccupied or under utilised employment land in the borough, why are there unoccupied sites, and what options have been considered to maximise their use? - no evidence all other options have been fully considered before developing on green belt or open countryside. i.e all brownfield sites should be exhausted before considering unwarranted development on our countryside. how many existing undeveloped brownfield sites are there? - what is the genuine level of interest in new business space. i.e exactly how many businesses have indicated they are willing to invest/ pay for new business space (built on greenbelt) at current market rates (as opposed to incentivised rates) and why are they not able to use existing/ unoccupied employment space - - 2. green belt purpose is to prevent urban sprawl, there seems to be little reference to extending and moving the well defined existing urban boundaries in terms of protecting our countryside or the interests of people who live in the countryside. i.e. many people will have bought properties specifically because they are in close proximity to green belt or open countryside, - 3. what consideration is being given to rural residents, many of whom may be elderly and not have seen the poorly promoted consultation documentation online. what efforts have been made to consult with hard to reach groups? - - 4. no consideration appears to have been given to the appearance of Rossendale as people travel along the A56 through he borough, by re-developing every piece of green land within close proximity to the A56, there's a real risk Rossendale will no longer be perceived as a rural/ green valley, and this could impact the boroughs desirability as a place to live and work. our green spaces and valleys are one of the boroughs unique selling points - -		please dont rape our green spaces
71	Kathleen	Heathcote	-		Object	It was with horror I discovered the new local plan for Haslingden. The Hud Hey, Rising Bridge and Martin Croft Region is to become a large industrial estate- the northern extension of Carrs Industrial Estate. - The area earmarked consists of pristine hay meadows, fields, and a quiet residential area, with a small but 'good' thriving primary school; which will become engulfed by this development. Why would you plan for an industrial area to surround a primary school?? - There are many areas of brownfield sites which would be prime sites for development in the Haslingden area instead: dilapidated mills and former industrial sites, run down and often an eyesore, which would benefit from development. - Also, on already developed sites such as Carrs and the Rising Bridge Office development, a large number of units have been empty for years. If these are surplus to requirements why are we building more? - Why does this rural and residential area need to be destroyed by this sort of development? -		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.23	Further comment
519	Kath	Lees	-		Object	I am seriously objecting to these plans, even though I don't fully understand the printouts, there is no need for more industrial units within this area. Carrs Industrial Estate is not fully occupied and neither are other industrial units locally fully occupied. In fact Rossendale is overrun with these units and most of them are empty. - - I personally moved into Rossendale because of the green hills, why on earth are you trying to blight the natural beauty? - - Regarding the duty of providing new housing as a council, I would suggest that we update the beautiful buildings that are sitting empty and being left to ruin. I would be very interested in how you can justify building more.		I also have safety issues with regards to vehicles adding to the load that is already accessing via Hud Hey Road. The roads in Haslingden cannot cope with more traffic.
520	Brian	Flockton	-	EMP2.15*, EMP2.23*, EMP2.38* employment allocation refs	Object	I have lived here for 50 years and the land behind our property is farmland and greenbelt as far as I am aware and I do not wish for industrial units to be put on there. - - The beauty of Rossendale is being ruined. I feel as though Rawtenstall is being protected to the detriment of the outlying districts. This is very concerning. - - I am also concerned about the access to and from the A56, how are the local people going to be affected? Is this going to cause more accidents? - - I also am concerned about chemicals being accepted in these units, how can we feel confident that they won't be.		-
669	Joan	Priestley	-		Object	I fail to understand the logic in planning to extend an industrial area that is typically under-filled with vacant units, in an area with other developments that are also under-filled, such as the office development in Rising Bridge. The area marked contains hay meadows, fields and a quiet residential area. This will have a substantial effect on the quality of life of the residents of this area, there is already more than enough industrial allocation in this area without adding to the environmental load with more industry. There are many other more suitable sites for this development, there are run down mills, former industrial sites and other brownfield sites that should be used before running riot over green land. There are already enough issues with traffic on Hud Hey Road in particular large vehicles using it when they should not be in order to bypass the motorway. Parking is a severe problem, especially if the residential parking at the end of my row of houses is made into an access road for the industrial estate extension as I have heard there are plans to do. There are flooding issues in the area which need to be considered as well. This area should be protected as Greenbelt land and not developed, as is the land closely surrounding it to the north.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.23	Further comment
684	Corinne	Collier	-	emp2.23 and emp 2.38	Object	- adequate demand for ADDITIONAL employment land has not been clearly evidenced within the local plan. the Plan must surely first seek to evidence current and predicted demand outstrips current supply , including development of land already allocated for development before consideration is given to development on green belt and open countryside - there are currently 2 very large units on Carrs industrial estate which are vacant and have been vacant for several years. - this shows a clear lack of demand for very large units, furthermore there are smaller units on Carr road currently advertised to let and an abundance of small units at rising bridge owned by LCC which they have struggled to let or sell over the past 3 years. - in addition to the above existing unoccupied units, there are already sizeable plots allocated for employment land on the opposite side of the A56 from Carr road which surely must be developed(and fully utilised/occupied) before any decisions are made to build on green belt and open countryside. - If RBC are absolutely intent on developing on increasing employment opportunities, then as an absolute minimum the plans must be phased to ensure that existing unoccupied employment land is put to good use and occupied before developing on undeveloped sites that are already allocated for development, and then only when there is sufficient evidence to support further demand, should consideration be given to developing on green belt or open countryside. As this is not yet evidenced, it would be reasonable to suggest that there is also a second phase of decision making involving local communities and councillors once there is sufficient evidence that demand outstrips supply even after existing employment land is fully utilised and existing undeveloped sites are developed and fully occupied. -		It would be interesting to understand if any developers or speculative land holding companies have been involved in discussion (Emails, meetings or otherwise) with RBC prior to the formal consultation commencing? - the main people that stand to benefit from developing on green belt and open countryside are developers and land owners, there is a real risk that the general public are likely to be left looking at a Rossendale which is significantly less green, and full of unoccupied business space and "To Let" signs as the drive along the A56

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.23	Further comment
738	Christine	Holden		ADD6	Object	<p>Objections against the proposal to build on green field land EMP 2.23 Land Study Ref ADD6 Carrs Industrial Estate North Extension</p> <ul style="list-style-type: none"> • Increase in noise levels. We are already subject to excessive noise pollution due to the A56 bypass and the volume of HGVs and other vehicles, which use our road (B6236) as a short cut to and from Blackburn and the M65 at Guide. Excessive noise levels for our home have been acknowledged by Highways England. It is therefore unacceptable to introduce additional noise from industrial units (machinery, night shift workers, increased traffic etc) to the area adjacent to our home. This would disturb our sleep and reduce the quality of life for all residents in the area. • Disruption to sleep. We have lived in our house for over 32 years but in the last 5 years we have been forced to move to the much smaller, rear bedroom of our house due to increased traffic noise over this period. It is unacceptable to be faced with the possibility of additional noise and further disruption to sleep, if the farm land at the rear of our home is developed for industrial use. • Air pollution. We are concerned about air pollution from industrialisation of this area as we are situated above the proposed site and downwind from it. As the wind blows up the valley from the south fumes and toxic smells will be blown directly towards our home. • Increase in traffic. The B6236 is already very busy at peak times and parking is difficult for residents in the evenings and at weekends. The proposed development of this site and surrounding sites will only make this worse and lead to further disruption and increased potential for accidents. • Increase in litter. There is already a problem in the Hud Hey area from litter/fly tipping of predominately fast food wrapping cans and bottles. Much of this is thrown from cars and originates from the nearby McDonalds outlet. If this site is developed for industrial use this problem will only intensify. • Impact on wildlife. We have deer, a heron and many other wild birds and animals that are regularly seen on this land. • Impact on the environment and reduction in quality of life. Unlike some of the other proposed sites in Rossendale/Haslingden this site has always been farmland. It is green field land and has not previously been an industrial site. There will be an overall reduction in the quality of life in this area if this open green space is built on. Fresh air is widely acknowledged as being beneficial to general health, wellbeing and life expectancy. • Potential for anti-social behaviour. The access to the road network and the seclusion of industrial units will potentially attract anti-social behaviour to this residential area. • Lack of demand. There are currently a number of vacant units in this area. Therefore there is no logic to the plan to expand the industrialisation of the area. <p>Objections against the proposal to use the existing car park (LAN4065)</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.23	Further comment
						<p>adjacent to our homes (next to 116 Hud Hey Road), as access to the potential industrial site EMP 2.23 Land Study Ref ADD6 Carrs Industrial Estate North Extension</p> <p>We have lived here for over 32 years and have parked on the land adjacent to 116 Hud Hey Road for the whole of that period, without challenge. We and a number of other neighbours campaigned for several years to secure funding to tarmac the land and fence the area. This work was completed 20 years ago and the land became ours, on the understanding that we would maintain it. This we have done, including the voluntary development of a planted area for the benefit of our neighbours and to discourage anti-social behaviour. As we have maintained and parked on this land in excess of 12 years we are able to claim adverse possession of the land.</p> <ul style="list-style-type: none"> • Parking is at a premium in this area and to lose this car park, which can hold 8 to 9 cars, would impact adversely on all residents of our area, including those who currently park on Rising Bridge Road. • On the assumption that most of the traffic would originate from the A56, vehicles would only be able to reach an access point on Hud Hey Road by travelling along unsuitable routes such as the B6236, or along Rising Bridge Road to join the B6236. None of these routes are suitable as they pass through residential areas, with narrow streets and tight bends, i.e. Brook St and Worsley St. • This plan could also lead to further heavy traffic on the B6236 with HGVs etc ignoring the main trunk road to short cut from Blackburn and the M65. This road is already unsuitable for heavy vehicles and increased parking on the road due to the loss of the current car park would only make this worse. • There is an ever increasing problem with huge freight vehicles taking an unsuitable route along our road B6236 and then undertaking extremely dangerous and illegal manoeuvres when the driver realises their mistake. We witness HGVs reversing fully on the pavement over the A56 bypass bridge, reversing from the Rising Bridge Road junction on a blind bend into a main road. There are increasing instances of HGVs and huge freight transporters parking fully on our pavements, (photographic evidence can be provided), and even in the last few weeks, parking up for the night fully on the pavement. This has led to numerous phone calls to the transport managers of these businesses and it is totally unacceptable to consider allowing such vehicles access to the proposed industrial development site via our car park and in such close proximity to our homes.

1146	Ralph	Woodcock	-	EMP2.15*, EMP2.23*, EMP2.38*	Object	<p>Following the public consultation at Haslingden library, which I felt had amazing attendance due to the lack of information about the consultation. In fact the ONLY reason we were there was due to a neighbour informing us of the proposed plans, which claimed to offer public consultation (regulation 18); of which I have printed the full wording, but there is not enough space to type it. - We found the library open but no signage as to where this meeting was being held, and had to look round ourselves. Therefore first and foremost how on earth can you call this a public a participation and engagement consultation. - Carrs Industrial Estate North Extension - Why does Carrs have to be extended, there are loads of empty units as it is more than the expected 5%. I intend providing photographs to prove the vacancies we have in the area. There is also plenty of empty unused existing buildings that could be revitalized and in keeping with the period of the area. - Access to this area would also be a problem; we noted that the A56 already has access to Carrs Industrial Estate. To even consider Martin Croft Road, which is almost single tract seems absolutely ridiculous, dangerous and impossible to get two way traffic. It was also suggested that the carpark at the end of our row of houses could be converted, this I would object to passionately, as this was given by the council at least 15 years ago, and has been maintained by the lower end residents ever since, therefore we consider this our adopted land. Hud Hey Road cannot take any more traffic, this is a country road coming over the moors as Haslingden Road, into Roundhill Road and changing to 30mph Hud Hey Road, which I would like to say not a lot of drivers adhere to, unless it is the standstill traffic that we have to suffer. We have also had the issue of foreign lorries using this road as a fast track and parking up on the bridge with two wheels and the body of the lorry on the pavement leaving the remained two wheels up against the kerb, leaving no payment work walkers, never mind prams. The noise and the fumes from extra traffic would really affect the air quality in Haslingden Too. The traditional roads across the town could not take extra traffic. The field that is being considered for the extension has been used for animal grazing as long as I have lived here and we experience flooding and standing water to the bottom of the field with heavy rain. I believe there is a culvert under some properties along with the drains across the field under the right of way. It is very sad that brown field sites cannot be cleaned up and used before green field sites are considered. This should be a statutory order for development. The proposed field also has a large area of untreated Japanese Knot Weed. - Land adj Hollin Gate Farm - Has anybody been out to actually look at this land? It is surrounding a thriving local primary school. There is already an industrial estate on one side, which had been empty for months and now the council has taken over some of the units, do we really need to put these childr5en through the risk of more dangers - noise, air pollution, security and road safety? Would it not be more sensible</p>		<p>Rossendale is a beautiful area and we should be proud of what we have, not let it go to ruin and put up modern units that are not required. There is enough empty workplaces and homes that could fulfil the needs.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.23	Further comment
						<p>to put housing on it if houses area needed? Roundhill Lane is also used by traffic avoiding the A56 traffic, via Rising Bridge Road or Hud Hey Road. - Please, please, please could the local authority plan take over and refurbish empty, boarded up properties that would keep the period and make solid homes for the requirements.</p>

1212	Michael	Heathcote	-		Object	<p>1 – Regulation 18 – Public Consultation - The ‘public’ generally had no knowledge of the existence of the plan until informed by a private citizen who found out by accident when looking for something else on line. With his neighbours and at their expense, information and maps were circulated to their neighbours, and the governors of the local school affected by the plan. All people contacted had no previous knowledge of the existence of a Rossendale Development Plan. There has been NO advertising, information, leaflets, posters in the town or local papers, and even on the evening when the consultation maps were on view in the Library there were no posters indicating that they were in the Library, which room, etc. It has been so poorly publicised and so little information available that I question its legality as a ‘public consultation’ -2 - Northern Extension of Carr's Industrial Estate.</p> <p>EMP 2.23 • An environmental survey is required before decisions are made as this is an increasingly rare hay meadow with valuable meadow species such as Yellow Rattle, and is equally bio – diverse as the adjoining land which is protected. See initial comments from Lancashire Wildlife Trust below :- Semi improved grassland. Moderately herb rich, especially in contrast to the intensive agriculture and horse grazing that surrounds it. A stepping stone habitat in the South Pennines Grassland network. - Crested dogstail - Ribwort plantain - Sweet vernal grass - Rough meadowgrass - Meadow buttercup - Red clover - Yellow rattle - Meadow vetchling - White clover - Common ragwort - Cocks foot - Common bistort - - 3 Biological Heritage Site qualifying species. Thanks - X South Pennines Grasslands Project Officer - The Wildlife Trust for Lancashire, Manchester and North Merseyside - X - Less environmentally acceptable, but significant to development potential, there is a large patch of Japanese Knot Weed. • Traffic on the A56 and Hud Hey Road in particular is already a concern , especially at rush hour times when Hud Hey Road has become a preferred alternative to Grane Road for many drivers, including large trucks, and development to this site would exacerbate the situation to a dangerous degree. Access to this site is problematic whether direct from the A56, via Hud Hey Road, or from the existing Carr's estate. • Noise levels would affect residents in Hud Hey Road and Martin Croft Road, whose gardens adjoin the designated ar - • The A56 has a drainage/standing water problem and water draining from hard surfaces in the area due to development would exacerbate this problem and create a dangerous surface in wet weather. • A culvert/stream flows under the cellar of some houses on Martin Croft Road, which would adjoin the designated area. This currently drains into the field and has not caused any problems for the residents. However development could cause serious flooding problems in these properties. - - • There are nearby brown field sites which need ‘cleaning up’ and would be much more suitable as industrial development sites. Could it be made statutory that development is phased so that ALL brown field sites have</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.23	Further comment
						<p>to be developed before green field, environmentally sensitive sites are released for development. - • Existing developments along the A56 corridor have a lot of empty units – that have remained empty for a number of years (in some cases 7 years or more). This constitutes much more than 5% of the existing units. There does not appear to be a need or demand for more development in the foreseeable future. - • Plans show development of employment/industrial land for the Haslingden area far outweighs that for other areas of Rossendale. E.g. Rawtenstall – approx. 5 hectares, Haslingden – approx. 14 hectares. Balance is needed!! - - - 3 - Land adjoining Hollin Gate Farm. EMP 2.38 - • This land surrounds on 3 sides a small, but thriving local primary school. A primary school surrounded by an industrial estate raises so many health and safety issues, they are too numerous to list in this document but would include noise, air pollution, security, road safety. - • This could lead to the closure of a good, thriving and much needed primary school at a time when more school places are needed, not fewer. - • This is currently Green Belt land which should be protected from development for future generations. - • Traffic is already a safety issue on the road outside the school because of existing developments in the area end a ‘rat run’ which cuts out the busy A56 roundabout, and allows access to the M65 as an alternative to the Grane Road. Further development would make this a major problem. - • If there has to be development at this site surely with the school, post office/corner shop and bus stop with direct bus links to Accrington, Blackburn, Rossendale, and Manchester, housing would be a much more sensible option.</p>

1628	Janet	Waterworth		ADD6	Object	<p>After the consultation session in Haslingden Public Library on Tuesday 19th September I wish to submit the following comments to the above plan with specific reference to the stated area.</p> <ol style="list-style-type: none"> 1. I was only made aware of the 'consultation' through the efforts of a concerned neighbour who took the trouble to inform those living in the area affected by the plan. They had only found out about it by accident whilst searching for something else on line. I think there was poor publicity about the plan and subsequent meetings. I take the Free Press each week and am a regular visitor to Haslingden Library, both of which I would have expected to publicise something so important in an obvious and clear way. 2. The proposed development would increase traffic to an already busy A56 which is often at a standstill at busy times of the day. Also Hud Hey Road is increasingly being used as an alternative to the A56 and Grane Road especially by large trucks and this would be exacerbated by any new development. 3. The noise levels of the increased traffic would further affect residents of Hud Hey Road and Martin Croft as these properties back onto the designated area. 4. There appear to be several brown field sites adjoining this area, some of which are in need of attention. Why can't this issue be addressed rather than taking away more countryside? 5. The existing Carrs site has units which are unoccupied indicating that maybe new ones aren't needed. A nearby site on Rising Bridge Road illustrates this point as well, many of the units were empty of a long time and some have never been occupied. 6. The land is currently used as valuable farmland and I am informed that there are environmental issues which need to be explored in relation to the site concerning particular species of plants. <p>I am against this proposed development of the land around Hud Hey Road and I hope the council will give due consideration to the points raised not only by myself but also by the majority of residents in this affected area.</p>

1465	SEE AGENT DETAILS	SEE AGENT DETAILS	B AND E BOYS LIMITED		Not Applicable	<p>THE EMPLOYMENT ALLOCATION SHOULD BE BROADENED TO ALLOW FOR ROADSIDE RETAIL USES GIVEN THE SITE'S LOCATION. SEE SUBMITTED REPRESENTATION REPORT FOR FULL DETAILS.</p> <p>Email received 11/10/2017:</p> <p>1. INTRODUCTION 1.1 Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. Following the adoption of the Local Plan Part 1: Core Strategy in November 2011, RBC commenced work on its Local Plan Part 2: Site Allocations and Development Management Policies. However, this document was halted in favour of the preparation of a full new Local Plan which has now been issued for consultation from Monday 24 July to Monday 9 October 2017. This edition of the Local Plan comprises the Regulation 18 consultation document which sets out the Council's preferred approach to future housing, employment and leisure uses over the Plan period. Once adopted the Local Plan will replace the Core Strategy (2011).</p> <p>1.2 Within the draft Local Plan, sites have been proposed for development (for housing or employment use), for environmental protection and for recreation uses, as identified on the Draft Policies Map. Changes are also proposed to the existing Green Belt and the Urban Boundary. Also, four additional Conservation Areas, along with an extension to an existing Conservation Area, are being considered. 1.3 Documents included in the Draft Local Plan Consultation are the Draft Local Plan (Written Statement), the accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan. 1.4 The evidence base which supports the Local Plan comprises the following documents: • Strategic Housing Land Availability Assessment (SHLAA) (2017). • Strategic Housing Market Assessment (SHMA) (2017). • Employment Land Review (2017). • Green Belt Review (2016). • Environmental Network Study (2017). • Gypsies and Travellers Accommodation Assessment (2016). • Town Centre, Retail, Leisure and Tourism Study (2017). • Playing Pitch Strategy (2016) (previously published). • Strategic Flood Risk Assessment (SFRA) (2016). • Local Plan Viability Study 2015 and Updated Viability Study in relation to Affordable Housing (2017). • Landscape Study (2015) (previously published). • Landscape capacity study for wind energy developments in the South Pennines (2014) (previously published). • Heritage Impact Assessment of Housing Sites (2017). 1.5 In addition to the above documents, the Council's Sustainability Appraisal, although not strictly evidence, has informed the development of the draft policies.</p> <p>BACKGROUND</p> <p>1.6 Hourigan Connolly is instructed to review and comment on the emerging Local Plan in relation to land at Robert Street (Corn Exchange), Rawtenstall.</p>	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.29	Further comment
						<p>The site has a proposed allocation for B1, B2 and B8 employment uses under draft Policy Reference EMP2.29.</p> <p>1.7 The Corn Exchange, otherwise known as the Kingfisher Business Centre, lies within a short walking distance of Rawtenstall town centre with vehicular access being taken directly from Burnley Road via a short road called Kenyon Street. The site comprises a large five storey mill building and a collection of smaller buildings with associated car parking spaces. The site is in existing use, being occupied by a range of employment and other uses. Rawtenstall is one of the largest of the small towns which characterise the Borough of Rossendale.</p> <p>SCOPE</p> <p>1.8 In preparing these submissions we have reviewed the documents mentioned above as well as other documents forming the evidence base that underpins the emerging Local Plan.</p> <p>1.9 This document follows earlier Representations and discussions made by Mr Brian Boys as part of previous consultation stages in the Local Plan process, albeit that parts of the Local Plan were subsequently halted in favour of a complete new Local Plan.</p> <p>OVERVIEW</p> <p>1.10 The starting point for consideration of the emerging Local Plan document is the well-established principle embodied in Paragraph 158 of the National Planning Policy Framework (hereafter referred to as the Framework) that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>2. LEGISLATIVE & POLICY CONTEXT</p> <p>INTRODUCTION</p> <p>2.1 In this Chapter we set out the relevant legislative and policy context before going on to examine the Council's Local Plan document.</p> <p>LEGISLATIVE CONTEXT</p> <p>2.2 Part 2 of the Planning & Compulsory Purchase Act 2004 (As amended) deals with Local Development.</p> <p>2.3 The RBC Local Plan is being brought forward following changes to the Development Plan making system in England which are set out in the Localism Act 2011. Part 6 Sections 109 – 144 of the Localism Act deal with Planning.</p> <p>2.4 Following revocation of the North West Regional Strategy (RS) in May 2013, Council's such as RBC will set their own housing and employment targets against objectively assessed needs.</p> <p>2.5 The Town & Country Planning (Local Planning) (England) Regulations (SI No. 767) came into force on 6 April 2012 and guide the preparation of Local Plans.</p> <p>MINISTERIAL STATEMENTS</p> <p>2.6 In his Written Statement of 23 March 2012 the then Minister for</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.29	Further comment
						<p>Decentralisation and Cities the Rt. Hon Greg Clark MP referred to a pressing need to ensure that the planning system does everything it can to help England secure a swift return to economic growth. He urged local planning authorities to make every effort to identify and meet the housing, business and other development needs of their areas.</p> <p>2.7 The National Planning Policy Framework (hereafter referred to as the Framework) (see below) was subsequently published on 27 March 2012 and urges local planning authorities to boost significantly the supply of housing.</p> <p>2.8 In his Written Statement of 6 September 2012 the Secretary of State for Communities and Local Government the Rt. Hon Eric Pickles MP noted an increase in house building starts between 2009 and 2011 but said that there was far more to do to provide homes to meet Britain’s demographic needs and to help generate local economic growth.</p> <p>2.9 There can be no doubt that house building is a driver of the local economy besides providing homes for local people.</p> <p>FRAMEWORK REQUIREMENTS</p> <p>2.10 Paragraphs 150 to 185 of the Framework deal with Plan-making.</p> <p>2.11 The importance of the Local Plan is identified as the key to delivering sustainable development and a cornerstone of the development management process (Paragraph 150 refers).</p> <p>2.12 The requirement for Local Plans to be prepared with the objective of contributing to the achievement of sustainable development is embodied in Paragraph 151 of the Framework and stems from the requirements set out under Section 39(2) of the Planning & Compulsory Purchase Act 2004. Local Plans must also be consistent with the principles and policies of the Framework.</p> <p>2.13 Paragraph 152 of the Framework requires local planning authorities to seek opportunities to achieve and secure net gains for each of the three dimensions of sustainable development. These three dimensions are defined in Paragraph 7 of the framework as economic, social and environmental. According to Paragraph 7 of the Framework these dimensions give rise to the need for the planning system to perform a number of roles:</p> <ul style="list-style-type: none"> • “an economic role – contributing to building a strong, responsive and competitive economy, by ensuring that sufficient land of the right type is available in the right places and at the right time to support growth and innovation; and by identifying and coordinating development requirements, including the provision of infrastructure; • a social role – supporting strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and future generations; and by creating a high quality built environment, with accessible local services that reflect the community’s needs and support its health, social and cultural well-being; and • an environmental role – contributing to protecting and enhancing our 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.29	Further comment
						<p>natural, built and historic environment; and, as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change including moving to a low carbon economy”.</p> <p>2.14 Paragraph 8 of the Framework states that the roles mentioned in Paragraph 7 should not be undertaken in isolation, because they are mutually dependant and should be sought jointly and simultaneously through the planning system.</p> <p>2.15 The importance of Local Plans taking into account local circumstances is highlighted in Paragraph 10 of the Framework to ensure that they respond to the different opportunities for achieving sustainable development.</p> <p>2.16 Paragraph 152 of the Framework goes on to deal with adverse impacts on any of the dimensions of sustainable development and sets out three tests:</p> <ul style="list-style-type: none"> • Firstly significant adverse impacts on any of the dimensions should be avoided, and where possible, alternative options which reduce or eliminate such impacts should be pursued. • Where adverse impacts are unavoidable, measures to mitigate the impact should be considered. • Where adequate mitigation measures are not possible, compensatory measures may be appropriate. <p>2.17 Paragraph 154 of the Framework requires Local Plans to be aspirational but realistic and address the spatial implications of economic, social and environmental change.</p> <p>2.18 The requirement for local planning authorities to set out strategic priorities for their areas in their Local Plans is established in Paragraph 156 of the Framework. Such policies are required to deliver:</p> <ul style="list-style-type: none"> • “the homes and jobs needed in the area; • the provision of retail, leisure and other commercial development; • the provision of infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat); • the provision of health, security, community and cultural infrastructure and other local facilities; and • climate change mitigation and adaptation, conservation and enhancement of the natural and historic environment, including landscape”. <p>2.19 The importance of using a robust and proportionate evidence base for Plan making is dealt with in Paragraphs 158 to 177 of the Framework. Paragraph 158 is of particular relevance to these submissions: “Each local planning authority should ensure that the Local Plan is based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. Local planning authorities should ensure that their assessment of and strategies for housing, employment and other uses are integrated, and that they take full account of</p>

						<p>relevant market and economic signals”.</p> <p>2.20 A number of topics are discussed and for the purpose of this document we will focus on housing (Paragraph 159), business (Paragraphs 160 – 161), infrastructure (Paragraph 162) and environment (Paragraphs 165 – 168).</p> <p>HOUSING</p> <p>2.21 Paragraph 159 outlines the importance of preparing a Strategic Housing Market Assessment (SHMA) to assess full housing needs and a Strategic Housing Land Availability Assessment (SHLAA) to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period.</p> <p>2.22 Of particular importance is the requirement for the SHMA to identify the scale and mix of housing and the range of tenures that the local population is likely to need over the Plan period which:</p> <ul style="list-style-type: none"> • “meets household and population projections, taking account of migration and demographic change; • addresses the need for all types of housing, including affordable housing and the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes); and • caters for housing demand and the scale of housing supply necessary to meet this demand”. <p>BUSINESS</p> <p>2.23 Paragraph 160 of the Framework outlines the importance of local planning authorities having a clear understanding (from a robust evidence base) of business needs within the economic markets operating in and across their area.</p> <p>2.24 Paragraph 161 of the Framework establishes the importance of understanding business needs (both quantitative and qualitative) and ensuring that sufficient suitable land (both existing and future) is available to meet needs.</p> <p>INFRASTRUCTURE</p> <p>2.25 An objective of government policy is the delivery of growth. Central to this objective is ensuring that infrastructure has the capacity or can be enhanced to deliver growth. A number of factors are outlined in Paragraph 162 of the Framework which need to be considered at a local level including transport, water, foul drainage, energy, telecommunications, waste, health, social care, education, flood risk and coastal change management.</p> <p>ENVIRONMENT</p> <p>2.26 Paragraphs 165 to 168 of the Framework deal with environmental matters and set out the requirement that a sustainability appraisal which meets the requirements of the European Directive on strategic environmental assessment should be an integral part of the plan preparation process, and should consider all the likely significant effects on the environment, economic</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.29	Further comment
					<p>and social factors.</p> <p>SOUNDNESS</p> <p>2.27 Paragraph 182 of the Framework deals with the examination of Local Plans. The Local Plan will be examined by an independent inspector whose role is to assess whether the plan has been prepared in accordance with the Duty to Cooperate, legal and procedural requirements, and whether it is sound. Local planning authorities are required to submit Plans for examination which they consider “sound” – namely that they are:</p> <ul style="list-style-type: none"> • “Positively prepared – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development; • Justified – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; • Effective – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and • Consistent with national policy – the plan should enable the delivery of sustainable development in accordance with the policies in the Framework”. <p>NATIONAL PLANNING PRACTICE GUIDANCE – LAUNCHED 6 MARCH 2014</p> <p>2.28 On 28 August 2013 the government launched its draft National Planning Practice Guidance (NPPG). The draft NPPG was subject to consultation for 6 weeks and was launched on 6 March in its final form. The NPPG replaces some 230 planning guidance documents but will result in no amendments to the Framework.</p> <p>2.29 The Housing and Economic Land Availability Assessment section of the NPPG is worthy of specific mention in relation to this Report, in particular paragraph 030 (reference ID: 3-030-20140306 confirms): “Housing requirement figures in up-to-date adopted Local Plans should be used as the starting point for calculating the five year supply. Considerable weight should be given to the housing requirement figures in adopted Local Plans, which have successfully passed through the examination process, unless significant new evidence comes to light. It should be borne in mind that evidence which dates back several years, such as that drawn from revoked regional strategies, may not adequately reflect current needs.”</p> <p>2.30 The NPPG deals with deliverable sites as follows at paragraph 031 (Reference ID 3-031-20140306): “WHAT CONSTITUTES A ‘DELIVERABLE SITE’ IN THE CONTEXT OF HOUSING POLICY? Deliverable sites for housing could include those that are allocated for housing in the development plan and sites with planning permission (outline or full that have not been implemented) unless there is clear evidence that schemes will not be implemented within five years. However, planning permission or allocation in a development plan</p>			

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.29	Further comment
						<p>is not a prerequisite for a site being deliverable in terms of the five-year supply. Local planning authorities will need to provide robust, up to date evidence to support the deliverability of sites, ensuring that their judgments on deliverability are clearly and transparently set out. If there are no significant constraints (e.g. infrastructure) to overcome such as infrastructure sites not allocated within a development plan or without planning permission can be considered capable of being delivered within a five-year timeframe. The size of sites will also be an important factor in identifying whether a housing site is deliverable within the first 5 years. Plan makers will need to consider the time it will take to commence development on site and build out rates to ensure a robust five-year housing supply.”</p> <p>2.31 In regards to how often a Local Plan should be reviewed, the NPPG states at paragraph 008 of the section titled ‘Local Plans’ (Reference ID 12-008-20140306) that: “HOW OFTEN SHOULD A LOCAL PLAN BE REVIEWED? To be effective plans need to be kept up-to-date. Policies will age at different rates depending on local circumstances, and the local planning authority should review the relevance of the Local Plan at regular intervals to assess whether some or all of it may need updating. Most Local Plans are likely to require updating in whole or in part at least every five years. Reviews should be proportionate to the issues in hand. Local Plans may be found sound conditional upon a review in whole or in part within five years of the date of adoption.”</p> <p>GOVERNMENT CONSULTATION ON STANDARDISED METHODOLOGY FOR HOUSING NEED (SEPTEMBER 2017)</p> <p>2.32 On 14 September 2017 the Government announced a consultation on a Standardised Methodology for Assessing Local Housing Need, the basis of which was included in the White Paper (February 2017) and is aimed at helping local authorities plan for the right homes in the right places.</p> <p>2.33 As the consultation document sets out, the root cause of the dysfunctional housing market in the UK is that for too long we have not built enough homes. The Government is aiming to deliver 1.5 million new homes between 2015-2022 and is attempting to create a system which is clear and transparent for local authorities. The new methodology will apply to all future plans, with the exception of those which have been submitted or will be submitted before 31 March 2018.</p> <p>2.34 The standard methodology is principally aimed at tackling problems of affordability as the proposed formula simply uplifts the household projections figure, based on market signals.</p> <p>2.35 For Rossendale the proposed standard methodology has little impact on the annual housing requirement (which, it is suggested should be 212 rather than the current 265 dwellings per annum). However, it should be noted that the proposed standard methodology is currently on consultation and may therefore be subject to changes in due course. It is also worth noting the</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.29	Further comment
						<p>heavy speculation that the proposed methodology focuses on growth in the south east to the detriment of other parts of the UK, in particular the north west.</p> <p>2.36 Crucially the link between housing growth and economic activity must be recognised and therefore the current consultation is considered to be relevant to this Representation in relation to land at Corn Exchange, Rawtenstall.</p> <p>3. POLICY EMP2: EMPLOYMENT SITE ALLOCATIONS</p> <p>INTRODUCTION</p> <p>3.1 Draft Policy EMP2: Employment Site Allocations identifies all sites within the Borough which have been allocated for employment development. For each site allocated, site area, available area for development and proposed use class is set out.</p> <p>3.2 Land at Robert Street is identified as Employment Allocation Ref. EMP2.29 as shown below. It is classed as an 'existing employment' site and is considered suitable for B1, B2 and B8 uses.</p> <p>Fig. 1 Extract from Site Allocations Table (Policy EMP2)</p> <p>3.3 The proposed allocation is identified in purple in Figure 2.</p> <p>3. POLICY EMP2: EMPLOYMENT SITE ALLOCATIONS</p> <p>INTRODUCTION</p> <p>3.1 Draft Policy EMP2: Employment Site Allocations identifies all sites within the Borough which have been allocated for employment development. For each site allocated, site area, available area for development and proposed use class is set out.</p> <p>3.2 Land at Robert Street is identified as Employment Allocation Ref. EMP2.29 as shown below. It is classed as an 'existing employment' site and is considered suitable for B1, B2 and B8 uses.</p> <p>Fig. 1 Extract from Site Allocations Table (Policy EMP2)</p> <p>3.3 The proposed allocation is identified in purple in Figure 2.</p> <p>3.4 We support the aims of the Local Plan to identify key development sites which are central to the delivery of the overall strategy for new and existing employment assets and the Borough's economy. Crucial to the economy is the delivery of appropriate uses in the right locations.</p> <p>3.5 The site fronts onto Burnley Road and is located within close walking distance of Rawtenstall Town Centre. The site comprises the 'Kingfisher Business Park' and is made up from a collection of multi-storey mill buildings all of which are in good structural repair. Vehicular access is taken directly from Burnley Road, via Kenyon Street, and there is ample off-street car parking available.</p> <p>3.6 The site is located just outside the Town Centre boundary, as shown on the draft Proposals Map, with a small part of the eastern corner of the site being located within the Rawtenstall Conservation Area. The existing five storey mill building dominates the streetscape at this section of Burnley Road, and the site could easily be described as a 'gateway' site to the northern part</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.29	Further comment
						<p>of Rawtenstall town centre. The site is in single ownership and this Representation is submitted on behalf of the land owners.</p> <p>3.7 The site is occupied by a number of businesses, covering a range of employment-generating uses. In addition, the site has a planning history which demonstrates that the Council has found alternative uses acceptable in this location, with planning permission being granted in 2012 for part of the site to change its use to Use Class D1 (non-residential institutions) to provide teaching space and ancillary spaces.</p> <p>3.8 Flexibility of acceptable Use Classes is necessary to enable the land owner to continue to market the site to a wide range of potential employment-generating occupants. In our opinion, the site is a key 'gateway' site in Rawtenstall Town Centre and it is sensible to maximise the opportunities available to ensure the site is not only occupied and making a contribution to the local economy in the Borough but also able present a prosperous image of the Town Centre when approaching from the north.</p> <p>3.9 Flexibility in the uses would enable uses such Retail, Food & Drink, Restaurant and Roadside business, thereby contributing to the economy, as well as providing a service to those using the site primarily for employment purposes. The site is located within close walking distance of Rawtenstall Town Centre and whilst the site may not fall within the boundary as shown on the draft Proposals Map, to all intents and purposes the site forms part of the town centre environs. A flexible approach to the employment allocation of the Corn Exchange would not harm the vitality and viability of the town centre, but would complement it by extending the economic role that the town centre has to play.</p> <p>3.10 Allowing a more flexible approach to employment allocation EMP2.29 would be beneficial to the immediate local economy in Rawtenstall town, as well as the Borough as a whole, by providing wider opportunities for full occupancy rates which would in turn create an attractive impression of Rawtenstall for those accessing the town from the North.</p> <p>3.11 We appreciate that additional uses introduced in this location must be complementary to the existing employment use and we consider that small scale roadside retail use would be entirely appropriate in this regard.</p> <p>PROPOSED MODIFICATION</p> <p>3.12 The Council is respectfully requested to modify the current employment allocation EMP2.29 to enable a wider mix of employment-generating uses within the site boundaries. The Council is invited to include this modification in the Local Plan document by the allocation of a new employment-led, mixed-use allocation for the site under draft Policy EMP2.29. The Council is proposing mixed-use allocations with similar profiles to the south of Rawtenstall Town Centre, which include retail uses, and we consider it appropriate to propose a similar allocation on this northern gateway site in order to facilitate the viable regeneration of the site in part or whole. Indeed,</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.29	Further comment
						<p>it could be argued that the subject site has better links to the town centre than those mixed-use allocations to the south.</p> <p>4. CONCLUSIONS</p> <p>4.1 The starting point for consideration of the Council's Draft Local Plan document is the well-established principle embodied in Paragraph 158 of the Framework that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>4.2 Whilst we support in principle the proposed employment allocation of the subject site, the Council is invited to propose a new employment-led, mixed-use allocation for the site under draft Policy EMP2.29 of the draft Local Plan.</p> <p>Please see appendix</p>

1811	Steve	Holt			Object	It has come to my attention that land over the railway lines adjacent to Holmeswood Park, has been designated for Industrial use. As a resident of Holmeswood Park I would like to ask, why I have not been notified of your proposals. This has come as a complete surprise as nobody on the estate is aware of your proposals. My understanding is that if you are intending to build on any land adjacent to properties, you are obligated to inform us of your intentions, which you have not adhered to. It also looks like the consolation period is now over so our view will not be taken into consideration, when it will have an impact on our properties. I await you explanation with interest.		
1820	Kelly	Holt	Lancashire County Council		Not Applicable	EMP2.34 – Access is via Holme Lane which is a concern due to the local road layout and level crossing . The junction of Bury Road and Home Lane is restricted for vehicles travelling to and from the south. Access through parcels EMP 2.26 and 2.31 should be secured

Reference		EMP2.35		Baxenden Chemicals Ltd, Rising Bridge				

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.35	Further comment
1042	John	Lord	LANXESS Urethanes UK Ltd		Object	Baxenden Chemicals has recently changed ownership. It has undergone a name change and rebanding exercise, and is now owned by LANXESS. LANXESS is committed to maintaining and growing the company on this site and is keen to ensure that the Local Plan assists in creating the conditions to allow it to do so. - - The proposed EMP2.35 Allocation includes in part, the existing chemical works owned and operated by the company, as well as green field farmland in the companies' ownership. The unallocated land to the east of Allocation EMP2.35, south of the access road is in the companies' ownership and forms a natural part of the allocated land's development potential. For this reason, and to support this future development potential, we propose that Allocation EMP2.35 be extended to the east, to include this land south of the existing access road, as far as Rising Bridge Road. Failure to extend this boundary will potentially stymie the company in its future development of this land. - - When considered alongside proposed Green Belt extension, and the tightly drawn proposed Urban Boundary, this has the potential to significantly stymie future development of EMP2.35 (as currently drawn) and adjacent unallocated land. -		
1610	M, C and J	Curran and Harrion			Object	Our objections relating to the new proposed industrial sites are: 1) Not enough parking areas for existing users and heavy road use i.e. - residential users - office block site users which is adjacent to Spice Room restaurant and Stonefold Primary School - Baxenden Chemical users and included HGV vehicles included - farming tractors and trailers - route between motorway and Blackburn Old Road. 2) Plenty of vacant units on existing i.e. Carrs Industrial Estate. It was noted that it stated on your planning information that there were only a few vacant units available on local sites, but my comments are that the few vacant sites cover a large footprint or working/storage area which is multiplied by how many floors contained within that building. 3) The heavy traffic use and parking facilities in itself creates safety for cyclists, pedestrians including children who use the adjacent school. 4) Damage to the roads and to the railway bridge, which is an integral part of the Rising Bridge road network.

59	James	Collier	-	employment land review appendicies 1- 4, add3, add6, emp 13	Object	strong objection to redesignation of green belt and open countryside as employment land or for any other type of development. - 1. the evidence base for requirement employment land is weak: - - e.g what is the current rate of unoccupied or under utilised employment land in the borough, why are there unoccupied sites, and what options have been considered to maximise their use? - no evidence all other options have been fully considered before developing on green belt or open countryside. i.e all brownfield sites should be exhausted before considering unwarranted development on our countryside. how many existing undeveloped brownfield sites are there? - what is the genuine level of interest in new business space. i.e exactly how many businesses have indicated they are willing to invest/ pay for new business space (built on greenbelt) at current market rates (as opposed to incentivised rates) and why are they not able to use existing/ unoccupied employment space - - 2. green belt purpose is to prevent urban sprawl, there seems to be little reference to extending and moving the well defined existing urban boundaries in terms of protecting our countryside or the interests of people who live in the countryside. i.e. many people will have bought properties specifically because they are in close proximity to green belt or open countryside, - 3. what consideration is being given to rural residents, many of whom may be elderly and not have seen the poorly promoted consultation documentation online. what efforts have been made to consult with hard to reach groups? - - 4. no consideration appears to have been given to the appearance of Rossendale as people travel along the A56 through he borough, by re-developing every piece of green land within close proximity to the A56, there's a real risk Rossendale will no longer be perceived as a rural/ green valley, and this could impact the boroughs desirability as a place to live and work. our green spaces and valleys are one of the boroughs unique selling points - -		please dont rape our green spaces
71	Kathleen	Heathcote	-		Object	It was with horror I discovered the new local plan for Haslingden. The Hud Hey, Rising Bridge and Martin Croft Region is to become a large industrial estate- the northern extension of Carrs Industrial Estate. - The area earmarked consists of pristine hay meadows, fields, and a quiet residential area, with a small but 'good' thriving primary school; which will become engulfed by this development. Why would you plan for an industrial area to surround a primary school?? - There are many areas of brownfield sites which would be prime sites for development in the Haslingden area instead: dilapidated mills and former industrial sites, run down and often an eyesore, which would benefit from development. - Also, on already developed sites such as Carrs and the Rising Bridge Office development, a large number of units have been empty for years. If these are surplus to requirements why are we building more? - Why does this rural and residential area need to be destroyed by this sort of development? -		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
519	Kath	Lees	-		Object	I am seriously objecting to these plans, even though I don't fully understand the printouts, there is no need for more industrial units within this area. Carrs Industrial Estate is not fully occupied and neither are other industrial units locally fully occupied. In fact Rossendale is overrun with these units and most of them are empty. - - I personally moved into Rossendale because of the green hills, why on earth are you trying to blight the natural beauty? - - Regarding the duty of providing new housing as a council, I would suggest that we update the beautiful buildings that are sitting empty and being left to ruin. I would be very interested in how you can justify building more.		I also have safety issues with regards to vehicles adding to the load that is already accessing via Hud Hey Road. The roads in Haslingden cannot cope with more traffic.
520	Brian	Flockton	-		Object	I have lived here for 50 years and the land behind our property is farmland and greenbelt as far as I am aware and I do not wish for industrial units to be put on there. - - The beauty of Rossendale is being ruined. I feel as though Rawtenstall is being protected to the detriment of the outlying districts. This is very concerning. - - I am also concerned about the access to and from the A56, how are the local people going to be affected? Is this going to cause more accidents? - - I also am concerned about chemicals being accepted in these units, how can we feel confident that they won't be.		-
684	Corinne	Collier	-	emp2.23 and emp 2.38	Object	- adequate demand for ADDITIONAL employment land has not been clearly evidenced within the local plan. the Plan must surely first seek to evidence current and predicted demand outstrips current supply , including development of land already allocated for development before consideration is given to development on green belt and open countryside - there are currently 2 very large units on Carrs industrial estate which are vacant and have been vacant for several years. - this shows a clear lack of demand for very large units, furthermore there are smaller units on Carr road currently advertised to let and an abundance of small units at rising bridge owned by LCC which they have struggled to let or sell over the past 3 years. - in addition to the above existing unoccupied units, there are already sizeable plots allocated for employment land on the opposite side of the A56 from Carr road which surely must be developed(and fully utilised/occupied) before any decisions are made to build on green belt and open countryside. - If RBC are absolutely intent on developing on increasing employment opportunities, then as an absolute minimum the plans must be phased to ensure that existing unoccupied employment land is put to good use and occupied before developing on undeveloped sites that are already allocated for development, and then only when there is sufficient evidence to support further demand, should consideration be given to developing on green belt or open countryside. As this is not yet evidenced, it would be reasonable to suggest that there is also a second phase of decision making involving local communities and councillors once there is sufficient evidence that demand outstrips supply even after existing employment land is fully utilised and existing undeveloped sites are developed and fully occupied. -		It would be interesting to understand if any developers or speculative land holding companies have been involved in discussion (Emails, meetings or otherwise) with RBC prior to the formal consultation commencing? - the main people that stand to benefit from developing on green belt and open countryside are developers and land owners, there is a real risk that the general public are likely to be left looking at a Rossendale which is significantly less green, and full of unoccupied business space and "To Let" signs as the drive along the A56

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
870	Frank	Rogers	-		Object	<p>This land is designated Green Belt land, and as such should not even be considered for development. RBC would need to demonstrate "EXCEPTIONAL" circumstances before consideration could be given to release this land from Green Belt. - - Given the narrow restrictive nature of Rising Bridge Road, and the weight limit that currently is in force for that road, access to any development on this site would have to be from and back on to the busy north-bound side of the A56 dual carriageway, at a point close to the major Rising Bridge roundabout. This would mean that vehicular traffic from the north would first have to head south down the A56 to either the Tesco roundabout and then head back up north, or alternatively come off the southbound A56 at the Station Road exit, and then travel through part of Carrs Industrial Estate in order to rejoin the northbound A56 at the Hurstwood's M66 development. - - The nearness of St John's Primary School to such a development brings with it a series of sensitivities which would have to be addressed and adequately provided for. - - The Leader of RBC, Councillor Barnes, together with Cllrs. Lamb, Oakes, Surridge, Marriott and Hughes, all publicly campaigned to "Keep our Valley Green". Therefore brownfield sites should be the target of further development, NOT Green Belt land.</p>		<p>HOW GREEN WAS MY VALLEY - - Green belt land should be protected at all costs. - Rossendale as an area really only has it's green fields and hills going for it - moving bus stations 150 yards, or filling up the Valley Square with unneeded shops, hotels, pubs, restaurants etc will deliver absolutely nothing to the standing of the area. - Fill in those green spaces with industrial units that will probably remain empty for years, and the place will become a nondescript continual blot on the landscape. - Keep our Valley GREEN.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1146	Ralph	Woodcock	-		Object	<p>Following the public consultation at Haslingden library, which I felt had amazing attendance due to the lack of information about the consultation. In fact the ONLY reason we were there was due to a neighbour informing us of the proposed plans, which claimed to offer public consultation (regulation 18); of which I have printed the full wording, but there is not enough space to type it. - We found the library open but no signage as to where this meeting was being held, and had to look round ourselves. Therefore first and foremost how on earth can you call this a public a participation and engagement consultation. - Carrs Industrial Estate North Extension - Why does Carrs have to be extended, there are loads of empty units as it is more than the expected 5%. I intend providing photographs to prove the vacancies we have in the area. There is also plenty of empty unused existing buildings that could be revitalized and in keeping with the period of the area. - Access to this area would also be a problem; we noted that the A56 already has access to Carrs Industrial Estate. To even consider Martin Croft Road, which is almost single tract seems absolutely ridiculous, dangerous and impossible to get two way traffic. It was also suggested that the carpark at the end of our row of houses could be converted, this I would object to passionately, as this was given by the council at least 15 years ago, and has been maintained by the lower end residents ever since, therefore we consider this our adopted land. Hud Hey Road cannot take any more traffic, this is a country road coming over the moors as Haslingden Road, into Roundhill Road and changing to 30mph Hud Hey Road, which I would like to say not a lot of drivers adhere to, unless it is the standstill traffic that we have to suffer. We have also had the issue of foreign lorries using this road as a fast track and parking up on the bridge with two wheels and the body of the lorry on the pavement leaving the remained two wheels up against the kerb, leaving no payment work walkers, never mind prams. The noise and the fumes from extra traffic would really affect the air quality in Haslingden Too. The traditional roads across the town could not take extra traffic. The field that is being considered for the extension has been used for animal grazing as long as I have lived here and we experience flooding and standing water to the bottom of the field with heavy rain. I believe there is a culvert under some properties along with the drains across the field under the right of way. It is very sad that brown field sites cannot be cleaned up and used before green field sites are considered. This should be a statutory order for development. The proposed field also has a large area of untreated Japanese Knot Weed. - Land adj Hollin Gate Farm - Has anybody been out to actually look at this land? It is surrounding a thriving local primary school. There is already an industrial estate on one side, which had been empty for months and now the council has taken over some of the units, do we really need to put these childr5en through the risk of more dangers - noise, air pollution, security and road safety? Would it not be more sensible</p>		<p>Rossendale is a beautiful area and we should be proud of what we have, not let it go to ruin and put up modern units that are not required. There is enough empty workplaces and homes that could fulfil the needs.</p>

						<p>to put housing on it if houses area needed? Roundhill Lane is also used by traffic avoiding the A56 traffic, via Rising Bridge Road or Hud Hey Road. - Please, please, please could the local authority plan take over and refurbish empty, boarded up properties that would keep the period and make solid homes for the requirements.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1203	Rosemary and Michael	Atherton	-		Object	<p>The public consultation meeting to discuss plans was illegal as all the residents were not informed, ie no letters through doors or notices on lampposts. The only public notification was in the Rossendale Free Press in July, some three months before the meeting. -This land two years ago was recommended to remain green belt The reconstituted land is infill from construction of A56, and remains a swamp, over a 30 ft deep railway cutting, not compacted under the bridge. There is a bridge (tunnel) at one end, and a manhole at the bottom of the cutting at the other, so this land is not confined. There was nothing solid, just slurry dumped in the hole. Some sort of sheets had to be laid in order to try to stabilise it so that the vehicles dumping the mud would not sink, although one of the vehicles was almost lost. The infill was so hazardous, the school had to be closed for a couple of days in 1980. Land is adjacent to primary school, meaning construction traffic would cause pollution to youngsters. Land presently used for horses, ducks, hens and goats, an ideal environment for children. Rising Bridge Business village offices are still mainly empty, some having never been in use since they were built. They should never have been built in the first place, as there was no call for them, as proven by their lack of use. They were left empty for so long that LCC rented out a couple of units to their existing staff from as far as Preston, to create an illusion. The parking then became chaotic, and complaints were numerous, resulting in a piece of land on Blackburn Road being commandeered for extra parking. Carrs industrial estate has many empty units. Neighbouring towns have empty office spaces too, so there is no great need for Rossendale to have any more units. There is NO market demand. There are still many brown field sites, far more suitable, which could be used before green belt. Rising Bridge Road had flooding problems for years due to blocked drains. Parking along Rising Bridge Road continues to be a massive problem. Plans have been submitted for this land on a number of occasions, and refused. The reasons for the refusals have not changed, but increased. Rising Bridge Road has a weight restriction on it. Empty units are a magnet for vandalism, and are a blight on the landscape. Once green belt has been built on, it has gone forever. Traffic at the northerly end of Rising Bridge Road is horrendous. Yellow lines on the road have faded or disappeared, and are largely ignored anyway, resulting in parked cars on both sides of the road, leaving difficulties for the flow of traffic, especially larger vehicles. Development ignores Hollingate Cottages, as on the plans they do not exist, a lack of care. People drawing up the plans obviously do not know the area or its history. A lot more research needs to be undertaken. The traffic at Brook Street and at Blackburn Road at the approach to Rising Bridge roundabout is already gridlocked at rush hour, and these roads could not cope with any more traffic. The traffic tailbacks stretch from the roundabout to the pedestrian crossing, up to a quarter of a mile. To add to this would be lunacy.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	Further comment
						<p>For a site to be taken out of green belt, there is a need to demonstrate exceptional circumstances. Given the number of empty units there are throughout the valley and the number of brown field sites available for development, there are no exceptional circumstances to justify removing this land from green belt.</p>	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1212	Michael	Heathcote	-		Object	<p>1 – Regulation 18 – Public Consultation - The ‘public’ generally had no knowledge of the existence of the plan until informed by a private citizen who found out by accident when looking for something else on line. With his neighbours and at their expense, information and maps were circulated to their neighbours, and the governors of the local school affected by the plan. All people contacted had no previous knowledge of the existence of a Rossendale Development Plan. There has been NO advertising, information, leaflets, posters in the town or local papers, and even on the evening when the consultation maps were on view in the Library there were no posters indicating that they were in the Library, which room, etc. It has been so poorly publicised and so little information available that I question its legality as a ‘public consultation’ -</p> <p>2 - Northern Extension of Carr’s Industrial Estate. EMP 2.23 -</p> <ul style="list-style-type: none"> An environmental survey is required before decisions are made as this is an increasingly rare hay meadow with valuable meadow species such as Yellow Rattle, and is equally bio – diverse as the adjoining land which is protected. See initial comments from Lancashire Wildlife Trust below :- Semi improved grassland. Moderately herb rich, especially in contrast to the intensive agriculture and horse grazing that surrounds it. A stepping stone habitat in the South Pennines Grassland network. - Crested dogstail - Ribwort plantain - Sweet vernal grass - Rough meadowgrass - Meadow buttercup - Red clover - Yellow rattle - Meadow vetchling - White clover - Common ragwort - Cocks foot - Common bistort - 3 Biological Heritage Site qualifying species. - Thanks - X - South Pennines Grasslands Project Officer - The Wildlife Trust for Lancashire, Manchester and North Merseyside - Less environmentally acceptable, but significant to development potential, there is a large patch of Japanese Knot Weed. - Traffic on the A56 and Hud Hey Road in particular is already a concern , especially at rush hour times when Hud Hey Road has become a preferred alternative to Grane Road for many drivers, including large trucks, and development to this site would exacerbate the situation to a dangerous degree. Access to this site is problematic whether direct from the A56, via Hud Hey Road, or from the existing Carr’s estate. - Noise levels would affect residents in Hud Hey Road and Martin Croft Road, whose gardens adjoin the designated area The A56 has a drainage/standing water problem and water draining from hard surfaces in the area due to development would exacerbate this problem and create a dangerous surface in wet weather. A culvert/stream flows under the cellar of some houses on Martin Croft Road, which would adjoin the designated area. This currently drains into the field and has not caused any problems for the residents. However development could cause serious flooding problems in these properties. There are nearby brown field sites which need ‘cleaning up’ and would be much more suitable as industrial development sites. Could it be made statutory that development is phased so that ALL brown field sites have 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
						<p>to be developed before green field, environmentally sensitive sites are released for development. • Existing developments along the A56 corridor have a lot of empty units – that have remained empty for a number of years (in some cases 7 years or more). This constitutes much more than 5% of the existing units. There does not appear to be a need or demand for more development in the foreseeable future. • Plans show development of employment/industrial land for the Haslingden area far outweighs that for other areas of Rossendale. E.g. Rawtenstall – approx. 5 hectares, Haslingden – approx. 14 hectares. Balance is needed!! - 3 - Land adjoining Hollin Gate Farm. EMP 2.38 • This land surrounds on 3 sides a small, but thriving local primary school. A primary school surrounded by an industrial estate raises so many health and safety issues, they are too numerous to list in this document but would include noise, air pollution, security, road safety. • This could lead to the closure of a good, thriving and much needed primary school at a time when more school places are needed, not fewer. • This is currently Green Belt land which should be protected from development for future generations - • Traffic is already a safety issue on the road outside the school because of existing developments in the area end a 'rat run' which cuts out the busy A56 roundabout, and allows access to the M65 as an alternative to the Grane Road. Further development would make this a major problem. • If there has to be development at this site surely with the school, post office/corner shop and bus stop with direct bus links to Accrington, Blackburn, Rossendale, and Manchester, housing would be a much more sensible option.</p>		
1552	William and Joan	Caine and Uttley			Object	<p>Objecting against the proposed plans for building units on Rising Bridge Road. Far too much traffic on the road already. It's near a school. Parking on both sides of the road is dangerous plus HGV wagons already use Rising Bridge Road as a shortcut, even though it's a 7.50 tonne weight limit, this could damage property due to the vibrations of the vehicles and could also cause damage to children's health through excessive fumes.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1584	S M	Ticehurst			Object	<p>After looking at information put out to public consultation by the Council, who are proposing to put industrial units on the land opposite my home on Rising Bridge Road.</p> <p>I have to object to this idea, because during the years I have lived, and raised my family in this house. We have successfully fought, three times to prevent building there. It is not suitable for any form of development because the land has been filled in with what was taken out of the A56 bypass, no one knows what may be in there. It was thought to be dangerous at the times 'quicksand' was mentioned. The school was closed for a time until it was made safe.</p> <p>Our properties already have a problem with drains backing up. We had to have the drainage people come to flush them out and this seems to have increased since the office blocks were built. How bad would this be if there were more units opposite.</p> <p>The parking is already congested and I have to leave my car parked on the road Monday to Friday because I can't reverse out of my drive for fear of hitting a car parked opposite.</p> <p>It would seem that the Council have not really looked into this, as there are already a large number of empty units in the Haslingden area.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1587	Derek and Jean	Sowerby			Object	<p>I am writing to lodge an objection to the above proposed development application.</p> <p>The site is currently zoned as Green Belt land with adjacent light residential use and also a Primary School and does not in any way support the planned change to Industrial Use.</p> <p>Any change to industrial use is likely to have a significant adverse impact on the surrounding community and environment.</p> <p>Inability to Cope with Traffic. I do not support the developer's assertion that the existing road and public transport networks can support such a large development. The capacity of the road network, principally Rising Bridge Road is not adequate to cope with such an increase in traffic movements.</p> <p>Compromising on Safety. The road passed Stonefold Primary School is already excessively busy and any adjacent development would only increase traffic and the associated risks to children's lives.</p> <p>The developer proposes access from Rising Bridge Roundabout! He obviously has not used this roundabout as any further increase in traffic through this would only increase the traffic dangers and backlogs that occur on a daily basis.</p> <p>Lack of Demand Current industrial/office units at Rising Bridge lay empty despite Lancashire County council renting parts of it to themselves. So how can anyone show that there is any demand for such premises? Take a brief tour around Carrs estate - there are units there - empty and falling into disrepair. So to state that the site is in an area of strong demand is simply untrue. In fact its a joke.</p> <p>Any development would also lead to :- Light Pollution, Noise Pollution and Air Pollution, and be the Destruction of habitats and the death knell for the huge array of Wildlife that abounds in this Green Belt Land.</p> <p>On these and other grounds we sincerely hope that you are able to act on our behalf and reject the progression of these developments on our greenbelt sites.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1590	David and Pat	Stevenson			Object	<p>Objections to the proposed units on this land.</p> <ol style="list-style-type: none"> 1. GREEN BELT LAND 2. Access to and from proposed site? 3. Very near school and properties. 4. Pollution and safety? <p>Rising Bridge road now has a huge amount of problems. Vehicles speeding along and large lorries using it. Workers at Council offices on R/B Road park all day on no parking area and all other areas along road. Footpaths and edges neglected by council.</p> <p>Empty units now down Hud Hey and Carrs (why more)?</p> <p>Lots of space to extend unit area down Hud Hey on land to Haslingden Railway sidings which is completely empty.</p> <p>SO KEEP OFF OUR GREEN BELT.</p>		
1591	Tracy	Ireland			Object	<p>With reference to the above proposal, we would like to strongly object to the application, due to the following reasons:</p> <p>The proposed siting of the development is totally out of character for the area, it is right in the middle of a residential area. This could cause overshadowing and a substantial loss of privacy due to the close proximity, please see attached picture.</p> <p>There will be light and noise pollution cause from the units and the increased traffic , this will cause al ot of distress to the neighbourhood. Furthermore the wildlife around the greenbelt will be effected, foxes, bats and deer are often seen on the surrounding land.</p> <p>There is already problems with traffic on Rising-Bridge road. Parents struggle to park when they drop off and collect their children attending St John's Stonefold. The employee's from the nearby Business Enterprise Village, park all along the road, cars alos parked on yellow lines, someimtes entrances blocked causing large vehicles to struggle entering and exiting Baxenden Chemicals. The proposed development will only add to the hazard with the increase of traffic and it will also cause severe traffic congestion. Rising-Bridge road is already being used as a rat run.</p> <p>The business enterprise village on rising bridge road stayed empty for over 18 months when first built and at present they still have a few vacant units. There are empty units on hud hey road and also Carrs industrial estate all within a mile away from the proposed development with easy access to the A56. Why build more undustrial units in the middle of a community causing a huge impact on all the local residents, and surrounding neighbourhood.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1593	Carol	Greenwood			Object	<p>I would like you to take notice of my views to oppose the proposal of industrial units/buildings on land facing my property of X Hollingate Cottages, Rising Bridge Road, Accrington, BB5 2SW.</p> <p>1. Why would permission be considered for building on green belt ground where there is so much brown field land in the rossendale valley and many units are already empty on the rising bridge business park and carrs industrial estate which are both within walking distance of the proposed site.</p> <p>2. There is already a problem with traffic congestion along rising bridge road due to school, the chemical factory and the business park.... Endangering the public, including children!!! Many commuters already use rising bridge road as a shortcut to other areas.</p> <p>3. the impact to the environment and wildlife would be severely damaged, we often watch the bats flying around the proposed site, seeing foxes roaming, deers are to be found in the area too, frogs, newts and amphibians are found regularly when the field is marshy and a pond creates for ducks and geese to frequent.</p> <p>I have many other points that I feel should be considered and would like the option to present these in person in a meeting with the council and other members of the community.</p>		
1594	C P	Wellock			Object	<p>We are writing to put forward and objection to the proposed industrial units on Rising Bridge Road.</p> <p>Having lived on Rising Bridge Road for 48 years, the weight of traffic now far exceeds the small road. Vehicles use the road as a short cut to avoid the queuing on the bypass and this has increased further since the new traffic system was put in place. Vehicles travel along the road at dangerous speeds. There is a high traffic volume for the school especially morning and afternoon as parents attempt to park and collect their children. Industrial units are not suitably safe next to the school.</p> <p>The units at rising bridge which were empty for some time now have work force that dot their vehicles around to park near their work. What is to say that more units will be a blot on the landscape, left empty? There are empty units on Carrs industrial estate, away from residential properties and schools. There is quite enough traffic coming to the village for the chemical works. Why should residents on Rising Bridge road be subject to look at further industrial units and the heavy delivery vehicles.</p> <p>We wish to remain living without further disturbance of heavy traffic</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1595	J	Clarke			Object	<p>We object to this development on the following grounds:</p> <ol style="list-style-type: none"> 1. This land 2 years ago was recommended to remain in green belt and is used to grazing. There has to be exceptional circumstances for a sight to be taken out of green belt and as there are more than 55 of units already lying empty why do we need any more. There are also plenty of brown belt areas to build on without the need for green belt land being used. Therefore there are no exceptional circumstances. 2. This land is reconstituted and is infill from the construction of the A56 bypass which filled in the railway cutting right up to the top of the bridge. This was not solid infill leading to one dumper truck almost sinking and had to be closed for a while. The field is like a swamp when it rains as it does not drain away and can stay like that for weeks. We have problems with drainage on the road and in the sewers which have had to be "rodded" 3 times in the last 12 months. 3. This land is adjacent to a primary school and industrial units will impact on the pupils natural environment around it. It will bring noise, pollution and danger from large vehicles. 4. Parking along rising bridge road is already chaotic and dangerous with school traffic and parking from the nearby offices. We already have problems with articulated lorries, using their sat navs, trying to come along the road and also blocking it when trying to get up the lane nearby and getting stuck. Traffic at Brook Street leading on to Blackburn Road and the rising bridge roundabout are always gridlocked at certain times of the day and could not cope with any more traffic. 5. These units would not receive high levels of demand as reported by Commercial Agents (The employment Land Review Final Report) as this is what we were told when the nearby offices were built and it was years before any one move in. LCC finally rented some units and this is when parking became a problem on Rising Bridge road as people were coming from far and wide with no place to park. Therefore where are all the extra cars of the unit workers going to park. Therefore where are all the extra cars of the unit workers going to park? This will be the same scenario as it won't be Workers from nearby coming in on Public transport as per (access to labour and services ADD3 small local labour market good access to local services). 6. Units and empty Units are a magnet for vandalism and theft as was shown with the nearby offices. We were also quite disgusted that proper care was not taken when highlighting the Ordnance Survey map as it looked like Hollingate Cottages did not exist and the school looked like it was out on its own (which clearly it isn't) but right next to the proposed site. Also the criteria for site ratings (ADD3) has 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1596	D	Cunliffe			Object	<p>the school as Rising Bridge Primary School when it's name is actually St Johns Stonefold Primary School.</p> <p>We are sorry to hear the council are thinking of allowing some industrial warehouses on the old railway lines that run adjacent to rising bridge road. We live in the bungalow in between the school and the rising bridge business & enterprise office complex in the time we have live there we have had countless confrontations with some of the people that work in the enterprise office constantly bloack part of our driveway. Also when the parents are dropping off & picking up children the vehicles are parked on both sides of rising bridge road.</p> <p>The parents can't park legally because all the spaces are taken up by the office worker. This is a serious problem that occurs every working day. The officer ares only hald full at the moment but can you imagine how bad it would be when they are full. So say the council go ahead with the development where would the workers park their vehicles. What sort of transport would be coming & going to the warehouses at all times of day and night when it's already congested.</p> <p>This road cannot take the HGV articulated lorries, 7x3 tonne box wagons, transit vans and sprinter vans that would being used.</p> <p>If the rumours are true there will be noise pollution 24/7 with a courier business. This area of rising bridge is a residential area and hats the way it should stay. There are lots of Brownland sites available in the rossendale valley two that I know of are the old valley refrigeration business on henrietta street, bacup and the old inghams box works near turnpike, waterfoot. I should imagine that there are lots of other sites in rossendale that are brown land that you could develop.</p> <p>Lets hope someone with a bit of common sense will be sitting on the planning committee and stampst this application with a resounding NO.</p> <p>P.S. outside our bungalow on our garden wall is a bronze plaque that says 1861 Acre Village Boundary, Hollingworth Farm Estate. Not industrial development area.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1597	Annie	Wilson			Object	<p>I write in objection to the proposed above site being developed with industrial units of B2 and B8 type for the reasons as follows:-</p> <p>All of the site is Green Belt land and has always been protected from several attempts at development, being a green belt corridor for wildlife and rare fauna. Part of this site is the old railway route that was in filled when the A56 excavation and construction was being carried out. This infill was taken from various areas of the excavation of the A56 and the deposits were not recorded or tested for contamination, but it was deemed a high risk site when a child from the primary school had to be rescued by the fire service because he was being sucked into the infill. This resulted in the school having to be closed and the site cordoned off so that no one could access it. Therefore this site would require contamination bore hole testing prior to any development being considered. Construction would require building on a platform after any contaminated ground was removed. All this would be extremely expensive and no EU Environmental Grant for clean up would be available.</p> <p>Traffic/Parking</p> <p>Currently the area surrounding this site has a huge problem with parking and volume of traffic. Worsley Street, and the whole of Rising Bridge Road not only has resident parking, Enterprise Village employee parking all along the area even on yellow lines impeding large vehicles entering and exiting Baxenden Chemicals entrance road. There are also parents dropping off and collecting children from school have students not only from the local area but Blackburn Road, Hud Hey, Stonefold part of Baxenden and all the outlying farms, making it difficult for parents not to use vehicles for the school run.</p> <p>Access</p> <p>There is a weight restriction bridge close to the school which would make any access from Rising Bridge Road to an industrial unit site, virtually impossible because of the size and weight of large vans, lorries and heavy goods vehicles. I have been led to believe that discussions are being held with highways regarding another exit from the Rising Bridge Roundabout onto Hollingate Farm. The church (not a chapel) is a listed building. The current entrance to the farm being opposite traffic, entering and exiting the garage and MacDonald's making it inappropriate for the volume and size of vehicles entering and exiting the proposed site. Therefore a revised road layout would be necessary on the roundabout resulting in more traffic control lights and a complete reconfiguration of the whole system that has only recently cost millions to input.</p> <p>Drainage</p> <p>All developments will be required to consider and address flood risks from all sources before planning can be given. Rising Bridge Road is prone to flooding adjacent to this site and not only but the drains have to be flushed out on a regular basis from the manhole at 180 Rising Bridge Road, otherwise it backs</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
						<p>up into between 4 to 6 properties. How would these drains cope with all the extra waste when to date this year (2017) they have been flushed through 3 times and this is prior to the winter commencing. Looking at the United Utilities infrastructure with the next stage commencing 2020/2025 I would think that the funds and projects for this period have already been allocated and would not fall in line with your plans.</p> <p>Industrial Unit Types B2 and B8</p> <p>The type of businesses and employment would require regular scrutiny because of operational times, noise pollution, air pollution and light pollution because this site not only is in the heart of a residential community but encompasses a primary school with approximately 1500 children who would be affected in varying ways from this development.</p> <p>Current Industrial Unit Vacancies</p> <p>Having trawled the existing industrial unit sites I have discovered the following:-</p> <p>Hud Hey Bordering Brooke Street and Opposite Worsley Park owned by the Adham Group there are 4 vacant units.</p> <p>Prinny Mill Haslingden 01706 233575 Offices and storage spaces available.</p> <p>Grane Road -1,500 to 7,500 sq ft. Hurstwoods 4 vacant units</p> <p>Carrs Industrial Estate There are 9 various sized units from 2,500 sq ft to a maximum of 12,429 sq ft, some for sale and others to let. I have the names and contact numbers of the agents for the above.</p> <p>Holligate Farm has quite recently changed ownership. They did not put forward this site according to your officers and having spent a considerable amount of money putting their own stamp on the property so why would they want to have it turned into industrial units.</p> <p>From the council's point of view going down the compulsory purchase route would be far too expensive for an authority that has to save so much money. Finally despite asking, no one could tell me the possible number or sizes of units they would expect on such a site.</p> <p>I am convinced that this site is far too large to be in line with our local area. Lichfield's Professional Consultancy Report gives me the impression that they did not even visit the area or research the area. They could not even give the primary school its correct name and they could not define the difference between a chapel and a church and that it is a listed building. They also felt that the terrain was quite even and did not pick up on the fact that a large amount of the site is infill. With Holligate Farm having considerable rises and falls.</p> <p>I would like to be informed of any meetings where public may attend regarding the Draft Local Plan.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1598	K/C	Horrocks/Mac key			Object	<p>We the above named of 54 Rising Bridge road are totally against the development of this land for Industrial units.</p> <p>Apart from the site being unsuitable, there are several industrial units and offices nearby that are vacant, why not fill these first. The access would be a nightmare and would also increase traffic down our once quiet road. At the moment it is just about bearable, but we have problems with heavy Goods vehicles using this route to cut out the roundabout, if this land where to be developed it would only get worse. It isn't a pleasant place to live any more, having lived on Rising Bridge road for 38 years and have seen it decline with the rest of Rossendale.</p> <p>Parking is another major issue, with the school at the end of the road the office buildings and now the gym. At school emptying times it difficult to drive through, I don't suppose anything will be done about that until someone is killed, that is the usual approach taken by the authorities.</p> <p>Our residential areas should be kept just that, it is not a good idea to build willy nilly on any scrap of land you can get your hands on, and particularly Industrial units, it is totally unacceptable to expect residents to sit back and let you ruin the landscape. This has always been grazing land as long as I can remember, never industrial.</p> <p>Please keep our area residential.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1599	Janet and Brian	Ashworth and Quinn			Object	<p>We have never been informed officially as residents to the proposed plans for this land, either by letter or alternatively any notices put up on lampposts, which, we were aware, was a legal requirement. Had we not seen it in the Rossendale Free Press we may never have known about this totally unacceptable proposal.</p> <p>We are aware that fairly recently, in last couple of years, another proposal to build on this green belt land was refused and that it was recommended that it stay green belt and nothing has changed since then and indeed the traffic on Rising Bridge has got much, much worse. At school drop-off and pick-up times it is extremely difficult to negotiate pulling out of our drive, at times, with the amount of traffic coming up and down the road. We have lived on this road for in excess of 20 years and the sheer volume of traffic coming along it now is unrecognisable.</p> <p>Also with the new Enterprise Village there are also additional cars parked outside our house along Rising Bridge Road, which at times also causes tailbacks which is extremely dangerous when there are children going to and from the primary school which is also extremely close to this land.</p> <p>Furthermore at rush-hour there are tailbacks along Hud Hey Road up to the Brook Street traffic lights, which cause problems, as well as the Rising Bridge roundabout which is backed up, sometimes well past the pedestrian crossing. The thought of you adding to this problem with articulated lorries fills us with dread and begs the question, why?</p> <p>The land is used to graze several horses, hens and ducks which is a lovely sight for children to see on their way from school. Further traffic on this road would be a ludicrous thing to allow especially as there is a weight restriction on the road.</p> <p>The Enterprise Village units are still on the whole empty, although parking on the few that are let, causes an overspill, which has resulted in a piece of land being used on Blackburn Road to accommodate the extra cars. This is before all the units are let (not that they ever will be on present evidence).</p> <p>Additionally this makes you wonder why you would be possibly thinking of building extra commercial units when the ones that are built remain mainly empty? We list below just a few of these in the area:-</p> <p>Three Point Business Park, Charles Lane Grane Road, The Court Yard (various units) Enterprise Village, Blackburn Road, Rising Bridge (various units some never let out since being built!!) Taylor Court, Haslingden Link 665 Off A56 (various units) - New Hall Hey, Rossendale (various units) -</p> <p>Most of these units also have good motorway links but still remain primarily empty so using that reason for granting permission is obviously off the mark!</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
						<p>We have listed just a few of the many empty units in the Rossendale area and as there are so many that are waiting to be let out or sold it is just inexplicable why you would be considering taking this land out of green belt to built yet more units, that will probably also remain empty. These also attract vandals and cause a blot on the landscape and in view of the number of empty units at present this does not demonstrate 'exceptional circumstances' for taking land out of green belt. Indeed there are many brown field sites that could be considered in much more suitable areas, although as mentioned above, in our view there is no requirement for the building of these units in the present economical climate.</p> <p>To summarise it is quite clear that there are no exceptional circumstances that demonstrate good enough reasons for removing this land from green belt and as such it should remain as green belt.</p>		
1600	Margaret and Kevin	Evans			Object	<p>We strongly object to the proposed Industrial units on the land adjacent to Hollingate Farm Rising Bridge Road.</p> <p>The roads around are already congested by the traffic from the roundabout, offices, McDonalds, petrol station, Spice Rooms, Cornmill, Chemical works and school.</p> <p>Units would be adding more heavy trucks and vans onto the roads making it a lot worse.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1601	Afzal	Hussain			Object	<p>1. The proposal does not respect the scale and proportion of surrounding houses and would be entirely out of character for Rising Bridge Road</p> <p>2. I cannot visualise any valuable contribution the proposal makes in meeting any identified local needs. There is already office/units around the corner on A680 that have been vacant for a number of years. Further there is already an industrial estate at the bottom of Round Hill Road.</p> <p>3. The proposal states that Rising Bridge will need upgrading -this will not widen the road and currently is already under pressure at school times. At the time of the school run and most particularly when children are leaving school the traffic increases substantially with parents parking all along Rising Bridge Road. I do not see how HGV can navigate the road when cars are parked on both sides.</p> <p>4. The bridge will probably need upgrading and widening if HGVs are going to use it regularly. Currently the bridge is too narrow as well as being to near the school. It would cause chaos through increase in traffic and possibly increase risk of accidents and incidents (particularly for the children coming out of the school). The bridge is not ideal for two vehicles to pass each other especially if one the vehicles happens to be HGV. In fact two HGVs cannot pass each at the same time.</p> <p>5. Currently Rising Bridge Road is not traffic hectic outside school run times but clearly if the proposal went ahead it would lead to substantial increase in traffic and hence noise and air pollution.</p> <p>6. The proposal acknowledges that this site is currently a Green Belt Site.</p> <p>7. The proposal will increase car use rather than increase public transport.</p> <p>8. Further points of concern;</p> <ul style="list-style-type: none"> -Detrimental impact on residential amenities plus visual impact -Detrimental to current character of Rising Bridge Road -Highway safety compromised -Road capacity and parking increase -Loss of property values!!! 		
1602	David	Entwistle			Object	<p>The land alongside Rising Bridge Road was the old railway line which was filled in with earth taken from the route of the new by-pass A56. No drains were put in place as I recall, leaving this land quite like a bog. In one part it has been left open to make way for the high pressure gas pipe.</p> <p>There is only one way this land can be accessed, this would be off Rising Bridge Road.</p> <p>In turn this would pose problems for the residents of Rising Bridge road. In the case of the land adjacent to Hollin Gate Farm access would have to be via the roundabout on the A56. The A56 is already very congested and would be even more so if this project was to go ahead.</p> <p>Why do we need more industrial units when there are numerous units available on Carrs Industrial estate and also the Hud Hey and Broadway Sites.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1603	Brian and Mavis	Bell			Object	<p>We wish to protest about the site, now designated as Green Belt Area and used for grazing, being removed from such designation, and being put to B2 and B8 usage.</p> <p>Some of the units built on land between the restaurant and chapel are still VACANT. Many of the workers there DRIVE in from Preston, Blackburn, Burnley and Accrington, thus local jobs are not necessarily provided. Statements saying that new jobs will be created with B2 and B8 category, are thus inaccurate. There are still VACANT units on CARRS INDUSTRIAL ESTATE. Are these suggested plans for future units necessary?</p> <p>Some reasons for our protest:</p> <ol style="list-style-type: none"> 1) Workers at the aforementioned units on Rising Bridge Rd, use said road for overspill parking to the detriment of residents nearby, and to the detriment of parents dropping off and collecting their children from St. John's School. 2) INDUSTRIAL UNITS implies industrial traffic - trucks, wagons etc. - causing much pollution for children at the school especially when in the playground, and walking to and from school, and also affecting the health of residents in that area. Providing a poisonous pollution environment should NOT be on your agenda. 3) We have lived on Rising Bridge Road since 1974 and are privileged to see ROE DEER, FOXES and RABBITS enjoying the green fields on our road - and even coming into our garden. 4) An increase of heavy traffic on this narrow road, where residents park outside their own homes and often use both sides of the road for parking purposes, will cause much concern about the EASE with which emergency vehicles will be able to access the school and homes of residents. 5) We would be interested in receiving a lower council tax because of removal from Green Belt designation if granted. Also compensation for the decline in the value of our property. <p>All these items need careful consideration and honest consideration. We hope to have a happy outcome re this being refused and the Green Belt continuing.</p>

1604	Andrew and Connor	Beverley			Object	<p>Proposed Industrial Units - Land adjacent to Hollingate Farm - Rising Bridge</p> <p>I OBJECT TO THE APPLICATION FOR THE FOLLOWING REASONS:-</p> <p>1/ Value of surrounding property if such units were but in front of them. We personally would lose our privacy if such units were built in front of us as our house (as with a lot of the houses on Rising Bridge Road) are elevated.</p> <p>2/ Traffic - this road and surrounding areas are already having major problems with traffic / parking issues due to the school, Industrial units already in Rising Bridge.</p> <p>3/ Noise in the residential area - already heightened since the new roundabout lights were installed. Traffic has significantly increased on Rising Bridge Road due to people using this road to avoid the delay at these lights.</p> <p>4/ Risk of flooding - Rising Bridge Road has already had a major problem with flooding and was recently improved by the council at a very significant cost.</p> <p>5/ Industrial units would be out of keeping with the surrounding area which includes a church and an old school building.</p> <p>6/ There are still several units vacant in the other units that were built in Rising Bridge.</p> <p>7/ There is a high pressure gas line parallel to the A56.</p>		
1605	Marian	Walmsley			Object	<p>The following are my objections to industrial units being constructed on land adjacent to Rising Bridge Road, Haslingden,</p> <p>1. Rising Bridge is a residential area and there is no apparent justification for an attempt to turn it into an industrial area</p> <p>2. Rising Bridge Road and Roundhill Lane are not designed to take their already too heavy volume of traffic. Residents already have to be vigilant in attempting to keep huge vehicles at bay.</p> <p>3. All traffic therefrom has to pass before an infants' school. Its size and speed already constitute a danger to the children. More industrial traffic would intensify that danger.</p> <p>4. The C.C. offices are not yet full yet occupants have to use the adjacent Indian Restaurant car park during the day. If they are to be filled they will generate more traffic. There is no room for more traffic.</p> <p>5. Presumably access to a new industrial area would not be to and from the by-pass. That being so lorries would be unable to reach the site because there is a 7.5 tonne restriction on Rising Bridge Road - the only alternative.</p> <p>6. I have written the above despite the fact that every time a consensus of opinion has been sought in Rising Bridge it has been ignored. Are you wasting your time and mine, yet again?</p>

1606	David	Blanchard			Object	<p>Objections to the building of industrial units at Rising Bridge:</p> <p>1) Some of the land to be used is Green Belt - it is only last year that the Leader of the Council was seen at the back of a banner saying - Keep Rossendale Green.</p> <p>2) There will be even more pressure on parking, which is currently a nightmare, especially outside the units on Rising Bridge Road, there is a time limited section which is totally ignored, and not policed, by the workers in the offices.</p> <p>3) Health and safety issues around the school, this is already congested and will only get worse putting children's safety at risk.</p> <p>4) Access, the bridge is a 7.5 ton limit, although you have said that there will be a new road, not everybody will use it.</p> <p>5) Access and exit, the new proposed road, if build, will be onto an already very busy island which will only cause further problems.</p> <p>6) Do we really need new units, there are plenty of empty units in the area which struggle to be leased.</p> <p>7) The inevitable increase in traffic will impact on surrounding roads, especially the 'rat run' this is Roundhill Lane, there are signs that indicate 'not suitable for HGVs' these are totally ignored - nobody polices this.</p> <p>Thanks</p>		
1607	D M	Blanchard			Object	<p>Objection to proposal of industrial units on land adjacent to Rising Bridge Road</p> <p>1) Why are you planning building on green belt land when there is plenty of other land available.</p> <p>2) Why units, there are empty units at Rising Bridge. Hud Hey and Car industrial estate WHY DO WE NEED MORE?</p> <p>3) Parking is a big issue on Rising Bridge Road due to the units at Rising Bridge parking there.</p> <p>4) It will be next to a Primary School St John Stonefold which has a parking problem at school time.</p> <p>5) Access on to a very busy roundabout at the moment will mean more traffic on Rising Bridge Road and Round Hill Lane. To avoid the roundabout causing a problem at school, health and safety of the children.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1608		Hammond and Hutchinson			Object	<p>We wish to make you aware of a number of strong objections we have with regard to the proposed development of industrial units on the land adjacent to Hollingate Farm. As an immediate neighbour to the site of the proposed development, we are of the view that the proposed development will have a serious impact on our standard of living. Our specific objections are as follows:</p> <p>Highways.</p> <p>Although outlined planning shows access onto the Rising Bridge roundabout it does not mention the impact on traffic at the roundabout. Currently during peak periods there can be major congestion at the roundabout, there have also been numerous accidents some of which have been near fatal. This is without an increase in volume. Also the suggested access will mean HGV s and cars will need to pull out onto a single carriage way requiring them to tum right before they can join the road approaching the roundabout. There is already a central road access by this point allowing cars and HGVs to access McDonalds and exit the garage.</p> <p>There is also no mention of the impact on Rising Bridge Road. This is already a busy road and although it is in a residential area cars frequently exceed the speed limit. Many households also park on the road. An increase of traffic will continue to affect the safety of residents.</p> <p>Water and Sewerage</p> <p>United Utilities has highlighted that the full impact of any development proposal cannot be fully determined until more details are known about the nature of the development. They have also outlined that it is particularly important to know whether foul and surface water will connect to the public sewer. Some of the cottages on Rising Bridge already experience problems with sewerage back up - the development would just add to this problem.</p> <p>Local area</p> <p>The proposed development is not sympathetic to the surrounding land uses as this is currently a residential area. The Human Rights Act, Protocol I, Article I, states that a person has the right to peaceful enjoyment of their possessions, which includes the home and other land. In addition Article 8, of the Human Rights Act states that a person has the substantive right to respect for their private and family life including their surroundings. As I have already pointed out an industrial estate in the middle of a residential area (on Green Belt Land) would not allow the residents to peacefully enjoy their possessions (home) or respect their private and family life.</p> <p>Light / Noise pollution</p> <p>The increase in light will be significant not only from buildings but also from the vehicles visiting the premises, this is also the same for noise. As the proposal is for industrial units the impact will be even greater. There could be an increase in noise due machinery and workers. As previously mentioned not</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
						<p>only will this be on the proposed site but also the surrounding streets/roads. This will impact on sleep, be harmful to wildlife and undermine the enjoyment of the countryside.</p> <p>We would be grateful if the council would take our objections into consideration when deciding this application.</p>		
1609	Carol and Shawn	James			Object	<p>We wish to raise our objections to the above inclusion of this reference in the proposed local plan.</p> <p>We have been residents of Rising Bridge Road for over 30 years and as such are familiar with the area extremely well.</p> <p>The area presently has problems with traffic and parking. The offices that were built at the end of the road did not provide sufficient parking to accommodate the number of people using the offices and as such, Rising Bridge Road and surrounding streets overflow with parked cars and traffic. At times this is so bad that it is hazardous to children at the local primary school. This road cannot accommodate further traffic or parked cars, which would be inevitable with the proposed development.</p> <p>The development would envelop the small primary school and be potentially dangerous due to extra traffic.</p> <p>The area already has lots of industrial units which presently are underused. Do we really need more in this area? Why not utilise the empty premises first.</p> <p>Rising Bridge is a small village. The infrastructure could not accommodate such a large site.</p> <p>The area is green belt land, it should remain as such. Industry here would be a blot on the landscape.</p> <p>There is no proven level of market demand in this area and would not be attractive to prospective businesses.</p> <p>Overall we strongly object to the development of this land. We feel it would be completely inappropriate to develop the land here for industrial use and the impact of the development on the area and it's residents would be detrimental.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1610	M, C and J	Curran and Harrion			Object	<p>Our objections relating to the new proposed industrial sites are:</p> <p>1) Not enough parking areas for existing users and heavy road use i.e.</p> <ul style="list-style-type: none"> - residential users - office block site users which is adjacent to Spice Room restaurant and Stonefold Primary School - Baxenden Chemical users and included HGV vehicles included - farming tractors and trailers - route between motorway and Blackburn Old Road. <p>2) Plenty of vacant units on existing i.e. Carrs Industrial Estate. It was noted that it stated on your planning information that there were only a few vacant units available on local sites, but my comments are that the few vacant sites cover a large footprint or working/storage area which is multiplied by how many floors contained within that building.</p> <p>3) The heavy traffic use and parking facilities in itself creates safety for cyclists, pedestrians including children who use the adjacent school.</p> <p>4) Damage to the roads and to the railway bridge, which is an integral part of the Rising Bridge road network.</p>		
1611	Susan	Greenhalgh			Object	<p>With regard to the proposed development plans for land adjacent to Hollingate Farm off Rising Bridge Road.</p> <p>It is my understanding that the land is at present green belt and that to take such designated land for development requires there to be a desperate need for this particular area.</p> <p>Already in the Rossendale area there are vacant brownfield sites and numerous empty units, surely it would be more beneficial to make use of these areas first therefore showing need and interest.</p> <p>The proposed site provides habitat for flora and fauna in the valley which has already lost large area of green belt to development. There is a danger of the Rossendale Valley becoming an extension of the Greater Manchester conurbation and losing its own identity.</p> <p>I urge the council to look seriously into any decision.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1612	Stephen	Oldfield			Object	<p>As headteacher of Stonefold St John's CE school. I write on behalf of the community to express my extreme concern over the proposed developments indicated above. Not only is this a development on a greenfield site, but there are further issues which need consideration.</p> <p>Firstly, the immediate area is a haven for wildlife. There are many rare moths, and great crested newts are known to breed in lodges in Baxenden, with a dispersal area that includes the proposed development. The surrounding scrub landscape contains many small mammals, and these are hunting grounds for kestrels and tawny owls. This is one of the few green sites left in Haslingden and it would be a great loss if it were to disappear to industry when there are many nearby brown field sites.</p> <p>Secondly, the traffic implications would cause great concern for the local residents and for parents bringing their children to school. Parking is already a severe and dangerous problem. Nearby offices developed in 2009 are still not utilised fully.</p> <p>What are the implications for our school? Increased industry will mean further housing and the school is already over-subscribed, and in a dangerous situation with the local roads. Whatever the reasons for development, building on the few remaining green field sites is surely wrong and is a great concern to us all. Rising Bridge and Stonefold have always been traditional semi-rural communities with a proud heritage, and I know I speak for many in stating that this is going to be destroyed forever.</p> <p>The Haslingden by-pass is already a congested road and the roundabout is extremely dangerous, having seen many accidents. Access will surely be made to the industrial estate from the by-pass and will cause further problems.</p> <p>In short, this is not a sensible move in any way, both for the community, the environment and the long-term future. It is something that seriously needs to be re-considered for the benefit of all.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.38	Further comment
1613	George	Cropper			Object	<p>I'm writing to object against the planning to the above site. It is totally out of character for our neighbourhood. It will cause noise, air and light pollution, which will have a huge impact on our wellbeing, also not only being in the heart of a residential community but there is also a primary school situated adjacent to the development.</p> <p>The site is green belt land and has always been protected from several attempts at development and also the wildlife will be effected.</p> <p>Rising Bridge Road is prone to flooding, the drains have had to be flushed out on a regular basis how would these drains cope with all the extra waste from the units??</p> <p>The area surrounding the site has a huge problem with parking and the volume of traffic, heavy goods vehicles struggle entering and exiting at Baxenden Chemicals because of double parking and also parking on yellow lines. There are also parents dropping off and collecting their children from school. Rising Bridge Road will not be-able to cope with the extra volume of traffic this area will be hazardous also endangering pedestrians.</p> <p>There are plenty of empty units around the surrounding area, a few on the Business park on RisingBridge Road are still vacant, units on Hud Hey Road and also Carrs Industrial estate have around 9 units available. Why do we need more??? Especially in a residential area.</p>

1629	S I	Bradley		Land adj Hollin Gate Farm	Object	<p>I wish to object to the proposed local plan for the above areas for the following reasons-</p> <p>1 Parking and Traffic - parking in this area is already a nightmare. Traffic and wagons on Hud Hey Road, which incidentally is also coping with the displaced traffic from Grane Road due to weight restrictions, are a constant misery for all the local residents, our properties are shaken constantly, the noise is never ending, and we cannot cope with any more traffic - This is a 'B' Road after all.</p> <p>I am disabled and have been waiting 3 months for a disabled parking bay as I am never able to park near my home.</p> <p>There is a proposal to access the Carrs Industrial Estate North Extension via land adjacent to 116 Hud Hey Road, where there is currently a small car park where up to 50% of the residents have parked for nearly 30 years, they had this land surfaced with tarmac and continue to attend it, surely they must have a claim to using this car park after all this time? Should it be lost there will be nowhere for them to park at all, further exacerbating the already congested parking north of the motorway bridge on Hud Hey Road.</p> <p>The problem is the same on Rising Bridge Road, traffic is so busy with the school and the offices at the far end of Rising Bridge road, we are in constant misery with traffic and parking</p> <p>2 The fields identified within EMP2.23 belonging to the Barnes family have been traditionally farmed for over 60 Years. No pesticides, No chemicals or heavy machinery, in fact the fields have been left this year and not cut for Hay - there must therefore be a fair degree of wildlife and also the natural habitat for wildlife to flourish which we must conserve for the future</p> <p>3 Flooding - There is a culvert running under the houses on Hud Hey Road, when there is major rainfall water running down the road from all the farms on Haslingden Old Road causes this culvert to overflow and flood many cellars on the road, if we had more major concreting of greenfield areas would this issue become far worse?</p> <p>4 Is there really a need for more new warehousing within the areas identified? We need a feasibility study in order to identify within the borough as to what is actually currently available and not being used and which would benefit from being reconfigured to a more appropriate use</p> <p>In conclusion surely there must be other brownfield and existing sites within the Haslingden area that would be more suitable to this type of development. Please look again for more sustainable sites and leave what little greenfield we have well alone.</p> <p>Haslingden is blighted by fast food take a ways, bins and warehousing and now the potential decimation of the countryside, this must not be allowed to happen</p>

1643	Terry	Waterhouse			Object	<p>I object to the development of Industrial Units for the following reasons.</p> <p>1. As of 06 Oct 2017 there are a minimum of 71 units available for sale or rent in Rossendale, almost all offering below market rental. This demonstrates that we do not need more units that will lay empty.</p> <p>You will know that the LCC units adjacent to Stonefold School were built using EU funds (UK taxpayers) and were unoccupied for almost 5 years. Only through favourable rent free periods and below market rent have these units been able to be let. Had these been leased at market rates commensurate with the property size and condition, I suggest that they would still be empty.</p> <p>There is currently more than 120,000sq ft of commercial unit space unoccupied throughout Rossendale, more than 3 football pitches.</p> <p>No account has been taken of the availability of units in adjacent authorities. The local Plan has taken no account of developments in neighbouring authorities. Hyndburn, Bury, Burnley and Rochdale Councils have a significant amount of industrial units available and any plan to allow development should take account of the adjacent supply.</p> <p>The clamour to develop more units seems to be based on demand, which is clearly not there, and i suggest that this is about spending money (EU or should I say UK taxpayers money) that could be better invested in other infrastructure projects such as road improvements.</p> <p>2. The land adjacent to Hollingate Farm forms part of a natural boundary between the Haslingden bypass and the domestic properties on Rising Bridge Road. This area is clearly residential and can in no way be considered 'Industrial'. Rising Bridge Road is narrow and is used as a rat run for cars, HGVs and other traffic to avoid the roundabout at Rising Bridge. The road is not suitable for increased traffic and already displays weight limitations that are ignored. The 30mph limit is not adequate due to the narrowness and young children playing. Cars are always in excess of speed limits and often more than 50mph despite the school hazard lights displaying.</p> <p>3. Stonefold School backs on to the land and it is inconceivable that industrial units will be allowed to be built next to a junior school. There are considerable dangers with increased traffic, machinery, chemicals and other goods that will inevitably contribute to injury and loss of life.</p>		
1820	Kelly	Holt	Lancashire County Council		Not Applicable	<p>EMP2.38 – Direct access onto Blackburn Road appears unachievable due to the proximity to the A56 roundabout and the visibility splay requirements. Major earth moving would also be required which is a concern at this location. Access onto Rising Bridge Road is available however the route to Blackburn Road is a concern with heavy on-street residential and staff parking. The increase in HGV movements would be a concern.</p>

1465	SEE AGENT DETAILS	SEE AGENT DETAILS	B AND E BOYS LIMITED		Object	<p>SITE SHOULD BE ALLOCATED FOR RESIDENTIAL USE WITHIN THE EMERGING LOCAL PLAN. PLEASE SEE ACCOMPANYING STATEMENT FOR DETAILS.</p> <p>1. INTRODUCTION</p> <p>1.1 Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. Following the adoption of the Local Plan Part 1: Core Strategy in November 2011, RBC commenced work on its Local Plan Part 2: Site Allocations and Development Management Policies. However, this document was halted in favour of the preparation of a full new Local Plan which has now been issued for consultation from Monday 24 July to Monday 9 October 2017. This edition of the Local Plan comprises the Regulation 18 consultation document which sets out the Council's preferred approach to future housing, employment and leisure uses over the Plan period. Once adopted the Local Plan will replace the Core Strategy (2011).</p> <p>1.2 Within the draft Local Plan, sites have been proposed for development (for housing or employment use), for environmental protection and for recreation uses, as identified on the Draft Policies Map. Changes are also proposed to the existing Green Belt and the Urban Boundary. Also, four additional Conservation Areas, along with an extension to an existing Conservation Area, are being considered.</p> <p>1.3 Documents included in the Draft Local Plan Consultation are the Draft Local Plan (Written Statement), the accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan.</p> <p>1.4 The evidence base which supports the Local Plan comprises the following documents:</p> <ul style="list-style-type: none"> • Strategic Housing Land Availability Assessment (SHLAA) (2017). • Strategic Housing Market Assessment (SHMA) (2017). • Employment Land Review (2017). • Green Belt Review (2016). • Environmental Network Study (2017). • Gypsies and Travellers Accommodation Assessment (2016). • Town Centre, Retail, Leisure and Tourism Study (2017). • Playing Pitch Strategy (2016) (previously published). • Strategic Flood Risk Assessment (SFRA) (2016). • Local Plan Viability Study 2015 and Updated Viability Study in relation to Affordable Housing (2017). • Landscape Study (2015) (previously published). • Landscape capacity study for wind energy developments in the South Pennines (2014) (previously published). • Heritage Impact Assessment of Housing Sites (2017). <p>1.5 In addition to the above documents, the Council's Sustainability Appraisal, although not strictly</p>	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>evidence, has informed the development of the draft policies.</p> <p>BACKGROUND</p> <p>1.6 Hourigan Connolly is instructed by B&E Boys Ltd to review and comment on the emerging Local Plan in relation to the site known as Toll Bar Business Park on Newchurch Road, Stacksteads. The site is allocated for employment uses under draft Policy Reference EMP2.40, and this Representation sets out why the Council should allocate the land for housing.</p> <p>1.7 A title plan is provided at Appendix 1 to indicate the location of the site and to demonstrate that the site is within a single ownership, however Figure 1.1 below is also provided for assistance to illustrate the location of the site in Stacksteads Ward:</p> <p>Figure 1.1 Location of subject site, Toll Bar Business Park, Newchurch Road (circled in red).</p> <p>1.8 The 0.8 ha site lies on the southern side of Newchurch Road, close to the junction with Booth Road, with vehicular access taken directly from this main road. The site is located approximately 1.6 km from the centre of Bacup town and comprises a large five storey mill building, smaller mill building additions, newer single and two storey industrial buildings, with large areas of hardstanding which are used for storage and car parking. The site is occupied in part by existing commercial businesses, but much of the floorspace in the upper storeys of the large mill building are unoccupied and have remained vacant for a long period of time due to the condition of the building and its suitability for modern-day commercial practices.</p> <p>1.9 The owners of the site wish to promote the site for a housing allocation in the emerging Local Plan and this Representation will demonstrate its suitability for this use as the site is located in the Urban Boundary, in a sustainable location, and on a main arterial route in the Borough.</p> <p>SCOPE</p> <p>1.10 In preparing these submissions we have reviewed the documents mentioned above as well as other documents forming the evidence base that underpins the emerging Local Plan.</p> <p>1.11 This document follows earlier Representations and discussions made by Mr Brian Boys as part of previous consultation stages in the Local Plan process, albeit that parts of the Local Plan were subsequently halted in favour of a complete new Local Plan.</p> <p>OVERVIEW</p> <p>1.12 The starting point for consideration of the emerging Local Plan document is the well-established principle embodied in Paragraph 158 of the National Planning Policy Framework (hereafter referred to as the Framework) that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>2. LEGISLATIVE & POLICY CONTEXT</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>INTRODUCTION</p> <p>2.1 In this Chapter we set out the relevant legislative and policy context before going on to examine the Council's Local Plan document.</p> <p>LEGISLATIVE CONTEXT</p> <p>2.2 Part 2 of the Planning & Compulsory Purchase Act 2004 (As amended) deals with Local Development.</p> <p>2.3 The RBC Local Plan is being brought forward following changes to the Development Plan making system in England which are set out in the Localism Act 2011. Part 6 Sections 109 – 144 of the Localism Act deal with Planning.</p> <p>2.4 Following revocation of the North West Regional Strategy (RS) in May 2013, Council's such as RBC will set their own housing and employment targets against objectively assessed needs.</p> <p>2.5 The Town & Country Planning (Local Planning) (England) Regulations (SI No. 767) came into force on 6 April 2012 and guide the preparation of Local Plans.</p> <p>MINISTERIAL STATEMENTS</p> <p>2.6 In his Written Statement of 23 March 2012 the then Minister for Decentralisation and Cities the Rt. Hon Greg Clark MP referred to a pressing need to ensure that the planning system does everything it can to help England secure a swift return to economic growth. He urged local planning authorities to make every effort to identify and meet the housing, business and other development needs of their areas.</p> <p>2.7 The National Planning Policy Framework (hereafter referred to as the Framework) (see below) was subsequently published on 27 March 2012 and urges local planning authorities to boost significantly the supply of housing.</p> <p>2.8 In his Written Statement of 6 September 2012 the Secretary of State for Communities and Local Government the Rt. Hon Eric Pickles MP noted an increase in house building starts between 2009 and 2011 but said that there was far more to do to provide homes to meet Britain's demographic needs and to help generate local economic growth.</p> <p>2.9 There can be no doubt that house building is a driver of the local economy besides providing homes for local people.</p> <p>FRAMEWORK REQUIREMENTS</p> <p>2.10 Paragraphs 150 to 185 of the Framework deal with Plan-making.</p> <p>2.11 The importance of the Local Plan is identified as the key to delivering sustainable development and a cornerstone of the development management process (Paragraph 150 refers).</p> <p>2.12 The requirement for Local Plans to be prepared with the objective of contributing to the achievement of sustainable development is embodied in Paragraph 151 of the Framework and stems from the requirements set out under Section 39(2) of the Planning & Compulsory Purchase Act 2004. Local Plans must also be consistent with the principles and policies of the Framework.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>2.13 Paragraph 152 of the Framework requires local planning authorities to seek opportunities to achieve and secure net gains for each of the three dimensions of sustainable development.</p> <p>These three dimensions are defined in Paragraph 7 of the framework as economic, social and environmental. According to Paragraph 7 of the Framework these dimensions give rise to the need for the planning system to perform a number of roles:</p> <ul style="list-style-type: none"> • “an economic role – contributing to building a strong, responsive and competitive economy, by ensuring that sufficient land of the right type is available in the right places and at the right time to support growth and innovation; and by identifying and coordinating development requirements, including the provision of infrastructure; • a social role – supporting strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and future generations; and by creating a high quality built environment, with accessible local services that reflect the community’s needs and support its health, social and cultural well-being; and • an environmental role – contributing to protecting and enhancing our natural, built and historic environment; and, as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change including moving to a low carbon economy”. <p>2.14 Paragraph 8 of the Framework states that the roles mentioned in Paragraph 7 should not be undertaken in isolation, because they are mutually dependant and should be sought jointly and simultaneously through the planning system.</p> <p>2.15 The importance of Local Plans taking into account local circumstances is highlighted in Paragraph 10 of the Framework to ensure that they respond to the different opportunities for achieving sustainable development.</p> <p>2.16 Paragraph 152 of the Framework goes on to deal with adverse impacts on any of the dimensions of sustainable development and sets out three tests:</p> <ul style="list-style-type: none"> • Firstly significant adverse impacts on any of the dimensions should be avoided, and where possible, alternative options which reduce or eliminate such impacts should be pursued. • Where adverse impacts are unavoidable, measures to mitigate the impact should be considered. • Where adequate mitigation measures are not possible, compensatory measures may be appropriate. <p>2.17 Paragraph 154 of the Framework requires Local Plans to be aspirational but realistic and address the spatial implications of economic, social and environmental change.</p> <p>2.18 The requirement for local planning authorities to set out strategic priorities for their areas in their Local Plans is established in Paragraph 156 of</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>the Framework. Such policies are required to deliver:</p> <ul style="list-style-type: none"> • “the homes and jobs needed in the area; • the provision of retail, leisure and other commercial development; • the provision of infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat); • the provision of health, security, community and cultural infrastructure and other local facilities; and • climate change mitigation and adaptation, conservation and enhancement of the natural and historic environment, including landscape”. <p>2.19 The importance of using a robust and proportionate evidence base for Plan making is dealt with in Paragraphs 158 to 177 of the Framework. Paragraph 158 is of particular relevance to these submissions: “Each local planning authority should ensure that the Local Plan is based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. Local planning authorities should ensure that their assessment of and strategies for housing, employment and other uses are integrated, and that they take full account of relevant market and economic signals”.</p> <p>2.20 A number of topics are discussed and for the purpose of this document we will focus on housing (Paragraph 159), business (Paragraphs 160 – 161), infrastructure (Paragraph 162) and environment (Paragraphs 165 – 168). HOUSING</p> <p>2.21 Paragraph 159 outlines the importance of preparing a Strategic Housing Market Assessment (SHMA) to assess full housing needs and a Strategic Housing Land Availability Assessment (SHLAA) to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period.</p> <p>2.22 Of particular importance is the requirement for the SHMA to identify the scale and mix of housing and the range of tenures that the local population is likely to need over the Plan period which:</p> <ul style="list-style-type: none"> • “meets household and population projections, taking account of migration and demographic change; • addresses the need for all types of housing, including affordable housing and the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes); and • caters for housing demand and the scale of housing supply necessary to meet this demand”. <p>BUSINESS</p> <p>2.23 Paragraph 160 of the Framework outlines the importance of local planning authorities having a clear understanding (from a robust evidence base) of business needs within the economic markets operating in and across</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>their area.</p> <p>2.24 Paragraph 161 of the Framework establishes the importance of understanding business needs (both quantitative and qualitative) and ensuring that sufficient suitable land (both existing and future) is available to meet needs.</p> <p>INFRASTRUCTURE</p> <p>2.25 An objective of government policy is the delivery of growth. Central to this objective is ensuring that infrastructure has the capacity or can be enhanced to deliver growth. A number of factors are outlined in Paragraph 162 of the Framework which need to be considered at a local level including transport, water, foul drainage, energy, telecommunications, waste, health, social care, education, flood risk and coastal change management.</p> <p>ENVIRONMENT</p> <p>2.26 Paragraphs 165 to 168 of the Framework deal with environmental matters and set out the requirement that a sustainability appraisal which meets the requirements of the European Directive on strategic environmental assessment should be an integral part of the plan preparation process, and should consider all the likely significant effects on the environment, economic and social factors.</p> <p>SOUNDNESS</p> <p>2.27 Paragraph 182 of the Framework deals with the examination of Local Plans. The Local Plan will be examined by an independent inspector whose role is to assess whether the plan has been prepared in accordance with the Duty to Cooperate, legal and procedural requirements, and whether it is sound. Local planning authorities are required to submit Plans for examination which they consider “sound” – namely that they are:</p> <ul style="list-style-type: none"> • “Positively prepared – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development; • Justified – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; • Effective – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and • Consistent with national policy – the plan should enable the delivery of sustainable development in accordance with the policies in the Framework”. <p>NATIONAL PLANNING PRACTICE GUIDANCE – LAUNCHED 6 MARCH 2014</p> <p>2.28 On 28 August 2013 the government launched its draft National Planning Practice Guidance (NPPG). The draft NPPG was subject to consultation for 6</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>weeks and was launched on 6 March in its final form. The NPPG replaces some 230 planning guidance documents but will result in no amendments to the Framework.</p> <p>2.29 The Housing and Economic Land Availability Assessment section of the NPPG is worthy of specific mention in relation to this Report, in particular paragraph 030 (reference ID: 3-030-20140306 confirms): “Housing requirement figures in up-to-date adopted Local Plans should be used as the starting point for calculating the five year supply. Considerable weight should be given to the housing requirement figures in adopted Local Plans, which have successfully passed through the examination process, unless significant new evidence comes to light. It should be borne in mind that evidence which dates back several years, such as that drawn from revoked regional strategies, may not adequately reflect current needs.”</p> <p>2.30 The NPPG deals with deliverable sites as follows at paragraph 031 (Reference ID 3-031-20140306): “WHAT CONSTITUTES A ‘DELIVERABLE SITE’ IN THE CONTEXT OF HOUSING POLICY? Deliverable sites for housing could include those that are allocated for housing in the development plan and sites with planning permission (outline or full that have not been implemented) unless there is clear evidence that schemes will not be implemented within five years. However, planning permission or allocation in a development plan is not a prerequisite for a site being deliverable in terms of the five-year supply. Local planning authorities will need to provide robust, up to date evidence to support the deliverability of sites, ensuring that their judgments on deliverability are clearly and transparently set out. If there are no significant constraints (e.g. infrastructure) to overcome such as infrastructure sites not allocated within a development plan or without planning permission can be considered capable of being delivered within a five-year timeframe. The size of sites will also be an important factor in identifying whether a housing site is deliverable within the first 5 years. Plan makers will need to consider the time it will take to commence development on site and build out rates to ensure a robust five-year housing supply.”</p> <p>2.31 In regards to how often a Local Plan should be reviewed, the NPPG states at paragraph 008 of the section titled ‘Local Plans’ (Reference ID 12-008-20140306) that: “HOW OFTEN SHOULD A LOCAL PLAN BE REVIEWED? To be effective plans need to be kept up-to-date. Policies will age at different rates depending on local circumstances, and the local planning authority should review the relevance of the Local Plan at regular intervals to assess whether some or all of it may need updating. Most Local Plans are likely to require updating in whole or in part at least every five years. Reviews should</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>be proportionate to the issues in hand. Local Plans may be found sound conditional upon a review in whole or in part within five years of the date of adoption.”</p> <p>GOVERNMENT CONSULTATION ON STANDARDISED METHODOLOGY FOR HOUSING NEED (SEPTEMBER 2017)</p> <p>2.32 On 14 September 2017 the Government announced a consultation on a Standardised Methodology for Assessing Local Housing Need, the basis of which was included in the White Paper (February 2017) and is aimed at helping local authorities plan for the right homes in the right places.</p> <p>2.33 As the consultation document sets out, the root cause of the dysfunctional housing market in the UK is that for too long we have not built enough homes. The Government is aiming to deliver 1.5 million new homes between 2015-2022 and is attempting to create a system which is clear and transparent for local authorities. The new methodology will apply to all future plans, with the exception of those which have been submitted or will be submitted before 31 March 2018.</p> <p>2.34 The standard methodology is principally aimed at tackling problems of affordability as the proposed formula simply uplifts the household projections figure, based on market signals.</p> <p>2.35 For Rossendale the proposed standard methodology has little impact on the annual housing requirement (which, it is suggested should be 212 rather than the current 265 dwellings per annum). However, it should be noted that the proposed standard methodology is currently on consultation and may therefore be subject to changes in due course. It is also worth noting the heavy speculation that the proposed methodology focuses on growth in the south east to the detriment of other parts of the UK, in particular the north west.</p> <p>2.36 Crucially the link between housing growth and economic activity must be recognised and therefore the current consultation is considered to be relevant to this Representation in relation to land at Toll Bar Business Centre.</p> <p>3. POLICY EMP2: EMPLOYMENT SITE ALLOCATIONS</p> <p>INTRODUCTION</p> <p>3.1 Draft Policy EMP2: Employment Site Allocations identifies all sites within the Borough which have been allocated for employment development. For each site allocated, site area, available area for development and proposed use class is set out within the allocations table.</p> <p>3.2 Toll Bar Business Centre is identified as Employment Allocation Ref. EMP2.40 as shown below. It is classed as an ‘existing employment’ site and is considered suitable for B1, B2 and B8 uses.</p> <p>Fig. 3.1 Extract from Site Allocations Table (Policy EMP2)</p> <p>3.3 The proposed allocation is identified in Figure 3.2, as indicated by the red arrow.</p> <p>Fig. 3.2 Extract from Draft Proposals Map</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>3.4 We support the aims of the Local Plan to identify key development sites which are central to the delivery of the overall strategy for new and existing employment assets and the Borough's economy. Crucial to the economy is the delivery of appropriate uses in the right locations.</p> <p>3.5 The Toll Bar Business Centre site is in single land ownership, being solely within the ownership of B&E Boys Limited. The site is located on Newchurch Road, the main through-route between Rawtenstall and Bacup. The site is dominated by a five storey mill building which is positioned at the back of the pavement on Newchurch Road. There are a smaller number of car parking space located directly off Newchurch Road in front of the building. The frontage of the site extends along Newchurch Road where the mill building reduces in height to four stories to the south-east, and to two stories in the north-west corner.</p> <p>3.6 Part of the main existing mill building is a Grade II Listed Building. The Listing Entry is contained in Appendix 2. The mill, known in the Listing Entry as 'Stacksteads Mill' was listed in 1984 and was built by the brothers Robery and John Munn. The mill was originally a cotton spinning mill dating to 1833. The Listing Entry makes it clear that the main mill building, the former engine house at the west end and the extension to the mill in the north west corner form part of the Listed Building, with all other built form (i.e. the former weaving sheds, modern office block at the east end, and the extension at the south west corner) not included in the entry.</p> <p>3.7 Vehicular access is taken directly from Newchurch Road adjacent to the two storey building in the northwest corner of the site and opens up to a large area of hardstanding located to the rear of the buildings on site. Access is restrictive due to the orientation of existing buildings on site -vehicular access is a prohibitive feature to attracting prospective commercial tenants.</p> <p>3.8 Toll Bar Business Centre is only partly occupied by commercial and industrial operators and employers. In short, the site does not operate on a financially viable basis, but the land owner is committed to retaining those existing tenants for the time being.</p> <p>3.9 Given the nature of the premises and the current occupation levels at Toll Bar Business Centre, we do not consider that the proposed allocation for B1, B2 and B8 uses will secure viable use and investment in the site going forward. As referred to in the Policy Explanation, much of the committed supply of employment sites is not considered to be fit for purpose, and is often in the wrong location with sites to the west of the Borough being more attractive due to better links to the A56 and M66.</p> <p>3.10 To this end we consider that it would be more appropriate for the allocation for employment uses to be removed and for the site to be allocated for residential development. The site comprises brownfield land in a sustainable location within the urban area and is therefore considered to be entirely appropriate to contribute towards the Borough's housing need over</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>the plan period. This is considered in further detail in Sections 4 and 5 of this Representation.</p> <p>PROPOSED MODIFICATION</p> <p>3.11 The Council is respectfully requested to remove the current employment allocation EMP2.40 and allocate the site for residential development under draft Policy HS2. Residential development in this location is considered appropriate in order to facilitate the viable regeneration of the site in part or whole.</p> <p>3.12 We contend that this would properly reflect Paragraph 22 of the Framework which seeks to avoid the long term protection of employment uses where there is no reasonable prospect of a site being used for that purpose. In such circumstances, more appropriate and viable uses, such as housing, should be acceptable.</p> <p>4. PROPOSED HOUSING ALLOCATION: TOLL BAR BUSINESS PARK, NEWCHURCH ROAD, STACKSTEADS SITE CONTEXT</p> <p>4.1 The site at Toll Bar Business Park represents an opportunity to deliver truly sustainable residential development. As already highlighted, the site is partly occupied by a number of commercial businesses located in the various buildings spread across the site, however the upper floors of the main, large mill building have been unoccupied for many years despite constant marketing.</p> <p>4.2 The site is in single land ownership, being solely within the ownership of B&E Boys Limited. The extent of the area we request the Council allocate for housing is edged in red on the Title Plan contained in Appendix 1. As previously identified, the site is located on Newchurch Road, the main through-route between Stacksteads and Bacup. It is dominated by a five storey mill building which is positioned at the back of the pavement on Newchurch Road. Parking is limited at the site.</p> <p>4.3 Part of the main existing mill building is a Grade II Listed Building. Access is restricted due to the orientation of existing buildings on site - vehicular access is a prohibitive feature to attracting prospective commercial tenants.</p> <p>4.4 In terms of topography, the site is relatively flat and there is a small number of low quality trees within the site boundaries. There is also a culvert which runs through the site in a north east to south-westerly direction and links into the River Irwell which is located south of the site.</p> <p>DRAFT POLICY HS1 – MEETING ROSSENDALE’S HOUSING REQUIREMENT</p> <p>4.5 Draft Policy HS1 sets out the Council’s approach to ‘Meeting Rossendale’s Housing Requirement’. It states that at least 4,000 additional dwellings will be provided over the plan period (2019-2034), in addition to addressing a prior underprovision of 425 dwellings within the first five years of the plan. The draft policy also seeks to deliver over 20% of new dwellings on previously developed land.</p> <p>4.6 In this context, land at Toll Bar Business Park could make an important</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>contribution towards meeting the Borough's residential development needs. In particular, as it is recognised within the explanatory text that brownfield sites within the urban area are limited.</p> <p>SUSTAINABLE HOUSING ALLOCATION</p> <p>4.7 The site is located in a very sustainable location, being positioned on a main bus route through the Rossendale Valley and being within close proximity to local services and amenities in Stacksteads and nearby Bacup (which is circa 1.6 km away), including, within walking distance, a Primary School. Adjacent to the site is a public house (the Rose 'N' Bowl), a bowling green, and playing fields at Stacksteads Recreation Ground. The site is adjacent to residential properties located on Commercial Street, Stuart Avenue and Miles Avenue. In this regard, the residential redevelopment of the site would be complementary to existing surrounding uses.</p> <p>4.8 Any residential redevelopment of the site could include the retention, upgrade and conversion of the Listed Building, subject to the financial viability of undertaking such works.</p> <p>4.9 However, the site may more realistically be capable of complete redevelopment.</p> <p>4.10 It has already been described how the site is only partly occupied by commercial and industrial operators and employers. In short, the site does not operate on a financially viable basis, but the land owner is committed to retaining those existing tenants for the time being. In the meanwhile, this Representation is submitted at this key stage in the Local Plan process to promote the allocation of the site for housing.</p> <p>4.11 The Representation presents an opportunity to contribute to the delivery of sustainable housing over the next 15 years, i.e. during the current Plan period, or beyond. The subject site comprises previously developed land, within the Urban Boundary, in a sustainable location and therefore would accord with the principles of sustainable development as set out in the Framework, for which there is a presumption in favour of.</p> <p>4.12 To conclude, for the reasons discussed above, in our view the site at Toll Bar Business Park should be allocated for housing in the emerging Local Plan.</p> <p>NEIGHBOURHOOD CENTRE</p> <p>4.13 In addition to the site being promoted for a housing allocation, we wish to oppose the designation of part of the site being located within a Neighbourhood Centre.</p> <p>4.14 The draft Proposals Map for Stacksteads Ward shows that part of the subject site, that part which fronts onto Newchurch Road, is included in a Neighbourhood Centre. The precise boundaries of the Neighbourhood Centre are not clear on the draft Proposals Map, with no 'Inset Maps' provided which delineate the true extent of the proposed Neighbourhood Centre in relation to the site.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>4.15 Clarification is sought from the Council on this point, but in any event, we wish to oppose the proposed designation of any part of the subject site within the Neighbourhood Centre boundary, for the reasons set out below.</p> <p>4.16 According to the adopted Proposals Map (footnote: That being the saved policies from the Local Plan (1995) as shown on the Proposals Map and as amended by the adoption of the Core Strategy in November 2011) of the development Plan the site is not currently included in any Town Centre boundary. Neighbourhood Centres do not feature on the Proposals Map, but are included in the Core Strategy where Policy 11 (Retail and other Town Centre Uses) sets out the retail hierarchy in the Borough</p> <p>4.17 Paragraph 248 of Chapter 5 of the Core Strategy notes that the key town centre, district centre and local centre boundaries have been redefined in the context of PPS4 (which set out the national retail planning policy at the time the Core Strategy was adopted, but has since been superseded by the Framework). However, Paragraph 248 further states that:</p> <p>“No boundaries have been set for the smaller neighbourhood centres.”</p> <p>4.18 Chapter 3 of the Draft Local Plan relates to Retail, with draft Policy R1: Retail and Other Town Centre Uses confirming that Neighbourhood Centre boundaries are identified on the Proposals Maps for four areas, including Stacksteads. The Policy states that development proposals will be expected to maintain or strengthen the retail offer and vitality and viability of neighbourhood centres. The Policy further states that:</p> <p>“Proposals that require planning permission which would result in the loss of A1 uses in all levels of retail centre as defined in Core Strategy Policy 11 will only be supported where:</p> <ul style="list-style-type: none"> • It would make a positive contribution to the vitality and viability of the relevant centre; • It would not result in a significant break in retail frontage or lead to the loss of retail floorspace at a scale that would be harmful to the shopping function of the centre or which would reduce the ability of local communities to meet their day-to-day needs within the centre; • It is compatible with a retail area and would maintain an active frontage and be immediately accessible to the public from the street; and • There would be no significant adverse impacts on the character of the area, the amenity of local residents, road safety, car parking or traffic flows. <p>4.19 Some of the units within the proposed Neighbourhood Centre at the subject site are used for retail purposes serving the general public. However, the current retailers operate from dated premises which lack modern facilities, lack safe car parking areas, and are difficult to access for deliveries and other servicing purposes.</p> <p>4.20 The loss of these units from this part of the Stacksteads Neighbourhood</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.40	Further comment
						<p>Centre would not harm the objectives of Policy 11 (in the Core Strategy) or draft Policy R1 as the loss of these inadequate retail premises would not harm the shopping function of the centre, nor would it reduce the ability of the local communities to meet their day-to-day needs within the centre.</p> <p>4.21 The proposed Stacksteads Neighbourhood Centre designation extends along Newchurch Road beyond the subject site boundaries, with a natural break in this linear form at the subject site - to the west adjacent to the Rose 'N' Bowl public house (where the Toll Bar building gable end meets the public right of way between the subject site and the public house), and to the east at Commercial Street.</p> <p>4.22 To that end, the Neighbourhood Centre designation should not extend into the boundaries of the subject site to enable the full and proper redevelopment of the subject site for alternative uses other than retail.</p> <p>ADDITIONAL STUDIES</p> <p>4.23 Studies are ongoing in relation to the listed building, flood risk and marketing of the existing premises and we reserve the right to submit these at a later stage of the Local Plan preparation process.</p> <p>5. CONCLUSIONS</p> <p>5.1 The starting point for consideration of the Council's Local Plan is the well-established principle embodied in Paragraph 158 of the Framework that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>5.2 The Framework is clear at Paragraph 22 that planning policies should avoid the long-term protection of sites allocated for employment use where there is no reasonable prospect of a site being used for that purpose. Paragraph 160 outlines the importance of local planning authorities having a clear understanding of business needs within the economic markets operating in and across their area.</p> <p>5.3 It has been highlighted in this Representation that the Toll Bar Business Centre site is no longer appealing to modern businesses. As a result, and in order to future-proof the site, removal of the proposed employment allocation is recommended, and a residential allocation should be considered in order to promote sustainable residential development. Land at Toll Bar Business Centre has an opportunity to contribute to the delivery of housing over the Plan period on a site which comprises previously developed land within the Urban Boundary.</p> <p>5.4 In conclusion, Local Plan Policy EMP2 should be modified to remove reference to the Forest Mill site to allow a more flexible approach for redevelopment of the site over the plan period. Further, the site should be considered for allocation under draft Policy HS2 for residential development.</p> <p>Appendix 1</p>

SEE SUBMITTED REPRESENTATION REPORT FOR FULL DETAILS.</p> <p>Email received 11/10/2017:</p> <p>1. INTRODUCTION</p> <p>BRIEF</p> <p>1.1 Hourigan Connolly is instructed by B&E Boys Ltd in respect of its land interests at Townsend Fold, Rawtenstall – also known as Riverside Business Park. The land in question is identified in Figure 1.1 below and is hereafter referred to as “the site”.</p> <p>Figure 1.1 – Land at Townsend Fold, Rawtenstall – not to scale.</p> <p>1.2 A full Title Plan is included at Appendix 1. The Riverside Business Park site (the former Mill site) falls within the urban boundary with the remainder of the site falling within the Green Belt. The latest iteration of the Council’s Green Belt Assessment refers to that part of the site within the Green Belt as Parcel Ref. 19.</p> <p>1.3 Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. Following the adoption of the Local Plan Part 1: Core Strategy in November 2011, RBC commenced work on its Local Plan Part 2: Site Allocations and Development Management Policies. However, this document was halted in favour of the preparation of a full new Local Plan which has now been issued for consultation from Monday 24 July to Monday 9 October 2017. This edition of the Local Plan comprises the Regulation 18 consultation document which sets out the Council’s preferred approach to future housing, employment and leisure uses over the Plan period. Once adopted the Local Plan will replace the Core Strategy (2011).</p> <p>1.4 Within the draft Local Plan, sites have been proposed for development (for housing or employment use), for environmental protection and for recreation uses, as identified on the Draft Policies Map. Changes are also proposed to the existing Green Belt and the Urban Boundary.</p> <p>Also, four additional Conservation Areas, along with an extension to an existing Conservation Area, are being considered.</p> <p>1.5 Documents included in the Draft Local Plan Consultation are the Draft Local Plan (Written Statement), the accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan.</p> <p>1.6 The evidence base which supports the Local Plan comprises the following documents:</p> <ul style="list-style-type: none"> • Strategic Housing Land Availability Assessment (SHLAA) (2017). • Strategic Housing Market Assessment (SHMA) (2017). • Employment Land Review (2017). • Green Belt Review (2016). • Environmental Network Study (2017). 	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<ul style="list-style-type: none"> • Gypsies and Travellers Accommodation Assessment (2016). • Town Centre, Retail, Leisure and Tourism Study (2017). • Playing Pitch Strategy (2016) (previously published). • Strategic Flood Risk Assessment (SFRA) (2016). • Local Plan Viability Study 2015 and Updated Viability Study in relation to Affordable Housing (2017). • Landscape Study (2015) (previously published). • Landscape capacity study for wind energy developments in the South Pennines (2014) (previously published). • Heritage Impact Assessment of Housing Sites (2017). <p>1.7 In addition to the above documents, the Council's Sustainability Appraisal, although not strictly evidence, has informed the development of the draft policies.</p> <p>BACKGROUND</p> <p>1.8 Hourigan Connolly is instructed to review and comment on the emerging Local Plan in relation to the site known as Townsend Fold, Holme Lane in Rawtenstall. Part of the site is allocated for employment uses under draft Policy Reference EMP2.50 (Riverside Business Park) with the remainder of the site falling within the Green Belt, and this Representation sets out why the Council should consider amending the Green Belt boundary in this location in order to accommodate an expanding and successful employment site.</p> <p>1.9 B&E Boys supports the allocation of the Riverside Business Park site for employment uses as identified in the draft Local Plan. The remainder of this Representation therefore focuses on that part of the site which is currently in the Green Belt.</p> <p>SCOPE</p> <p>1.10 In preparing these submissions we have reviewed the documents mentioned above as well as other documents forming the evidence base that underpins the emerging Local Plan.</p> <p>1.11 This document follows earlier Representations and discussions made by Mr Brian Boys as part of previous consultation stages in the Local Plan process, albeit that parts of the Local Plan were subsequently halted in favour of a complete new Local Plan.</p> <p>1.12 This representation is structured as follows:</p> <ul style="list-style-type: none"> • Legislative and Policy Context. • The Site. • Green Belt Review. • Proposed Extended Employment Allocation. • Conclusions. <p>2. LEGISLATIVE & POLICY CONTEXT</p> <p>INTRODUCTION</p> <p>2.1 In this Chapter we set out the relevant legislative and policy context before going on to examine the Council's Local Plan document.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>LEGISLATIVE CONTEXT</p> <p>2.2 Part 2 of the Planning & Compulsory Purchase Act 2004 (As amended) deals with Local Development.</p> <p>2.3 The RBC Local Plan is being brought forward following changes to the Development Plan making system in England which are set out in the Localism Act 2011. Part 6 Sections 109 – 144 of the Localism Act deal with Planning.</p> <p>2.4 Following revocation of the North West Regional Strategy (RS) in May 2013, Council's such as RBC will set their own housing and employment targets against objectively assessed needs.</p> <p>2.5 The Town & Country Planning (Local Planning) (England) Regulations (SI No. 767) came into force on 6 April 2012 and guide the preparation of Local Plans.</p> <p>MINISTERIAL STATEMENTS</p> <p>2.6 In his Written Statement of 23 March 2012 the then Minister for Decentralisation and Cities the Rt. Hon Greg Clark MP referred to a pressing need to ensure that the planning system does everything it can to help England secure a swift return to economic growth. He urged local planning authorities to make every effort to identify and meet the housing, business and other development needs of their areas.</p> <p>2.7 The National Planning Policy Framework (hereafter referred to as the Framework) (see below) was subsequently published on 27 March 2012 and urges local planning authorities to boost significantly the supply of housing.</p> <p>2.8 In his Written Statement of 6 September 2012 the Secretary of State for Communities and Local Government the Rt. Hon Eric Pickles MP noted an increase in house building starts between 2009 and 2011 but said that there was far more to do to provide homes to meet Britain's demographic needs and to help generate local economic growth.</p> <p>2.9 There can be no doubt that house building is a driver of the local economy besides providing homes for local people.</p> <p>FRAMEWORK REQUIREMENTS</p> <p>2.10 Paragraphs 150 to 185 of the Framework deal with Plan-making.</p> <p>2.11 The importance of the Local Plan is identified as the key to delivering sustainable development and a cornerstone of the development management process (Paragraph 150 refers).</p> <p>2.12 The requirement for Local Plans to be prepared with the objective of contributing to the achievement of sustainable development is embodied in Paragraph 151 of the Framework and stems from the requirements set out under Section 39(2) of the Planning & Compulsory Purchase Act 2004. Local Plans must also be consistent with the principles and policies of the Framework.</p> <p>2.13 Paragraph 152 of the Framework requires local planning authorities to seek opportunities to achieve and secure net gains for each of the three dimensions of sustainable development.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>These three dimensions are defined in Paragraph 7 of the framework as economic, social and environmental. According to Paragraph 7 of the Framework these dimensions give rise to the need for the planning system to perform a number of roles:</p> <ul style="list-style-type: none"> • “an economic role – contributing to building a strong, responsive and competitive economy, by ensuring that sufficient land of the right type is available in the right places and at the right time to support growth and innovation; and by identifying and coordinating development requirements, including the provision of infrastructure; • a social role – supporting strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and future generations; and by creating a high quality built environment, with accessible local services that reflect the community’s needs and support its health, social and cultural well-being; and • an environmental role – contributing to protecting and enhancing our natural, built and historic environment; and, as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change including moving to a low carbon economy”. <p>2.14 Paragraph 8 of the Framework states that the roles mentioned in Paragraph 7 should not be undertaken in isolation, because they are mutually dependant and should be sought jointly and simultaneously through the planning system.</p> <p>2.15 The importance of Local Plans taking into account local circumstances is highlighted in Paragraph 10 of the Framework to ensure that they respond to the different opportunities for achieving sustainable development.</p> <p>2.16 Paragraph 152 of the Framework goes on to deal with adverse impacts on any of the dimensions of sustainable development and sets out three tests:</p> <ul style="list-style-type: none"> • Firstly significant adverse impacts on any of the dimensions should be avoided, and where possible, alternative options which reduce or eliminate such impacts should be pursued. • Where adverse impacts are unavoidable, measures to mitigate the impact should be considered. • Where adequate mitigation measures are not possible, compensatory measures may be appropriate. <p>2.17 Paragraph 154 of the Framework requires Local Plans to be aspirational but realistic and address the spatial implications of economic, social and environmental change.</p> <p>2.18 The requirement for local planning authorities to set out strategic priorities for their areas in their Local Plans is established in Paragraph 156 of the Framework. Such policies are required to deliver:</p> <ul style="list-style-type: none"> • “the homes and jobs needed in the area; 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<ul style="list-style-type: none"> • the provision of retail, leisure and other commercial development; • the provision of infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat); • the provision of health, security, community and cultural infrastructure and other local facilities; and • climate change mitigation and adaptation, conservation and enhancement of the natural and historic environment, including landscape”. <p>2.19 The importance of using a robust and proportionate evidence base for Plan making is dealt with in Paragraphs 158 to 177 of the Framework. Paragraph 158 is of particular relevance to these submissions: “Each local planning authority should ensure that the Local Plan is based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. Local planning authorities should ensure that their assessment of and strategies for housing, employment and other uses are integrated, and that they take full account of relevant market and economic signals”.</p> <p>2.20 A number of topics are discussed and for the purpose of this document we will focus on housing (Paragraph 159), business (Paragraphs 160 – 161), infrastructure (Paragraph 162) and environment (Paragraphs 165 – 168). GREEN BELT</p> <p>2.21 In respect of Green Belt Paragraph 80 of the Framework lists the five national purposes of the Green Belt as follows:</p> <ul style="list-style-type: none"> • To check the unrestricted sprawl of large built-up areas; • To prevent neighbouring towns merging into one another; • To assist in safeguarding the countryside from encroachment; • To preserve the setting and special character of historic towns; and, • To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>2.22 Paragraph 83 goes on to state that Local Planning Authorities (LPA’s) with Green Belts in their area should establish Green Belt boundaries in their Local Plans which set the framework for Green Belt and settlement policy. Once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. At that time, authorities should consider the Green Belt boundaries having regard to their intended permanence in the long term, so that they should be capable of enduring beyond the plan period.</p> <p>2.23 Paragraph 84 states when drawing up or reviewing Green Belt boundaries local planning authorities should take account of the need to promote sustainable patterns of development. They should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary.</p> <p>2.24 Paragraph 85 sets out that when defining new Green Belt boundaries LPA's should:</p> <ul style="list-style-type: none"> • ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development; • not include land which it is unnecessary to keep permanently open; • where necessary, identify in their plans areas of 'safeguarded land' between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period; • make clear that the safeguarded land is not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following a Local Plan review which proposes the development; • satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period; and 2.25 define boundaries clearly, using physical features that are readily recognisable and likely to be permanent. <p>BUSINESS</p> <p>2.26 Paragraph 160 of the Framework outlines the importance of local planning authorities having a clear understanding (from a robust evidence base) of business needs within the economic markets operating in and across their area.</p> <p>2.27 Paragraph 161 of the Framework establishes the importance of understanding business needs (both quantitative and qualitative) and ensuring that sufficient suitable land (both existing and future) is available to meet needs.</p> <p>HOUSING</p> <p>2.28 Paragraph 159 outlines the importance of preparing a Strategic Housing Market Assessment (SHMA) to assess full housing needs and a Strategic Housing Land Availability Assessment (SHLAA) to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period.</p> <p>2.29 Of particular importance is the requirement for the SHMA to identify the scale and mix of housing and the range of tenures that the local population is likely to need over the Plan period which:</p> <ul style="list-style-type: none"> • "meets household and population projections, taking account of migration and demographic change; • addresses the need for all types of housing, including affordable housing and the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes); and • caters for housing demand and the scale of housing supply necessary to 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>meet this demand”.</p> <p>INFRASTRUCTURE</p> <p>2.30 An objective of government policy is the delivery of growth. Central to this objective is ensuring that infrastructure has the capacity or can be enhanced to deliver growth. A number of factors are outlined in Paragraph 162 of the Framework which need to be considered at a local level including transport, water, foul drainage, energy, telecommunications, waste, health, social care, education, flood risk and coastal change management.</p> <p>ENVIRONMENT</p> <p>2.31 Paragraphs 165 to 168 of the Framework deal with environmental matters and set out the requirement that a sustainability appraisal which meets the requirements of the European Directive on strategic environmental assessment should be an integral part of the plan preparation process, and should consider all the likely significant effects on the environment, economic and social factors.</p> <p>SOUNDNESS</p> <p>2.32 Paragraph 182 of the Framework deals with the examination of Local Plans. The Local Plan will be examined by an independent inspector whose role is to assess whether the plan has been prepared in accordance with the Duty to Cooperate, legal and procedural requirements, and whether it is sound. Local planning authorities are required to submit Plans for examination which they consider “sound” – namely that they are:</p> <ul style="list-style-type: none"> • “Positively prepared – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development; • Justified – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; • Effective – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and • Consistent with national policy – the plan should enable the delivery of sustainable development in accordance with the policies in the Framework”. <p>NATIONAL PLANNING PRACTICE GUIDANCE – LAUNCHED 6 MARCH 2014</p> <p>2.33 On 28 August 2013 the government launched its draft National Planning Practice Guidance (NPPG). The draft NPPG was subject to consultation for 6 weeks and was launched on 6 March in its final form. The NPPG replaces some 230 planning guidance documents but will result in no amendments to the Framework.</p> <p>2.34 The Housing and Economic Land Availability Assessment section of the NPPG is worthy of specific mention in relation to this Report, in particular paragraph 030 (reference ID: 3-030- 20140306 confirms):</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>“Housing requirement figures in up-to-date adopted Local Plans should be used as the starting point for calculating the five year supply. Considerable weight should be given to the housing requirement figures in adopted Local Plans, which have successfully passed through the examination process, unless significant new evidence comes to light. It should be borne in mind that evidence which dates back several years, such as that drawn from revoked regional strategies, may not adequately reflect current needs.”</p> <p>2.35 The NPPG deals with deliverable sites as follows at paragraph 031 (Reference ID 3-031- 20140306):</p> <p>“WHAT CONSTITUTES A ‘DELIVERABLE SITE’ IN THE CONTEXT OF HOUSING POLICY?</p> <p>Deliverable sites for housing could include those that are allocated for housing in the development plan and sites with planning permission (outline or full that have not been implemented) unless there is clear evidence that schemes will not be implemented within five years.</p> <p>However, planning permission or allocation in a development plan is not a prerequisite for a site being deliverable in terms of the five-year supply. Local planning authorities will need to provide robust, up to date evidence to support the deliverability of sites, ensuring that their judgments on deliverability are clearly and transparently set out. If there are no significant constraints (e.g. infrastructure) to overcome such as infrastructure sites not allocated within a development plan or without planning permission can be considered capable of being delivered within a five-year timeframe.</p> <p>The size of sites will also be an important factor in identifying whether a housing site is deliverable within the first 5 years. Plan makers will need to consider the time it will take to commence development on site and build out rates to ensure a robust five-year housing supply.”</p> <p>2.36 In regards to how often a Local Plan should be reviewed, the NPPG states at paragraph 008 of the section titled ‘Local Plans’ (Reference ID 12-008-20140306) that:</p> <p>“HOW OFTEN SHOULD A LOCAL PLAN BE REVIEWED?</p> <p>To be effective plans need to be kept up-to-date. Policies will age at different rates depending on local circumstances, and the local planning authority should review the relevance of the Local Plan at regular intervals to assess whether some or all of it may need updating. Most Local Plans are likely to require updating in whole or in part at least every five years. Reviews should be proportionate to the issues in hand. Local Plans may be found sound conditional upon a review in whole or in part within five years of the date of adoption.”</p> <p>GOVERNMENT CONSULTATION ON STANDARDISED METHODOLOGY FOR HOUSING NEED (SEPTEMBER 2017)</p> <p>2.37 On 14 September 2017 the Government announced a consultation on a Standardised Methodology for Assessing Local Housing Need, the basis of</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>which was included in the White Paper (February 2017) and is aimed at helping local authorities plan for the right homes in the right places.</p> <p>2.38 As the consultation document sets out, the root cause of the dysfunctional housing market in the UK is that for too long we have not built enough homes. The Government is aiming to deliver 1.5 million new homes between 2015-2022 and is attempting to create a system which is clear and transparent for local authorities. The new methodology will apply to all future plans, with the exception of those which have been submitted or will be submitted before 31 March 2018.</p> <p>2.39 The standard methodology is principally aimed at tackling problems of affordability as the proposed formula simply uplifts the household projections figure, based on market signals.</p> <p>2.40 For Rossendale the proposed standard methodology has little impact on the annual housing requirement (which, it is suggested should be 212 rather than the current 265 dwellings per annum). However, it should be noted that the proposed standard methodology is currently on consultation and may therefore be subject to changes in due course. It is also worth noting the heavy speculation that the proposed methodology focuses on growth in the south east to the detriment of other parts of the UK, in particular the north west.</p> <p>2.41 Crucially the link between housing growth and economic activity must be recognised and therefore the current consultation is considered to be relevant to this Representation in relation to land at Townsend Fold.</p> <p>3. THE SITE</p> <p>SITE LOCATION</p> <p>3.1 The site's general location is identified below in Figure 3.1.</p> <p>3.2 The existing business park is located to the south of Holme Lane, with the remaining Green Belt land located to the west. Bury Road is located a short distance to the east, providing links into Rawtenstall to the north and to Edenfield, and beyond, to the south.</p> <p>3.3 As is evident from the aerial image above, land to the west of Riverside Business Park has a close physical relationship with the existing built up part of the settlement, which is further reinforced by the A56 and A682 which both provide a physical boundary to the west.</p> <p>SITE DESCRIPTION</p> <p>3.4 The site extends to 3.6 hectares and comprises vacant greenfield land, a reservoir and an area of previously developed land used for industrial and storage purposes.</p> <p>3.5 The site which is the subject of this representation is located within the Green Belt. It is bordered by the existing business park and associated employment units to the east and Holme Lane to the north. There are fields to the north west and north of the site, although beyond this is the A682 and buildings at Holme Farm/Holme Manor. There is further greenfield land to the</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>south of the site. The River Irwell runs along the eastern boundary of the Green Belt parcel, separating it from the existing Riverside Business Park.</p> <p>CURRENT OCCUPIERS</p> <p>3.6 The existing employment site is fully occupied by a range of businesses. Most notably the site is home to Lucite International which produces chemical solutions for sports pitch markings (amongst other things). The firm has seen rapid growth over recent years and requires larger premises to accommodate the growing business. Their preference is to remain at the current site, however, if premises are not forthcoming on this site they will be forced to look elsewhere and, given the lack of modern and accessible premises in Rossendale, this inevitably means relocating to outside the Borough. The land owner is keen to meet Lucite's requirements, however, it can only do so with some expansion into the Green Belt.</p> <p>SURROUNDING AREA</p> <p>3.7 The subject site is located adjacent to Riverside Business Park which is currently utilised for various employment uses, by a variety of occupiers. Further to the east, is an established residential area in this southern part of Rawtenstall. Importantly, the site is separated from the main residential area by the business park.</p> <p>3.8 Holme Manor Retirement Centre lies to the north west of the site, though there is an area of separation between the site boundary and the retirement centre.</p> <p>3.9 To the south of the site is open countryside, though this is sandwiched between the A56 and Bury Road in this location.</p> <p>3.10 Rawtenstall town centre lies to the north east, offering a range of services and facilities.</p> <p>3.11 This unremarkable site has a close physical relationship with the existing settlement and it does not relate to the wider countryside which is largely located to the south.</p> <p>FLOOD RISK</p> <p>3.12 According to the Flood Map for Planning provided by the Environment Agency, the majority of the site lies within Flood Zone 1. Parts of the existing employment site fall in Flood Zone 2 and a narrow channel following the course of the River Irwell is within Flood Zones 2 and 3.</p> <p>LANDSCAPE</p> <p>3.13 The Council commissioned a Landscape Character Assessment in 2015. The document separates areas of the Borough into various landscape character types. The subject site which is located on the edge of the urban area of Rawtenstall broadly falls into an area identified as 'Settled Valley', on the edge of an area identified as 'Industrial Age' and in close proximity to an area of 'Suburban' landscape. The area is not identified as one which is of particular value.</p> <p>3.14 The Landscape Character Assessment goes on to assess specific sites in</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>relation to their development potential, although land at Townsend Fold is not considered in detail in this regard.</p> <p>An area close to the site to the east was, however, assessed – land at Haslam Farm. It was concluded that parts of this site were suitable for development and this would have a negligible impact upon the surrounding landscape with mitigation measures in place.</p> <p>PUBLIC RIGHTS OF WAY</p> <p>3.15 Footpath number 14-4-FP309 runs through part of the business park as shown in Figure 3.4 below (albeit this is marked on the key as a temporary closure), but there are no public right of way running through the Green Belt land.</p> <p>AGRICULTURAL LAND QUALITY</p> <p>3.16 According to the agricultural land quality database, land in this area is considered to be of poor or very poor value. This is identified in Figure 3.5 below.</p> <p>ECOLOGY</p> <p>3.17 The site is not a statutory Ecological or Heritage asset neither is it within 1 km of a National Nature Reserve, Ramsar Site, Site of Special Scientific Interest or Special Protected Area.</p> <p>HERITAGE</p> <p>3.18 Holme Bridge which is located to the north of the site on Holme Lane is Grade II Listed (Listing ID: 185784 Holme Bridge). The listing text states the following: Bridge, probably late C18. Coursed simply-dressed sandstone. Vernacular materials used in formal style: 2 segmental arches with rusticated voussoirs, a pilaster at each end and another to the pier, which has a cutwater; band, and slab-walled parapet (part replaced by rubble).</p> <p>SUMMARY</p> <p>3.19 In summary, none of the statutory or other designations identified would preclude development of the site.</p> <p>4. GREEN BELT REVIEW</p> <p>4.1 As part of the evidence base to inform the emerging Local Plan, a Green Belt Review was carried out by LUC with the final report being published in November 2016. The purpose of the review was to carry out an independent and comprehensive assessment of Green Belt within the Borough to inform the preparation of the new Local Plan. One of the key aims of the review was to provide clear conclusions on the relative performance of Green Belt which will enable Rossendale Borough Council to consider whether there are ‘exceptional circumstances’ (as per Paragraph 83 of the Framework) to justify altering Green Belt boundaries through the Local Plan process to meet development needs.</p> <p>4.2 As previously identified, the Framework sets out five purposes of the Green Belt as follows:</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<ul style="list-style-type: none"> • To check the unrestricted sprawl of large built-up areas; • To prevent neighbouring towns merging into one another; • To assist in safeguarding the countryside from encroachment; • To preserve the setting and special character of historic towns; and, • To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <p>4.3 In common with other studies we have reviewed, the LUC Green Belt Assessment firstly establishes Green Belt parcels – in this instance there are 80 parcels included within five broad areas of Green Belt. In that respect the subject site falls within Parcel 19, as identified below.</p> <p>4.4 Parcels were formed through the identification of land that contains the same or very similar land uses or character bounded by recognisable features. These features are described as:</p> <ul style="list-style-type: none"> • Natural features i.e. substantial watercourses; and • Manmade features i.e. motorways A and B roads, railways. <p>4.5 Less prominent features such as walls, woodland, hedges, tree lines, streams and ditches were also considered where other more permanent boundaries were not present.</p> <p>4.6 Two types of parcel were identified:</p> <ul style="list-style-type: none"> • Areas adjacent to built up areas (relatively small parcels); and • Broad areas of Green Belt that may be more remote from settlement. <p>4.7 The boundary of Parcel 19 is identified in further detail in Figure 4.2 below.</p> <p>4.8 An assessment has then been made by LUC as to the ratings of the Green Belt parcels in Rossendale against the first four objectives of including land within the Green Belt as set out in Paragraph 80 of the Framework.</p> <p>Figure 4.3 Extract from Green Belt Review (2016) – Overall Assessment Table Figure 4.4 Extract from Green Belt Review (2016) – Parcel Ratings</p> <p>4.9 It can be seen in Figure 4.3 that the Council’s Green Belt Assessment for Parcel 19 concluded that the parcel has a ‘strong’ role in relation to Purpose 2, a ‘moderate’ role in relation to Purpose 3 and ‘no contribution’ in relation to Purpose 4. Purpose 1 was considered to be ‘not applicable’ given the nature of the urban area of Rawtenstall. Purpose 5 is not detailed within the table given that all sites have been considered as equal in this regard.</p> <p>4.10 Our response is detailed below.</p> <p>PARCEL 19</p> <p>4.11 The assessment for Parcel 19 states that it lies on the edge of Rawtenstall within the green gap between Rawtenstall and Haslingden.</p> <p>4.12 In our view Parcel 19 is far too broad a study area which has led to skewed conclusions being reached by LUC. In our opinion there is a clear distinction between the northern most part of Parcel 19 to that in the south. In that respect we comment on the conclusions reached by LUC below.</p> <p>PURPOSE 1: TO CHECK THE UNRESTRICTED SPRAWL OF LARGE BUILT UP AREA</p> <p>4.13 As identified within the assessment of the subject site, the land lies on</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>the edge of Rawtenstall which is not considered as a 'large built up area' and so the checking of unrestricted sprawl of such a built up area is not relevant in this instance. In any event, even if this purpose were considered appropriate, the physical barrier of the A56 and A682 to the west of the site ensures that development of the subject site would not result in unrestricted sprawl.</p> <p>4.14 Result: No contribution.</p> <p>PURPOSE 2: TO PREVENT NEIGHBOURING TOWNS MERGING INTO ONE ANOTHER</p> <p>4.15 Clearly development of the subject site would not result in the merging of towns as a matter of fact as the site is physically well contained by the A56 and A682. Within the Council's assessment, it is stated that the parcel has an important role in maintaining a gap between Rawtenstall and Haslingden, however we consider that this gap would be maintained in any case due to the existing road infrastructure. It should also be considered that the subject site, that within our client's ownership, does not extend to the area shown in Figure 4.1 above and so development will not be as far as the road (please refer to Title Plan in Appendix 1).</p> <p>4.16 Result: No contribution.</p> <p>PURPOSE 3: TO ASSIST IN SAFEGUARDING THE COUNTRYSIDE FROM ENCROACHMENT</p> <p>4.17 In our view the site does not assist in safeguarding the countryside from encroachment. Due to the site's proximity to the Mill and its various employment uses, the nearby roads and indeed residential development in close proximity, the character of the subject site does not have a strong rural character. There is no basis for the Council considering that this site has a moderate role in this regard.</p> <p>4.18 The site is enclosed and has strong defensible boundaries which would safeguard the countryside from encroachment. This is particularly the case for the northern part of Parcel 19 to which this representation relates and this highlights the issues that can occur when too large a Green Belt parcel is considered together, resulting in inaccurate conclusions.</p> <p>4.19 Result: No contribution.</p> <p>TOWNS</p> <p>4.20 The analysis in the Green Belt Review considers our client's site to make no contribution to this purpose. We agree with this conclusion.</p> <p>4.21 Result: No contribution.</p> <p>PURPOSE 5: TO ASSIST IN URBAN REGENERATION BY ENCOURAGING THE RECYCLING OF DERELICT & OTHER URBAN LAND</p> <p>4.22 It is noted that in line with the methodology all sites have been considered as having an equal contribution to this purpose, though it is not stated what this is.</p> <p>4.23 Result: Equal contribution.</p> <p>COMPARISON SITES</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>4.24 Figure 4.3 below identifies other Green Belt sites in and around Rawtenstall and Haslingden which have been assessed as part of the Green Belt Review. The plan also goes further to identify those sites which are considered potentially suitable for Green Belt release and subsequently for development (these sites are identified in blue).</p> <p>Figure 4.5 Extract from Green Belt Review (2016) – Sites Considered to be suitable for Green Belt Release</p> <p>4.25 Given the specific nature and characteristics of the subject site, in particular as a successful employment site with occupiers seeking to expand their existing premises, it is difficult to consider other sites which may serve these needs. Indeed, if forced to move from one site in Rawtenstall (or its vicinity) to another, there is the possibility that businesses could be attracted to other areas outside of the Borough.</p> <p>4.26 Having regard to Figure 4.3 however, we note that the only two sites in this southern part of Rawtenstall, and to the east of the A56, which are identified as potentially suitable for development are Parcel 21 and Parcel 17. We consider these sites briefly below.</p> <p>PARCEL 21</p> <p>4.27 Parcel 21 is the closest site to the subject site which is put forward as potentially suitable for development. The site is immediately adjacent to Riverside Business Park, on the opposite side of the railway line. In terms of its assessment, Parcel 21 was scored as follows:</p> <p>Figure 4.6 Extract from Green Belt Review (2016) Sites Summary Table – Parcel 21</p> <p>4.28 Having reviewed the individual site assessment for this parcel, it is identified that the parcel is on the settlement edge of Rawtenstall and forms a small part of the gap between Rawtenstall and Haslingden. Under the assessment for Purpose 2 it is stated that the parcel plays an important role in providing separation between the settlement area of Wood Top and the Riverside Business Park, but as both of these urban areas form part of Rawtenstall this has not been taken into account with regard to Purpose 2.</p> <p>4.29 In relation to Purpose 3, it is concluded that the site lacks a strong rural character which we concur is the case in this location more generally.</p> <p>PARCEL 17</p> <p>4.30 Parcel 17 is also considered to have a relatively weak role in terms of its Green Belt designation. This parcel is closer to the Rawtenstall Town Centre and therefore is of less relevance to the subject site.</p> <p>Figure 4.7 Extract from Green Belt Review (2016) Sites Summary Table – Parcel 17</p> <p>4.31 Notably, it is concluded in the assessment that this parcel is not considered critical in terms of its role maintaining the separation between Rawtenstall and Haslingden as this role is carried out by Parcels 14,15 and 16 further to the west.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>4.32 The subject site (Parcel 19) is further to the south of these key parcels, with its boundaries clearly defined by road structures, again highlighting the parcel's suitability for Green Belt release and the minimal impact this would have on the surrounding area.</p> <p>OVERALL ASSESSMENT</p> <p>4.33 We consider the assessment which has been carried out for the subject site, which comprises part of the land included within Parcel 19 to be flawed as it overestimates the value of the Green Belt in this location. In addition, there are distinct differences between the land included in the northern part of the parcel and that in the south.</p> <p>4.34 We advocate that our client's land makes no contribution to four of the purposes of including land in the Green Belt and the remaining purpose 5 cannot be used for assessment purposes as all of the sites in the Borough are given equal weighting.</p> <p>4.35 In line with the Council's methodology the overall assessment for our client's site should therefore be weak.</p> <p>4.36 We consider the subject site as an appropriate site for release from the Green Belt as it is adjacent to the settlement boundary and is controlled by defensible boundaries and has existing development on 3 sides. The site would form a logical extension to the south of Rawtenstall and in particular to the established employment site at Townsend Fold.</p> <p>4.37 We reserve the right to make further representations in support of the release of the subject site from the Green Belt.</p> <p>5. PROPOSED EXTENDED EMPLOYMENT ALLOCATION</p> <p>SITE CONTEXT</p> <p>5.1 The subject site at Townsend Fold represents an opportunity to deliver truly sustainable employment development. As already highlighted, the Riverside Business Park site is occupied by a number of commercial businesses located in the various buildings spread across the site, however there is demand for further employment space on the site.</p> <p>5.2 Riverside Business Park's success is based upon its location. It is situated off Bury Road, Rawtenstall and offers easy access to the town centre facilities including banks, post offices, shops and cafes. It is also within easy reach of the motorway networks, with the A56 providing good links to both the M65 and M66. As a result, the site is within easy reach of Manchester, Bolton, Blackburn, Bury, Rochdale, Burnley and beyond.</p> <p>5.3 Units at Riverside Business Park are reasonably modern with good access for goods vehicles and ample parking. Current tenants range from shoe manufacturers, furniture makers and a line marking company (Lucite International) who received a Queens Award for Innovation. As previously detailed, Lucite International is seeking to extend its operations at the site. Unfortunately, if their requirements cannot be met within the existing site they will inevitably be looking for alternative premises outside of the Borough.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>Given the rapid decline in industry in the Borough of Rossendale, the retention of successful businesses such as this one is key to the Borough's future prosperity.</p> <p>5.4 Whilst the existing employment site is allocated within the draft plan under draft Policy EMP2.50, we consider that the adjoining Green Belt land, which is also in the same ownership, could provide an appropriate extension which will allow the employment site to retain its valued occupiers and remain competitive over the course of the plan period.</p> <p>5.5 Both the existing employment site and the adjoining Green Belt land is in single land ownership, being solely within the ownership of B&E Boys Limited.</p> <p>DRAFT POLICY EMP1 – PROVISION FOR EMPLOYMENT</p> <p>5.6 Draft Policy EMP1 sets out the Council's approach to 'Provision for Employment'. It states that the Council will seek to provide sufficient land to meet the Borough's requirement of 27 hectares for business, general industrial or storage and distribution (Use Classes B1, B2, B8) for the period up to 2034.</p> <p>5.7 Within the explanatory text it is identified that, as evidenced by the Employment Land Review (2017), there is a lack of good quality small to medium sized industrial premises (B2 and B8 uses) which is in turn suppressing demand. It is further identified that the need for industrial premises is greatest in the west of the Borough where sites benefit from good access to the A56 and M66.</p> <p>5.8 It is generally recognised that Rossendale has seen a significant decline in employment levels since 1997, however it still has an active industrial market and suitable and sufficient premises need to be provided in order for the Borough to remain competitive.</p> <p>DRAFT POLICY EMP2 – EMPLOYMENT SITE ALLOCATIONS</p> <p>5.9 Draft policy EMP2 allocates sites for employment use over the plan period, including both existing sites and new allocations. The existing employment site at Townsend Fold is referred to under draft Policy reference EMP2.50 'Riverside Business Park'. It is stated that the site is suitable for B1, B2 and B8 uses and the total site area is 6.04ha.</p> <p>Figure 5.1 Extract from draft Policy EMP2 Allocations Table</p> <p>5.10 The site is identified on the draft Proposals Map as shown below.</p> <p>Figure 5.2 Extract from Draft Proposals Map</p> <p>5.11 We support the continued allocation of this site for employment uses, as recommended in the Employment Land Review (2017). It enjoys high levels of occupation and indeed requires expansion in order to meet the demands of current occupiers. The site has good links to A56 and the M66 beyond this and therefore demand from occupiers has remained high in comparison to other more limited parts of the Borough.</p> <p>5.12 The long-term prospects of the business park are however, dependent upon the ability for expansion.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>A SUSTAINABLE EXTENDED EMPLOYMENT ALLOCATION</p> <p>5.13 The existing Riverside Business Park represents a prime opportunity for expanding an existing successful employment location for the benefit of the Borough as a whole.</p> <p>5.14 The site is located in a very sustainable location, in close proximity to Rawtenstall Town Centre and with good road and motorway links to destinations further afield. Despite being within the urban boundary of Rawtenstall, the employment site sits well with nearby residential uses and is separated by the physical presence of the railway line to the east of the site.</p> <p>5.15 The proposed expansion site, whilst currently in the Green Belt, does not perform well against the established Green Belt purposes. The site is well contained by existing road infrastructure and provides an opportunity for sensitive expansion of the existing business park, without being detrimental to the Green Belt or other surrounding uses.</p> <p>5.16 The expansion of the existing business park would not only provide more space and better quality employment units, but any capital generated would also help to improve the existing units making them more attractive to occupiers and further securing the long term future of Riverside Business Park.</p> <p>5.17 This proposal presents an opportunity to ensure the continued delivery of a sustainable and successful employment site over the next 15 years, which will in turn make a significant contribution to Rossendale Borough's economy and attract further investment. The subject site and the case made for development therefore presents the exceptional circumstances as set out in the Framework which would allow an amendment to the Green Belt boundary through the preparation of a new Local Plan.</p> <p>5.18 To conclude, for the reasons discussed above, in our view the site at Riverside Business Park should be extended to allow for a more substantial employment allocation in this area.</p> <p>ADDITIONAL STUDIES</p> <p>5.19 Studies are ongoing in relation to this site and we reserve the right to submit these at a later stage of the Local Plan preparation process.</p> <p>PROPOSED MODIFICATION</p> <p>5.20 The Council is respectfully requested to extend the current employment allocation EMP2.50 to include the remainder of land within the ownership of B&E Boys Ltd and amend the Green Belt boundary accordingly. The extension of this existing employment site is considered entirely appropriate in order to secure the long-term future of the site and ensure that Rawtenstall (and the Borough more widely) is able to retain important local employers.</p> <p>5.21 We contend that this would properly reflect the provisions of Paragraph 83 of the Framework which sets out that amendments to Green Belt boundaries can only be made in exceptional circumstances and through the local plan process. In additional, the amendment to the Green Belt boundary in this instance would be fully in accordance with Paragraph 84 of the</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.50	Further comment
						<p>Framework which sets out that such amendments should only be made to facilitate sustainable development patterns.</p> <p>6. CONCLUSIONS</p> <p>6.1 The starting point for consideration of the Council’s Local Plan is the well-established principle embodied in Paragraph 158 of the Framework that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>6.2 The Framework is clear at Paragraph 83 that Green Belt boundaries can be amended in exceptional circumstances, through the local plan process. Paragraph 84 further states that this can only be done in order to facilitate sustainable development.</p> <p>6.3 It has been highlighted in this Representation that the land adjacent to the existing Riverside Business Park does not meet the five purposes of the Green Belt as set out in Paragraph 80. As a result, and in order to future-proof the site, an extension to the existing employment site is recommended following the land ownership boundary of B&E Boys. Through implementing this sustainable extension, land at Riverside Business Park has an opportunity to be a significant contributor to the local economy in Rawtenstall, and the Borough of Rossendale more widely.</p> <p>6.4 In conclusion, Local Plan Policy EMP2.50 should be modified to include land to the west of Riverside Business Park and this land should be removed from the Green Belt accordingly.</p> <p>Please see appendix</p>

1465	SEE AGENT DETAILS	SEE AGENT DETAILS	B AND E BOYS LIMITED		Object	<p>THE SITE SHOULD NOT BE ALLOCATED FOR EMPLOYMENT USE DUE TO ITS LOCATION AND IMMIDENT VOIDS. PLEASE SEE SUBMITTED REPORT FOR FULL REPRESENTATION DETAILS.</p> <p>Email received 10/11/17:</p> <p>1. INTRODUCTION 1.1 Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. Following the adoption of the Local Plan Part 1: Core Strategy in November 2011, RBC commenced work on its Local Plan Part 2: Site Allocations and Development Management Policies. However, this document was halted in favour of the preparation of a full new Local Plan which has now been issued for consultation from Monday 24 July to Monday 9 October 2017. This edition of the Local Plan comprises the Regulation 18 consultation document which sets out the Council's preferred approach to future housing, employment and leisure uses over the Plan period. Once adopted the Local Plan will replace the Core Strategy (2011).</p> <p>1.2 Within the draft Local Plan, sites have been proposed for development (for housing or employment use), for environmental protection and for recreation uses, as identified on the Draft Policies Map. Changes are also proposed to the existing Green Belt and the Urban Boundary. Also, four additional Conservation Areas, along with an extension to an existing Conservation Area, are being considered. 1.3 Documents included in the Draft Local Plan Consultation are the Draft Local Plan (Written Statement), the accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan. 1.4 The evidence base which supports the Local Plan comprises the following documents:</p> <ul style="list-style-type: none"> • Strategic Housing Land Availability Assessment (SHLAA) (2017). • Strategic Housing Market Assessment (SHMA) (2017). • Employment Land Review (2017). • Green Belt Review (2016). • Environmental Network Study (2017). • Gypsies and Travellers Accommodation Assessment (2016). • Town Centre, Retail, Leisure and Tourism Study (2017). • Playing Pitch Strategy (2016) (previously published). • Strategic Flood Risk Assessment (SFRA) (2016). • Local Plan Viability Study 2015 and Updated Viability Study in relation to Affordable Housing (2017). • Landscape Study (2015) (previously published). • Landscape capacity study for wind energy developments in the South Pennines (2014) (previously published). • Heritage Impact Assessment of Housing Sites (2017). <p>1.5 In addition to the above documents, the Council's Sustainability Appraisal, although not strictly evidence, has informed the development of the draft</p>	-

						<p>policies.</p> <p>BACKGROUND</p> <p>1.6 Hourigan Connolly is instructed by Brother Investments Ltd to review and comment on the emerging Local Plan in relation to the Forest Mill site in Water. The site is allocated for employment uses under draft Policy Reference EMP2.51.</p> <p>1.7 The site lies on the western side of Burnley Road East in the area of Water, approximately 3 km north of Waterfoot and approximately 5 km north east of Rawtenstall. The site is located on a main arterial route through Rosendale borough and is in an existing employment use.</p> <p>SCOPE</p> <p>1.8 In preparing these submissions we have reviewed the documents mentioned above as well as other documents forming the evidence base that underpins the emerging Local Plan.</p> <p>1.9 This document follows earlier Representations and discussions made by Mr Brian Boys as part of previous consultation stages in the Local Plan process, albeit that parts of the Local Plan were subsequently halted in favour of a complete new Local Plan.</p> <p>OVERVIEW</p> <p>1.10 The starting point for consideration of the emerging Local Plan document is the well-established principle embodied in Paragraph 158 of the National Planning Policy Framework (hereafter referred to as the Framework) that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>2. LEGISLATIVE & POLICY CONTEXT</p> <p>INTRODUCTION</p> <p>2.1 In this Chapter we set out the relevant legislative and policy context before going on to examine the Council's Local Plan document.</p> <p>LEGISLATIVE CONTEXT</p> <p>2.2 Part 2 of the Planning & Compulsory Purchase Act 2004 (As amended) deals with Local Development.</p> <p>2.3 The RBC Local Plan is being brought forward following changes to the Development Plan making system in England which are set out in the Localism Act 2011. Part 6 Sections 109 – 144 of the Localism Act deal with Planning.</p> <p>2.4 Following revocation of the North West Regional Strategy (RS) in May 2013, Council's such as RBC will set their own housing and employment targets against objectively assessed needs.</p> <p>2.5 The Town & Country Planning (Local Planning) (England) Regulations (SI No. 767) came into force on 6 April 2012 and guide the preparation of Local Plans.</p> <p>MINISTERIAL STATEMENTS</p> <p>2.6 In his Written Statement of 23 March 2012 the then Minister for</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.51	Further comment
						<p>Decentralisation and Cities the Rt. Hon Greg Clark MP referred to a pressing need to ensure that the planning system does everything it can to help England secure a swift return to economic growth. He urged local planning authorities to make every effort to identify and meet the housing, business and other development needs of their areas.</p> <p>2.7 The National Planning Policy Framework (hereafter referred to as the Framework) (see below) was subsequently published on 27 March 2012 and urges local planning authorities to boost significantly the supply of housing.</p> <p>2.8 In his Written Statement of 6 September 2012 the Secretary of State for Communities and Local Government the Rt. Hon Eric Pickles MP noted an increase in house building starts between 2009 and 2011 but said that there was far more to do to provide homes to meet Britain’s demographic needs and to help generate local economic growth.</p> <p>2.9 There can be no doubt that house building is a driver of the local economy besides providing homes for local people.</p> <p>FRAMEWORK REQUIREMENTS</p> <p>2.10 Paragraphs 150 to 185 of the Framework deal with Plan-making.</p> <p>2.11 The importance of the Local Plan is identified as the key to delivering sustainable development and a cornerstone of the development management process (Paragraph 150 refers).</p> <p>2.12 The requirement for Local Plans to be prepared with the objective of contributing to the achievement of sustainable development is embodied in Paragraph 151 of the Framework and stems from the requirements set out under Section 39(2) of the Planning & Compulsory Purchase Act 2004. Local Plans must also be consistent with the principles and policies of the Framework.</p> <p>2.13 Paragraph 152 of the Framework requires local planning authorities to seek opportunities to achieve and secure net gains for each of the three dimensions of sustainable development. These three dimensions are defined in Paragraph 7 of the framework as economic, social and environmental. According to Paragraph 7 of the Framework these dimensions give rise to the need for the planning system to perform a number of roles:</p> <ul style="list-style-type: none"> • “an economic role – contributing to building a strong, responsive and competitive economy, by ensuring that sufficient land of the right type is available in the right places and at the right time to support growth and innovation; and by identifying and coordinating development requirements, including the provision of infrastructure; • a social role – supporting strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and future generations; and by creating a high quality built environment, with accessible local services that reflect the community’s needs and support its health, social and cultural well-being; and • an environmental role – contributing to protecting and enhancing our 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.51	Further comment
						<p>natural, built and historic environment; and, as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change including moving to a low carbon economy”.</p> <p>2.14 Paragraph 8 of the Framework states that the roles mentioned in Paragraph 7 should not be undertaken in isolation, because they are mutually dependant and should be sought jointly and simultaneously through the planning system.</p> <p>2.15 The importance of Local Plans taking into account local circumstances is highlighted in Paragraph 10 of the Framework to ensure that they respond to the different opportunities for achieving sustainable development.</p> <p>2.16 Paragraph 152 of the Framework goes on to deal with adverse impacts on any of the dimensions of sustainable development and sets out three tests:</p> <ul style="list-style-type: none"> • Firstly significant adverse impacts on any of the dimensions should be avoided, and where possible, alternative options which reduce or eliminate such impacts should be pursued. • Where adverse impacts are unavoidable, measures to mitigate the impact should be considered. • Where adequate mitigation measures are not possible, compensatory measures may be appropriate. <p>2.17 Paragraph 154 of the Framework requires Local Plans to be aspirational but realistic and address the spatial implications of economic, social and environmental change.</p> <p>2.18 The requirement for local planning authorities to set out strategic priorities for their areas in their Local Plans is established in Paragraph 156 of the Framework. Such policies are required to deliver:</p> <ul style="list-style-type: none"> • “the homes and jobs needed in the area; • the provision of retail, leisure and other commercial development; • the provision of infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat); • the provision of health, security, community and cultural infrastructure and other local facilities; and • climate change mitigation and adaptation, conservation and enhancement of the natural and historic environment, including landscape”. <p>2.19 The importance of using a robust and proportionate evidence base for Plan making is dealt with in Paragraphs 158 to 177 of the Framework. Paragraph 158 is of particular relevance to these submissions: “Each local planning authority should ensure that the Local Plan is based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. Local planning authorities should ensure that their assessment of and strategies for housing, employment and other uses are integrated, and that they take full account of</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.51	Further comment
						<p>relevant market and economic signals”.</p> <p>2.20 A number of topics are discussed and for the purpose of this document we will focus on housing (Paragraph 159), business (Paragraphs 160 – 161), infrastructure (Paragraph 162) and environment (Paragraphs 165 – 168).</p> <p>HOUSING</p> <p>2.21 Paragraph 159 outlines the importance of preparing a Strategic Housing Market Assessment (SHMA) to assess full housing needs and a Strategic Housing Land Availability Assessment (SHLAA) to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period.</p> <p>2.22 Of particular importance is the requirement for the SHMA to identify the scale and mix of housing and the range of tenures that the local population is likely to need over the Plan period which:</p> <ul style="list-style-type: none"> • “meets household and population projections, taking account of migration and demographic change; • addresses the need for all types of housing, including affordable housing and the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes); and • caters for housing demand and the scale of housing supply necessary to meet this demand”. <p>BUSINESS</p> <p>2.23 Paragraph 160 of the Framework outlines the importance of local planning authorities having a clear understanding (from a robust evidence base) of business needs within the economic markets operating in and across their area.</p> <p>2.24 Paragraph 161 of the Framework establishes the importance of understanding business needs (both quantitative and qualitative) and ensuring that sufficient suitable land (both existing and future) is available to meet needs.</p> <p>INFRASTRUCTURE</p> <p>2.25 An objective of government policy is the delivery of growth. Central to this objective is ensuring that infrastructure has the capacity or can be enhanced to deliver growth. A number of factors are outlined in Paragraph 162 of the Framework which need to be considered at a local level including transport, water, foul drainage, energy, telecommunications, waste, health, social care, education, flood risk and coastal change management.</p> <p>ENVIRONMENT</p> <p>2.26 Paragraphs 165 to 168 of the Framework deal with environmental matters and set out the requirement that a sustainability appraisal which meets the requirements of the European Directive on strategic environmental assessment should be an integral part of the plan preparation process, and should consider all the likely significant effects on the environment, economic</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.51	Further comment
					<p>and social factors.</p> <p>SOUNDNESS</p> <p>2.27 Paragraph 182 of the Framework deals with the examination of Local Plans. The Local Plan will be examined by an independent inspector whose role is to assess whether the plan has been prepared in accordance with the Duty to Cooperate, legal and procedural requirements, and whether it is sound. Local planning authorities are required to submit Plans for examination which they consider “sound” – namely that they are:</p> <ul style="list-style-type: none"> • “Positively prepared – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development; • Justified – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; • Effective – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and • Consistent with national policy – the plan should enable the delivery of sustainable development in accordance with the policies in the Framework”. <p>NATIONAL PLANNING PRACTICE GUIDANCE – LAUNCHED 6 MARCH 2014</p> <p>2.28 On 28 August 2013 the government launched its draft National Planning Practice Guidance (NPPG). The draft NPPG was subject to consultation for 6 weeks and was launched on 6 March in its final form. The NPPG replaces some 230 planning guidance documents but will result in no amendments to the Framework.</p> <p>2.29 The Housing and Economic Land Availability Assessment section of the NPPG is worthy of specific mention in relation to this Report, in particular paragraph 030 (reference ID: 3-030-20140306 confirms): “Housing requirement figures in up-to-date adopted Local Plans should be used as the starting point for calculating the five year supply. Considerable weight should be given to the housing requirement figures in adopted Local Plans, which have successfully passed through the examination process, unless significant new evidence comes to light. It should be borne in mind that evidence which dates back several years, such as that drawn from revoked regional strategies, may not adequately reflect current needs.”</p> <p>2.30 The NPPG deals with deliverable sites as follows at paragraph 031 (Reference ID 3-031-20140306): “WHAT CONSTITUTES A ‘DELIVERABLE SITE’ IN THE CONTEXT OF HOUSING POLICY? Deliverable sites for housing could include those that are allocated for housing in the development plan and sites with planning permission (outline or full that have not been implemented) unless there is clear evidence that schemes will not be implemented within five years. However, planning permission or allocation in a development plan</p>			

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.51	Further comment
						<p>is not a prerequisite for a site being deliverable in terms of the five-year supply. Local planning authorities will need to provide robust, up to date evidence to support the deliverability of sites, ensuring that their judgments on deliverability are clearly and transparently set out. If there are no significant constraints (e.g. infrastructure) to overcome such as infrastructure sites not allocated within a development plan or without planning permission can be considered capable of being delivered within a five-year timeframe. The size of sites will also be an important factor in identifying whether a housing site is deliverable within the first 5 years. Plan makers will need to consider the time it will take to commence development on site and build out rates to ensure a robust five-year housing supply.”</p> <p>2.31 In regards to how often a Local Plan should be reviewed, the NPPG states at paragraph 008 of the section titled ‘Local Plans’ (Reference ID 12-008-20140306) that: “HOW OFTEN SHOULD A LOCAL PLAN BE REVIEWED? To be effective plans need to be kept up-to-date. Policies will age at different rates depending on local circumstances, and the local planning authority should review the relevance of the Local Plan at regular intervals to assess whether some or all of it may need updating. Most Local Plans are likely to require updating in whole or in part at least every five years. Reviews should be proportionate to the issues in hand. Local Plans may be found sound conditional upon a review in whole or in part within five years of the date of adoption.”</p> <p>GOVERNMENT CONSULTATION ON STANDARDISED METHODOLOGY FOR HOUSING NEED (SEPTEMBER 2017)</p> <p>2.32 On 14 September 2017 the Government announced a consultation on a Standardised Methodology for Assessing Local Housing Need, the basis of which was included in the White Paper (February 2017) and is aimed at helping local authorities plan for the right homes in the right places.</p> <p>2.33 As the consultation document sets out, the root cause of the dysfunctional housing market in the UK is that for too long we have not built enough homes. The Government is aiming to deliver 1.5 million new homes between 2015-2022 and is attempting to create a system which is clear and transparent for local authorities. The new methodology will apply to all future plans, with the exception of those which have been submitted or will be submitted before 31 March 2018.</p> <p>2.34 The standard methodology is principally aimed at tackling problems of affordability as the proposed formula simply uplifts the household projections figure, based on market signals.</p> <p>2.35 For Rossendale the proposed standard methodology has little impact on the annual housing requirement (which, it is suggested should be 212 rather than the current 265 dwellings per annum). However, it should be noted that the proposed standard methodology is currently on consultation and may therefore be subject to changes in due course. It is also worth noting the</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.51	Further comment
						<p>heavy speculation that the proposed methodology focuses on growth in the south east to the detriment of other parts of the UK, in particular the north west.</p> <p>2.36 Crucially the link between housing growth and economic activity must be recognised and therefore the current consultation is considered to be relevant to this Representation in relation to land at Forest Mill.</p> <p>3. POLICY EMP2: EMPLOYMENT SITE ALLOCATIONS</p> <p>INTRODUCTION</p> <p>3.1 Draft Policy EMP2: Employment Site Allocations identifies all sites within the Borough which have been allocated for employment development. For each site allocated, site area, available area for development and proposed use class is set out within the allocations table.</p> <p>3.2 The Forest Mill site is identified as Employment Allocation Ref. EMP2.51 as shown below. It is classed as an 'existing employment' site and is considered suitable for B1, B2 and B8 uses.</p> <p>Fig. 1 Extract from Site Allocations Table (Policy EMP2)</p> <p>3.3 The proposed allocation is identified in Figure 2.</p> <p>Fig. 2 Extract from Draft Proposals Map (with red arrow indicating the site)</p> <p>3.4 We support the aims of the Local Plan to identify key development sites which are central to the delivery of the overall strategy for new and existing employment assets and the Borough's economy. Crucial to the economy is the delivery of appropriate uses in the right locations.</p> <p>3.5 The Forest Mill site fronts onto Burnley Road East, located near Lower House Green in Water. The site is in single land ownership, being solely within the ownership of Brother Investments Ltd, and comprises a mixture of single and multi-storey mill buildings with limited vehicle access to the front and rear single storey section. The owner has experienced an upturn in the number of leases ending without renewal in recent months, owing to occupiers closing down or seeking more modern and adaptable premises.</p> <p>3.6 Given the nature of the premises and the recent loss of tenants at Forest Mill, we do not consider that the proposed allocation for B1, B2 and B8 uses will secure viable use and investment in the site going forward. As referred to in the Policy Explanation, much of the committed supply of employment sites is not considered to be fit for purpose, and is often in the wrong location with sites to the west of the Borough being more attractive due to better links to the A56 and M66.</p> <p>3.7 To this end we consider that it would be more appropriate for the allocation for employment uses to be removed and for the site to be allocated for residential development. The site comprises brownfield land in a sustainable location within the urban area and is therefore considered to be entirely appropriate to contribute towards the Borough's housing need over the plan period.</p> <p>PROPOSED MODIFICATION</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.51	Further comment
						<p>3.8 The Council is respectfully requested to remove the current employment allocation EMP2.51 and allocate the site for residential development under draft Policy HS2. Residential development in this location is considered appropriate in order to facilitate the viable regeneration of the site in part or whole.</p> <p>3.9 We contend that this would properly reflect Paragraph 22 of the Framework which seeks to avoid the long term protection of employment uses where there is no reasonable prospect of a site being used for that purpose. In such circumstances, more appropriate and viable uses, such as housing, should be acceptable.</p> <p>4. CONCLUSIONS</p> <p>4.1 The starting point for consideration of the Council’s Local Plan is the well-established principle embodied in Paragraph 158 of the Framework that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>4.2 The Framework is clear at Paragraph 22 that planning policies should avoid the long-term protection of sites allocated for employment use where there is no reasonable prospect of a site being used for that purpose. Paragraph 160 outlines the importance of local planning authorities having a clear understanding of business needs within the economic markets operating in and across their area.</p> <p>4.3 It has been highlighted in this Representation that the site at Forest Mill on Burnley Road East is no longer appealing to modern businesses and indeed there has been a notable loss of tenants in the building in recent months. As a result, and in order to future-proof the site, removal of the proposed employment allocation is recommended, along with consideration of the site for sustainable residential development. Land at Forest Mill has an opportunity to contribute to the delivery of housing over the Plan period on a site which comprises previously developed land within the Urban Boundary.</p> <p>4.4 In conclusion, Local Plan Policy EMP2 should be modified to remove reference to the Forest Mill site to allow a more flexible approach for redevelopment of the site over the plan period. Further, the site should be considered for allocation under draft Policy HS2 for residential development. Please see appendix</p>

1465	SEE AGENT DETAILS	SEE AGENT DETAILS	B AND E BOYS LIMITED		Support	<p>WE SUPPORT THE PROPOSED MIXED USE ALLOCATION FOR THIS SITE. PLEASE SEE REPRESENTATION LETTER FOR MORE DETAILS.</p> <p>Email received 10/11/2017: ISLE OF MAN MILL, WATER</p> <p>Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. This consultation is the first public consultation stage in the production of the Local Plan (Regulation 18) and includes the Draft Local Plan (Written Statement) and its accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan.</p> <p>Hourigan Connolly is instructed by B and E Boys Limited to submit and provide comment on the above site in support of its future development for mixed uses. We have previously submitted representations in response to consultation relating to the Local Plan Part 2 in 2015 and subsequently the 'Call for Sites' exercise relating to the preparation of the new Local Plan in 2016.</p> <p>Along with this letter, we have also submitted an electronic consultation form via the Council's website and this letter should be read in conjunction with the submitted form. A site plan is also enclosed for information.</p> <p>Submissions</p> <p>We note that within the draft Local Plan, Isle of Man Mill in Water has a proposed allocation for mixed uses under draft policy references HS2.97 and EMP2.52. Our client supports the proposed allocation of this site for mixed uses – the mill building is currently in employment use and is suitable to be retained as such whereas the greenfield land adjacent to the mill building is more suitable for residential development. The location of the site is such that it lends itself to a mix of uses to ensure that the vitality of the area is maintained.</p> <p>We reserve the right to provide further supporting statements and evidence during the preparation of the Plan process and ask that we continue to be informed as the Local Plan progresses.</p> <p>Please see appendix</p>

1465	SEE AGENT DETAILS	SEE AGENT DETAILS	B AND E BOYS LIMITED		Not Applicable	<p>THE DRAFT ALLOCATION SHOULD BE AMENDED TO FACILITATE MIXED USE DEVELOPMENT TO INCLUDE RESIDENTIAL USE. SEE SUBMITTED REPRESENTATION REPORT FOR FULL DETAILS.</p> <p>Email received 11/10/2017:</p> <p>1. INTRODUCTION</p> <p>1.1 Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. Following the adoption of the Local Plan Part 1: Core Strategy in November 2011, RBC commenced work on its Local Plan Part 2: Site Allocations and Development Management Policies. However, this document was halted in favour of the preparation of a full new Local Plan which has now been issued for consultation from Monday 24 July to Monday 9 October 2017. This edition of the Local Plan comprises the Regulation 18 consultation document which sets out the Council's preferred approach to future housing, employment and leisure uses over the Plan period. Once adopted the Local Plan will replace the Core Strategy (2011).</p> <p>1.2 Within the draft Local Plan, sites have been proposed for development (for housing or employment use), for environmental protection and for recreation uses, as identified on the Draft Policies Map. Changes are also proposed to the existing Green Belt and the Urban Boundary. Also, four additional Conservation Areas, along with an extension to an existing Conservation Area, are being considered.</p> <p>1.3 Documents included in the Draft Local Plan Consultation are the Draft Local Plan (Written Statement), the accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan.</p> <p>1.4 The evidence base which supports the Local Plan comprises the following documents:</p> <ul style="list-style-type: none"> • Strategic Housing Land Availability Assessment (SHLAA) (2017). • Strategic Housing Market Assessment (SHMA) (2017). • Employment Land Review (2017). • Green Belt Review (2016). • Environmental Network Study (2017). • Gypsies and Travellers Accommodation Assessment (2016). • Town Centre, Retail, Leisure and Tourism Study (2017). • Playing Pitch Strategy (2016) (previously published). • Strategic Flood Risk Assessment (SFRA) (2016). • Local Plan Viability Study 2015 and Updated Viability Study in relation to Affordable Housing (2017). • Landscape Study (2015) (previously published). • Landscape capacity study for wind energy developments in the South Pennines (2014) (previously published). • Heritage Impact Assessment of Housing Sites (2017). 	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>1.5 In addition to the above documents, the Council's Sustainability Appraisal, although not strictly evidence, has informed the development of the draft policies.</p> <p>BACKGROUND</p> <p>1.6 Hourigan Connolly is instructed to review and comment on the emerging Local Plan in relation to the Waterfoot Mills site, Waterfoot. Part of the site has a proposed allocation for B1, B2 and B8 employment uses under draft Policy Reference EMP2.53.</p> <p>1.7 The site comprises a collection of mill buildings and other commercial / industrial premises in single ownership which extend along the eastern side of Burnley Road East for circa 430m. The site has four distinct areas currently comprising of Dale Mill, Waterfoot Business Centre, Globe Mill and Albion Mill, but collectively the entire site is known as 'Waterfoot Mills'. There are a number of vehicular access points off Burnley Road East which provide access to the various businesses located across the site. The site is located in the area known as Waterfoot between Rawtenstall (which is 2.5 km away), and Bacup (which is 3 km). Whitewell Brook runs through the centre of the site running parallel to Burnley Road East.</p> <p>1.8 The site is proposed to be designated as an Existing Employment Area. However to recognise the full potential that the entire site has to offer to the future growth of the Borough of Rossendale, on behalf of the landowner, this Representation seeks to promote the site as an employment-led, mixed-use allocation. This Representation will set out how the site should be included in the Council's proposed list of Mixed Use Allocations listed under Policy EMP2.</p> <p>SCOPE</p> <p>1.9 In preparing these submissions we have reviewed the documents mentioned above as well as other documents forming the evidence base that underpins the emerging Local Plan.</p> <p>1.10 This document follows earlier Representations and discussions made by Mr Brian Boys as part of previous consultation stages in the Local Plan process, albeit that parts of the Local Plan were subsequently halted in favour of a complete new Local Plan.</p> <p>OVERVIEW</p> <p>1.11 The starting point for consideration of the emerging Local Plan document is the well-established principle embodied in Paragraph 158 of the National Planning Policy Framework (hereafter referred to as the Framework) that Development Plans must be based on adequate, up-to-date BACKGROUND</p> <p>1.6 Hourigan Connolly is instructed to review and comment on the emerging Local Plan in relation to the Waterfoot Mills site, Waterfoot. Part of the site has a proposed allocation for B1, B2 and B8 employment uses under draft Policy Reference EMP2.53.</p> <p>1.7 The site comprises a collection of mill buildings and other commercial / industrial premises in single ownership which extend along the eastern side of</p>

						<p>Burnley Road East for circa 430m. The site has four distinct areas currently comprising of Dale Mill, Waterfoot Business Centre, Globe Mill and Albion Mill, but collectively the entire site is known as 'Waterfoot Mills'. There are a number of vehicular access points off Burnley Road East which provide access to the various businesses located across the site. The site is located in the area known as Waterfoot between Rawtenstall (which is 2.5 km away), and Bacup (which is 3 km). Whitewell Brook runs through the centre of the site running parallel to Burnely Road East.</p> <p>1.8 The site is proposed to be designated as an Existing Employment Area. However to recognise the full potential that the entire site has to offer to the future growth of the Borough of Rossendale, on behalf of the landowner, this Representation seeks to promote the site as an employment-led, mixed-use allocation. This Representation will set out how the site should be included in the Council's proposed list of Mixed Use Allocations listed under Policy EMP2.</p> <p>SCOPE</p> <p>1.9 In preparing these submissions we have reviewed the documents mentioned above as well as other documents forming the evidence base that underpins the emerging Local Plan.</p> <p>1.10 This document follows earlier Representations and discussions made by Mr Brian Boys as part of previous consultation stages in the Local Plan process, albeit that parts of the Local Plan were subsequently halted in favour of a complete new Local Plan.</p> <p>OVERVIEW</p> <p>1.11 The starting point for consideration of the emerging Local Plan document is the well-established principle embodied in Paragraph 158 of the National Planning Policy Framework (hereafter referred to as the Framework) that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>2. LEGISLATIVE & POLICY CONTEXT</p> <p>INTRODUCTION</p> <p>2.1 In this Chapter we set out the relevant legislative and policy context before going on to examine the Council's Local Plan document.</p> <p>LEGISLATIVE CONTEXT</p> <p>2.2 Part 2 of the Planning & Compulsory Purchase Act 2004 (As amended) deals with Local Development.</p> <p>2.3 The RBC Local Plan is being brought forward following changes to the Development Plan making system in England which are set out in the Localism Act 2011. Part 6 Sections 109 – 144 of the Localism Act deal with Planning.</p> <p>2.4 Following revocation of the North West Regional Strategy (RS) in May 2013, Council's such as RBC will set their own housing and employment targets against objectively assessed needs.</p> <p>2.5 The Town & Country Planning (Local Planning) (England) Regulations (SI</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>No. 767) came into force on 6 April 2012 and guide the preparation of Local Plans.</p> <p>MINISTERIAL STATEMENTS</p> <p>2.6 In his Written Statement of 23 March 2012 the then Minister for Decentralisation and Cities the Rt. Hon Greg Clark MP referred to a pressing need to ensure that the planning system does everything it can to help England secure a swift return to economic growth. He urged local planning authorities to make every effort to identify and meet the housing, business and other development needs of their areas.</p> <p>2.7 The National Planning Policy Framework (hereafter referred to as the Framework) (see below) was subsequently published on 27 March 2012 and urges local planning authorities to boost significantly the supply of housing.</p> <p>2.8 In his Written Statement of 6 September 2012 the Secretary of State for Communities and Local Government the Rt. Hon Eric Pickles MP noted an increase in house building starts between 2009 and 2011 but said that there was far more to do to provide homes to meet Britain’s demographic needs and to help generate local economic growth.</p> <p>2.9 There can be no doubt that house building is a driver of the local economy besides providing homes for local people.</p> <p>FRAMEWORK REQUIREMENTS</p> <p>2.10 Paragraphs 150 to 185 of the Framework deal with Plan-making.</p> <p>2.11 The importance of the Local Plan is identified as the key to delivering sustainable development and a cornerstone of the development management process (Paragraph 150 refers).</p> <p>2.12 The requirement for Local Plans to be prepared with the objective of contributing to the achievement of sustainable development is embodied in Paragraph 151 of the Framework and stems from the requirements set out under Section 39(2) of the Planning & Compulsory Purchase Act 2004. Local Plans must also be consistent with the principles and policies of the Framework.</p> <p>2.13 Paragraph 152 of the Framework requires local planning authorities to seek opportunities to achieve and secure net gains for each of the three dimensions of sustainable development. These three dimensions are defined in Paragraph 7 of the framework as economic, social and environmental. According to Paragraph 7 of the Framework these dimensions give rise to the need for the planning system to perform a number of roles:</p> <ul style="list-style-type: none"> • “an economic role – contributing to building a strong, responsive and competitive economy, by ensuring that sufficient land of the right type is available in the right places and at the right time to support growth and innovation; and by identifying and coordinating development requirements, including the provision of infrastructure; • a social role – supporting strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>future generations; and by creating a high quality built environment, with accessible local services that reflect the community's needs and support its health, social and cultural well-being; and</p> <ul style="list-style-type: none"> • an environmental role – contributing to protecting and enhancing our natural, built and historic environment; and, as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change including moving to a low carbon economy”. <p>2.14 Paragraph 8 of the Framework states that the roles mentioned in Paragraph 7 should not be undertaken in isolation, because they are mutually dependant and should be sought jointly and simultaneously through the planning system.</p> <p>2.15 The importance of Local Plans taking into account local circumstances is highlighted in Paragraph 10 of the Framework to ensure that they respond to the different opportunities for achieving sustainable development.</p> <p>2.16 Paragraph 152 of the Framework goes on to deal with adverse impacts on any of the dimensions of sustainable development and sets out three tests:</p> <ul style="list-style-type: none"> • Firstly significant adverse impacts on any of the dimensions should be avoided, and where possible, alternative options which reduce or eliminate such impacts should be pursued. • Where adverse impacts are unavoidable, measures to mitigate the impact should be considered. • Where adequate mitigation measures are not possible, compensatory measures may be appropriate. <p>2.17 Paragraph 154 of the Framework requires Local Plans to be aspirational but realistic and address the spatial implications of economic, social and environmental change.</p> <p>2.18 The requirement for local planning authorities to set out strategic priorities for their areas in their Local Plans is established in Paragraph 156 of the Framework. Such policies are required to deliver:</p> <ul style="list-style-type: none"> • “the homes and jobs needed in the area; • the provision of retail, leisure and other commercial development; • the provision of infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat); • the provision of health, security, community and cultural infrastructure and other local facilities; and • climate change mitigation and adaptation, conservation and enhancement of the natural and historic environment, including landscape”. <p>2.19 The importance of using a robust and proportionate evidence base for Plan making is dealt with in Paragraphs 158 to 177 of the Framework. Paragraph 158 is of particular relevance to these submissions: “Each local planning authority should ensure that the Local Plan is based on</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. Local planning authorities should ensure that their assessment of and strategies for housing, employment and other uses are integrated, and that they take full account of relevant market and economic signals”.</p> <p>2.20 A number of topics are discussed and for the purpose of this document we will focus on housing (Paragraph 159), business (Paragraphs 160 – 161), infrastructure (Paragraph 162) and environment (Paragraphs 165 – 168).</p> <p>HOUSING</p> <p>2.21 Paragraph 159 outlines the importance of preparing a Strategic Housing Market Assessment (SHMA) to assess full housing needs and a Strategic Housing Land Availability Assessment (SHLAA) to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period.</p> <p>2.22 Of particular importance is the requirement for the SHMA to identify the scale and mix of housing and the range of tenures that the local population is likely to need over the Plan period which:</p> <ul style="list-style-type: none"> • “meets household and population projections, taking account of migration and demographic change; • addresses the need for all types of housing, including affordable housing and the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes); and • caters for housing demand and the scale of housing supply necessary to meet this demand”. <p>BUSINESS</p> <p>2.23 Paragraph 160 of the Framework outlines the importance of local planning authorities having a clear understanding (from a robust evidence base) of business needs within the economic markets operating in and across their area.</p> <p>2.24 Paragraph 161 of the Framework establishes the importance of understanding business needs (both quantitative and qualitative) and ensuring that sufficient suitable land (both existing and future) is available to meet needs.</p> <p>INFRASTRUCTURE</p> <p>2.25 An objective of government policy is the delivery of growth. Central to this objective is ensuring that infrastructure has the capacity or can be enhanced to deliver growth. A number of factors are outlined in Paragraph 162 of the Framework which need to be considered at a local level including transport, water, foul drainage, energy, telecommunications, waste, health, social care, education, flood risk and coastal change management.</p> <p>ENVIRONMENT</p> <p>2.26 Paragraphs 165 to 168 of the Framework deal with environmental</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>matters and set out the requirement that a sustainability appraisal which meets the requirements of the European Directive on strategic environmental assessment should be an integral part of the plan preparation process, and should consider all the likely significant effects on the environment, economic and social factors.</p> <p>SOUNDNESS</p> <p>2.27 Paragraph 182 of the Framework deals with the examination of Local Plans. The Local Plan will be examined by an independent inspector whose role is to assess whether the plan has been prepared in accordance with the Duty to Cooperate, legal and procedural requirements, and whether it is sound. Local planning authorities are required to submit Plans for examination which they consider “sound” – namely that they are:</p> <ul style="list-style-type: none"> • “Positively prepared – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development; • Justified – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; • Effective – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and • Consistent with national policy – the plan should enable the delivery of sustainable development in accordance with the policies in the Framework”. <p>NATIONAL PLANNING PRACTICE GUIDANCE – LAUNCHED 6 MARCH 2014</p> <p>2.28 On 28 August 2013 the government launched its draft National Planning Practice Guidance (NPPG). The draft NPPG was subject to consultation for 6 weeks and was launched on 6 March in its final form. The NPPG replaces some 230 planning guidance documents but will result in no amendments to the Framework.</p> <p>2.29 The Housing and Economic Land Availability Assessment section of the NPPG is worthy of specific mention in relation to this Report, in particular paragraph 030 (reference ID: 3-030-20140306 confirms):</p> <p>“Housing requirement figures in up-to-date adopted Local Plans should be used as the starting point for calculating the five year supply. Considerable weight should be given to the housing requirement figures in adopted Local Plans, which have successfully passed through the examination process, unless significant new evidence comes to light. It should be borne in mind that evidence which dates back several years, such as that drawn from revoked regional strategies, may not adequately reflect current needs.”</p> <p>2.30 The NPPG deals with deliverable sites as follows at paragraph 031 (Reference ID 3-031-20140306):</p> <p>“WHAT CONSTITUTES A ‘DELIVERABLE SITE’ IN THE CONTEXT OF HOUSING</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>POLICY? Deliverable sites for housing could include those that are allocated for housing in the development plan and sites with planning permission (outline or full that have not been implemented) unless there is clear evidence that schemes will not be implemented within five years. However, planning permission or allocation in a development plan is not a prerequisite for a site being deliverable in terms of the five-year supply. Local planning authorities will need to provide robust, up to date evidence to support the deliverability of sites, ensuring that their judgments on deliverability are clearly and transparently set out. If there are no significant constraints (e.g. infrastructure) to overcome such as infrastructure sites not allocated within a development plan or without planning permission can be considered capable of being delivered within a five-year timeframe. The size of sites will also be an important factor in identifying whether a housing site is deliverable within the first 5 years. Plan makers will need to consider the time it will take to commence development on site and build out rates to ensure a robust five-year housing supply.”</p> <p>2.31 In regards to how often a Local Plan should be reviewed, the NPPG states at paragraph 008 of the section titled ‘Local Plans’ (Reference ID 12-008-20140306) that:</p> <p>“HOW OFTEN SHOULD A LOCAL PLAN BE REVIEWED? To be effective plans need to be kept up-to-date. Policies will age at different rates depending on local circumstances, and the local planning authority should review the relevance of the Local Plan at regular intervals to assess whether some or all of it may need updating. Most Local Plans are likely to require updating in whole or in part at least every five years. Reviews should be proportionate to the issues in hand. Local Plans may be found sound conditional upon a review in whole or in part within five years of the date of adoption.”</p> <p>GOVERNMENT CONSULTATION ON STANDARDISED METHODOLOGY FOR HOUSING NEED (SEPTEMBER 2017)</p> <p>2.32 On 14 September 2017 the Government announced a consultation on a Standardised Methodology for Assessing Local Housing Need, the basis of which was included in the White Paper (February 2017) and is aimed at helping local authorities plan for the right homes in the right places.</p> <p>2.33 As the consultation document sets out, the root cause of the dysfunctional housing market in the UK is that for too long we have not built enough homes. The Government is aiming to deliver 1.5 million new homes between 2015-2022 and is attempting to create a system which is clear and transparent for local authorities. The new methodology will apply to all future plans, with the exception of those which have been submitted or will be submitted before 31 March 2018.</p> <p>2.34 The standard methodology is principally aimed at tackling problems of affordability as the proposed formula simply uplifts the household projections</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>figure, based on market signals.</p> <p>2.35 For Rossendale the proposed standard methodology has little impact on the annual housing requirement (which, it is suggested should be 212 rather than the current 265 dwellings per annum). However, it should be noted that the proposed standard methodology is currently on consultation and may therefore be subject to changes in due course. It is also worth noting the heavy speculation that the proposed methodology focuses on growth in the south east to the detriment of other parts of the UK, in particular the north west.</p> <p>2.36 Crucially the link between housing growth and economic activity must be recognised, along with the importance of directing such uses to viable locations.</p> <p>3. POLICY EMP2: EMPLOYMENT SITE ALLOCATIONS INTRODUCTION</p> <p>3.1 Draft Policy EMP2: Employment Site Allocations identifies all sites within the Borough which have been allocated for employment development. For each site allocated, site area, available area for development and proposed use class is set out.</p> <p>3.2 The Waterfoot Mills site is identified as Employment Allocation Ref. EMP2.53 as shown below. It is classed as an 'existing employment' site and is considered suitable for B1, B2 and B8 uses.</p> <p>Fig. 1 Extract from Site Allocations Table (Policy EMP2)</p> <p>3.3 The proposed allocation is identified in purple in Figure 2.</p> <p>Fig. 2 Extract from Draft Proposals Map</p> <p>3.4 We support the aims of the Local Plan to identify key development sites which are central to the delivery of the overall strategy for new and existing employment assets and the Borough's economy. Crucial to the economy is the delivery of appropriate uses in the right locations.</p> <p>3.5 Given the nature of the site and premises at Waterfoot Mills, we do not consider that the proposed allocation for B1, B2 and B8 uses will secure viable use and investment in the site going forward.</p> <p>As referred to in the Policy Explanation, much of the committed supply of employment sites is not considered to be fit for purpose, and is often in the wrong location with sites to the west of the Borough being more attractive due to better links to the A56 and M66.</p> <p>3.6 We provide greater details of the site and its current use in Section 4 of this Representation, however we consider that flexibility of acceptable Use Classes is necessary to enable the land owner to continue to market the site to a wide range of potential employment-generating occupants, whilst also diversifying from the existing employment uses to allow some residential development on the site.</p> <p>3.7 To this end we consider that it would be more appropriate for the site to be listed as a 'Mixed-Use Allocation' under the provisions of draft Policy EMP2.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>PROPOSED MODIFICATION</p> <p>3.8 The Council is respectfully requested to modify the current employment allocation EMP2.53 to allow for mixed-use development including both employment and residential development. The Council is invited to include this modification in the Local Plan document by the allocation of a mixed-use allocation for the site under draft Policy EMP2. Mixed-use development in this location is considered appropriate in order to facilitate the viable regeneration of the site in part or whole.</p> <p>3.9 We contend that this would properly reflect Paragraph 22 of the Framework which seeks to avoid the long term protection of employment uses where there is no reasonable prospect of a site being used for that purpose. In such circumstances, more appropriate and viable uses, such as housing, should be acceptable.</p> <p>4. WATERFOOT MILLS – A MIXED USE DEVELOPMENT SITE</p> <p>SITE CONTEXT</p> <p>4.1 The site at Waterfoot Mills fronts onto Burnley Road East, located in Waterfoot. Waterfoot Mills comprises four separate areas:</p> <ul style="list-style-type: none"> i. Dale Mill. ii. Waterfoot Business Centre iii. Globe Mill. iv. Albion Mill. <p>4.2 Contained in Appendix 1 is a masterplan strategy document which illustrates the distinct mill areas.</p> <p>DALE MILL</p> <p>4.3 Dale Mill is located in the far north of the Waterfoot Mills area. Dale Mill comprises a collection of mainly single storey buildings and maintains high levels of occupancy due to good vehicular access; currently 65% of this mill is occupied, sustaining 33 jobs.</p> <p>4.4 It is intended that Dale Mill would continue in employment use with areas of the existing buildings being subject to a strategy of upgrade and refurbishment, with relocated self-storage units positioned on site (relocated from the existing site at Gaghills Lane). As part of the upgrade strategy, new employment floorspace could be generated through selective demolition and the creation of up to an additional 1,400 sqm workshop floorspace.</p> <p>WATERFOOT BUSINESS CENTRE</p> <p>4.5 Moving southwards along Burnley Road East, the next section of the site is known as Waterfoot Business Centre. This element of the site currently only has 21% of its total space occupied, which equates to only 18 jobs on site. This section comprises a collection of buildings of varying heights and construction, with a mill building being located at the front of the site immediately adjacent to the main road. The buildings at the rear of the site are built into the banking of the brook and pose structural challenges for any redevelopment,</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>but they have reasonable access for vehicles. Vehicular access is limited to the remainder of the site for heavy goods vehicles due to the orientation of the existing buildings; this is a prohibitive factor to attracting potential commercial occupants.</p> <p>4.6 Accordingly it is submitted that owing to technical constraints therefore, the retention and / or redevelopment of large parts of the Business Centre are unviable for continued / new employment use. The Business Centre offers no reasonable prospect of being retained as a whole in viable employment use across the Plan period.</p> <p>4.7 The Waterfoot Business Centre site is considered suitable for residential redevelopment. Whilst an element of employment may be retained in more viable, suitable, and accessible areas, our clients believe there to be an opportunity to positively redevelop a previously developed site within the Urban Boundary for a more viable residential use.</p> <p>GLOBE MILL</p> <p>4.8 Globe Mill has only 2% of its 3,000 sqm of available floorspace occupied; this results in only 5 people being in employment at Globe Mill. The site comprises another large mill building where the upper floors are impossible to let for current employment space needs due to the nature of the construction and layout of the mill building and the fact that the goods lift can only provide access to limited space in the building. Due to the age of the mill building, the floors of the mill are constructed mainly in timber and present a fire risk.</p> <p>4.9 Globe Mill had once been wholly occupied by a single user, but since that business closed down the building has remained empty. There are issues with access for vehicles and goods, and problems with the fabric of the construction of the building. The resultant position is that this element of the Waterfoot Mills site is unattractive to new tenants and is financially unviable for retention in employment use either as existing or as a redevelopment employment proposal.</p> <p>4.10 Accordingly, the site should not be retained for employment purposes. Globe Mill is considered more suitable for residential redevelopment.</p> <p>ALBION MILL</p> <p>4.11 Albion Mill is sandwiched between the main road (Burnley Road East), the adjoining Wales Road, and an area of existing woodland. Albion Mill recently had its road frontage demolished as a consequence of structural obsolescence, and as such only 20% of the site is now occupied, providing jobs for 5 people. Following the demolition of the mill this element of the site is more suited to a residential use which would complement the existing residential properties which surround the site. The site should not be retained for employment purposes for the duration of the Plan period.</p> <p>4.12 An indicative proposed layout is shown on the masterplan contained in Appendix 1 which illustrates how the Albion Mill section of the site could potentially be redeveloped for residential purposes.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>POTENTIAL FOR SUSTAINABLE MIXED USE DEVELOPMENT</p> <p>4.13 Allocating the Waterfoot Mills for Mixed Use Development rather than restricting it to an Existing Employment Area presents a very positive opportunity to redevelop the whole of the site in a holistic and strategic manner.</p> <p>4.14 The Framework makes it very clear that planning policies should avoid the long term protection of sites allocated for employment use where there is no reasonable prospect of a site being used for that purpose (Paragraph 22). It has been demonstrated in this Representation that the site should not be retained solely for employment purposes. The Council should recognise the potential for the site to be brought back into beneficial use through a mix of complementary uses including retained and new employment and new residential proposals. A mixed use allocation would facilitate the delivery of sustainable development within the Borough.</p> <p>4.15 Not only could the site contribute to the local economy through the retention and creation of employment-generating uses, but the site presents the opportunity to contribute to the delivery of housing over the Plan period.</p> <p>4.16 Policy HS1 within the Draft Local Plan relates to 'Meeting Rossendale's Housing Requirement' and identifies a net housing requirement for the period 2019 to 2034 of at least 4,000 additional dwellings, equating to 265 dwellings a year. In addition, it is stated that a prior underprovision of 25 dwellings is to be met in the first five years.</p> <p>4.17 We support the aims of the Local Plan to identify key development sites which are central to the delivery of the overall strategy for new housing and this subject site could make a positive contribution to the delivery of housing in the Borough; a mixed use development would embody the aims of the Framework to meet the development needs of the area for both housing and employment.</p> <p>4.18 Importantly, the site is in a single ownership, and the land owners are willing to have open discussions with the Council to deliver a really exciting project across the whole site which could make a key contribution to the sustainable growth of the Borough. The site in its current state is not financially viable, and as the existing buildings remain vacant and continue to fall into disrepair, the situation is only going to be exacerbated. The flexibility of a Mixed Use Allocation would enable a more sustainable approach to the future protection and development of the site at Waterfoot Mills.</p> <p>4.19 There is potential for a Development Brief to be drafted for the redevelopment of the site to encourage key stakeholders, the land owner and the Council to work together for the benefit of the site itself, the immediate environs in Waterfoot, and to the benefit of the local economy in Rossendale Borough. Additional work is forthcoming in this regard.</p> <p>CONCLUSIONS</p> <p>4.20 It has already been described how each of the distinct areas which form</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	EMP2.53	Further comment
						<p>the 'Waterfoot Mills' site are only partly occupied by commercial and industrial operators and employers. The site does not operate on a financially viable basis, but the land owner is committed to retaining existing tenants where possible and attracting new employers through the creation of additional floorspace. However, there are deficiencies with many of the existing buildings and the associated environs which prohibit the site being fully occupied for solely employment use.</p> <p>4.21 This Representation has set out how there is an exciting opportunity for the site to make a contribution to the continued retention of existing employment floorspace, the creation of new employment floorspace, and the delivery of new housing over the Plan period and beyond.</p> <p>4.22 This subject site comprises previously developed land, within the Urban Boundary, in a sustainable location and therefore would accord with the principles of sustainable development as set out in the Framework.</p> <p>5. CONCLUSIONS</p> <p>5.1 The starting point for consideration of the Council's Local Plan is the well-established principle embodied in Paragraph 158 of the Framework that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>5.2 The Framework is clear at Paragraph 22 that planning policies should avoid the long term protection of sites allocated for employment use where there is no reasonable prospect of a site being used for that purpose. Paragraph 160 outlines the importance of local planning authorities having a clear understanding of business needs within the economic markets operating in and across their area.</p> <p>5.3 It has been shown in this Representation that the site at 'Waterfoot Mills' on Burnley Road East presents an exciting opportunity to make a sustainable contribution to the local economy through employment and housing redevelopment. The site is currently proposed to be designated as an Existing Employment Area, however it has been demonstrated that the site should be allocated for Mixed Use. Some parts of the site are occupied by commercial businesses, however many of the existing buildings are in limited use, some buildings have remained long-term vacant, and some buildings are not in a suitable condition to meet the needs of modern-day employers. The site as a whole does not present an attractive employment environment and it is for these reasons that the site should not be protected for sole-employment uses only.</p> <p>5.4 The site would be more suitable as a Mixed Use allocation. This would enable the necessary flexibility in planning policy for the site to attract other employment-generating uses, as well as providing the opportunity to develop parts of the site for housing. The site has an opportunity to contribute to the delivery of housing over the Plan period on a site which comprises previously</p>

						developed land within the Urban Boundary. 5.5 In conclusion, Local Plan Policy EMP2 should be modified to include the site at Waterfoot Mills as a Mixed Use Development site. The site presents an exciting opportunity to plan properly for the holistic redevelopment and regeneration of a major site within the Urban Boundary in sustainable location. Please see appendix for figures.

Gypsies and Travellers Transit Site Allocation

Reference	HS16.1	Little Tooter Quarry, Sharneyford
-----------	--------	-----------------------------------

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
57	Barbara	Ashworth	Elected member RBC	SHLAA16405	Object	<p>I wish to raise the following points in relation to the above proposal for a transit gypsy site.</p> <ol style="list-style-type: none"> 1. Overwhelming public objection - approximately 80 residents attended a public meeting last night at Sharneyford school and there was no support whatsoever for the proposal. People were angry and dismayed. 2. The site is right on the boundary between Lancashire and Calderdale. This raises the issue of it being a gateway not only to Bacup, but also Rossendale and Lancashire with implications for visitors we want to encourage for leisure and tourism. What a welcome! 3. The distance from Police Stations - Waterfoot and Burnley - is of great concern to residents who are aware that criminal activity can increase where gypsies camp. 4. The site would be directly opposite a listed property. Tree screening has been mentioned but the land is so high above sea level with extreme winters that it would be unlikely trees would grow or be sustainable. 5. Ecologically there are many concerns which have rightly been highlighted in the SHLAA assessment. 6. I have walked up to the quarry and around the adjoining land and it is very boggy. There are concerns that work done to construct an appropriate site for caravans would disperse water lower down to Bacup which already has flooding issues. <p>In general terms, it is very disappointing that this is the only site now in the draft plan. Residents feel they have been unfairly selected and that this a fait accompli. Nevertheless, in my opinion this site is totally unsuitable for the reasons stated above and should not go ahead.</p>		
138	Andy	Ross	-		Object	<p>I notice that there are proposals to develop a Gypsy and Traveller's Site at Tooter Quarry, at the top of Todmorden Rd. HS16.1 on the local map , i wish to object to this plan,the site is outside the settlement or " Urban boundary" there is no demonstrable need for the site to be in a countryside setting, such as the old quarry area which has over the years turned into an area of high wildlife interest , most other councils would be proud of aiding in the recovery to nature of places such as this, this development will not enhance the rural character of the area of BACUP. your objective is to "CONSERVE" and "ENHANCE" the historic environment,and "THEIR SETTINGS" a Traveller's site would not "enhance" this rural setting. no attempt has been made by the council to ensure that no local wldlife will be affected by this proposal, under Biodiversity and Geodiversity your objective is to "PROTECT" and "ENHANCE" you are failing to uphold your own objectives just as you are in other areas of BACUP under this local plan proposal another example of an uncaring unsympathetic council hell bent on destroying what is left of the countryside feel of this area, by building more and more unnecessary and unwanted structures -</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
346	Moira	Mitchell	-		Object	Transit site at Little Tooter Hill quarry for travelling people, the proposal says minimum of 4 pitches no maximum is stated . - As travellers congregate in large groups a maximum no should be stated. - Little Tooter quarry is currently fenced and gated as due to safety aspects there are steep sided drops and large areas of flooded land. - - There will be difficulty in making the area safe for use by the travellers and to stop its misuse when travellers are present. - - The draft plan says there should be access to the road network, this would have to be provided and hard standing created at an area where currently drainage is natural and no concrete areas exist. - - The draft plan says there should be access to schools and services. - The nearest school Sharneyford Primary is currently oversubscribed. - Most of these children are brought by car as there is only one bus per day on Todmorden Road. - Travellers would not have access to a bus service and nearest shops and services are 1.4 miles away in Bacup centre. - - The draft plan says there should be availability of water and infrastructure services , currently there is no drinking water or sewerage provision at the Quarry and at 1400 feet this would be expensive to commence installation. - - There are ribbon developments in the area of housing all to the left hand side of Todmorden Road as it ascends the hill at Sharneyford.This development proposed for the right hand side at the top of the hill above Sharneyford would be incongruous and give artificial lighting into an area which is relatively dark at night and has unlit roads above it (A671) . - - Noise would be an issue in an area which is currently only populated by sheep, cattle and some deer and other wildlife . - - The area is currently closed in for the safety of people not to enter a disused quarry . - - Adding a gypsies encampment would cause dangerous access to the old quarry and commence new traffic exiting onto a major A road at a point which is dangerous in winter due to ice and snow, used as a racetrack in many hours by high powered cars and with many HGVs passing heavily laden going to the Anaerobic digestion plant on the Todmorden side of the hill. - - The gypsies would be appalled at the smell of these wagons which are a current blight to the residents of Rossendale as they drive through our Valley.		
560	Hilary	Fairclough	-		Object	I object to the loss of green space.		I object to loss of green space been lost due to the housing development proposed.
577	John	Purdy	-		Object	This proposal will increase the crime rate in the area. I speak from having knowledge of similar sites in Lancashire.		
579	Joanne	Hartley	Na		Object	Please accept this as official objection to the proposed Gypsy/traveller site at Sharneyford.		
616	Tracy	Keir	N/A	Not known	Object	Disagree against the proposed siting for gypsy/ traveller site within the area.		N/A

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
617	Susan	Grindrod	-		Object	I place my objection to this proposed site full stop. We have had many dealings with this community of people with theft, uncleanliness and noise. Futures Park offices should know this too well as they have often camped at Lee Bank quarry and left it in an utter disgusting mess of which I know first hand having worked there myself when you've had the expense of clearing it all up. How this can even be considered is unbelievable in such a small historic town as ours. Just because it's at the top of Todmorden Road on the border of Calderdale you must think it's out of the way, well it's not for the any of the residents so I implore you to think twice and not give this proposal the green light		No, but for the planners to put this proposal in file 13.....the bin.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
628	Dionne	Kennedy	-		Object	<p>Submitted via online survey 24/09/17: Can I first say that as a resident in sharneyford we have had no official notification of this proposal - - I object to this plan for various reasons: - The plan only states the site will have a minimum without stating the maximum numbers - - This will considerably change the area consistently and impact on the nature and environmental ethos of the - - I am concerned about the financial consequences to the small hamlet which is already oppressed by the wagons coming down Todmorden road at all - - point SD2 is fundamentally flawed . There is no need to build this proposal in this area as this plan DOES NOT NEED to be located within a countryside . The site is as indicated outside the urban boundary and as such should not be developed. There is no analysis as to why this site merits a requirement and a change in your own policy - - Sharneyford residents are frequently the poor neighbours and this is another pointer to make plans without any consideration of the residents. - - The plan is a contradiction to the policy ENV4 which you have identified within the proposals. - - -</p> <p>Received by email 05/10/17: As a resident, I would like to object to the proposal to develop a Gypsy and Traveller's Site at Tooter Quarry, Todmorden Rd. HS16.1 I am sending this alongside the objection notice that I have already provided Firstly my concern is about the proposed location of the site. The quarry in question has regenerated itself over 25 years to a nature area of high importance to the people locally. Goodness knows what wildlife is inhabiting the water and the surrounding area whereby there is a vast amount of wildlife . To disturb this would be morally wrong But secondly and more importantly, this plan is unrealistic and unsafe more so for any person living there regardless of their cultural identity:- Issues of risk:-</p> <ul style="list-style-type: none"> •The travellers will be socially isolated •The quarry and nearby road becomes impassable in extreme weather conditions leaving them isolated and vulnerable to the community and elements •There is no direct bus route to either Bacup or Todmorden bar one bus for school am and pm. The result being woman and children would not be able to access essential services such as health education and community based services (due to the adult male members who would be out working during the day) •The conditions of the quarry are the extreme to say the least . Winds Rain, It is prone to constant flooding. These would result in serious health issues and impact on the welfare of any child living there <p>Based on your own research in your assessment plan and the number of</p>		I think this plan should be rejected as per the reasons identified

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						<p>unauthorised stays by the local community, it is apparent the traveller DO NOT venture towards Sharneyford ... I attach the said Research to evidence this.</p> <p>Furthermore, policy demands that you ASK and CONSULT with the travelling community whether they wish to reside in the proposed site (which I note that there is no formal agreement to this land being used in any event). Your own evidence based research indicates that Sharneyford is not an area that this community wish to reside.</p> <p>In any event. The character of the area will change significantly and impact on the heritage of the hamlet of Sharneyford. As identified in para 3.14.17 of your May 2017 Sustainability report of the Rossendale plan I bring this to your attention:-</p> <p>Sharneyford residents feel that they are the poor relations of Rossendale. The wagons speed up and down the road day and night from the recycling centre clearly more than the alleged 30 a day. The bus route bar the school run has ceased and now this unsafe proposal.</p> <ul style="list-style-type: none"> •We have the wind turbines which have damaged the moors, moors which we(in this household) walk frequently. •We have ongoing issues with fly tipping and wagons to contend with which Rossendale council appear not to care about •We have the unsightly view of the illegally dumped waste at Heald Top Farm which this household has personally complained about early on this year to no avail <p>As a tax payer and voter of Rossendale, I strongly object to this proposal regarding the traveller and gypsy site for the reasons identified</p>		
629	Julie	Mooney	-		Object	<p>This development will potentially impact on the character of sharneyford and impact on the everyday lives of residents. There are no details as to the size of the site as it is suggested that there are a minimum of 4 pitches which is very vague. The house prices in this area are depressed enough and there is a real risk that such a development will depress the prices further. - - A travellers site will not be in keeping with the local housing stock. - - The site is outside the urban boundary and should not be developed. - sd2 urban boundary and greenbelt - A travellers site would not be sympathetic / in keeping local architecture and the countryside. - Developing this site would be contrary to plans policy ENV4 - The residents of Sharneyford should not be further disregarded. We have to out up with the inconvenience of the recycling lorries wind farm traffic and now this proposal. - - I STRONGLY OBJECT TO THE PLAN -</p>		STRONGLY OBJECT AS DISCUSSED PREVIOUSLY

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
649	Veronica	Norris	-		Object	A gypsy site placed in this vicinity would not be in keeping with the views and landscape. - - It is too near to farmland, footpaths and bike trails and grazing livestock. It would spoil the area completely. - There would be an increase in traffic. There are already enough articulated lorries flying up and down Todmorden Road through Sharneyford going to the Waste Disposal site opposite Tooter Quarry. - - There would be an increase in pollution and noise particularly for residents living close to Tooter Quarry. - Where would waste and sewage be disposed? - - There is already a gypsy site further along Todmorden Road near Cloughfoot so why another one? - - Why do we have to provide sites for these people at taxpayers expense? It is their chosen lifestyle which is why they class themselves as Travellers. - - Last time Bacup housed gypsies/travellers there were inundated thefts to local properties and businesses. - What about their livestock? What is the plan for this? Is their livestock going to desecrate the surrounding land? - - I am absolutely against this Plan. I have forked out a lot of hard earned money on my property to improve it. I purposely chose to live in Sharneyford because it offers amazing scenery and I have fantastic neighbours. The area is lovely and natural and scenic and up to now I haven't experienced any anti-social behaviour or crime related incidents. I would very much like it to stay that way. - - -		Yes. - I have lived very close to gypsy/traveller sites in the past in Oswaldtwistle so my comments are from first hand experience. - - One site's gypsies continually fly tipped onto the lane adjoining the nature reserve regularly blocking residents' access to their properties further along the lane. - This site also backed onto a local car garage and the gypsies dogs roamed free and quite frequently attacked customers from the car garage. - - The other site tipped their rubbish onto the grass banking along Blackburn Road and those gypsies also let their dogs roam around. My dog and a neighbour's dog were attacked by their dogs more than once. They also put their horses into the field at the front of the local residents' properties without permission and tethered them and neglected them. - - Also, they destroyed the padlocks and barriers along the lane leading to the residents' properties so they could put their horses on that same field. - - We had 8 years of hell living near gypsies in Oswaldtwistle so when I moved here I got away from it and now the Council want to provide them with a site here! - No I do not want this again! -

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
666	Lisa	Greenwood	-		Object	I feel this will change the character of the area and that it will have a detrimental impact on the lives of the residents in the Sharneyford area. It doesn't state on the plans how big the site would be. My concern is the loss of countryside currently the site is outside the settlement or urban boundary and as such should not be developed. I feel that if travellers wish to settle then it should be within the urban or settlement boundary. The boundary is there for a reason and should be respected. - My other concern is that the site could be used for commercial enterprises which would again have a detrimental impact on the area. - A traveller site is not in keeping with the local housing and would have a negative impact on the aesthetics of the countryside. any site built would not blend in with the local housing some of which are over 200 years old. -		-
675	Diane	Dungworth	-		Object	Do not want this proposal to go ahead, worried about the impact on the quiet village. Last time travellers were around, cars were broken into, milk taken off doorsteps, children running wild, horses up and down the road, leaving fly tipping, household rubbish ie food causing vermin.. All their vehicles are un taxed so why do we pay car tax		No
676	paula	Pilling	-	13918	Object	us as residents are not happy about this, they do not tax there vehicles, there will be a lot of things stolen, they fly tip there will be a lot of vehicles up and down mainly vans to which they run there so called business's from, children running wild.		no

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment	
741	Chris	Howarth			Object	<p>For myself, as a resident, I would like to object to the proposal to develop a Gypsy and Traveller's Site at Tooter Quarry, Todmorden Rd. HS16.1</p> <p>My main concern is the loss of countryside and urban sprawl. Hinterland villages such as Sharneyford should be protected from such irresponsible proposals. Currently, the site is outside the settlement or "Urban boundary" and, as such, should not be developed. Your Policy SD2: Urban Boundary and Green Belt States;</p> <p>"All new development in the Borough will take place within the Urban Boundaries, defined on the Policies map, except where development specifically needs to be located within a countryside location and the development enhances the rural character of the area"</p> <p>I believe the Planning Dep't could not provide evidence that there is a demonstrable need for the site to be in a countryside setting, outside the urban boundary, and that this development could not enhance the rural character of the area.</p> <p>I fear the character of the area will change significantly and I feel a site of this nature will have a detrimental impact on the lives of the residents in the Sharneyford area. We don't know how big the site will be as the Plan states there will be;</p> <p>"A Transit site accommodating a minimum of four pitches will be provided on a site at Little Tooter Quarry, Sharneyford shown on the Policies Map as HS16.1."</p> <p>This means there will be two caravans per pitch, resulting in eight Caravans and eight vehicles, sufficient in size to pull large caravans. Plus a potentially unknown number of additional plant and machinery that many travellers use in many of their lines of business. This, potentially overbearing number of vehicles and vans, is in direct conflict with Policy ENV4: Landscape Character and Quality which states;</p> <p>"In order to protect and enhance the character and quality of the landscape, development proposals should:</p> <ul style="list-style-type: none"> • Respond positively to the visual inter-relationship between the settlements and the surrounding hillsides and follow the contours of the site; • Retain and, where possible, enhance key views. • Be built to a density which respects the character of the surrounding area with only low density development likely to be acceptable in areas abutting the Enclosed Upland or Moorland Fringe Landscape Character Areas; • Retain existing watercourses, trees and green infrastructure features that make a positive contribution to the character of the area and retain and, where possible, enhance key views. <p>In my opinion, the proposed site could not meet the criteria set out in the four points above, from your planning policy document. Nor could the proposed development;</p>			

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						<p>“Respect the character and distinctiveness of the local landscape.”</p> <p>I have additional worries as many travellers sites mix domestic living with commercial enterprise and this again could have a detrimental impact on the area. I feel any Traveller’s site would not be in keeping with local housing stock and would have a detrimental impact on the aesthetics of the local countryside. The site wouldn’t be built in a traditional manner and would not blend in sympathetically with the surrounding houses some of which are over two hundred years old, including a listed house and a listed milestone within yards of the entrance to the proposed site. My points are in line with your Policy ENV1: High Quality Development in the Borough, which states;</p> <ul style="list-style-type: none"> • All proposals for new development in the Borough will be expected to take account of the character and appearance of the local area, including the following: Siting, layout, massing, scale, design, materials, lighting, building to plot ratio and landscaping. • Safeguarding and enhancing the built and historic environment. Being sympathetic to surrounding land uses and occupiers, and avoiding demonstrable harm to the amenities of the local area. • The scheme will not have an unacceptable adverse impact on neighbouring development by virtue of it being over-bearing or oppressive. <p>How could a transient Traveller’s site comply with any of the points above? It couldn’t and is another example why I have strong objections to this proposal. I have forwarded to you recently, some images of the Quarry in an attempt to show just how much is at stake with the loss of Tooter Quarry to development of any kind. As you can see through the pictures, the quarry has had an amazing recovery back to moorland and has amazing Biodiversity, of which, most other Councils and Boroughs would be proud of, in fact, thousands are spent on former quarries, to encourage what has happened naturally in the quarry.</p> <p>To allow a transient Traveller’s site at the quarry could potentially disturb the Bio-diversity that’s taken place since the quarry closed. I believe there is a significant wildlife interest at the quarry and any development would not adhere to your planning Policy ENV5: Biodiversity, Geodiversity and Ecological Networks which advises:</p> <ul style="list-style-type: none"> • Proposals should avoid harm and where possible enhance biodiversity, and where necessary appropriate mitigation and on and off-site compensatory measures to offset the impact of development. • Development proposals should protect areas of biodiversity and ecological networks and where possible enhance sites and linkages. Any unavoidable adverse effects should be minimised and mitigated against, and where this cannot be achieved, compensated for with a net gain for biodiversity demonstrated. • The design and layout of new development should retain and enhance existing features of biodiversity value within and immediately adjacent to the 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						<p>site. Ecological networks should be conserved, enhanced and expanded. Development proposals will be expected to demonstrate how ecological networks are incorporated within the scheme.</p> <p>The majority of travellers are law abiding and respect the countryside but, there are a small minority that carry out illegal activities, in fact DCLG have produced advice to local councils with issues such as this in mind including, fly tipping, illegal burning, and other anti-social behaviour trends associated with traveller sites. It may only be a minority of travellers that do that but, I don't believe we can take a risk at this site due do the green, biodiversity environment which is at risk in the quarry if such tipping and illegal burning occurs. And I don't believe a transient traveller's site could;</p> <p>"Where appropriate, development should incorporate habitat features of value to wildlife within the development (including within building design)."</p> <p>Some travellers do use plant and machinery and with that comes oils and diesels. The majority would manage these pollutants safely however, there are some who would not use these potential pollutants responsibly. Policy ENV7: Environmental Protection says;</p> <p>Development which has the potential, either individually or cumulatively, to result in pollution that has an unacceptable impact on health, amenity, biodiversity including designated sites, will only be permitted if the risk of pollution is effectively prevented or reduced and mitigated to an acceptable level by:</p> <p>Undertaking assessments and/or detailed site investigations of land which is or may be affected by contamination and implementing appropriate remediation measures to ensure the site is suitable for the proposed use and that there is no unacceptable risk of pollution within the site or in the surrounding area.</p> <p>I believe, policing the control of such substances would be very hard with a transient community and on these grounds , I would strongly object to the site as there is too much at stake with the potential pollution and loss of habitat for wildlife at the quarry.</p> <p>We have pylons, wind turbines, fly tipping and smelly wagons to contend with. In addition, behind us we have 8 hundred tonnes of illegally dumped waste at Heald Top Farm, which it appears that no one can do anything about other than to let it rot! What would happen if we have a similar incident in the quarry?</p> <p>The quarry has benefitted due to it being a basin the holds water, hence the biodiversity that has regenerated there. It has a clay, stone and shale base which holds water. This assists in the intercepting of rainwater and holds this water, releasing it slowly. The site is inappropriate for a travelling community site due to this. Draining it or putting surface water drains in for the travellers could exacerbate the flooding problems Bacup struggles with in spate conditions. Policy ENV11: Surface Water Run-Off, Flood Risk, Sustainable</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						<p>Drainage and Water Quality states;</p> <ul style="list-style-type: none"> • All Development proposals will be required to consider and address flood risk from all sources. Planning permission will only be granted for proposals which would not be subject to unacceptable flood risk or materially increase the risks elsewhere. This should be informed by consideration of the most up to date information on Flood Risk available from the Environment Agency, the Strategic Flood Risk Assessment (SFRA) and from the Lead Local Flood Risk Authority. • All development proposals will be required to manage surface water as part of the development and should seek to maximise the use of permeable surfaces/areas of soft landscaping, and the use of Green Infrastructure as potential sources of storage for surface water run-off. New development should not increase on-site or off-site surface water run-off rates and, where practicable, should seek to reduce surface water run-off <p>Clearly, any interference with the site would not comply with the policies above. Policy NV6: Green Infrastructure states;</p> <p>Development proposals should seek first to avoid or, if not feasible, mitigate biodiversity impacts on-site. Schemes which would result in a net loss of green infrastructure on-site will only be permitted if:</p> <p>The loss resulting from the proposed development would be replaced by equivalent or better provision elsewhere (achieving an overall net gain of 20% in biodiversity offsite compared to that lost including long-term management proposals); and</p> <p>The proposals would not have an unacceptable impact on amenity, surface water run-off, nature conservation or the integrity of the green infrastructure network.</p> <p>How and where would any developer achieve an overall net gain of 20% in biodiversity offsite compared to that lost including long-term management proposals? They couldn't and this is another reason why I would object to this development.</p> <p>I have worries with regard to Anti-social behaviour and criminal behaviour that has been associated with some traveller's sites. Sharneyford has many isolated properties and I feel, should there be any inappropriate behaviour, especially of a criminal or violent nature, how long would it take for our overstretched constabulary to respond with the nearest Police Station at Waterfoot.</p> <p>There are no amenities for the travellers at Sharneyford, there is only a very limited bus service. We have no shops and, historically, the travellers like to be closer to such amenities as supermarkets, doctors etc. Sharneyford School is always oversubscribed and would struggle to accommodate more children from the travelling community.</p> <p>Currently the site has no running water, no foul drains and no electric. Putting porta-loos in the quarry and having generators running all the time would not</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						<p>be fair to local residents. There would be noise pollution and potentially light pollution. Who would pay for the loos to be emptied, if it is left to the travellers, some may tip toilet waste on to the land which has happened before. There is no hard standing and providing hard standing could only interfere with the bio-diversity again.</p> <p>I would suggest the Council looks at sites were the travellers have been evicted from as appropriate locations such as Futures Park, Valley View or off John Street Whitworth where they are closer to local amenities and where the living conditions are much easier for them. Tooter Quarry sits over a thousand foot high, the winters are harsh and living in a caravan could not be pleasant up there for most of the year.</p> <p>Please take my concerns into consideration and look at more suitable sites across Rossendale for the travellers.</p>		
758	Matthew + Rebecca	Saxon + Crampton	-		Object	<p>We wish to object to the proposed plans for the Sharneyford Traveller's site for the below reasons: - - We are a very close knit community, friendly and small and we believe that the Travellers site will disrupt this. - - The Travellers site is not in keeping with any of the houses or the country side in the area. - - We believe that the travellers will have a detrimental effect on the area and community. - - The Travellers will also cause traffic congestion on our local roads due to horse and carriages. - - The quarry may end up turning into an illegal tipping/dumping site (e.i. waste from their commercial enterprises). - - The proposed site is located on a Green Belt area where construction should not take place unless it enhances the rural character of the area. - - The site will also disrupt the nature and animals living in this area. - - The site will be visually unattractive within the beautiful countryside/hillside and landscape. - - We believe this site will have a detrimental affect on the house pricing within this area. - - We are also concerned about an increase of crime, if the proposed site is approved.</p>

768	Sandra	Navesey	-		Object	I object to this proposal as it is completely inappropriate to consider development of a Gypsy and traveller's site at Tooter Quarry. Such a development would be a blight on the landscape! This site has recovered from a quarry to an area of national beauty over the past 20 years and this would be ruined by placing hard standing pitches for a minimum of 8 caravans, with all the problems caused by travellers moving on. How will the site be monitored? How can the tipping of tarmac waste and rubbish, diesel from the trucks, not to mention horses tearing up the ground! This is to be a transit camp with a maximum of three month's stay. How will this be monitored? Inevitably there will be some travellers who will break the law or cause other trouble but as they are in transit, they could not be given an asbo. There will need to be a water supply provided as well as sewage system and power. The travellers will certainly not be contributing by way of council tax or rent. Regardless of these concerns, the location is not suitable for purpose, families would need to be nearer to amenities such as shops etc, and there is a very limited bus service. Also this would put pressure on schools and medical services. Sharneyford has already been inconvenienced by wind turbines etc. not to mention the absolutely foul smelling trucks going up and down every day. Snow and ice in winter often make the road unpassable and this wouldn't be ideal for travellers trying to drag their caravans and horses up and down. There must be a better site in Rosendale!		
833	Carl	Davey	-		Object	Travelers are not welcome in Bacup . They bring nothing to the community and will only bring the area down and impact on an already struggling economy in the town. Bacup is trying to attract tourists via adrenaline gateway etc . This would be totally wasted		Why does Bacup appear to be the barren wasteland of the rossendale valley .poor transport. Poor schools . High unemployment and social issues . I know let's park a load of travellers in the mix
858	Deborah	Hernon	-		Object	The site at Sharneyford is inappropriate for a number of reasons. Firstly there is no adequate infrastructure in that area and it would cost a substantial amount to put it in. In these days of austerity we are having budgets cut from services provided to our town so why would you spend such a high proportion of the budget on such a small minority. Secondly the local school is very small and to capacity so how would you support their education and ensure that other local children can access education? Thirdly crime in the area is already out of control with a very poor response from Police with no presence of a front desk in the borough. Finally this area is one of the great things about the Borough and after all the money being invested in the THI bid in the Centre we should be celebrating what Bacup could become for the economy of the Borough. - I can see why this site has been chosen its because you think they will be tucked away and nobody will bother. This is however not a fair area for the people you will be putting there, they need to have proper access to the services they require, schools with capacity, doctors, Police etc.		-

862	Sue	McCafferty	-		Object	I live opposite Little Tooter Hill Quarry and would object to this proposed site due to several factors. Firstly, we are very high above sea level being on the moors and the climate is not conducive to living comfortably! We live where we do because we have animals and land is cheaper up here for obvious reasons! There is no mains water for a start so the travellers would need to have some source of water as we own the spring that supplies the current residences up here and it is not capable of sustaining any further demand on it. Secondly, the road is an A road with national speed limit and I do not want to see young children being knocked down, travellers do tend to let their children and animals play unsupervised and it would not be a safe site. We have over 60 HGV's daily from 5am going to the composting factory on Todmorden Moor and back to Warrington continuously plus the other traffic.		I find it incredible that you would think of offering people such a bleak place to abide. No drains, no water, bad climate, no services!! No hardstanding or possibility of without a lot of work.
865	Geoff	Smith		13918 SHAA16396	Object	To whom it may concern; Re Site Assessment document SHLAA16396 file 13918 - My Name Is Geoff Smith , I have been a resident of Sharneyford for 28 years and have endured some harsh winters. I feel the proposal to allow a travellers site to be built here would cause unnecessary suffering to families living there. This site is also liable to flooding as it is a clay quarry; - This quarry has slowly recovered from the devastating condition it was left in many years ago, the wonders of nature have finally restored some beauty into the space. - I have also endured several illegal travelling communities in this area who have moved on eventually due to the weather and left a massive trail of domestic and commercial waste. - I have also had break ins and items removed from around our property; this stopped when the individuals moved on. - I totally oppose this proposal and suggest the travellers would be better facilitated on a town centre site such as opposite futures park and surrounding areas where more amenities are available. This seems to be a prefer site by choice from the travellers. - - I hope this is of help with your decision . - - Regards Geoff Smith		The facilities at this site are not in place and would be very costly, it is located near to the wind farm at sharneyford and the worry that a caravan may blow over in the extreme conditions also the quarry fills in with snow which makes this a hazard for travelers.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
896	David	Mitchell	-		Object	The proposal is outside the urban boundary. - It is in an area of open and rural countryside. - Caravans and associated commercial enterprises carried out by these travellers is out of keeping with the area. - This is the gateway into Rossendale and into Lancashire and should not be blighted by any more eyesores. - We already have the anerobic digestive site, wind turbines and pylons and enough is enough. - We need to improve our countryside not add to the negative aspects of what is essentially open and splendid countryside. - Currently the quarry acts as a flood basin, alleviating short term overflow into the brook. Covering a significant area with hardstanding will increase flash flooding further down the valley and in particular Bacup centre itself. - This facility would be better placed more centrally, on established public transport routes and closer to schools with available places. - One such site would be Futures Business Park where it could easily be overseen by council staff and more easily policed. - Another would be adjacent to Hardman Mill in Rawtenstall where appropriate screening by trees would be more practical and is local to supermarkets and other services. - Tooter Quarry is not suitable for this type of settlement. - -		Please rethink this proposal.
953	Philip	Taylor	-		Object	Dear Planning Department, - As a resident of Sharneyford for over 33 years I would like to strongly object to the above section of the local plan. - The quarry has not been mined for many years and has naturally regenerated into a beautiful area. - If the plan was to put in picnic tables or a bird watching hide, that would make sense and could be used by the local school and tourists alike. - In my view the siting of at least eight caravans on the site would be: - Expensive (there are no services there whatsoever) - Out of keeping with the local housing stock - Completely set back this natural regeneration that has occurred - Lead to more illegally dumped conifers and waste material on Flower Scar Road - In a document produced by one of the local councillors who attended the meeting held at Sharneyford School on Tuesday night, even the planning department itself had highlighted in red and orange, serious concerns about the suitability of this site for this proposed use. - The travellers themselves, who years ago used to stay at the top of Sharneyford seem to have voted with their feet (or wheels) and now prefer Whitworth and the area adjacent to the Kingfisher building in Stacksteads. - Sharneyford, because of its location at the edge of the Rossendale and Caldedale boundaries seems to be a convenient place for both councils to allow Turbines, Waste recycling (previously a maggot farm), illegal dumping of a considerable amount of waste (800 tonnes?) and now this site is planned. Perhaps out of sight (of most people) is out of mind for the council planners. - Quite frankly, from the meeting on Tuesday night the people of Sharneyford have had enough and deserve better. - I hope that you will see fit to reassess Tooter Quarry as the Rossendale site for Gypsies, Travellers and Travelling Showpeople. - Yours faithfully		- The people of Sharneyford DO NOT WANT this site. - - Please reconsider this proposal.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
972	Christopher	Rich	-		Object	As local residents we have many concerns about this proposed development that we have only found out about on facebook yesterday ! - We feel that this site is totally unsuitable because of the following reasons :- - 1.It is far too remote for purpose, there are no shops , services , very limited bus service which only runs during term time . - 2. We travel this area for work and in winter the road becomes impassable due to snow and ice. The winds can be very strong and caravans have been blown over in the past. - 3.The only school in the immediate area is Sharneyford Primary which is always fully subscribed and would not be able to take the children from the site without local children being affected. - 4.This site being on the border with Calderdale and Rossendale councils means there are very few Police resources to attend any possible crimes or disturbances resulting in delayed attendance and the inability to deal effectively. This would have an adverse effect on the local residents. Although the majority of travellers are law abiding, from personal experience through work I am fully aware of what effect a Travellers site can have on an area and community. I therefore - feel this location is far too remote to be able to deal with these issues. - 5.There has been issues with flooding in Bacup in recent years and creating hardstandings on moorland above Bacup is only going to make matters worse and I do not see how the council can justify this when there are much more suitable locations within the valley. - 6.This area has already been badly effected by Pylons , Windturbines and a smelly waste disposal site as well as having tonnes of illegally dumped waste at Heald Top Farm and fly tipping on a regular basis. - - We feel the council should look at sites within the valley where travellers have been evicted from in the past as appropriate locations such as Futures Park where weather conditions are better and amenities closer to		Please consider looking at more suitable locations. - As Calderdale residents we were totally unaware of this planning application and feel very upset that we have been given limited time to voice our concerns and also feel very worried there be will lots of calderdale residents who live nearby who will be totally unaware of this application and totally against it but unable to have their say due to it not being widely publicised by Rossendale Council.

974	Jean	Howarth	-	Travellers Site	Object	<p>The site has no running water or foul and surface drains or electricity. It will not blend in to the local countryside and will not be sympathetic to the local housing stock, including my grade 2 listed house.. The site has a significant wildlife interest and it's biodiversity could be under threat from draining the land or potential pollution of the water from accidental spillages of diesels and oils. The site would be hard to manage and the number of caravans and support vehicles would be overbearing in its size. The site floods and would present difficult living conditions for the travellers. The site would be at risk of fly tipping once opened up from both the travellers and persons taking part in criminal activity. There are no local amenities up in Sharneyford and only a limited bus service. The site is Greenfield and is outside the urban boundary and your planning policies state any development should be within the settlement boundary. They couldn't prove any need to be in the country to live, in fact, in Rossendale, they traditionally seek hard standing and like to be close to amenities. There are brownfield sites that would better suit their needs. (Futures Park.) Some travellers sites have had criminal activities taking place, including violence, we are isolated up in Sharneyford and I feel we could be at risk. The site has seen a great recovery since the quarry closed and is full of ponds and waterfowl and aquatic life could lose habitat. Essentially, the site deserves protecting, not violating. There could be noise from the travellers generators and light pollution from portable lighting units that could not be controlled or be sympathetic to local housing like the positioning of traditional street lights. Due to the site being transient, there is the potential for a lack of ownership and this could prove catastrophic for the biodiversity of the site. The residential area would be ruined due to the site having both domestic and commercial interests, which would not be appropriate for the setting.</p>		<p>Residents could overstay their permitted time at the site and this would prove hard to police. I fear there would be more than the eight permitted caravans and again, would be hard to police. We could be under threat f the travellers feel we were responsible for reporting both over stayers and over occupancy. I would feel threatened alone at night with my daughter because there is no way of knowing who is travelling through the borough and staying on our doorstep. I appreciate the vast majority of travellers are genuine people but, I also acknowledge that, historically, there have been anti-social behaviour issues on some sites and being up there would petrify me if there was violent travellers passing through. Thanks for taking time to read my objections. - - Jean Howarth - 278 Todmorden Rd, - Sharneyford. Bacup</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1007	Rachel	OLeary	-		Object	Dear Sir/Madam, - I would like to object to the proposal of a Gypsy Travellers site at Tooter Quarry Todmorden Road Bacup. - Instead of this inhospitable site, I would like to suggest Futures Park, Valley View or off John Street Whitworth where the travellers already park up as they are closer to local amenities, street lighting, they are in the valley so they are away from the open elements on the moor and where the living conditions are much easier for them. Let's be honest, they wouldn't utilise this site unless they had to move from Futures Park, Valley View or John St Whitworth anyway. Then they would simply use this Todmorden site temporarily to then return to the others which they prefer! This will cause more problems and costs to tax payers in the long term. - I am sad to have to object to this proposal, as the site should not have been chosen in the first place. I suggest that this plan has been rushed, no travellers surveys or thought or experience what so ever has gone into this. It is very worrying that we place our trust in the Planning team for them to make the best decisions for our borough when instead they are choosing the easy option with minimal objections. I intend to take this further in the hope that whoever decided that this was a suitable place to house a caravan site be re trained in their field of planning. - I can only think of one reason why this site has been chosen and that is because there are not many residents living up here to be able to complain! So there will not be many objections as there are not many to object! The plan has been buried in a huge document draft so that the residents of Rossendale will instead focus on the housing developments near to where they and their families live and not the overall impact on our borough or the impression it has on visitors to the valley. So the objections will be low due to this and will not demonstrate public opinion at all. - - The site is over 1000 ft high, with gale force winds, driving rain, no street lighting, they will not use this site except maybe in the summer months which due to the surrounding open area will then be open for dozens of vehicles if not possibly hundreds of travelling people congregating for parties. - We have proof that a number of years ago when some new age travellers did pass through, caravans blew away and sunk on the site. It is inhospitable for a tin home of a caravan. The school is always over subscribed and there is no bus service to other schools, so are tax payers to subsidise travel for the children on the site to go to school? Also there is already a serious regular fly tipping problem in this area of geological interest and as we already are aware, travellers are renowned for leaving waste when they leave their sites. After using their fuel to hoard their caravans, horses and vans up to the site, what happens if it is already full? They have a selection of places to choose from and would obviously use farmer's fields, lanes, the entrance to the windmills, RS Motorcycles, the parking at the top where the fly tipping is done and the geological site of flower scar instead, is this view we want on the welcome to Rossendale and Lancashire border? The journey		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						<p>which is a fantastic viewpoint and aesthetically pleasing entrance to our county. Surely planners know and have researched that the best places for a travellers site is close to where the travellers already use, or they just will not use it will they! This way next to the main road with buildings bordering the site, if the site is full they have no choice but to move on to a site allocated in the next town, which would be the natural flow. This would then be easier to manage by the council and police, local residents can report any anti social behaviour instead of individual cottages on the moor having to lock down their properties feeling isolated and threatened and not protected by our police because they are 20 minutes away. - The site is inhospitable no running water, no drains and no electric. Having generators running all the time on a permanent basis is not in keeping with the moor and would impact local residents with noise pollution and light pollution. Who would pay for the toilets to be emptied and site maintained? If it is left to the travellers, some chemical toilet waste may be left on to the land which has happened before, and having compiled the pollution reporting for United Utilities and Yorkshire Water I am aware that this pollution could affect the water table as it is at the top of the hill. - There is no hard standing and providing hard standings would interfere with the bio-diversity and cause flooding, as we are only too aware removing the mosses and covering years of deep natural draining causes flooding, and our moorland must be protected from this as it captures the water naturally. - The site cannot be shielded/covered with native trees as no trees will grow or have grown on the site as it is shale and if they were going to grow they would have already grown in over 20 years and have not. So how can any hard standing "Respect the character and distinctiveness of the local landscape." let alone a number of caravans which cannot be shielded sufficiently in line with the moorland landscape? - I hope that Rossendale planning will do what most other planning departments do in most other counties and designate this spot as a place for nature to flourish as it is already doing, allowing access, benches and schools to conduct biology lessons etc instead of trying to cover it in concrete. - I hope that planners will use their skills to consider Futures Park, Valley View or off John Street Whitworth. If these other sites cannot be utilised, I suggest that local businesses should be contacted like B E Boys who have dozens of brownfield sites on the main road which can be used for this temporary purpose and already have utilities and foundations. - Please take my concerns into consideration and look at more suitable sites across Rossendale for the travellers. I have also forwarded my concerns to Calderdale Council as they will be affected by this plan. - -</p>

1048	Ailis	Ni Riain	-	HS16.1 Proposed 'Transit' Site	Object	I understand there is a marked boundary and that this site is outside the "Urban Boundary" - and therefore should not be used for housing gypsy of traveller communities. There are already wind turbines put up around the area of Sharneyford and it's approach much to the detriment of the landscape. 'Key views' are already jeopardized and the character of the area will suffer - - A traveller and gypsy site - and all that that normally entails - is certainly not a desirable proposition in an area where we should encouraging walkers and tourism if at all possible therefore contributing to your own aims for Landscape Character and Quality (Policy ENV4). It will not be in keeping with the rural environment and I suspect will, as ever, lead to abuse of the landscape and character of the area. - -	-	-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1056	Nicola	Howorth	-		Object	<p>To Whom it may concern, - - I am writing to voice my utter objection to the plans put forward by Rossendale borough council to transform Little Tooter Quarry into a transient travellers site. - - I am a former resident of a farm local to the area in question, however I now live down the road in Stacksteads. When hearing of the plans I was initially shocked at the thought of anybody trying to sustain life in a caravan or living wagon at the top of Sharneyford. It sees some of Rossendale's worst weather. I feel the travelling community will find it laughable to think they are expected to remain 'up there' and will voice this through their actions i.e. by continuing to reside in their usual spots - Futures Business Park in Bacup, Valley View in Whitworth etc. If you examine the most commonly used roads by the travelling community, you will find that Todmorden Road is not one of them, and is actually a very isolated area which serves no use to a community of women, children and the elderly who need access to local amenities such as supermarkets, healthcare services etc. - The proposed land which you have suggested is suitable for residing on is known by anyone who has visited the area all year round to be almost a wetland and a huge 'soak-away' for a lot of the surrounding land. This means that in its current state it is entirely unsuitable for driving onto, never mind trying to pitch a caravan etc. If works are carried out to correct this issue (of which I would like to question; who will be funding such ventures? I suspect it will be you and I - the taxpayers!) I fear the water would have no choice but to travel downhill, further impacting on the horrendous and ever-increasing flooding we have seen through Bacup in recent years. Can you please inform me of any measures you will be taking to reassure residents this would not be the case? Dredging the rivers to make way for such a volume of water would be my suggestion however I suspect this would come at a high cost. - I feel much thought has gone into finding an area which is very much 'out of sight' to both council officials and the majority of the population of Rossendale, but not a single thought has been given to the needs of those the site is intended for, the travellers themselves. - I feel if you consulted the travelling community, you might find that they would prefer very much to be welcomed onto Futures Business Park instead of being evicted every time they set up their homes in this area. This is clearly the most convenient site for them as they keep returning despite countless eviction orders. What makes it 'unsuitable' to transform this site (which I assume is already council-owned?) into a resting place for our travelling community? - - An alternative place that springs to mind is the old waste site at the top of Blackwood road in Stacksteads which I believe is currently owned by the council and will have lighting etc. already installed. I believe this site has been considered in previous plans, could you advise me on what makes either of my suggested locations unsuitable for a travelling site and why you haven't even considered them in your 2019-2034 plans? - - The two sites I have suggested are just been plucked from the top</p>	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	Further comment
----	-----------	---------	--------------	-----------------	-----------	---------	-----------------

of my head, I am sure given more time I could find at least a dozen suggestions, the fact you seem to have only found one 'suitable' site tells me that you either have not given it any real consideration or that you have given extremely careful consideration to choose a spot where you can see there are fewer residents in the area and therefore fewer appeals will be made to the plans. If the latter is true then I have to inform you that you have your priorities very wrong. If you must, by law, make a traveller site in Rossendale, then I beg you to place it in a position in which it will be valued and used by the community it is designed to serve. - - Thankyou for taking the time to read my letter. I look forward to hearing your response to the questions I have highlighted. - - Yours Faithfully, - Nicola Howorth

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1057	Karen	Taylor	-		Object	<p>I have lived in Sharneyford for 33 years and am a regular walker/fell runner on the moors around my home. Near our doorstep, runs a part of the Rossendale Way, over the open, somewhat desolate moorland but all the more wonderful. - To live in such a beautiful area of the country is a delight and I am always inspired by what I am so fortunate to experience. - To learn that Little Tooter Hill Quarry has been proposed for a Traveller's Site came with sadness. Over the many years, Little Tooter Quarry has rejuvenated itself into an area of great environmental wealth; ponds, marshes and moorland, restoring some of the wildlife and plants that it had 'homed' before the quarrymen came! - As I have commented, I have included quotes from your policy to support my objections. (I did highlight specific phrases but unfortunately they have not shown on your page.) - Instead of proposing the site be dug up, drained (if indeed it can be- as the area collects and holds water from the surrounding moors and is a nature's way of preventing flooding of the area), - Policy ENV11: Surface Water Run-Off, Flood Risk, Sustainable Drainage and Water Quality - Rossendale has large areas of flood risk. *There are high surface water runoff rates coming off the hillsides especially after sustained periods of heavy rain. High surface water runoff also contributes to temporary poor water quality.* - concreted.... and turned into a caravan site with the loss of these habitats, shouldn't it be made into an area of natural beauty? Why couldn't the Little Tooter Hill Quarry site be left to complement The Rossendale Way, The Mary Towneley Loop and historical Lee Quarry and provide an educational site for the schools: Sharneyford, Thorn, St. Mary's, Northern... or just leave it alone for the enjoyment of all. - Policy SD1 - At the heart of the Framework is a presumption in favour of *sustainable development*, this is a golden thread running through both plan-making and decision-taking. The definition of * is: development that is conducted without depletion of natural resources. - Policy SD1 - The Council will always work proactively with applicants jointly to find solutions which mean that proposals can be approved wherever possible, and to secure development *that improves the economic, social and environmental conditions in the area.* How will the traveller's site at Little Tooter Hill improve this? - - Continued over... - - - - - Thank you.</p>		<p>Policy SD2: Urban Boundary and Green Belt - All new development in the Borough will take place within the Urban Boundaries, defined on the Policies map, except where development specifically needs to be located within a countryside location and the *development enhances the rural character of the area.* Sharneyford has maintained its rural character over the years that I have lived here; we have a strong relationship with the environment around us, a small community living in farms, cottages and stone built houses, close families, some who have lived here all their lives as did their parents...How can a traveller's site enhance this? - - Policy HS14: Conversion and Re-Use of Rural Buildings in the Countryside - The proposal does not have a materially greater impact on the openness of the area and the proposal will *not harm the character of the countryside* In my opinion, the site will harm the character of Sharneyford. - The conversion works and facing materials to be introduced would be *in keeping with the original building, and important architectural and historical features would be retained.* How will the caravan site do this? - The proposals would serve to *preserve or enhance the setting of any nearby Listed Building* . The Old Toll House is a listed building and it almost directly faces the entrance to the quarry site. - The development does not *require the removal of, or damage to, significant or prominent trees,</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
								<p>hedges, watercourses, ponds or any other natural landscape features*</p> <p>The development of the traveller's site will do exactly this! - The development *would not have an unacceptable impact on nature conservation interests or any protected species present* The development of the traveller's site will do exactly this! - Policy HS16: Gypsies, Travellers and Travelling Showpeople - Developments need to function well and add to the overall quality of the area. They should optimise the potential of the site to accommodate development and respond to* Rossendale's local character, history and topography. In Rossendale the relationship of town and countryside, hill and valley, stone and other materials are particularly important.* Won't a caravan site in spoil the local character of Sharneyford? Yes! - - Policy ENV5: Biodiversity, Geodiversity and Ecological Networks - Development proposals should *protect areas of biodiversity and ecological networks and where possible enhance sites and linkages.* The biodiversity and ecological aspect of the rejuvenated Little Tooter Hill Quarry site will be destroyed not enhanced! - - May I draw your attention to some worries of mine: I have had personal contact with travellers in the area: I left my car at the bottom of Lee Quarry (near Kingfisher) to go for a run- when I returned a group of travellers were parking their caravans in the lanes where I was parked. It was quite hectic with more caravans arriving at the time I returned. I and others</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
								<p>(bikers) were boxed in. Politely, I asked if I could get my car out- two females were extremely aggressive towards me and brought over some men from their group. It was my fault that I had parked there and they then ignored me and continued to park up. Another time, when the travellers were already parked up, I went for a run and some dogs that were roaming about their camp, set upon me. It was really frightening. , In both instances, I was lucky because I had some bikers to support me. What I am concerned about is that as I have mentioned above, run and walk over Sharneyford, which is quiet with few people about- the Police Station is at Waterfoot, no community police.... am I now to lose the freedom to enjoy the moors because I feel unsafe? - Another worry, again that I have witnessed at travellers' camps set up The Kingfisher and near Flower Scar Road, is the fly tipping and rubbish the travellers leave. An absolute, foul disgrace! This will destroy the habitats and we will lose the wildlife that at the moment live there. Who will be responsible for monitoring this at the Little Tooter Hill Quarry site? - Policy HS16 Basic facilities such as toilets, water and waste bins would be provided. - Waste bins will not be inadequate for the fly tipping of the travellers, I feel. Who will pay for the toilets and water to be provided? The houses near the site use spring water. - Hopefully, there may be further opportunities for me to comment further if it is necessary. - Thank you.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1064	April	Ormerod	-		Object	<p>- The site would not be visually respectful to the surrounding properties and would not blend in with the moorland landscape. There would be no opportunity to screen the site naturally as indigenous trees would take years to grow and, due to the high winds experienced up at Sharneyford, the growth would be dramatically stunted. It is a moorland landscape and, should stay as a moorland landscape. The site would dominate the local views and would pose a potential disaster if hydrocarbons were released at the site through irresponsible travellers accidentally spilling or deliberately releasing old fuels into the flooded quarry or the gully running from the site. The local Primary school is full and further children could not be accommodated easily. The area around the Tooter Quarry suffers from fly tipping and, opening up the quarry could see tipping on an industrial scale due to the hidden nature of the majority of the site. How could this be managed? Fly tipping has happened every time travellers visit the valley. There is no sanitation at the quarry, there is no drinking water at the quarry. what would happen to the site if travellers chose not to use toilets in the caravans, as I believe they chose not to, then defecate in and around the quarry, which has happened at some travellers sites? There are no shops etc, the nearest one is in Bacup or Todmorden, at best that's a mile or more to access local amenities. Why would Gypsies want to live up on the moor? I believe there could be potential health issues due to the cold and damp environment if people stay up there. Who would clear there waste? Many sites see illegal burning and that could result in pollution and could affect the wildlife; plant life and pond life inside the quarry. Who says the gypsies want to live there or travel through there? Surely there are more suitable sites in Rossendale, closer to main A roads and the motorway network. There is no logical route over Todmorden/Bacup Rd in my mind. -</p>		<p>Please consider my opinions carefully. Please protect this corner of Bacup from development. Please understand that this area is important and has seen many inappropriate additions such as the turbines. Please understand that this site and area is used by many visitors and walkers, it is the entrance to our County, our Borough and our Town. Bacup has so many areas not to be proud of the old Bingo Hall, the burnt out Waterside Mill, and the former Health Centre site to mention a few. Why would we destroy this former quarry that has recovered from its previous industrial past and blight the moorland landscape with both caravans and pickups and other commercial type vehicles? Please think again about the proposal. Regards April.</p>
1067	Ajay	Gilbert	-		Object	<p>Having only just moved to this lovely village I was shocked to receive news of the proposed travellers site just up the road from us. It will spoil the beauty and peacefulness of the area and devalue our homes. I am not prejudiced against these people - I quite like 'outsiders' and admire their independent spirits but they are either part of our society/community or they are not, and I don't see why the council has to accommodate them in this manner. - Typically such sites contribute to an increase in crime rate and feature unsightly mess. - I appreciate the council is in a difficult position, and I guess there are very few communities who would welcome such a proposal with open arms, but I consider your first duty to be towards the tax-paying families whose more conventional lifestyles will be adversely affected by such a proposal at that location.</p>		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1139	Andy	Stephenson	ASA Micros Ltd		Object	Unsuitable location away from amenities - isolated location. - A more suitable, central location, would be Kingfisher Park. - No evidence that this site is on the route to Appleby. - No evidence that this site is wanted by the traveller community. - Poor bus service. - Damage to established wildlife in the area that took 25 plus years to re-establish. - More suited to a nature reserve. - Lack of information as to how the site will be monitored, funded, maintained. - Area is already subject to fly tipping. How will this be monitored and managed? - Local police and emergency services will not be able to respond to incidents in a timely fashion. - Isolated rural location. - Tree line screening not suitable in this area. - Outside of Urban Boundary. - Not in keeping with the character of the surrounding area. - Cause damage to existing water courses. - D		Why is there only 1 proposed site for HS16.1? - If you are to provide such a facility, then it need to be more central. -
1173	Glynis	Jones	-		Object	The proposed site is totally inappropriate in this rural location, particularly in relation to the site itself. The former quarry has been transformed into one of ecological diversity as flora and fauna have populated the area. This site is important to an area which is recovering from its industrial past. This would be destroyed by the necessary clearance and work on the services required to support a traveller's' site. - - The traveller's appear to prefer sites which are more central and close to amenities, hence their presence near the Kingfisher Centre. In addition, the severe winter weather that would be experienced by residents here would make the site unsuitable. - - There are concerns about potential tipping activity in an area which is already suffering from this blight on the environment. - - The site is close to a major bend in the road in a 60 mph zone where drivers are already likely to speed and could therefore present a danger to caravans turning and slowing. A large number of heavy goods vehicles use this road, and particularly those going to the compositing plant adding to that danger. - - Over the years residents have been subjected to the maggot plant, constant traffic to the compost plant with foul smells emanating from the vehicles, as well as from the plant itself. Pylons and wind turbines clutter the landscape, and associated roadworks have left the road in an appalling condition. Please do not now subject us to yet another assault on this recovering rural landscape. Why can't the site that the traveller's already chosen to use be made a permanent one?		No

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1184	William Victor	Morrell	-		Object	Dangerous location close to a bend, slow vehicles could cause accidents on this busy road with 60 mph speed limit. High usage by HVGs already causing a problem - The site is in an area of natural interest. Tree planting has already improved the area, but this site would have a detrimental effect plants and wildlife now colonising this site. Important water course in relation to flooding lower down, potential danger of this being blocked. Potential tipping problems given type of work often carried out by travellers. Impact on houses opposite the site and site not in keeping with local residences which are stone built with listed buildings in the area. Concerns about how the site will be monitored and managed in terms of length of stay, condition of the site etc.		No
1204	Samantha	Bradford	TA		Object	I would like to raise my concerns as follows: - - Who will be responsible for the removal of waste/cleaning and upkeep of the site - - Who will police the site, while in use by the transient community and when not in use, this will become a place where non-travellers could hangout - - What is the footfall of travellers – do you have statistics that underpinned your reasoning to proposal of the site in Sharenford - - Alternative sites - there are many disused areas within 'urban boundary' that can be used – is it a case of 'out of site, out of mind?' - - Concern with the integration of the transient community with the local community - - The isolation and vulnerability of the residents in the area, there are many older members of the community that are already isolated due to the lack of facilities and services in the area. - - The destruction of a recovering bio-diverse site. - - Contradiction of your own policies in relation to urban housing - - Pollution created by the site, rubbish, waste disposal. - - Pressure on oversubscribed facilities/amenities in the area. - - Cost implications- I contribute to the maintenance of the borough through my taxes. What contribution will the community that use this site be making - - There is no public transport in the area, leaving us and the transient community without links. - - Already have to put up with smelly/loud/speeding HGVs that pass through all hours. The transient community have been known to have many vehicles that they use for personal business use. This will overcrowd the site and make it eyesore.		I think you should reconsider this proposal, we do not need an 'out of site out of mind' transit site in Sharneyford. That will then be 'signposted' for use by a non contributing group of people. Given this is within meters of the edge of the Rossendale boundary that is already neglected and overlooked by the council and other services, and is not considered when allocating the area as a pylon/wind turbine/refuse disposal vicinity. - - This is an aging population of vulnerable people and you are putting them and myself at unnecessary risk.
1206	Jennifer	Hardman	-		Object	This is not the right place for a traveller community. I have lived in this neighborhood for over 40 years and I cannot see the need for the site to be located in this area. I live on the road from Bacup to the proposed site and I feel that I and others within the local vicinity could be a risk with the encouragement of a traveller site in the area.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1252	paul	ross	-		Object	<p>Dear sir /madam - I am writing in objection to the proposed travellers site at tooter hill Quarry todmorden road sharney ford HS16.1,one of my concerns is the proposed development at the said site is out of the urban boundary, there is no evidence from the planning department that the development would benefit or enhance the site and surrounding area, there fore such a development should be kept within the urban boundary. Also there would be a loss of country side which doesn't keep up with the outlook and wouldn't blend in with the surrounding houses and I firmly say hinterland villages like sharneyford should be protected from such developments and proposal's. - I am also concerned that the planning states it will be a transient site which means the travellers will come and go without anybody really knowing who,s who and how many other travellers and visitors are on the site , it would be extremely difficult to police, 8 caravans are proposed, my concerns also is the amount of machinery that they use for there work , wagons horse boxes etc that they would fetch, 16 acres is a large area so I feel there would be a lot more than eight vehicles on the proposed site and would look out of place with the look of the surrounding area and would be a eyesore to what is a beautiful area with outstanding views, there would be massive changes to the current look of the current site as it is now, as its very high up it takes a long time for anything to grow, the temperatures are cold at best , the trees that was planted many years ago have struggled to grow, therefore any new planting to potentially shield the site wouldn't work as it would take to long for new trees to grow and we would be left with a view that doesn't complement the surrounding area and views, there would be absolutely no chance of retaining existing water courses and trees on the proposed site. - I also believe that the site would be built in such a way that would not blend in with local housing that is in this area as a lot of the houses are nearly two hundred years old and older in some cases therefore I believe the traveller's site wouldn't be built using traditional materials etc ,also there is a listed house facing the proposed site, again there would be no chance of the proposels blending in with the current character of the surrounding areas. I feel strongly about the amount of commercial rubbish that could be potentially left which is essentially a 16 acre hole, who is going to police this?. - I have concerns of pollution regards diesel ,oils etc that would come hand in hand with vans wagons and machinery , what would happen when spillages makes its way into the water ways which will in my opinion is certain to happen and we have polluted rivers and streams polluted and lots of dead wildlife , in my opinion there is lots of wild life on the current site, lots of birds and lots of other things living in the spongy type of nature reserve it has turned it self into as I remember it just being a quarry hole that has transformed into something that no one could have imagined , who knows what is living in there , Badgers have been reported to sometimes be living in a</p>		I have put my points across in my letter.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						<p>nook that slides under a little rock face on one of the banks on the right hand side of the quarry so I take all these points would be taken into consideration as these animals and wild creatures that are living within the site and marshes deserve to be left in pieces rather than die through excavation. - The quarry holds a lot of water as people that have seen the quarry develop from a large hole to almost a flat spongy marsh can vouch for therefore it is also retaining a lot of water and slow releasing in to the water ways which acts as a great flood plain, I would have massive concerns if the site was developed as to where and how the water that collects there would affect the local todmorden road streams and drains which heads straight to bacup adding to the problems bacup already has with flooding, - The site would need regular checks for pollution , rubbish, over population , with a transient community I think this would be very hard to police and would object as the risk to existing wild life and pollution would be a big risk and one that shouldn't be taken. - Adding this to the current wind farms we have and the composting wagons which stink us out as well as fly tipping like at heald top farm which is a absolute eyesore , what would happen if tooter quarry ends up the same , its a risk I think shouldn't be taken. - As I am led to believe there is no existing drains , no electric and running water, so as I see it we would have to look at put up with make shift toilets , noisy generators running day and night , this again polluting the area with antisocial noise and is something that we should not have to put up with in a village like ours.who would pay the for make shift toilets to be emptied , I fear that if it is left to the travellers as it would be a transient site no one would pay and the toilets would be tipped on the site or on surrounding fields or simply just left full and would be a health and safety hazard along with the smell, , Again this would also have a impact on the current wildlife and habitants of the quarry, Anti social behaviour and crime would soar , we have a crime free area compared to most - Having lived on todmorden road for a long time I also know the travellers don't want to be up here , they can access lots of spare land and never do, they don't want to be here, its to out the way we have no shops and amenities and would not survive a winter up there in a caravan . why would they want to be up here when they can camp in the urban area of the town, fact tells me that, they like being at futures park, its in the town, there children are safe from freezing in winter its close to the shops supermarkets and is more livable that the quarry on todmorden road. - As the ride-on biking plans have fell through and the land is being fly tipped on etc why propose this land as there is space for a transient site, they clearly like it there and would be easier to monitor and easier to build as that area is urban and not country side. - I would like it if you would consider other sites across Rossendale that would suit the travellers and there needs.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1274	joan	heap	-		Object	<p>This site as gone from a disused quarry to what some would class as an area of natural beauty. - This will affect local wildlife and wild flowers/shrubs. - Will there be a survey for nesting birds, bats, badgers and the wild deer in this area? - As we cannot predict the future and know what type of Gypsy/travellers will arrive on site.(good and bad in all walks of life). Can you guarantee that the site will be kept clean and tidy. Who pays for the clean up operation? As you keep saying this is not a permanent site, so Gypsy/travellers will not have to pay anything towards this venture, but we will as taxpayers and we will not benefit from this. - The stream running down sharneyford will not be contaminated and no illegal dumping of waste (trees and tarmac). - Who will be monitoring this site, or are sharneyford residents left to paddle there own canoe, now that the council have made cutbacks in all areas also if there is a problem with our safety or belongings the local police will not be available, due to cut backs again. - The affect on house prices will not be in our favour. The affect on local businesses will suffer, self catering accommodation, local farmers who have sheep and cows in adjacent fields. A lot of Travellers have dogs and sheep worrying would is a very cruel way for sheep and lambs to die. Again who will take responsibility and cover the cost? - A good number of years ago travellers arrived in sharneyford at the bus turnaround area.they were removed and the area made inaccessible. A while after that travellers arrived again at the top of sharneyford left a terrible mess and the process was repeated. The travellers have not been back since. Now you want to put back them up sharneyford. - Given the choice were would the travellers want to be? On the top of a hill on their own were the weather can be cold and wet. The area is prone to water which will make it boggy. There is no street lighting, now no bus route. Will they want to be on a tarmacked hard standing with street lighting and access to local amenities? Were they can be monitored for there well being and ours. The area we suggest is futures park. This is the area THEY keep choosing!</p>		<p>Has anyone sat down with the Gypsy/travellers and asked them where they would like to be situated? - You are telling us that you are proposing Tooter Hill Quarry and asking us whether we object. We do - You the council are just as bad you are telling them were they have to go. Your are Not listening either. ASK THEM !</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1275	Nic	Greenwood	-		Object	<p>I have lived in Sharneyford for 41 years my family also live here. I wish to object to the planned traveller site for a number of reasons. - We have pylons, wind turbines, fly tipping and smelly wagons to contend with. In addition, behind us we have 8 hundred tonnes of illegally dumped waste at Heald Top Farm, which it appears that no one can do anything about other than to let it rot! What would happen if we have a similar incident in the quarry? - Some travellers do use plant and machinery and with that comes oils and diesels. The majority would manage these pollutants safely however, there are some who would not use these potential pollutants responsibly. Policy ENV7: Environmental Protection says; - Development which has the potential, either individually or cumulatively, to result in pollution that has an unacceptable impact on health, amenity, biodiversity including designated sites, will only be permitted if the risk of pollution is effectively prevented or reduced and mitigated to an acceptable level by: - Undertaking assessments and/or detailed site investigations of land which is or may be affected by contamination and implementing appropriate remediation measures to ensure the site is suitable for the proposed use and that there is no unacceptable risk of pollution within the site or in the surrounding area. - I believe, policing the control of such substances would be very hard with a transient community and on these grounds , I would strongly object to the site as there is too much at stake with the potential pollution and loss of habitat for wildlife at the quarry. - The majority of travellers are law abiding and respect the countryside but, there are a small minority that carry out illegal activities, in fact DCLG have produced advice to local councils with issues such as this in mind including, fly tipping, illegal burning, and other anti-social behaviour trends associated with traveller sites. It may only be a minority of travellers that do that but, I don't believe we can take a risk at this site due do the green, biodiversity environment which is at risk in the quarry if such tipping and illegal burning occurs. And I don't believe a transient traveller's site could; - - "Where appropriate, development should incorporate habitat features of value to wildlife within the development (including within building design)."</p>		<p>I don't believe that a traveller site is appropriate for the area or community I feel that it would be detrimental to the natural beauty and eco system with the quarry. Traveller have never stayed at the quarry probably due to the remoteness of it from local services and the exposed nature of the site</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1278	Lucy	Ross	-		Object	As a resident of Sharneyford I am strongly objecting against the proposal of a traveller site in our small village, if this happens it will be built outside the urban boundary and therefore should be enhancing to the area! How I question is a transient traveller site going to enhance the area? For one it is not going to blend in to a village setting with some very old houses and if im correct in thinking a listed building! There are no amenities up here for them, no electric, plumbing, waste disposal etc who is to pay for all this? If left up to the travellers I fear they would just leave all their waste it or fly tip it on the moorland if they aren't to return would they really care! I think not! Not to mention the threat of antisocial behaviour, which yes is a minority of travellers but with them changing over repeatedly how do you know what sort of people are staying there, how will this be policed with an already stretched and cut force! Sharneyford primary is a small already oversubscribed school which simply cannot and should not have to accommodate an influx of travelling children. The quarry site is a basin which holds water and slowly releases it, if this was interfered with and built on then what would happen to the excess water? this will present a flood risk! we only need a heavy downpour up here and the road becomes a river so add to that all the water the basin holds and you create an unnecessary flood problem! Not to mention all the wildlife that resides in the quarry, surely that should be a focus and enhanced as an area of natural beauty for the children and residents of the village to enjoy and not sticking a load of unsightly caravans and vehicles up there, its a disgusting waste of a beautiful landscape, I believe badgers may even live in the quarry! are they not a protected species? Common sense tells me that these travellers don't even want to be up here, there are no amenities, limited bus service and never do they set up here despite being able to access land. The one place I have seen them repeatedly set up is on the land next to futures park in stacksteads which is unoccupied so why not have it there? I would urge you to consider my points and have this site at futures park		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1301	Andrea	Kay	Homeowner		Object	<p>Dear Sir / Madame - - I am a Sharneyford resident, I am writing to object to the proposal to develop a Gypsy and Travellers Sight at Tooter Quarry, Todmorden Road, Sharneyford. HS16.1 - I have significant concerns in relation to the location of the choses sight. - It is well known that the gypsy and travelling communities are one of the most marginalised and oppressed communities within society. They face a high-level of poverty and discrimination and concerns are regularly recorded in relation to their unmet needs, poor physical and mental health, inappropriate housing conditions, poor sanitation and lack of educational opportunities. - The Local Area Safeguarding Children's board express concerns in relation to the high-levels of child neglect, poverty, domestic abuse and substance misuse. Due to the transient life style, it harder to provide the appropriate education and support, therefore the key is to integrate these communities into society and not to segregate and isolate. It is imperative that the women and children within this community are seen and heard and have appropriate access to community resources and services. - Central government has proposed to take measures to address these inequalities and provided better outcomes in relation to social isolation, poverty, education, health, housing and hate crime etc. This will mean that each local council had a duty to promote equality and challenge discrimination. - - The proposed site will significantly isolate this community from society, the council could not have choses a more remote isolative sight. Without transport there is no access to shops, health care, available educational facilities. Currently there is no bus service. Due to the rural location very few people are physically fit enough or able to walk up from the doctors, schools, shops or town centre to the quarry sight. This will further isolate the women and children within this community. - As a Sharneyford Resident, over eight months of the years we are subject to extreme weather conditions. Temperatures plummet below zero on a regular basis, the wind, rain, fog and snow provide a harsh environment in which to reside. Our homes are required to be maintained to a high standard, all have stone roofs, most have additional insulation and all have heating bills above the national average. - - The quarry sight which is proposed fills with water acting as a flood plain for both Bacup and Todmorden, as the council are well aware the flooding has worsened over recent years, and of concern is that interference with this quarry will only exacerbate the flood issues. - - Snow drifts have been known to cover the back of my house for over a period of a month during the winter, I would be extremely concern about the safety and welfare of any individual living in a caravan, relaying on hook up electricity in such extreme weather conditions. The quarry its self, also fills with water and snow, being exposes to such conditions could have fatal consequences for the most vulnerable members of our society, the children and elderly. - - Therefore, in conclusion I express concern that the Council Members</p>		I am of the view that the plan should be rejected for the reasons stated above. That the council identified a alternative more appropriate sight.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						<p>proposing this sight are significantly discriminating against the Travelling and Gypsy community, by failing to take their needs fully in to account. Furthermore, they would be isolating them from society, restricting their access to community resources and facilities also placing their health and welfare at significant risk of harm, due to social isolation and the extreme adverse weather conditions we experienced here in Sharneyford. - - I am of the view that the local council would be failing in their duties to address the government recommendations to challenging these social inequalities of the gypsy travelling communities and to implement the recommended local strategies in relation to flooding. - - Out of the whole of the Rossendale Valley, I fail to see that this proposal is the only option available. The sight at New Hall Hey Road in Rawtenstall, has recently failed as a retail sight, its central to all amenities which would meet the needs of gypsy and traveller's community, it already has hard standing, water and electricity and is close to the motorway network. It is currently housing the travelling fair. - - The gypsy travelling community have identified sights appropriate for themselves such as Futures Park, I request that the council reconsider these sights, the needs and basic human rights of this community. -</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1305	Fiona	Knapper	-		Object	<p>I was extremely alarmed to discover that this site has been proposed as a transient travellers' site. It is entirely unsuitable for a number of reasons, something which the planners ought to already know as they have red rated most of the key considerations in the local plan. - It is a remote location, outside of the urban boundary. An ongoing series of caravans and mobile homes will do nothing to 'enhance the rural character', which any development outside the urban boundary is required to do. - It is also distant from any local amenities. Sharneyford is a very small hamlet, consisting only of houses and a primary school. There are no shops, no doctors and, crucially, no public transport is available to transport people to these amenities. The only bus service that ran has now been stopped, making Sharneyford a place completely unsuited to anyone who may be vulnerable and in need of support services. - The site itself is recognised as an area of important bio-diversity, something that will certainly be negatively impacted by development of any kind. It is also prone to flooding, and this is likely to worsen if hardstanding is laid, increasing the amount of water run off in wet conditions. - The site has no basic amenities in place, such as water and sewage, which means a considerable amount of expense and disruption would be necessary to provide these. - The site is unlikely to meet with approval from traveller communities, due to the above practical considerations. When traveller communities arrive in the Bacup end of Rossendale, they choose to settle at the Lee Quarry/Kingfisher building, or at Valley View in Whitworth. These locations are already paved, and would be easily connected to basic facilities, such as water and sewage, as well as being much more practically located for local amenities. I believe that either of these locations would be much more suitable for a traveller site than Tooter Quarry in Sharneyford. - In conclusion, I strongly object to the proposed development at Tooter Quarry.</p>		Please look more closely into developing the brown field sites proposed, and leave our green spaces alone.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1327	Ebony	Ross	-		Object	As a resident I would like to object to the proposal to develop a Gypsy and traveller's site at Tooter quarry, Todmorden road HS16.1 - One of my main concerns is the loss of countryside and the destruction of natural habitats. As it stands, the site is outside of the 'urban boundary' and therefore should not be developed on. I do not believe that the planning department provided sufficient evidence into why the site should be in a countryside setting, which is outside of the urban boundary. Another concern is that this site will not blend in with our local housing. The site wouldn't be built in a manner that would blend into the surrounding houses, some of which are over two hundred years old. This includes a listed milestone and a listed house, both of which would be within yards of the entrance to this proposed site. Tooter Quarry has had a brilliant recovery back to moorland and has created itself a amazing biodiversity which surrounding councils and boroughs would be proud of. I understand that the majority of travellers are law abiding and will respect the countryside, but there is a minority that carry out illegal activities. Even though this may be a minority I do not believe that putting the natural biodiversity and environment at risk is a risk worth taking. Whenever Travellers are in the area they always choose to stay on the spare land at futures park which they evidently like. If they wanted to stay at tooters quarry they have had many chances to do so. The spare land is close to shops etc and is clearly a more suitable site for them to stay on.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1330	laura	davies	-		Object	<p>To whom this may concern, I am a resident on Todmorden Road, Sharneyford, Bacup and live very close to the proposed site to build a gypsy/traveller site. I live with my husband and 3 year old. - - The loss of countryside and urban sprawl is a huge concern to me. I feel that Hinterland villages such as Sharneyford should be protected from proposals such as the suggested. Currently, the site is outside the settlement or "Urban boundary" and therefore should not be developed. Your Policy SD2: Urban Boundary and Green Belt States; - - "All new development in the Borough will take place within the Urban Boundaries, defined on the Policies map, except where development specifically needs to be located within a countryside location and the development enhances the rural character of the area" - - I feel that the Planning Department could not provide evidence that there is a demonstrable need for the site to be in a countryside setting, outside the urban boundary, and that this development could not enhance the rural character of the area. - - I am concerned that the character of the area will change, and I feel a site of this nature will have a detrimental impact on the lives of the residents in the Sharneyford area including myself when I am walking/driving past on a daily basis to work. - - To build a gypsy/traveller site would almost definitely disturb the Bio-diversity that's taken place since the quarry closed. I believe there is a significant wildlife interest at the quarry and any development would not adhere to your planning Policy ENV5: Biodiversity, Geodiversity and Ecological Networks which advises:</p> <ul style="list-style-type: none"> • Proposals should avoid harm and where possible enhance biodiversity, and where necessary appropriate mitigation and on and off-site compensatory measures to offset the impact of development • Development proposals should protect areas of biodiversity and ecological networks and where possible enhance sites and linkages. Any unavoidable adverse effects should be minimised and mitigated against, and where this cannot be achieved, compensated for with a net gain for biodiversity demonstrated. • The design and layout of new development should retain and enhance existing features of biodiversity value within and immediately adjacent to the site. Ecological networks should be conserved, enhanced and expanded. Development proposals will be expected to demonstrate how ecological networks are incorporated within the scheme. My suggestion is that the Council looks at other sites where the travellers have been evicted from as appropriate locations such; as Futures Park, Valley View or off John Street Whitworth. These locations are closer to local amenities such as shops, bus routes, schools and where the living conditions are much easier for them. - - Yours

1331	craig	davies	-		Object	I am a resident and business owner and I live very close to the plot that has been earmarked to be turned into a gypsy/traveller site at Tooter Hill Quarry, Sharneyford. - - I do not feel this is a suitable site and i feel you should consider somewhere with better amenities and transport links such as Futures Park.		-
1354	Ivor	Vaughan	-		Object	I don't want a gypsy site on my doorstep. - It is not a suitable site. there are plenty of other places in Rossendale where they could be accommodated. maybe Whitworth where they have lived happily for decades. maybe Futures Park where you could keep an eye on them from your offices, maybe Helmshore after you shut down the textile museum.		-
1360	Catherine	Whitehead	-		Object	I object to this proposed site due to the fact that the site is not suitable for this purpose. - We already have to put up with excessive amounts of huge stinking wagons and roads ruined by wind turbine ducting as well as two wind turbine sites to look at and hear. As a resident of Todmorden road I feel that we have more than enough to put up with and a gypsy site with all it's issues is not acceptable. Other sites can be found where residents are not as affected.		-

1378	Tia	Howarth	-		Object	<p>Tooter Quarry should be designated as Geen belt and should not developed into a Travellers Site. The quarry has a vast array of moorland plant species and could be put and risk if travellers abuse the site. Most won't but, some may carry out commercial interests that could pollute the quarry. The South Pennine Moors are not considered with enough importance if you ask me and, they should be protected as is the North Yorkshire moors. The site would not match the building style of the houses in this area. Most are made out of natural materials in a style going back as far as the Georgian period and modern caravans would look totally out of place. There would be no effective way of screening the site as quick growing Conifer type trees and shrubs would not blend in with the moorland landscape. The inclement, normal, weather patterns we experience up here would put the health and well being of the visitors at risk . There is a reason why our houses have walls two foot thick up here. There is nothing in terms of amenities in the area that the travellers need. The quarry floods and any attempt to drain it or any pollution could harm the wildlife interest at the quarry. I don't want to see a caravan site that would be oppressive in scale in comparison to the few scattered stone built properties in the area. I worry that the site will go ahead just because there are fewer people to object up here and the Council will put the site up here to keep the Travellers away from more heavily populated areas where the travellers want to be. Many travellers fly tip, it's more than fair to say, the Council and other Councils face huge clean up bills where ever they go and I fear that this site would provide opportunity for those who take part in such activities to dump rubbish on a commercial scale. I worry about crime that is associated with some sites. This is an isolated and potentially vulnerable area to live. How long would it take for a police response if there were safety critical criminal activities taking place up here?</p>		<p>The site is wholly inappropriate for travellers. The site has multiple owners, there are no utilities, no running water or foul drains, not even electricity. Putting these in place or substituting them with water butts or porta-loos would only add to the unsightly nature of the site in this location. Not forgetting loud diesel generators akin to the fair ground. Put the site where the travellers want to be. Look at the sites in Rossendale where they have been visiting. You have the records and know where they want to be. Not half way up a mountain over a thousand foot up. - - Cleaning up this site would be the responsibility of the owner of the site and, with waste costing a thousand pound per tonne to put into landfill, the site could potentially end up as one of the biggest unlicensed tips in the North of England and the Council would be powerless to do anything about it, as with Heald Top Farm's eight hundred tonne of illegally dumped waste. Apparently, the polluters are known but the rubbish has been there now for nearly two years. - - Please let common sense prevail and consider a more suitable site in Rossendale. - - Thank you Tia Howarth.</p>
1441	Catherine	Hunter	-		Object	<p>I am very concerned about this site and having people live there who are sadly known to cause disturbances in an area where they live. I am so fearful that the value of my house will drop. I was looking to put my property on the market in a few years. I strongly strongly feel that with this site so close to my home no body will want to buy it. I worry about walking my dog around the moors in the future. I WILL NOT feel safe anymore.</p>		<p>I am saddened with this proposal, not only do you take our bus service away but you move a potential opportunity to crime in to our little neighbourhood.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1471	Jean	Carter	-		Object	<p>I believe the proposed site is outside the settlement or "Urban boundary" and will not enhance the rural character of the area which is against SD2: Urban Boundary and Green Belt. I also believe that the proposed site would contradict/contravene the following polices of the Local Plan: - - Policy ENV4: Landscape Character and Quality; - Policy ENV5: Biodiversity, Geo-diversity and Ecological Networks; - Policy ENV11: Surface Water Run-off, Flood Risk, Sustainable Drainage and Water Quality; - Policy NV6: Green Infrastructure. - - As stated in the conclusion of the Summer 2015 Consultation ref SHLAA16405, page 62 of 990, the site is not suitable for a permanent residential scheme but can be suitable for a transit site for gypsies and travellers. I believe that if the site is unsuitable for 'residential' then it is also unsuitable for visiting gypsies/travellers as they will be residents whilst occupying the site, for the same reasons. - - This proposed site is isolated, there is presently no bus service (apart from a school service), the nearest local facilities are approximately 3 miles away, the local primary school is approximately 1 mile away, secondary schools at least 4 to 5 miles away, I therefore feel that the travelling community themselves would not wish to have to stay on a site so far away from local services. I feel that there must be other suitable sites/areas closer to local amenities for this proposed development which should be considered before Little Tooter Quarry. - - I have not seen any travellers in the area for a long time which suggests they do not want to be here. They have however been at other locations such as behind Futures Park car park towards Lee Mill Quarry, Valley View and on an area of land off John Street Whitworth which suggests that they wish to be nearer to local amenities, I would therefore suggest that the Council considers these areas to see if they are more suitable for 'visiting' travellers. - - After having studied the proposal for a transit gypsy/travellers' site at Little Tooter Quarry I, and many other residents in the Sharneyford area, believe the site is unsuitable and the development of such would contravene many of the Local Plan's policies, some of which are noted above. I am therefore strongly objecting to this proposal. -</p>		<p>Although this is only a proposal at the moment I believe there are more issues that would need to be resolved than the breach of the policies. - - The actual site would have to have a lot of work carried out on it, presumably by a developer. How would the investment be recovered, from the occupiers of the site - would not think gypsy/travellers would pay for a pitch - does not seem like a viable plan. - How would the site be policed with regard to the length of occupation, sanitation, noise, waste etc and how would it be implemented in such a remote area? Would this come as an extra cost to the residents of Rossendale via Council Tax? - If and I stress 'if' there were any anti-social/criminal concerns how would these be dealt with effectively considering the nearest police desk is approximately 5 miles away? - - These are just a few issues raised at a residents' meeting attended by Councillors Barbara Ashworth and Andrew Walmsley who, unfortunately, could not provide us with any answers. I therefore strongly believe that this proposal should be dismissed by the Council. - - -</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1481	John	Howorth	-		Object	<p>As the owner of the land surrounding this site I have no choice but to object to the plans I have read. - - First and foremost I feel a duty to protect the wildlife and habitats of the many animals who have made their homes in the old quarry. For the 12 years I have farmed the surrounding land I have seen a variety of wild birds (including Heron's and Snipe's); I have seen many badgers, and I know for certain there is at least one fox den within the quarry itself. I have lived close to this area for over 22 years and have seen the slow transformation of the quarry go from a barren wasteland to a fertile habitat for numerous species of plants and animals. It is obvious to anyone that if you now decide to open this land up and invite people to live there (whether permanent or temporary) you will be actively reversing over 20 years worth of work. - - The risk to livestock is obviously a personal concern to myself and my family. I am concerned that if the plans were to go ahead then the land I own and farm which borders the quarry is at real risk of contamination. If people begin living in the quarry, there will easily be a 100% increase in litter blowing across onto my land which will have a direct impact on my livestock. The other obvious risk I will face will be dogs. The travelling community, like the rest of society can and do own dogs as pets. Throughout my farming life I have dealt with numerous tragedies where my sheep are killed or injured by dogs who have been let off the lead. More residents equals more dogs, which subsequently equals more attacks on my livestock. A further issue this will cause for me is that should I wish to sell the land I have bought and worked so hard to farm, it will be massively devalued if there is a travelers site adjoining it (mainly due to the anticipated problems mentioned above). - - A final point I would like to make is that as a friend of several travelling families and having driven a horse and cart myself, this is not a route which anyone travelling by horse and cart would use by choice. I am sure you have considered that Todmorden Road is a long, steep road and the majority of the Calderdale side is national speed limit. Why would anybody choose to make an animal suffer the drag of that hill for seemingly no benefit? There are no shops or services up there and it is not the usual route taken by those travelling to Appleby horse fair. If you consider the places travelling communities choose to stay over, you will realise they are usually on car parks and places close to town centres and shops etc. There is good reason for this - they have needs very similar to mine and yours which cannot be met in isolated spaces such as the old quarry in Sharneyford. - - As I am sure you can imagine, me and my family have been worrying about these plans since hearing of them a couple of weeks ago. I have put forward to you my main concerns and hope you will consider them closely. However, if the plans are to go ahead, the only thing which gives me hope that my livelihood will not be affected is that the travelling community will see this site as too inconvenient and continue to park unlawfully in the areas which are of most convenience to them; thereby</p>	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						making your efforts to destroy this beautiful piece of nature a complete waste of time and resources. - - I urge you to reconsider your plans. This site is of least convenience to travelling communities and to use it for such a purpose is of high concern to those farming or living around this area who care about the ecology and diversity of wildlife it currently attracts. Other areas such as Futures Business Park in Bacup and Valley View in Whitworth seem to be the preferred location for the travelers themselves, why are these areas not being considered in your plans? - - Regards, - John Howorth		
1495	christine	Dawson	-		Object	It is not appropriate to allocate a travellers site in Sharneyford both from the travellers point and from the residents point. The site is not suitable for accomodation due to its elevation and proximity to pylons and wind turbines and lack of amenities. - - I understand that travellers at times stay adjacent to Futures Park which would seem to be a more appropriate place . - -		
1527	Stephanie	Van der Hoeven	-		Object	I feel this site is inappropriate given its remote location not to mention this area has become an area of natural beauty and will be destroyed by the caravans and horses. The location of the site means policing will be difficult as no doubt the site will bring some anti-social behaviour problems with it. As this site has a maximum stay of 3 months for passing through travellers who will monitor this? Our nearest police are in Burnley or Rochdale. Also the site would be very far from shops and the transport links from this site for the families is not suitable. In addition, the site would put pressure on schools, doctors etc who are already over subscribed. I feel a much more suitable location could be found for this site within the Rossendale Valley. Lastly, surely the residents of Sharneyford have had enough to put up with e.g. smelly compost trucks driving past and the disruption the wind turbines have caused etc.		
1528	susan	Halliday	halliday healthcare ltd		Object	Location, Hills, ice, snow, not entirely suitable for caravans - - amenities. Not enough school places for my sons step children who needed to move into the area. Plus Doctors surgery over crowded. - - finance. Any excess funds should be aimed at existing facilities for current residents - - monitoring. Police station moving out of area. Travellers have no fixed address to contact with normal traffic etc violations. plus who will enforce 3 month time limit. - - areas beauty. The quarry has regenerated naturally and will be destroyed with the infrastructure needed I.. water, gas, electric and sewer pipes. - - Disruption. Wind turbines, unpleasant compost/was maggot factory. Have we not had enough.		Please treat any if not all residents objection seriously, whatever their opinions and in such a hilly location I feel sure that an alternative location could be found,

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1563	Yvonne and Alan	Peach			Object	With regard to the Traveller Site, it would be awful during the winters for anyone living there on the site. Being high up it is continually cold and windy, even through the summer. The particular piece of land is now a high biodiversity area, where over the past 30 years it has been left and now has natural flora and fauna. There is no sewage/mains electricity or mains water there either. These facilities would have to be installed along with access. There is also no bus route past there and people would find it difficult to get to shops etc. Also in winter Rossendale do not grit the Todmorden Road very often, although Calderdale do grit on their side. There is also the worry about any Fly Tipping that might occur. Who is going to "police" this site as I believe that there is a three month time limit on their stay there? I think the Kingfisher site is a more suitable place for them to stay. At Sharneyford they will be quite isolated.		
1564	D	Stevens			Object	<p>I am writing to object to a proposed traveller site near my home:-</p> <ol style="list-style-type: none"> 1) Location is not suitable - first thing people from West Yorkshire will see in entering Rossendale boundary. 2) Threat of pollution from old tyres, oil etc. that travellers do generate. 3) Location to Listed buildings on Todmorden Road Areas - Grade 2 Listed. 4) Policing of transient type criminal element associated with traveller sites. 5) Distance from schools - shops - garages - medical services etc. 6) Contamination of areas ref/wildlife oil into drains sewers - burning tyres and rubbish - (travellers lifestyle). <p>I would like a reduction in my Council Tax if a Traveller site is established in my area.</p> <p>I do not accept that RBC has a duty to identify sites of suitable use of travellers - may I suggest:</p> <ul style="list-style-type: none"> - Trough Gate Britannia - opposite former Traveller's Rest Pub (primary school available) - Land at Landgate Shawforth behind former Red Lion Pub - primary and secondary schools available plus shops at Whitworth and Britannia also medical centre in Whitworth. <p>The Rossendale Valley has I'm sure many sites other than Tooter Hill that accommodate Traveller Sites.</p>

1637	Robert	Goodwin		Tooter Quarry	Object	<p>I would like to notify you of my objection to the proposed draft plan for gypsy/traveller site at Tooter Quarry Sharneyford as described in policy HS16: Gypsies, Travellers and Show people.</p> <p>I have lived in Sharneyford for 30 years and about 25 years ago I would walk with my children and dog on Tooter Quarry at that time all that was there was a bit hole full of water</p> <p>Recently I walk on the Quarry and was surprised at its transformation it is alive with wild life and I am looking forward to showing my grandchildren who love looking for wild life</p> <p>Myself and my wife are keen walkers and enjoy walking the hills I feel this will be taken away from us if the site is approved</p> <p>I hope you take into account my objections when discussing the draft plan</p>		
1736	P A	King			Object	<p>I am very disturbed to hear of the proposal to turn Sharneyford Quarry into a site for transient Travellers. The site is just NOT suitable. The ground is unstable and now has a sizeable pond, the site has been designated as one to be allowed to return to a natural state. The idea of transient travellers coming and going would be most unsatisfactory with no guarantee as to how many might be there.</p> <p>Also it is a most unsuitable site for the Travellers themselves - stuck at the top of a hill, nowhere near any amenities, in an areas that can have the most inclement weather conditions. I don't believe any Traveller would be happy up there, and believe there are much better sites in the Rossendale area that are more suitable for them.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1745	Jean/Harold	Ormrod			Object	<p>1. The site is a disused quarry not being used for the last 20 years. There must be a lot of wild life in it now. There was a pond in it so there must be wild life in it.</p> <p>2. The stream that goes to the river irwell from Sharneyford, is that going to be contaminated</p> <p>3. Is there going ot be illegal dumping of waste all over Sharneyford for the residents of the village to see every day. As the council have to make cut backs also the police, who will keep te occupants of the site in order if need be.</p> <p>4. It Is said they may need to use the site for Travelling to appleby in Westmorland todmorden road A681 is not on that route so will not be used.</p> <p>5. Local businesses can be affected i.e farmers with their land, sheep, cows travellers have dogs which could worry sheep, lamb even young calves. THAT IS NOT A GOOD WAY FOR THEM TO DIE.</p> <p>As travellers used to come to sharneyford in the summer they calways left in the winter as it was to cold for them.</p> <p>They always left a lot of mess.</p> <p>When the sites were made inaccesible they have not come back. If they had wanted to do they would have been back.</p> <p>If there must be a site in the valley the deem to like Futures Park were the council can keep a eye on them.</p>		
1746	Jane	Durkin		Reference no, 13918	Object	<p>Objections for the above site</p> <p>The site is a disused quarry for about 20 years.</p> <p>There now must be a lot of wildlife and water ponds in it.</p> <p>There the stream at the side which flows to the river irwell. Is this to be contaminated from the site.</p> <p>Will there be illegal dumping of waste for sharneyford residents to see each day as the council have to make cutbacks will they want to clean it all up.</p> <p>Local businesses could be affected self catering accommodation,farmers even the local town(bacup).</p> <p>Travellers have dogs that could become a nuisance to the sheep and cows.</p> <p>As travellers came to sharneyford years ago and left a mess when they left after the site was made inaccessible they did not come backl they had wanted to they would have done so.</p> <p>If there is to be a site in the valley Futures park seem to be the site they want Where they can be policed by the council.</p>

1750	Andrew	Walmsley		Tooter Hill SHLAA16405	Object	<p>I visited the site with a local resident, Cllr X and Cllr X</p> <p>I'm unclear if a full site inspection or an onsite visit has yet been completed ? I appreciate many points have been identified in the site assessment, in my opinion the unsuitability is understated and would have hoped that even by walking the site at this early stage this would have assisted in demonstrating its unsuitability.</p> <p>I will not reiterate the SHLAA assessment other than to say the site itself is very uneven, wet and boggy, and has pleasingly returned to somewhat of a natural habitat. The possibility of contamination to the land and water course has a wider impact further down the village. There are significant challenges in keeping the site safe. Given the site conditions and extreme winter weather, the likelihood of growing trees to reduce visual impact, is likely to take longer than the plan itself</p> <p>Travellers are one of the most marginalised communities in the UK, by creating a site on Sharneyford /Todmorden boundary does nothing to improve integration if anything it enhances segregation, however short the travelling visit. The remote location is inappropriate to tackle this issue, what work has been done to offer travellers equality in accordance with legislation?</p> <p>Capacity at the local junior school is also an issue, has this been reviewed as part of the SHLAA</p> <p>The site borders West Yorkshire. Has a response been sourced from both Lancashire and Yorkshire police forces as to identify the challenges a site on a border may bring, has information been sourced from other authorities who may face a similar issue and information from the bordering police forces elsewhere. ?</p> <p>Public Objection – attendees at a residents meeting exceeded 80 people. I'm sure the coordinator will share information.</p> <p>Neighbouring Properties – with a listed property neighbouring and overlooking the site, and moorland surrounding I'm unclear how the site would sit in visual terms.</p> <p>Appreciating that this is consultation, and responses are being invited, we are required to include a travellers site in the local plan. The consultation only has one option, I trust you will understand why residents feel this is already agreed and the consultation is a formality. With the benefit of hindsight, we should not have only included one option.</p> <p>Email received 23/10/2017:</p> <p>Appreciating there were many issues across Rossendale on Saturday evening Sunday Morning 21/22 October.</p> <p>Attached is evidence of the flooding issues at Tooter Hill quarry entrance tge pphoto was taken by me around 7.30pm</p> <p>I'm aware the consultation has closed but it's very difficult to evidence actual</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
						flooding in a consultation time fame. I trust therefore that this will be added as evidence of site issues to the process Please see appendix for photos.		
1752	Kelly	Baggaley			Object	I wish to oppose the travellers site at HS16 and would suggest that a more suitable location for this site would be Futures Park in Bacup. The reasons I object are as follows: Infrastructure (no police, schools, no high school, roads, public transport, doctors, dentists, no hospital) Width of roads (congestion) Width and lack of paths (especially for the elderly, disabled and parents with prams and young children Surface drainage problems, possible flooding in some of the areas (e.g. Bankside Lane) Sewerage problems Access roads Traffic in and out of Bacup at peak times Wildlife Areas of natural beauty Empty houses in Bacup		
1754	Douglas/Kat hleen	Hardman			Object	My wife and I wish to submit the following objections to the above proposed site as we feel that it would create a massive detrimental effect to the area, both on the site and covering a much wider area. Environmental damage to wildlife etc. would be seen to this lovely area which after 20+ years of non-use is re-establishing itself and proving a great asset to the community and further afield. (See your policy ENV5) We also feel that the setting up of this site would have a negative impact on the future (and present) residents due to the visual impact (ENV4) as to the type of dwellings and vehicles which would be present on the site. The proposed site is due to be set up right on the Lancashire/Yorkshire boundary and would not create a good impression as to the gateway to Rossendale. In fact the very sight of the "travellers camp" would suggest the opposite. We are disappointed also that the site not proposed as a permanent one but as a transient site which would mean less controls giving it to be out in place and making a transient site difficult to police with its comings and goings and short stays etc. Furthermore, we would have expected the proposed site to be contained within the Rossendale boundaries but it would appear that the majority of the site is in fact contained within the Calderdale boundary and should therefore be considered/consulted by same Whilst we have not touched on watercourses, natural springs and natural drainage etc. We trust that all the necessary surveys for same will be carried out.		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS16.1	Further comment
1759			Brosters Environmental Ltd		Object	<p>We are instructed by our client Brosters Environmental Ltd in relation to the Local Plan Written Statement (regulation 18 Draft) in respect of Policy HS16: Gypsies, Travellers and Travelling Showpeople with specific reference to the proposed allocation of site HS16.1 as defined on the associated Policies Map. Whilst acknowledging the requirement to provide gypsy sites in appropriate locations, it is considered that the proposed allocation of site HS16.1 at the former Little Tooter Quarry, Sharneyford is unsound in that the site does not meet the criteria for locating such sites as set out in the adopted Core Strategy (CS) under Policy 5: Meeting the Needs of Gypsies, Travellers and Travelling Showpeople.</p> <p>CS Policy 5 states that 5 permanent and up to 3 transit pitches are to be provided in the plan period (2011-2026). The stated criteria requires such sites to be within reach of schools, shops and other facilities and all sites should be close to "green infrastructure." It is noted that paragraph 212 states that "Many Gypsy families contain children and access to services is important and encourages better integration with the settled community."</p> <p>It is also noted at paragraph 213 that "The location of pitches should therefore be close to (within 30 minutes travel) of at least two of the following: shops, primary school, community facilities, GP."</p> <p>Whilst it is acknowledged that the Sharneyford Primary School is located approximately 750 metres from the centre of the allocated site, the Bacup Local Centre which contains many of the other required facilities, is approximately 2.5 kilometres away. The Institute for Highways & Transportation (IHT) publication "Guidelines for Providing for Journeys on Foot" outlines that the preferred maximum walking distance for commuting from an origin point by persons without a mobility impairment is 2,000m. In this respect it is considered the proposed site, which is located well into the open countryside and substantially detached from the defined settlement of Bacup, does not meet the CS locational requirements. Additionally, the site is not located close to any designated "green infrastructure" as required by CS Policy 5.</p> <p>In respect of the above and other related matters it is considered that the location of site HS16.1 is not in accordance with the requirements of CS Policy 5 and is accordingly considered unsound.</p> <p>If there are any questions, please don't hesitate to contact us.</p>

1465	SEE AGENT DETAILS	SEE AGENT DETAILS	B AND E BOYS LIMITED		Support	<p>SUPPORT PROPOSED HOUSING ALLOCATION. PLEASE REFER TO SUBMITTED LETTER.</p> <p>GREENSNOOK LANE, BACUP</p> <p>Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. This consultation is the first public consultation stage in the production of the Local Plan (Regulation 18) and includes the Draft Local Plan (Written Statement) and its accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan.</p> <p>Hourigan Connolly is instructed by B and E Boys Limited to submit and provide comment on the above site in support of its future development for residential purposes. We have previously submitted representations in response to consultation relating to the Local Plan Part 2 in 2015 and subsequently the 'Call for Sites' exercise relating to the preparation of the new Local Plan in 2016.</p> <p>Along with this letter, we have also submitted an electronic consultation form via the Council's website and this letter should be read in conjunction with the submitted form. A site plan is also enclosed for information.</p> <p>Submissions</p> <p>We note that within the draft Local Plan land at Greensnook Lane in Bacup has a proposed allocation for residential development under draft site allocation HS2.1. The 1.13ha site is identified as being suitable to deliver 33 dwellings with an identified timescale for delivery of 1.5 years.</p> <p>Our client supports the proposed allocation of this site for residential purposes and considers that it is entirely appropriate for delivering such a use and quantum of development within the timescales proposed.</p> <p>We reserve the right to provide further supporting statements and evidence during the preparation of the Plan process and ask that we continue to be informed as the Local Plan progresses.</p> <p>Please see appendix</p>	-

------------------	----------------	---------------------------------

556	Ken	Hagans	-	Object	<p>This proposed housing site was previously a cemetery with still intact graves. The headstones and tombstones are now located to the south of the site to creating a lovely historic paved area. - The "common" as it is locally known is used daily by local residents for dog walking and in better weather, recreational activities for families and children. We do not want to lose this beautiful open space to housing. - - Parking in general is bad in the area, with barely enough on street parking for the existing properties. There is a cricket club nearby and on match days parking is terrible in the surrounding area. This would only be exasperated further by new housing -</p>	No

630	Michaela Jayne	Cunningham		HS2. 3 Higher Cross Row	Object	<p>I moved to Bacup from Cornwall 2 years ago due to its similar landscape and it was in a conservation area. The area of Higher Cross Row has a number of gravestones within it and is of historical as are the terraces on Lanehead Lane, there are often visitors who come to look at these areas, these should remain protected and be kept as a clean green area. I think the lpa need to review and rethink there housing stock, there are lots of properties remaining empty on pennine, landlords who have no tenants, houses which are derelict. Property remains cheap here but still no one wants to come here so why by building a proposed site of 17 houses change thus, there are already plans to build on Greensnook. Lanehead Lane is a one way system which is already busy enough and cannot cope with heavy vehicles driving down the steep slope, there are parking issues for local residents having to find spaces on side streets, if you take away this space there will be more issues. This green space is used by dogwalkers and children and has also been a safe place for the air ambulance to land when there has been emergencies. We need to protect our areas of history and heritage and stop this area being developed. The reasons for designation vary widely but all Conservation Areas have in common historic and architectural features which make them worthy of additional protection. We recongise that this places extra responsibilities, and in some cases extra costs, on owners when proposing material changes to their properties. Not at any point has anyone around this area been consulted about this property proposal. The area also is a habitat for some local wildlife and should remain, green, protected and in the conservation area.</p>		<p>I am disgusted that they are proposing such a development so close to the town centre where the road plan is still being considered as there would be more road users heading straight towards the existing roundabout and this is already a dangerous crossing for both motorists and pedestrians the whole impact of this needs reconsidering. I think the LPA needs to reconsider its current housing stock in this area, is there a real need for new housing, there are properties which have been for sale for 2 years which still haven't been sold, some of these are empty, perhaps liase with these people first and come to an agreement and get these filled first. Consider the impact of more traffic in the area, more pollution, reconsider the road layouts they don't work, how many more road traffic collisions does there need to be, how many more deaths in the valley, repaint all the zebra crossings or change them to a pelican crossing simple solution, put speed bumps in some areas. You need to consider everything before you go ahead and build more housing, the town could do with a complete face-lift so families want to remain or move here, turn the derelict building sites into housing they would be more appealing than using our green sites. Stop being greedy by selling the land in the first place, developers don't care about local communities but people do. -</p>

680	Danielle	Sutcliffe	-		Object	Higher cross row is a green space used by many dog walkers and numerous people around the area. - - Building on here would seriously obstruct the view from my house and devalue my property when I look to sell. - - the area of green had been used many times by air ambulance services and is a required green space for all residents on the surrounding streets. There are already housing developments on greensnook lane and I don't feel like we can lose this space to more houses.		-
681	Emma	Kierans	-		Object	This green area is not only the site of a number of graves but is used by the community for several reasons. Our children play safely there, local dog walkers use the area as a place to exercise their pets and it's used by the air ambulance in emergencies. Just to name a few. - As someone who has grown up in this area I'd be sad to see houses built there, I played there as a child and my son's do now!		-
682	Mark	Beverley	-		Object	The area above Earnshaw Road has always been part of the local greenbelt area incorporating the historical values of the previously positioned church and school. - The current conservation area splits the area in two thus sacrificing all it has represented to the town and community. - - Should a choice be made to erect houses on HS2.3 there is no reason why the houses can't be extended to incorporate the remainder of the area thus totally removing anything of historical and natural beauty from the town. - - In addition to the above the area will massively struggle with the road infrastructure which currently grinds to a halt at the slightest incident which will inevitably put additional pressure on the current residents. - - to sum up, I most vigorously object to the proposal.		I feel that should the residents of Bacup be consulted prior to any plans being drawn the final outcome for Rossendale Borough Council would be mutually beneficial. - - I would also suggest that had the council planned more efficiently we would now not be faced with what appears to be a knee jerk reaction/mass build any where that could physically accommodate a new house. - - More thought and consideration to the matter may / should have been applied by Rossendale Borough Council.
695	John	Egan	-		Object	Don't build on higher cross rd.		NO

1141	Marie	Harris	-		Object	<p>You propose to build 17 properties on the land outside my house. I'm 37 now and I grew up in this house. My memories of growing up are the fun me and my friends and family spent on that field. The views of Bacup are beautiful... it's bad enough that trees were planted lower down as that as already taken part of how special the view were. It's a lovely quiet part of Bacup, where a lot of our elderly generation live. By building houses on the field you take away everything that's special about this area. In this area, we are working class people that enjoy the views from my house . I spend a lot of time sat outside enjoying the views, the calm relaxing atmosphere and you want to build houses that take all that away. It will reduce the value of my house. Make the area more vulnerable due to the kind of people you intend to move into these houses. I chose to take over this house to stay in the town I grew up in as everywhere else in Bacup is occupied by non working class and quite frankly a dump. You plan to do the same to such a beautiful area. Go and build houses somewhere else and leave this area alone</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.005	Further comment
661	CA and VJ	Jennings	Home Owner		Object	<p>I am contesting these housing developments on several grounds. - - My issues and concerns will be submitted, in writing by the closing date of 9th October 2017.</p> <p>Letter received 06/10/2017:</p> <p>The statement "Improving the lives of people in the Borough" is central to the Borough's current "mantra" regarding their fundamental philosophy and how it is applied in all Departments, and in all the things that they do. However, I feel that some of the current proposals as outlined in the above DLP could fall far short of the Council's altruistic intentions.</p> <p>These are our concerns in respect of the Fernhill Crescent, Fernhill Drive and Bankside Lane development proposals:-</p> <ul style="list-style-type: none"> • Conservation - there is an extensive line of "mixed" trees which decorate the hillside from the end of Bankside Lane above Fernhill Crescent and Osborne Terrace. As far as I understand it, we all have a shared commitment to protect and preserve trees and the landscapes on which they reside. From the above plans, it seems that there is the potential for the removal of some of this tree-line on site HS2.32. This would have a huge and negative impact on the aesthetic outlook onto that hillside, and the potential for land slip, soil erosion, water-runoff and flooding on lower levels • Protecting the Environment - there are many issues here that would negatively affect several aspects of the local environment. Some of which resulting from over-capacity and over-crowding caused by the over-expansion in this area by these proposed developments (particularly along Bankside Lane) • Preserving the local Character - the area around an incorporating site HS2.32 is particularly attractive (especially to the West of Bankside lane) and is an asset to the local area and its residents. It offers countryside walks along heritage sites and long established pathways (ideal for walkers, dog-owners, explorers in general and "kids" of all ages) • Infrastructure - this aspect has never been something to celebrate in the Rossendale Valley area: mostly due to the uncompromising geography of the area rather than the incompetence of the local authorities. However, focusing on one point only, transport through the Valley is often difficult, and sometimes almost impossible at certain times of the day. Therefore, the addition of around 200 units along Bankside Lane would severely impact on both movement and parking. AND, the thought of possibly an additional 350 vehicles exiting onto the Bacup/Rawtenstall road and heading through the valley, doesn't bare thinking about!! AND, what about the winter if it's like the Fernhill area, some of it, or all of it, will not be gritted!! • Impact - in my opinion, the impact from these proposals would be many and 		To be submitted before 9th October 2017.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.005	Further comment
						<p>wide ranging, but some would militate against the "improvement of lives"</p> <ul style="list-style-type: none"> • Preservation of Wild-life Habitats - the treed areas and adjacent open fields and moorland, are homes for thriving wild-life. In addition to the usual populations of wildlife, we have seen deer, foxes, squirrels, birds of prey and colonies of bats. The retention of range of wild-life would be threatened by the proposed invasion of their "space" • Ecological/Biological Considerations - these extensive developments could severely compromise the 'health', stability and integrity of the land, its trees; also its top-soil and sub-soil and the life forms that inhabit them • Local Heritage Preservation - there are some historical mule tracks, bridal paths & walkways and access routes into Yorkshire in this area, and we have a duty to protect and preserve them • Land Integrity - we have been aware for many years that the land above part of Fernhill Crescent has been subject to land-slip over the years. In fact, we were told by an authoritative figure that the extent of the problem had been measured over time. This weakness in the land caused our builder to reinforce the retaining walls in the back gardens of Nos 22, 24 and 26. Indeed, the retaining wall at No 26 actually collapsed. <p>Interestingly, the field behind these and other FC properties seems to show evidence of land-slip, whereas the adjacent wooded field seems not to suffer this problem</p> <ul style="list-style-type: none"> • Aesthetic Balance - given the attractiveness (in all respects) of this residential area, we would suggest that the proposed plans could severely impact upon the "wholesomeness" of this area, and have a negative effect upon the valuation of properties. Which would be, at least, unfair!!! • Practicality and Compatibility - in conclusion, and looking at just one aspect, when we factor-in access roads, traffic congestion and general disruption over time, and deterioration in the quality of people's lives, is it appropriate or acceptable to further pursue the Fernhill proposals?!? <p>Finally, who is it in the best interests of</p>		
853	Ian	Read	-	HS2.5 HS2.32 HS2.13 HS2.11 HS2.12	Object	<p>Fernhill Drive is not capable of taking any more traffic, The main Bacup to Rawtenstall carriageway is at it's capacity for traffic. - The site HS2.5 is not a suitable site for hosing and will cause problems on Fernhill Drive. - The site HS2.5 will interfere with the views of the existing houses</p>		<p>Bacup is full and no other housing should be built until the infrastructure in Bacup is improved ie Road to Rawtenstall.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.005	Further comment
857	Lucy	Beaumont	-	Hs2.32 + Hs2.5	Object	We use the hillside behind fernhill crescent extending down to bankside on a weekly basis with our young children, exploring the area, looking a local wild life & animals. These green areas are used regularly by members of the public on a daily basis. What a shame to ruin it for the whole community when so many empty unoccupied houses are scattered around rossendale. It is lovely to have access to such a beautiful green area just a minute from our home..our children have spend many hours exploring and playing here.. - - The second proposal site Hs2.5 is just off fernhill drive.. A road already backed up with parked cars the majority of the time. The road surface needs adressing at present with pot holes all over, more houses and cars conjesting this area would be awful for residents who already live in the area!		-
879	Nick	Earnshaw	-		Object	The access to the Fernhill estates is bad enough on its single track knackered potholes road as it is, what is the point in causing stress and hassle for local people. For a few extra houses shoehorn ex into another patch of green space. Extra hones= extra traffic on an already congested area, why not create a suitable car parking area permitted for residents of the drive instead, so that we can drive safely both ways on the drive.		I understand the need for some more housing, but please - drive around the valley, look at all the derelict and run down sites that exist already and build on them. Our valley infrastructure is overwhelmed already.. Roads are shocking, services stretched and minimum investment at the top of the valley (RBC inheriting the Lee quarry - it's a disgrace for the money spent on it, it should be a landmark). Grow a pair as a council and tell the policy makers Rossendale is full and stop ruining the only tourist attraction we have - our countryside location.
1112	Louise	Oddy	-		Object	The road is already heavily congested and parking spaces severely limited. - With just purchasing the house as it is tucked out of the way and being informed there was no known building plans. I am absolutely infuriated with just being informed of this. With the road already being busy we have got a young family and this is the reason of purchasing on fernhill drive as it is quieter. If we wanted to live on an estate then we would of chose to. - It would be absolutely devastating to wildlife as so many animals live amongst these trees and it would be absolutely tragic to destroy their homes. The environment would also suffer with more trees being destroyed for even more houses being built.		If you plan to build here: -• it would be aesthetically displeasing to home owners that live up fernhill drive. • road congestion would increase and so would road kill (do you want the death of animals to increase?) •there would be a major impact on the environment with more trees being cut down and even more animals losing their homes. • our babies bedroom over looks the proposed building site and we will not appreciate the disturbances, if you have children you will understand this.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.005	Further comment
1115	Tom	Bray	-		Object	<p>I wish to object in the strongest possible terms to the proposed development on Fernhill Drive. - - The road is already heavily congested at peak times with next to no parking spots, every day I am finding myself reversing up the entirety of the road to allow cars coming the opposite way from the main road access, this is extremely dangerous with the steepness and narrowness of the road and many cars have been damaged due to less confident drivers hitting parked cars and sometimes even driving off afterwards. - - To find this out less than a year into buying the property I am absolutely disgusted, not only are you ruining the quiet environment and the views all residents more than likely decided to purchase their homes on you are destroying the habitat of local wildlife, I have seen owls frequently using the space to hunt and squirrels jumping from tree to tree. - - Most of all we have just had our first child who's bedroom would overlook the proposed development, I will fight this plan the whole way in order to ensure she is at peace and has privacy as she grows.</p>		<p>To close I find it ridiculous that the spot has even been considered in the first place, not only would they be overlooked by us but they would be overlooking the houses along the main road so there would be no privacy for any of them. - - I strongly believe I speak for the entire street when I say that this will be heavily opposed and fought at every possible turn, I will be talking to all my neighbours on both sides of the proposed site and wish to put an end to this now as I do not believe it's worth ours or your time fighting to put up 5 cardboard affordable homes. - -</p>

1122	samantha	anderton	-		Object	<p>Fernhill drive, avenue and close have a respectable reputation within Stacksteads and is known to many as one of the nice streets in Stacksteads. Residents of these streets help each other to maintain the cleanliness of the streets and have a level of gratitude to one another. Elder people who live around the Fernhill area speak of Fernhill's history on a regular basis. This history will soon be forgotten about if unsightly new builds are surrounding the outstanding views Fernhill has. - There are many reasons this should not go ahead. - Vehicle access is already restricted, - There is already restrictions to parking on Fernhill drive, The road is not suitable for the traffic flow new housing will create, 'Affordable housing' will hugely decrease the value of housing already on Fernhill drive, Fernhill close, Fernhill avenue, - Outstanding views of countryside and Lee quarry will be gone, due to unsightly views of new build's, - A huge decrease in value to the current properties, due to various reasons. Such as even more limited parking (unless the house has a driveway) over populated area, poor traffic flow up and down the street, unsightly views, noise pollution, - 'Affordable housing' would create difficulty in current houses on Fernhill being sold, - Noise pollution, - Loss of wildlife, - Loss of beautiful countryside, - Limited places to walk dogs, as this countryside is used on a regular basis to walk dogs, - Loss of bridleway, - Loss of community - More damage to an already damaged road surface (due to constant use) - Lack of local school places within the required 3 mile radius, - Loss of privacy to overlooking residents, - Loss of vehicle turning area, - Loss of garage/storage space for residents, - Loss of trees, - A huge impact on residents due to construction work, - Ownership disputes over rights of way/ ownership of land. - This proposed housing development should not go ahead and above is just a few reasons as to why.</p>		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.005	Further comment
1175	Lesley	Earnshaw	-		Object	As a resident we enjoy this area greatly for walking. We exercise ourselves and our dogs, see children playing and building dens, see a range of wildlife and just escape into our beautiful countryside. Horse riders take safe routes away from the valley traffic and noise. After 20 years of living here, I have seen our roads for the whole of Fernhill disintergrate and be unsuitable for the current level of traffic never mind adding to the situation. Roads are patched and pot holed and no money seems available to put this right. School's are full, local amenities are stretched already. We have limited banking facilities, shops and recreation areas. We cannot support the current level of people well with residents from this end of the valley needing to travel to swim, shop and bank. How then does adding more "improve the lives of people in the borough"? We have limited spaces for children to play away from traffic. The woods off Fernhill team with a variety of wildlife that we enjoy supporting. My husband and I take great pride in trying to keep the area clean by litter picking and helping with the footpaths. We are dismayed that this land would be potentially destroyed for yet more houses despite many houses standing empty in the valley. We have been told by elderly residents that the land you suggest is not suitable due to unstable land beneath. Our little patch of woodland that we so love and would so miss. An area of calm and peace. It would change our skyline dramatically from our beautiful trees to a block of ugly housing. - This seems to have all happened very quietly with consultations coming and going without any of us being informed. We found out with a few days to the deadline of 9th October from a note from a resident through our door, not from any department of Rossendale council, which all feels very underhand. - I'm not sure how this site is in any way in the best interests of local residents. The land off Fernhill Drive would again add more traffic to the already crumbling road. Poor choices! -		Bring the infrastructure to Bacup to support such schemes. Our town is dying in comparison to Rawtenstall. They have bars, banks, a range of wonderful shops, swimming pool and sports facilities, the train, the Newhallhey project, the Ski slope, park, museum What do we have?

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.005	Further comment
1213	Caroline	Bird	-		Object	<p>The proposed area has enhanced the current residences for many years. - Environmentally : - Many local wildlife use the current land and to scoop up the beautiful trees that adorn this area will leave much of the wildlife decimated. The trees have quite clearly been on the site for many many years and the thought of these being "scooped away" to make way for housing is heartbreaking. - The views alone are a huge selling point and provide a peaceful and relaxing escape. This area compliments the current surroundings. Looking at the other sites proposed these would , with the exception of Bankside, not appear to have such a damaging effect both on local wildlife and the aesthetics of the area - Access: - Parking itself, on Fernhill Drive is, at best, horrendous. By adding further proposed housing when the council is clearly not inclined to improve the current parking situation is utterly madness. Having experienced the negative affects of the parking for the last 9 years, I have seen speed restrictions ignored and have even had my own vehicle damaged due to lack of "road space" and adherence to the speed limit. By increasing the housing, and thus the traffic volume without any due consideration to the current situation will only lead to further accidents and lack of parking for the current residents. - - Surely this site, is at best, needing extensive irrigation and levelling, this alone would be detrimental to the land. By possibly by-passing natural streams this can only damage the surrounding area and create flooding issues. The trees have provided much needed "natural drainage and by removing them could lead to this outcome. - - I absolutely, and without question, object to this "proposed site"</p>	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.005	Further comment
1373	David	Schofield	-		Object	<p>Proposed site HS2.5 off Fernhill Drive - OBJECT - - The main reason for my objection is traffic, Fernhill Drive already has too much traffic flow which has resulted in a constant unmanaged contra-flow system and disintegrating road surfaces. The Fennhill Drive area cannot take any more vehicles and parking is already beyond its maximum capacity. - - The HS2.5 (off Fernhill Drive) site is currently a lovely wooded area with a wealth of wildlife, we know that it is home to a Badgers sett, as Badgers are often seen on the street at night disappearing into said wooded area. - - Further Points: - - - Adverse effect on the residential amenity of neighbours, by reason of (among other factors) noise*, disturbance*, overlooking, loss of privacy, overshadowing, etc. [*but note that this does not include noise or disturbance arising from the actual execution of the works, which will not be taken into account, except possibly in relation to conditions that may be imposed on the planning permission,dealing with hours and methods of working, etc. during the development] - - Unacceptably high density / over-development of the site, especially if it involves loss of garden land or the open aspect of the neighbourhood (so-called 'garden grabbing') - - Visual impact of the development - Our house is called "Quarry View" but this development will stop the Quarry from being in view - - Negative effect of the development on the character of the neighbourhood - - Design - Fernhill has some period styled housing and "new builds" all not match this - - The proposed development is over-bearing, out-of-scale and out of character in terms of its appearance compared with existing development in the vicinity - - The loss of existing views from neighbouring properties would adversely affect the residential amenity of neighbouring owners - - the development would adversely affect highway safety or the convenience of road users - as mentioned earlier with the contra-flow system that is already plaguing Fernhill. - - Property values, Fernhill is one of the nicer parts of our local community and to fill it with "affordable housing" will negatively impact the property values within this direct area. - - Overbearing - The scale of the works means that the development will have an oppressive impact on the surrounding area - what is currently a small woodland; would be replaced by 2 story houses with more cars.</p>		<p>Proposed site HS2.5 off Fernhill Drive - OBJECT - - The main reason for my objection is traffic, Fernhill Drive already has too much traffic flow which has resulted in a constant unmanaged contra-flow system and disintegrating road surfaces. 1465	SEE AGENT DETAILS	SEE AGENT DETAILS	B AND E BOYS LIMITED		Object	<p>HOUSING ALLOCATION SHOULD BE REMOVED AS THE SITE IS IN ACTIVE EMPLOYMENT USE. PLEASE SEE REPRESENTATION FOR FULL DETAILS.</p> <p>Email received 11/10/2017: SUBMISSION TO THE ROSSENDALE DRAFT LOCAL PLAN (REGULATION 18) CONSULTATION ANVIL STREET, BACUP</p> <p>Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. This consultation is the first public consultation stage in the production of the Local Plan (Regulation 18) and includes the Draft Local Plan (Written Statement) and its accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan.</p> <p>Hourigan Connolly is instructed by B and E Boys Limited to submit and provide comment on the above site to promote its retention for employment use. We have previously submitted representations in response to consultation relating to the Local Plan Part 2 in 2015 and subsequently the 'Call for Sites' exercise relating to the preparation of the new Local Plan in 2016.</p> <p>Along with this letter, we have also submitted an electronic consultation form via the Council's website and this letter should be read in conjunction with the submitted form. A site plan is also enclosed for information.</p> <p>Submissions</p> <p>We note that within the draft Local Plan land at Anvil Street in Bacup has a draft allocation for residential use. The 0.19ha site is identified under draft policy reference HS2.5 as being suitable to deliver 11 dwellings within years 6 to 15 of the plan period.</p> <p>Our client does not support this proposed allocation. The site is currently in employment use and will continue to be in such use for the foreseeable future. The site is not considered to be suitable for residential use and its retention for employment use will crucially allow the expansion of neighbouring employment uses who have expressed a preference to remain in this location. The site continues to be suitable for employment uses and we therefore suggest that the proposed housing allocation is removed in favour of more suitable sites for residential development – to this end please see our submission in relation to Booth Road, Stacksteads.</p> <p>We reserve the right to provide further supporting statements and evidence during the preparation of the Plan process and ask that we continue to be informed as the Local Plan progresses.</p> <p>Please see appendix</p>		-
1536	Pamela	Haslam-Jones	-		Object	<p>Poor excess!! The syrain put on the infrastucter of stacksteafs and Bacup! Strain on local schools snd Doctors! Too many cars on the road!</p>		-

1806	Neil	Fielding			Object	<p>I have only very recently been made aware of the above plan and, in particular, the proposed development HS2.5.</p> <p>To be honest I cannot believe that you would be allowed to put such a proposal to consultation without writing to every household in the locality which may be affected by the proposed development – or was it just a plan to sneak this through unnoticed?</p> <p>I live at XFernhill Park and if you were to allow a development of additional housing on the marked area I can only assume that, given the geography the only viable access to these properties would be via the current entrance to the garages off Fernhill Drive.</p> <p>This additional traffic would create an additional hazard to what is already a very difficult and dangerous road to travel up and down – which is not very good given that it is the main road into what is now a large estate. Have you been to assess the access options via Fernhill Drive?</p> <p>What you have is a very quaint road that has, until government and local government cuts, been a very nicely kept road with a grass banking with trees. However the situation is that there are so many cars parked on the Fernhill Drive that the road is virtually, at certain times, nearly impossible to get up and down as there is nowhere for cars to pass. If you now increase the traffic on the road or add a major access off it then it will virtually become impossible to use. The volume of traffic using Fernhill Drive has also led to the breakdown of the road surface and it is absolutely diabolical to travel on and adding volume will only make this worse.</p> <p>The actual removal of the garages themselves would also lead to an increase in parked vehicles on Fernhill Drive.</p> <p>I would also appreciate it if you could elaborate on the plan for me. Do you intend to allow building on the land above Anvil Street i.e. straight in front of my house? If you do what plans have you for vehicular access and regulations regarding building height etc.?</p> <p>Due to the fact you did not advise all of the local residents of your plans the consultation period is now officially closed for this but I would appreciate it if you could consider my feedback and I look forward to hearing from you soon regarding the questions I ask above.</p>

66	Julia	Andrews	-		Object	<p>Developing this site would contravene a number of your SA objectives: -</p> <p>1.Protecting and enhancing high quality landscapes - it would have huge effect on landscape appearance as it is high up.There are plenty of brownfield sites available in Bacup as an alternative to this site. - 2.Conserving the setting of heritage sites - a number of grade 2 listed sites are nearby - 3 & 5.Protecting biodiversity and geodiversity - inside the Rossendale Minerals Safeguarding Area & a known area of land instability; also you admit that no site assessments of biodiversity have been carried out - there are certainly badgers in the area.. - 13. Reducing the need to travel (for example for work) - there is poor access to the strategic road network from Bacup (5 miles, not 3.5 according to my sat nav, minimum 15 minutes to Rawtenstall, longer when road is being dug up (as it usually is)). - - Furthermore, although the site is described as on a gentle slope, access to it is via Moorside Crescent which is a very steep road; many residents park on Todmorden Road in snowy weather due to the difficulty of getting up the hill. - - As with all Bacup sites it suffers from a lack of access to secondary schools and hospitals. - -</p>		<p>There is a proven lack of demand for houses in Bacup compared to elsewhere in Rossendale and in the country generally - existing houses do not sell, and young educated people move elsewhere for better career opportunities and amenities. Accessibility to employment via the road network is the problem, and in narrow valleys this problem cannot be surmounted. I was unaware of this when moving here. Our own daughters moved away immediately on finishing university.</p>

481	John	Atherton			Not Applicable	<p>We recently sent an e-mail to you (please see below *copied e-mail sent to you on 21/6/17) regarding the withdrawal of the public bus service on Todmorden Road and would like to add this and some more points to you about the accuracy and omissions of the site assessment.</p> <p>We refer to: The Appendix E - Site Assessments, Site Ref: SHLAA16052, Site Name: Green Farm, Todmorden Old Road, Bacup.</p> <p>Regarding the Availability section of the Site Assessment - the land required for access from Moor View is not owned by the sponsor of this proposed development - the owner(s) have an easement but the site assessment infers that all land required for the development is: 'single private ownership'.</p> <p>In the Suitability section, under Access by public transport, it shows that there is a bus service but there is no longer a bus service on Todmorden Road - the service was withdrawn in January 2017 - therefore the colour coding should be red.</p> <p>In the Suitability section, under Flood risk it states: ' flood zone 1 or low surface water flood risk' but would the surface water flood risk rise due to the land engineering work required to mitigate the known issues on this piece of land? - these engineering works would reduce the land's capacity to absorb rain water and this would increase the vulnerability to flooding further down the valley, unless a SuDS scheme is put in place.</p> <p>In the Suitability section, under Recreational Value, it states: 'no recreational value' and is colour coded green but there are public footpaths along the boundaries - this should be amber colour coded. To state that the land has no recreational value after the submissions in the last planning consultation from local residents, about this green field site, is puzzling. After looking at several other different sites assessments which have public footpaths along or within boundaries, these are coloured coded amber and the future maintenance of the footpaths are noted as a requirement.</p> <p>In the Conclusion section, under Suitability summary, it states that: 'Most local services are accessible within a 15 minutes walk' but it does not mention the steepness of the roads and streets from the centre of Bacup up to the site, which would be more difficult when walking with children, prams, carrying shopping bags etc. and even more arduous for the elderly and people with impaired mobility.</p> <p>The conclusion also mentions that the secondary school and GP Surgery can be accessed by public transport but as we've mentioned previously, there is no public transport.</p> <p>Even if this bus service was still available - the assessment does not detail the poor bus service that was provided - the service was hourly and did not run in the evenings or on Sundays - it was not a good service for people attending late doctors appointments or for workers (days, nights or different shifts) or for people visiting from and to the site. Also, there was no mention of the</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.006	Further comment
						<p>steepness from the bus stop to the site, via Moorside crescent and Moorview - both are very steep. The location of the site would be only suitable for car owners - it is not suitable for people without their own transport.</p> <p>The possibility of prior extraction of the coal near the surface is not mentioned either in the conclusion, unlike other site assessments where it is noted that potential extraction of minerals might occur to avoid sterilisation of recourses.</p> <p>We are concerned that Greens Farm site assessment will be matched against the planning matrix when it does not contain the correct information and does not contain important details which other Site Assessments seem to have. We would be grateful if you would look at the Greens Farm Site Assessment again and amend it to show the correct details.</p> <p>Would you please acknowledge receipt of this e-mail and please contact us if you require any further information.</p> <p>Submitted online 08/10/17:</p> <p>Our objection is regarding HS2.6 and the inadequate access to the proposed site. The access to this allocation is from Todmorden Road, into Moorside Crescent, then into Moorview which is a Cul-de sac of four houses - then across a private garden which starts at the end of the cul-de-sac – the garden is between No. 3 and No. 4 Moorview. The intention of the developer, is to build a public road over this garden, which is a private easement between the landowner and the owners of No. 3 and 4 Moorview, to then access the proposed sites. The owner(s) have benefit of the right of way over the easement but do not have the right to make it a public road and to join it to other parcels of land. - - RE: TODMORDEN ROAD ACCESS - The journey from Todmorden Road (A681) to the proposed site will need expensive modifications to the Road, the Crescent, and the Cul-de-sac, to accommodate the large increase in the vehicle movements to and from the site, and to meet the requirements set out in the ‘Manual for Streets 2’. - The junction of Todmorden Road with Moorside Crescent and Greave Road would not meet the site line requirements in today’s Manual for Streets 2 and consequently the view for drivers exiting Moorside Crescent onto Todmorden Road is poor – of particular concern is the traffic coming down Todmorden Road where the clear majority of vehicles, including HGV’s, have to move into the centre of the road when over-taking the parked cars on Todmorden Road, especially cars parked directly opposite Moorside crescent. A significant number of vehicles exceed the speed limit when travelling down the steep incline of Todmorden Road and due to this, these vehicles move into the centre of the road higher up Todmorden Road, to pass the parked cars, reducing the visibility of the drivers trying to exit Moorside Crescent even more. Vehicles coming down Todmorden Road, preparing to turn left into Greave Road must execute a risky</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.006	Further comment
						<p>manoeuvre of swerving to the right, then turning left, which places them almost 90 degrees across the carriage way, which is the only way they can enter Greave Road – almost like Raleigh driving. - - RE: MOORSIDE CRESCENT ACCESS - Moorside Crescent is a very steep incline and gets steeper the higher up you go, until the road turns sharply to the left and levels off. This road only has a footpath on its western side and the foot path is not particularly wide. The developer who built this part of the estate went bankrupt and the bond was called in to finish the roads - the bond must have been inadequate, or the council would have finished the pathways. Today there is a more pedestrian centred policy, requiring retrospective changes to accommodate people with disabilities. On Moorside Crescent, footpaths on the Eastern side should be completed. - The planners say that most services and facilities are available from the proposed site, within a 15-minute walk – many people would find this difficult. The vast majority of people would find the return journey from Bacup to the proposed site impossible within 15 minutes, if you consider the steepness of the roads and footpaths, and especially with children, carrying bags of shopping etc. The elderly and people with disabilities would struggle even more to walk the steep road and pathways - in winter, the slightest snowfall would isolate this site. - Realistically, the only journeys to and from the proposed site would be by car. - - RE: MOORVIEW ACCESS - Moorview Cul-de-sac would require an expensive re-modelling to change it from a Cul-de-sac to a through-road, with a footpath on both sides of the road. The Cul-de-sac has been in place for over 25 years and the houses and the driveways of each house is positioned in such a way around the cul-de-sac, to enable the residents to safely drive on or off their driveways. Changing the cul-de-sac to a through-road, which would result in a large increase in traffic, would make it more hazardous for the residents driving on and off their driveways. The increase in traffic and public access could also have an impact on our security. We are aware of the developer’s right to pass and re-pass over the right of way but the four families living in Moorview have rights as well. It is our intention to ensure that the Council does not deprive us of any of our rights concerning this land, by the Council enabling access for the developer. - The right of way from the cul-de-sac into the developer’s field is also part of the Coal Authority High Risk Development Area, and the developer is proposing building a road across this, to access his field. - - RE: HS2.6 SITE - The HS2.6 site which consists of Greens Farm and Bull Hall, is in the Coal Authority High Risk Development Area and in the Lancashire County Council’s Mineral Safeguarding Area. We have communicated this fact to the Planning Department previously and consequently they have requested information from the Developer regarding mining and land stability reports/information. It seems that there is still no policy in the Local Plan which cover Mineral Safeguarding and the prior extraction of minerals, if the development is going to sterilise the mineral resources.</p>

746	Harry & Linda	Dutton			Object	<p>We would like to oppose the proposal for allocating housing sites at Bull Hall, SHLAA116051 and Greens Farm, SHLAA116052.</p> <p>Both of these sites require the moving of the Urban Boundary which we feel is unacceptable in the light of the cross-party Keep Rossendale Valley Green campaign which has succeeded in reducing the number of housing sites required by Government for Rossendale. We think that if fewer sites are now needed the priority for those 'drop out' sites should be given to those that require the moving of the Urban Boundary. The SHLAA for Greensclough recommends 621 houses on greenfield sites 100 on mixed sites and only 30 on brownfield sites, which is less than 5%. This figure does not include the 33 houses already granted permission on a greenfield site on land at Greensnook Lane less than 200 metres from the proposed site at Greens Farm. We feel this is disproportionate and unsustainable, placing an intolerable strain on the existing infrastructure in this area.</p> <p>Both the Bull Hall and Greens Farm sites fail the sustainability criteria set out in PPG which states they must be within 400 metres of a regular transport service, since January 2017 there has only been a twice daily school bus service between Bacup and Todmorden.</p> <p>Greens Farm:</p> <p>As stated in the assessment, the access to the site is inadequate. The alternative access mooted from the Bull Hall site would require the removal of a dry stone wall, the removal of trees and bushes which have formed a valuable wildlife corridor and would cross a public Footpath.</p> <p>The Council's proposal to build only on the southern half of the site but still wanting to extend the Urban Boundary to include the northern section would surely weaken any attempt to restrict a developer wishing to use the whole of the site for housing.</p> <p>Presently the Urban Boundary is robust and well defined by historic dry stone walls, it is surely a retrograde and illogical step to move the boundary and try to restrict development to an imaginary line across a hay meadow.</p> <p>In the landscape assessment study it states that housing should be low density, but the 23 house total is based on the standard density of 30 per hectare.</p> <p>The site is categorised by the Coal Authority as high risk and there are well documented geological problems due to previous mining operations. In Rossendale Rambles p.19 written by Ian Goldthorpe, a former chief planning officer at R B C, "coal measures can be seen a short distance past Laneside Cottages, open cast mining operations were carried out in this area in 1956 and 1957'. Underground mine workings from the former Blue Bell Colliery will probably also affect this site.</p> <p>Although in a designated low flood risk area, the result of housing</p>

						<p>developments on both sides of Todmorden Old Road has meant that in bad weather the road turns into a river discharging onto Greensnook Lane. If the proposed housing at Greens Farm and the 33 houses due to be built on land off Greensnook Lane were to go ahead the frequency and severity of these problems would obviously increase.</p> <p>The trees on the Greens Farm site along Todmorden Old Road form an important wildlife corridor for both birds and animals, Badgers, Roe Dear, Foxes and Weasels are frequent visitors. Many species of birds, Thrushes, Jays, Owls, and Woodpeckers and the usual array of garden birds use these trees as nesting sites. This biodiversity will be jeopardised both during and after any development.</p> <p>These greenfields are mown annually for hay and used for cattle and horse grazing and the footpaths 370 and 371 are well used by ramblers and dog walkers, if the Urban Boundary is moved as proposed these footpaths would be just paths on the periphery of housing estates and it would adversely impact on both local and longer distance vistas.</p> <p>For all the above reasons we would ask that you reject the moving of the Urban Boundary to facilitate these unnecessary housing developments and preserve the tranquil nature of these greenfields.</p>

1305	Fiona	Knapper	-		Object	<p>I have recently been made aware of this ongoing consultation into moving the urban boundaries in Bacup. I have lived in Bacup for 17 years and have become very familiar with it. I have experienced first hand the nightmare of commuting into Rochdale, Oldham and Manchester. I have also been through the soul destroying experience of trying to sell a house here, in a saturated and flat market, and having to accept an offer well below market value in order to move my family to more appropriate accommodation. - With dreadful transport links, and no improvement in that on the horizon, a run down and lifeless town centre and several new estates full of transient tenants because the builders can't sell them, the last thing Bacup needs is to lose one of its few advantages - protected green space. - The land above Greens Farm is beautiful, peaceful and a haven for walkers and wildlife. It is accessible, if steep, on foot in good weather - much less accessible in snow, which would be a major issue if funnelling more road traffic up the hill. The road built up to Moorside Crescent is extremely steep and treacherous, both in snowy and icy conditions, as well as when it is covered in autumn leaves. Having had to crawl up it on hands and knees at 8 months pregnant because the surface underfoot was so slippery, it makes me quite sure that increasing the number of people requiring access up it would not be advisable. - Additionally, there is currently NO public transportation available in this part of Bacup. The nearest buses are almost a mile's walk away. - I am a resident of Moorside Crescent, and obviously this gives me a vested interest in preserving the current environment. However, I am also a member of our community and if there was a genuine shortage of housing and more stock was desperately needed, then I would accept that sacrifices had to made. But this is not the case. It is MADNESS to continue planning new builds when the housing market is so flat, mainly due to the significant factors mentioned in my first paragraph. It is even worse to facilitate this by sacrificing the green space which gives Bacup one of its few advantages. This site also lies outside the urban boundary, and any development which is approved for areas such as this have to 'enhance the rural environment'. There is no possibility that covering a clear, green field with houses improves its rural environment. It is simply unacceptable. - In conclusion, to be clear, I strongly oppose the movement of the urban boundary at Greens Farm and the related housing application.</p>		Please look more closely into developing the brown field sites proposed, and leave our green spaces alone.

1463	Michael	Foley	-		Object	<p>The development is planned on greenfield – The site has poor access - - The assessment states it's on a gentle slope this is not the case as it is a steep slope site. - Vehicular access is going to be a major problem with the potential of causing travel delays and danger to children playing on streets. - The site is surrounded by mature trees and dry stone walls that all need conserving and should not be removed and would need repair - - There is poor access to strategic road network and the assessment talks of 3.5 miles distance which feels like a very underestimate. - Public transport is very poor, schools and GPs are all a distance from the planned development. - There is already a vast amount of recent housing developments of 3-4 bedroom houses in the Bacup area that have flooded the market, some housing has still not been sold and it has caused a flooding of the private rental sector – - There is a water flood issue that the site holds a large amount of water that runs down to adjoining site on Rosemount and moorview, if building on the site and preventing water draining and increasing run of rate this has potential to cause problems for adjoining housings and drains. - The assessment talks of an hourly bus service but this is not the case at weekend there is no service between Todmorden and Bacup - The assessment speaks of developing higher value properties, as we have already stated the market for 3-4 bedroom house in Bacup is flooded which has actually depressed prices in the Bacup area, prices are static or loosing value it would seem strange to want to add to large houses that don't seem what the market needs – What's happening to 2 bedroom LA / HA properties. - My understanding is this land is green belt and was not within the urban boundary - Wildlife - - The fields at Greens farm act as run for Foxes, we get bats flying across the field and around the houses at the top of Rosemount, these bats return each summer to the area. - There are field mice, shrews, hedgehogs using the green fields. Various small birds feed in the fields, thrush, blackbirds, greater spotted woodpecker, redwings, blue tits, great tits, gold finches, sparrows, starling's, robins, dunnocks, magpies, crows, doves and buzzards. - Environment - The fields have a number of large trees that larger birds use to nest each year. - These large trees are the near the last line of larger trees before you gain further height and only have smaller trees and shrubs. - The open fields also have a number of natural water springs. We list the springs as they cause some potential to create a flood worry for us on Rosemount during heavy rain. At present the drains have dealt with the springs that come through the dry-stone walls but if building were to take place in the field and concrete and tarmac were to take away the natural draining into the field/grass the danger of standing water and flooding to houses further down the hill could increase. - Weather considerations - It is worth note that the urban boundary being looked at is at a high altitude- Housing would be difficult to heat or require constant heating in the cold damp Bacup climate especially winters. This is at a time there are concerns</p>	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.006	Further comment
						<p>about the use of energy. - Drainage – At present I understand houses on Moorside struggle with surface water that comes down the hill from open fields. The problem of water drains becomes worse when you get onto Todmorden Road and down into Bacup where drains do not cope and often have running surface water – To build further on high open fields covering with Tarmac and concrete is only likely to increase drainage problems. - Density – This is a large change to the urban boundary, with what we feel leaving open further request to extent towards todmorden road area- The present planned urban boundary changes and suggested housing development will automatically create an area of high density housing. - Unused sites- We have concern that there are a number of site held waiting development i.e. greensnook lane, Old GP surgery todmorden Road, old mills to name just three. Surely to aim should be to use up land already vacant before moving the urban boundary. - - Social Implications - Transport – Public transport and car access to Bacup has always been under strain. - There are no local trains that can help reduce road congestion. - Although buses are fair in the rush hour, they are poor at other times. - Driving to Rochdale or Rawtenstall in rush hour can increase a 20 to 30 minute journey to 1hr. - Access – If further development were to go ahead in the open fields we understand access will be via a narrow easement on Moorview. We suggest there are chance of problems and accidents with this narrow access point. There is also issue of narrow access for essential services. - It is also worth note that in winter and ice and snow many people are forced to park on Todmorden road as it become impossible to get up the steep hill to homes. Cars have to be left near Bacup town centre and people struggle to walk up the steep hill to their homes. Any changes to the urban would increase this - The steep access road (Moorside Crescent) is so steep that it is at the maximum allowed nowadays. - Infrastructure - We have concerns if local facilities can cope with further development. Apart from poor transport and roads. We have always felt shopping opportunities are limited in Bacup. People seem to travel to Rawtenstall or Rochdale for food shopping. There seem limited opportunities for children’s facilities. The local library offers very limited hours. We are not aware of GP and school capacity but feel this needs careful consideration - Housing strategy - Looking at the local plans to increase housing and what has already been built there seems an unusually high level of housing already built in Bacup without taking further green belt. - There are still various sites being developed around Bacup and empty land. - It seems looking at Rossendale as a whole there is much more housing being targeted at Bacup than other areas i.e. Haslingden, Rawtenstall, Whiteworth - - Over-provision – We have lived in Bacup for 20ys and with recent housing developments on the Rochdale Road area and other smaller sites we would question if too much housing is being generated in Bacup with no real demand. We mention this as when we tried to sell our house over the</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.006	Further comment
						<p>last 5years we reduced the asking price from 195k to 160k and could not sell the house. - It's worth looking at the number of houses already around Bacup that cannot be sold. - - We are aware of the large trading development built down at Rawtenstall that has remained empty – We fear over developing housing at Bacup without a clear need may just lead to empty houses or empty fields half developed or empty fields marked for development and left vacant. All of which will further damage the economy of the local Bacup area.</p>

1525	Martin	Illman	-		Object	<p>Please see below for my concerns regarding the proposed development of land at Greens Farm, Todmorden Old Road, Bacup and proposed change to the Urban Boundary. - - The current and present Urban Boundary at Greens Farm is strong, robust and permanent as stated and confirmed by the Council itself in July 2014 in its reply to a previous consultation. The proposed changes to the Urban Boundary consist of moving the Urban Boundary to a remnant dry stone wall on one side and post and wire fence with mesh on another side (as described in an earlier Greens Farm Landscape Assessment by Penny Bennett Landscape Architects, I think this was undertaken in 2015), quite a significant change. The proposed move will weaken the Urban Boundary and in no way make it as strong or stronger than what currently exists. I would also like to draw your attention to the following statement taken from Rossendale Councils website The statement reads: "But, don't panic! We're not planning to radically change the boundaries and we understand how important the countryside is to local people and the natural environment." It sounds like the proposed change is quite a radical one to me. The Green Farm Landscape Assessment undertaken by Penny Bennett Landscape Architects in 2015 calls for "existing boundaries to be retained and repaired where appropriate using dry stone walls" and I concur with this 100% percent. - The proposed development at Greens Farm plans for access for vehicles to be provided from Moor View which is off Moorside Crescent from Todmorden Road. This would result in increased traffic generation at the junction of Moorside Crescent, Todmorden Road and Greave Road. This junction is notoriously difficult to navigate and an increase in traffic would result in further problems of highway safety for road users and non road users alike. At the moment the steepness of Moorside Crescent and Moor View causes problems for vehicle users in the Winter season especially. Often cars are left on Todmorden Road as they simply cannot get up the two aforementioned steep roads. More vehicles being abandoned on Todmorden Road will again lead to an increase in highway safety. I believe having access from Moor View to any proposed development will be a major constraint.</p>		<p>It is noted that mature sycamores line the site and that the trees on site are covered by Tree Preservation Orders. I am concerned that although the recommendation is for the existing trees to be protected and maintained any development on the site will result in loss of some of the trees or at best will have a negative effect on the trees. The trees are home to a diverse range of birds and other wildlife that will again be disrupted severely by any development. - A tree impact plan and tree constraints plan prepared by a qualified arboriculturalist will need to be undertaken but surely the best option would be not to develop at all. I am concerned by the layout and density of the proposed development and the adverse effect this will have on the local character which is described as "settled valley landscape" by Penny Bennett Landscape Architects in the Landscape Assessment and "a very attractive tranquil site". In Section 123 of The National Planning Policy Framework it states: - "Planning policies and decisions should aim to:" - · "Identify and protect areas of tranquillity which have remained relatively undisturbed by noise and are prized for their recreational and amenity value for this reason." - I am also concerned at the loss of privacy for several residents on Rosemount, Moor View and Change Close that will surely happen if the proposed development goes ahead. It is obvious that many of the properties on the three roads mentioned in my</p>

Reference		HS2.007		Land off Cowtoot Lane, Bacup				
57	Barbara	Ashworth	Elected member RBC	SHLAA 16067	Object	This land is subject to an agricultural tenancy where RBC is the landlord. Depending on when this tenancy was granted, it may be that there are succession rights which could make this a problematic site for development because of the tenant's rights. This is information I have read on the directgov website. I hope the details of the tenancy are therefore examined carefully before progressing further. - - My other objection is that this is a large site and to accommodate so many properties, would need major work to the existing road system. Cowtoot Lane - a no - through road on which we have Bacup Nursery school and Bacup's largest Primary school as well as BARB FC. has already got major problems at school entry and exit times. In order to access Cowtoot Lane, the traffic either comes along Greensnook Lane, itself far too narrow for parked vehicles and two - way traffic or from Burnley Rd, across the culvetted River Irwell and straight up Cooper St which is extremely steep and again has parked cars on one side. The other access to this site would be up Gordon St but this again means crossing the same culvetted stretch of the River Irwell. I see no solution to this traffic problem.		-
560	Hilary	Fairclough	-		Object	I object to the loss of green space where this housing development Is been proposed.		I object to loss of green space been lost due to the housing development proposed.

768	Sandra	Navesey	-		Object	<p>There are multiple reasons for my objection. I do not believe it is necessary to build houses on greenfield sites whilst there are many brownfield areas in Bacup, some of them with large decrepit mills and other sites which are unsightly and need to be demolished and developed to improve the area. The land in question is regularly visited by walkers and hikers as it is part of the Irwell Sculpture Trail where a large Sculpture has been built on the hillside on Cowtoot Lane, created to highlight links between rural and industrial heritage. Named THE SENTINAL, meaning a soldier posted to keep guard over a special place. Access to this site is problematic as there I no proper roads into the greenfield site. Cowtoot lane is actually a grassy, muddy footpath. I feel the large number of houses squeezed onto these fields (151) has a negative impact on the local area as it is visible from several areas in the town because of its elevated position. There are already insufficient schools - only two secondary schools, one of which is BRGS grammar school which is only accessible to higher achieving students who need to pass a rigorous entry exam to be accepted. This leaves one under achieving school under special measures, Fearn, for the remaining students. Hardly an attractive situation for potential new residents! The same situation applies to the Irewell Medical Centre which is already over subscribed. I assume the planning dept are aware of the historical mining carried out on this area, and also that it is very prone to flooding. This area was once a playing field, but is now frequently used by hikers and dog walkers, and it begs the question, has anyone checked whether there is a covenant on it preventing building and development? One of the major problems for more traffic in the area is the only road to Rawtenstall and access to the motorway system. This route is a nightmare during school runs and commuter periods, more often than not being dug up for various reasons with temporary traffic lights constantly in place.</p>

1068	Lynn	Cavanagh	-		Object	<p>The proposal will have a large impact on many things that will be of detriment - to the local community, whilst this is intended to be an extensive list with reasons I dont believe this is an exhaustive list. - 1) The impact on the local traffic will be extreme, there is currently large volumes of traffic that go through bacup to both whitworth which only has one road through and is also intending on building many houses, and to Rawtenstall, which due to the motorway connections is already very busy. Increase in traffic means increase in pollution, road traffic accidents and increased wear and tear on already tired roads. Many of the roads in Bacup are small and narrow and again already in need of repair putting extra pressure on council funds to repair them. - 2) A major problem in the area that is already identifiable today is the over crowding of the schools in this and surrounding areas, Whitworth high have rejected many from Bacup due to not enough space that has left pupils travelling (as noted in the local press) as far as Bury and Todmorden, again increasing the cost of school buses to take pupils to these schools. Primary schools are as oversubscribed and this is effecting the future of our community, those that we expect to stay in the region and buy such houses. With a major zchool now being in special measures where are the extra children supposed to be schooled? The increase on pressure for parents will be phenomenal, siblings at xifferent schools miles apart will be impossible to manage. - 3) Medical practices will be unable to manage more patients with an nhs already strugglung with funds and staff. The main practice in Bacup is extremely hard to get an appointment with at the moment so increasing patient numbers would be catastrophic, along with medical emergencies currently being dealt with at either Oldham or Blackburn will a death be caused before zomeone will take note? - 4) Births, there has already been a major increase in housing in the area which with it comes new families and younger couples, Rochdale stopped allowing births so now couples are left with Burnley or Oldham, if they can manage to get a bed! - 5) Dental practices along with doctors will be unable to meet the demand for increased nhs patients which will ultimately lead people to either travel far for a dentist, go private and pay or go without treatment which inevitably costs the nhs more in the longer term. - 6) Local police will need to have a larger presence and larger task force for the area due to the ratio of people, is there the funding to enable that, specifically as you are looking at a traveler stop over. Those that are travelling through the community often have little respect for it as has been seen in the past. - 7) Scenery and landscapes, Bacup is a wonderful area of beauty and this area especially has wonderful landscapes and views building on this will destroy this lanscape, the light on neighbouring properties and noise pollution to say the least. - 8) Wildlife, there is an abundance of natural wildlife on the fields throughout the year from field mice to hedgehogs, foxes and kestrels, sparrowhawks and weasels, where will they</p>

1070	Stacey	Mairs	-		Object	<p>The proposal will have a large impact on many things that will be of detriment to the local community, whilst this is intended to be an extensive list with reasons I dont believe this is an exhaustive list. - 1) The impact on the local traffic will be extreme, there is currently large volumes of traffic that go through bacup to both whitworth which only has one road through and is also intending on building many houses, and to Rawtenstall, which due to the motorway connections is already very busy. When there ard bad weather conditions roads are extremely dangerous due to cars being unable to get up the valleys hills and parking on the main roads. Increase in traffic means increase in pollution, road traffic accidents and increased wear and tear on already tired roads. Many of the roads in Bacup are small and narrow and again already in need of repair putting extra pressure on council funds to repair them. When road repairs are made traffic comes to a complete standstill with the current traffic so increasing this would impact all surrounding areas. - 2) A major problem in the area that is already identifiable today is the over crowding of the schools in this and surrounding areas, Whitworth high have rejected many from Bacup due to not enough space,that has left pupils travelling (as noted in the local press) as far as Bury and Todmorden, again increasing the cost of school buses to take pupils to these schools. Primary schools are as oversubscribed and this is effecting the future of our community, those that we expect to stay in the region and buy such houses. With a major school now being in special measures where are the extra children supposed to be schooled? The increase on pressure for parents will be phenomenal, siblings at different schools miles apart will be impossible to manage. School holidays are different from school to school creating problems for parents. Safety for children will put at risk as school intakes increase or travel becomes further. - 3) Medical practices will be unable to manage more patients with an nhs already strugglung with funds and staff. The main practice in Bacup is extremely hard to get an appointment with at the moment so increasing patient numbers would be catastrophic, along with medical emergencies currently being dealt with at either Oldham or Blackburn will a death be caused before zomeone will take note? More doctors will need to be on call out of hours to deal with demand. - 4) Births, there has already been a major increase in housing in the area which with it comes new families and younger couples, Rochdale stopped allowing births so now couples are left with Burnley or Oldham, if they can manage to get a bed! More people causes more pressure for hospitals which could mean people are left being unable to go to hospital. - 5) Dental practices along with doctors will be unable to meet the demand for increased nhs patients which will ultimately lead people to either travel far for a dentist(not practical), go private and pay or go without treatment which inevitably costs the nhs more in the longer term. - 6) Local police will need to have a larger presence and larger task force</p>		Do not build in this area

----	-----------	---------	--------------	-----------------	-----------	---------	-----------------

for the area due to the ratio of people, is there the funding to enable that, specifically as you are looking at a traveler stop over. Those that are travelling through the community often have little respect for it as has been seen in the past.increased crime statistics will drive insurance prices up and the lack of and increase police time. Vulnerable people will also need more help from the local authorties again increasing costs. - 7) Bacup is a wonderful area of beauty and this area especially has wonderful landscapes and views building on this will destroy this lanscape, the light on neighbouring properties and noise pollution to say the least. - 8)There is an enormous amount of natural wildlife on the fields throughout the year from field mice to hedgehogs, foxes and kestrels, sparrowhawks and weasels, where will they go? On top of this the fields are used almost hourly for dog walkers and horse riders and it is a joy to see! - As described before this is not an exhaustive list as it goes on and on but I strongly object to the building!!!!

1142	CHRISTINE	JACKSON	-		Object	<p>ROSSENDALE LOCAL PLAN - BACUP AREA. - Whilst I am totally opposed to the constant development of the whole of Rossendale and the ever changing green belt boundary I feel I must object most strongly to the new proposals in Bacup, which is recognised as the best preserved milll town in the County. - As a resident of Bacup for over 30 years I have seen some of our most beautiful countryside turned into housing developments, many of the houses built over the last 10 years have still not been sold. The fact is that there are already hundreds of empty properties in Bacup, new and old, which could fill our quota. - - Sites HS2.1, HS2.12, HS2.13, HS2.32 (Bankside Lane),HS2.6 AND HS2.7(Todmorden Old Road) and HS2.4 (land off Moorland Terrace) are the most important ones to me personally and I note that the majority of these sites are privately owned, will they be subject to Compulsory Purchase Orders? These privately owned sites sustain the livelihood of their owners who, in this pastoral farming community, raise their livestock. Will these livestock be forced indoors off a natural diet with sunshine and fresh air to be raised like battery hens? - The wildlife in these areas consist of foxes, badgers, small mammals, bats, deer and wild birds, these will all disappear/die without this natural habitat. - The local infrastructure, schools, nurseries, health centres, roads, drainage, police, ambulance, fire cews and public transport is already stretched to maximum capacity, will increasing these services be considered with all this additional pressure to meet demand? - On Bankside Lane in particular the access is already stretched beyond capacity, being only one car width at 3 points, with double-parked cars, steep hills and narrow pavements. Potentially another 200 cars up and down here on a daily basis would literally create havoc. Access off, single track, Todmorden Old Road is also practically impossible. - HS2.32 is an open area at the top of Bankside Lane which is enjoyed by residents of Bankside Lane and higher Stacksteads alike, and has been for many decades. There is also an abundance of wildlife there, it is also on the skyline, building on here would have a huge impact on the views for miles around.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.007	Further comment
1306	Gavin	Bridge	-		Object	<p>The great majority of this site is red-flagged as an 'undevelopable' area by the Landscape Study (2015): Bacup and Stacksteads Sites Assessment, Volume 2 (see map on p.12). The same study found that development for housing will have a 'substantial adverse impact' (p. 27) over most of the area, and decisively concluded it is "Not suitable for development on landscape grounds" (p.28). - - The SHLAA has also confirmed that development of this site will have "high landscape impact". In addition, it is adjacent to sites of significant ecological value, and the Landscape Study (2015) concluded "it provides an important separation between Industrial Age, Settled Valley and Moorland Fringe landscape character types and *has a key role in forming the edge of the built environment of Bacup*"- - The SHLAA has found that "access is a major constraint" for the site, that it has poor accessibility for public transport and that, if housing is developed on the site, most of the residents will commute by cars adding to the significant transport infrastructure problems in the Valley. The SHLAA has also found the site ranks highly on coal risk assessment. - - Overall, it is clear from the SHLAA study and supporting documentation that this plot of land (a) has been unambiguously assessed as "not developable" on landscape grounds; (b) the combination of access constraints and other factors (including coal risk) impose such significant costs for developers that the site is only regarded by the SHLAA as being (at best) 'marginally viable' in the long-term; and (c) any development of the site will require a major and permanent change to the Urban Boundary, which goes against the long-established goal (written into the previous local plan) to maintain openness and separation between urban development on the north east edge of Bacup and Weir. - - The evidence presented to support the case for allocating this land to housing is weak. The evidence from the SHLAA study concludes the site is not viable in the short to medium term; and, furthermore, that there is only a possibility of it becoming viable if the time-line is stretched out into the future (10-15 years): this is a time-horizon which requires some heroic assumptions about land prices, developers costs and discount rates. Indeed, the evidence of marginal viability suggests that, if it is allocated to housing, it ll likely end up in the 'land bank' of a developer who will then seriously struggle to finance the construction. The result will be a lose-lose situations: no houses, and a blighted piece of land on the edge of Bacup. - - It is irresponsible to allocate the land to housing in this context. The evidence points to the commercial case being marginal at best (and then only if one stretches the time horizon out to its maximum extent. To allocate it to housing directly contradicts the findings of both the Landscape Study and the SHLAA's conclusions regarding landscape value and access. There is a much stronger case for maintaining the landscape and ecological values the land supports.</p>	-

1376	Peter	Ackerley	-	land off Cowtoot Lane at rear of properties on Windermere Road	Object	Please accept this as a strong objection to the proposed development on Green Belt land which would have poor access and massively increase traffic near a school and through road system that is already overcrowded. - The development of brown field sites in the Rosedale area has not been exhausted and there are many empty properties across the area. - This site development is not required and would blight the green belt and rural aspects of existing development. - The already overcrowded road and transport system is unable to cope with existing population and these further developments will only add more congestion, demand on schools and services which are already overstretched - Please do not build on this greenbelt land		Need to rethink whole development policy across Rossendale as the valley infrastructure cannot cope with massive increases in housing
1542	J M	Morris		SHLAA16067	Object	I am totally against the proposal. No adequate infrastructure in place to support 151 homes. Profound effect on Greensnook and surrounding areas. Vast amount of money spent on flood prevention only to propose something that will disturb the natural water table. It would be better to demolish some of the dirty old buildings that make Bacup look unkempt and build. You can't make a town with village facilities.		
1563	Yvonne and Alan	Peach		SHLAA16067	Object	Houses built in the Green Field in Cowtoot lane would be affecting the Heritage Site Sentinel there. Also, the field is like a bog, continually wet although it is a popular area for dog walkers. The schools and GP surgeries are full to bursting, it's a constant battle to get a GP appointment and get our children into schools.		
1585	I & PJ	Boswell			Object	With reference to the above, we wish to register our comments (objections) to the emerging local plan which proposes the inappropriate development/building of 151 properties on the above land. -Any housing development will permanently damage the topography of this land area forever destroying the landscape and character in this green area. -Obviously this will severely impact the visual outlook of this amenity and will do nothing for its amelioration and nature conservation -One 'knock-on' effect would inevitably mean more congestion on the local roads where parking is already a major issue - more importantly it presents additional danger particularly to children attending the only school in the area. -around the town (and the valley in general) there are many empty properties with a significant number of others displaying 'For Sale' signs. - The local MP has been quoted as calling for a suspension of any proposal to remove Green Belt land for development and prioritise new developments in Rossendale on brownfield and forer industrial sites of which there are plenty.		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.007	Further comment
1763	Elaine	McGinley			Object	<p>I write to express my objections in regards to the above proposal:</p> <ol style="list-style-type: none"> 1. working on the assumption that there will be 2 children and 2 adults per house therefore 300+ people and adding in the factor of 1.5 cars per household (225) this will have a massive impact on local schools and health services with little or no employment to take such numbers. 2. the access will impact significantly with congestion in what is already a built up area not to mention the increased flooding possibilities when natural drainage is taken away and replaced by a concrete jungle. 3. there are few facilities for children/adults in the area as it is, no leisure centres, no cinemas and libraries under threat! <p>Surely there are numerous brownfield sites that can be accessed without taking more of our countryside away. I for one is totally against this proposal.</p>		
1820	Kelly	Holt	Lancashire County Council		Not Applicable	<p>HS 2:7 – Subject to more than one vehicular access onto the highway network being provided to distribute the traffic on the adjoining grid of terraced streets this site could be deemed acceptable. It would be necessary to use the football ground to provide one of the access points. Cowtoot Lane is too narrow to the east of the football ground boundary to accommodate any development traffic</p>

762	John & Ann	Farrow	-		Object	<p>There are many problems facing this proposal:-</p> <ul style="list-style-type: none"> - Access - proposed site is on a bend. - Visibility - dangerous as vehicles speed through the village - Separation values - no separation then for Weir Village from Township of Bacup. This field is the separation marker for the township. - The possibility of coal mine shafts. - Surface water issues - This area being hilly obviously gets a large amount of rain, and in most instances of heavy rain water gushes from the fields onto the main road, which although not causing flooding on this site may increase flood risk elsewhere lower down the valley. - The local school cannot fit in the village children as it is without more houses with children being built. - Sustainable location - there is nothing in the village as regards to facilities therefore new residents would be heavily reliant on the use of private cars and although the distance to the closest amenities might be considered as short the use of vehicles would conflict with the governments desire to reduce the number and length of vehicle movements as they move towards lowering the carbon economy. - Need for housing - in the Planning and Design and Access statement it is stated that Weir is probably considered with the Rossendale core strategy to be 'other smaller and isolated settlements' as per criteria 4 of policy 3 (distribution of additional housing) which outlines a locational hierarchy for where new housing is to be distributed. It is also stated that this means 'minimal numbers of additional houses will be built in this settlement'. 		<p>There are a number of homes already for sale in the Weir area - currently numbering 60 . These homes are constantly becoming available especially after harsh winters where commuters (not used to snow and having to park on the main road) get fed up with the location and move onto homes further down the valley. - In summary, we would object to this development strongly on the basis of all the arguments previously mentioned and would hope that sensibility would prevail in the making of the relevant decisions on the possibility of new homes being proposed.</p>
982	Michael	Chadderton	-		Object	<p>Observations on the Draft Local Plan site HS2.8 - Burnley Road, Weir</p> <ol style="list-style-type: none"> 1. The reason the green area between Lower Weir Cottages/Farm & the former Weir Hotel has not been built upon previously is the existence of a periglacial slip plane of lacustrine deposits. If any additional excavations are carried out, this would cause a catastrophic effect on the adjoining land & highway. One look at the former Weir Hotel with its substantial subsidence gives physical evidence of this. - It is a very similar situation to a site in Ewood Bridge (Rawlinsons) where the whole hillside moved & the site was abandoned & no further work carried out for over 40yrs & never likely to. 2. When the area is subjected to excessive rain, the properties across Burnley Road have been in danger of flooding because of poor land drainage & due to the site being several metres higher than the highway. 3. Any development would rid the site of all wildlife, where badgers & foxes freely roam. 4. There are no retail facilities in Weir now (shops, public houses etc) and there is currently a waiting list for the local school, so any additional development would impact detrimentally on the existing infrastructure of the Village. 		<p>Appreciate acknowledgement of this e mail.</p>

1362	adam	taylor	-	HS2.8, HS2.9, HS2.10	Object	Facilities in Weir are almost non-existent. No doctors, shops, schools. - There is one primary school located on the main road at the lower end of Weir, but I doubt it has the capacity to accept many more pupils. The road does become incredibly congested at school start/end times. More pupils will mean more congestion and an increased risk of traffic related accidents. Because it's on a busy road, most children are dropped off/picked up by car. - The nearest shops and Doctors surgery are almost two miles away. - Bus services in Weir are very limited. - The result is that private car journeys have to be relied upon for everything, so adding a new estate will multiply the number of journeys being made. A walk around the existing village reveals that almost every house owns at least two cars. Thus it can be surmised that for each proposed new property, at least two cars will be adding to the traffic. - The wider Rossendale area may also be affected by increasing the traffic to and from Weir. The nearest access to the motorway network is approximately 6 miles northwards, 8 miles away westwards, or over 10 miles to the south. The roads in all those directions are single lane carriageways that are always busy. There is very little scope for adding more traffic without causing major holdups for everyone. There are also few alternate routes due to the geography of the region. - Although I have not yet experienced a winter in Weir, several people have told me how snow is more of a problem than for other lower lying towns. When others get rain, Weir gets snow, and the first signs of snow mean many people park their cars on the main road to ensure easier road access. Again, adding more cars will exacerbate the current problems and could impact on the Gritters ability to ensure the roads remain clear! - There are far too many improvements required to the current infrastructure and to the village as a whole that would require funding and implementing before such a proposal could be considered. - Shops, schools, better road networks would all need to be in place. - And I haven't even mentioned the negative impact all of this would have on the landscape, and the surrounding natural habitats. - One of the challenges set out on the Lancashire County Councils Environment Directorate "Woodland Vision, 2006" document relates specifically to the Enclosed Uplands area of Rossendale: "Protect the open character of the upland summits" - building several new estates in Weir certainly does nothing to achieve that goal! - It also states amongst the Opportunities for Enclosed Uplands:- - Enhance the habitat mosaic of the Enclosed Uplands Landscape - Exploit opportunities for woodland creation on less viable agricultural landholdings. - So the land being earmarked should be considered for Woodlands, if it's not viable as agricultural land (which it is currently being used as). - the document can be read online at http://www.lancashire.gov.uk/media/191686/Composite-1-5.pdf - There are many brownfield sites visible driving around Rossendale, and these should be exhausted before considering ruining the small rural villages

by expanding them into gridlock.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.008	Further comment
1380	sharon	taylor	-	HS2.8, HS2.9, HS2.10	Object	Facilities in Weir are almost non-existent. No doctors, shops or schools. Having recently moved to Weir we had to wait 2 MONTHS just to get an appointment to register at the local surgery. - - The one primary school, located on the main road at the lower end of Weir, according to neighbours, is subscribed to capacity. Other schools in the area are also feeling the strain. Where are all the children who will be moving to the area, if these houses are built, get an education? Will they have to bus the 90 minutes to Bury as recently shown in an article in the Rossendale Free Press? - - Furthermore, during school pick up and drop off times the road around the primary school becomes incredibly congested and downright dangerous. More pupils will mean more congestion and an increased risk of traffic related accidents. - - The nearest shops and doctors surgery are almost two miles away and, as stated, very difficult to get appointments. If it's like this now how much worse will it get once several hundred more people move into the area? Bus services in Weir are very limited. The result is that private car journeys have to be relied upon for everything. Adding several new estates will multiply the number of journeys being made. A walk around the existing village reveals that almost every house owns at least two cars. Thus it can be surmised that for each proposed new property, at least two cars will be adding to the traffic. During winter when there is snow, people in the estates around Weir, have to park on Burnley Road to avoid being unable to get to work. How will Burnley Road cope with a further 200+ cars being parked on it? This will also impact the road gritters ability to clear and make the roads safe. - - The wider Rossendale area will also be affected by increasing the traffic to and from Weir. The nearest access to the motorway network is approximately 6 miles northwards, 8 miles away westwards, or over 10 miles to the south. The roads in all those directions are single lane carriageways that are always busy. There is very little scope for adding more traffic without causing major holdups for everyone. There are also few alternate routes due to the geography of the region. - - There are far too many improvements required to the current infrastructure and to the village as a whole that would require funding and implementing before such a proposal could be considered. Shops, schools, better road networks would all need to be in place. - - Some of these proposals do not take into consideration parking on a day to day basis. For example, the building around the lower end of Weir on Burnley Road, seems to allow for very little parking. The only option being Burnley Road, further exacerbating the dangers and snarl ups this causes. During the building of these houses where will the contractors park? Again, Burnley Road, causing further disruption & dangers not to mention potential accidents due to muddy roads from construction traffic. Over the last couple of months we've seen the chaos caused by the Electricity works being completed on Burnley road. How much worse will it be with all this building going on? - - Next we need to take into account the		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.008	Further comment
						<p>negative impact all of this would have on the landscape and the surrounding natural habitats. One of the challenges set out in Lancashire County Councils Environment Directorate "Woodland Vision, 2006" document relates specifically to the Enclosed Uplands area of Rossendale: "Protect the open character of the upland summits" - building several new estates in Weir certainly does nothing to achieve that goal! - It also states amongst the Opportunities for Enclosed Uplands:- Enhance the habitat mosaic of the Enclosed Uplands Landscape. Exploit opportunities for woodland creation on less viable agricultural landholdings. So the land being earmarked for housing should, according to your own directorate, be considered for Woodlands if its not viable as agricultural land (which it is currently being used as). The document can be read online at http://www.lancashire.gov.uk/media/191686/Composite-1-5.pdf. There are many viable brownfield sites around Rossendale, and these should be exhausted before ruining the few bits of open land and small villages left.</p>		
1431	Christopher	Dance	-		Object	<p>Site Location- This is the last piece of land which is green space on both sides of Burnley Road which separates the village of Weir from Bacup. If it is developed for housing, the village will be swallowed up by "greater Bacup" and will lose its village identity. - Topography- This is definitely not an accurate description. See photos sent by email. - Vehicular access- Will emerge on the concave side of a bend in the road, requiring extensive cutbacks. - Access to primary school- Northern is already oversubscribed. If all developments in Weir proceed, a new primary school will be required. - Access to Secondary school- Many parents already do everything in their power to avoid children going to Fearn. - Flood risk- Water streams across this land pouring out onto Burnley Road. There are actually ponds formed on the far side of the dry stone wall that separates the two fields. These cannot be seen from the road. - Ecological value- There are known badger sets adjacent to this site. - Mineral sterilisation- There are known mine workings in the village close to this land which may mean there are coal deposits under it. - Conclusion: Justification- As Northern School is oversubscribed, those not getting a place will find they are far from "within walking distance" and will be in for a very long walk to Bacup, or the County Council may find they are having to fund transport if places are not available within the prescribed distance. The "hourly" bus service stops just after 18.00 so unless a car is available, residents are cut off from all services after this time. Coal risk assessment: there are known mine workings in the village close to this land and may extend under it.</p> <p>Email received 09/10/2017: Further to my discussion with Adrian Smith at the consultation event at Futures park, please ensure these photos are submitted along with my objection to the above proposal made via the consultation website.</p>		<p>With the exception of the Baptist Church/Community Hall, Weir is totally devoid of infrastructure: no shop, no pub and a bus service that is totally inadequate during the day and non-existent after about 18.00. Therefore, the amount of traffic travelling from the village to Bacup will increase significantly if all the proposed developments in Weir proceed. A new primary school will be required because Northern School is already oversubscribed. Weir will lose its village identity.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.008	Further comment
1550	Shelley	Carter		SHLAA16070	Object	I am not happy that HS2.8 (52 homes) is still on the Draft Plan. This is a large Greenfield site adjacent to Burnley Road (A671) at the south of Weir Village. Building a housing estate on this land would have a significant impact and if this land is lost it will only be detrimental in terms of wildlife habitat and grazing loss, visual impact and added traffic.

The nearest access to the motorway network is approximately 6 miles northwards, 8 miles away westwards, or over 10 miles to the south. The roads in all those directions are single lane carriageways that are always busy. There is very little scope for adding more traffic without causing major holdups for everyone. There are also few alternate routes due to the geography of the region. - Although I have not yet experienced a winter in Weir, several people have told me how snow is more of a problem than for other lower lying towns. When others get rain, Weir gets snow, and the first signs of snow mean many people park their cars on the main road to ensure easier road access. Again, adding more cars will exacerbate the current problems and could impact on the Gritters ability to ensure the roads remain clear! - There are far too many improvements required to the current infrastructure and to the village as a whole that would require funding and implementing before such a proposal could be considered. - Shops, schools, better road networks would all need to be in place. - And I haven't even mentioned the negative impact all of this would have on the landscape, and the surrounding natural habitats. - One of the challenges set out on the Lancashire County Councils Environment Directorate "Woodland Vision, 2006" document relates specifically to the Enclosed Uplands area of Rossendale: "Protect the open character of the upland summits" - building several new estates in Weir certainly does nothing to achieve that goal! - It also states amongst the Opportunities for Enclosed Uplands:- Enhance the habitat mosaic of the Enclosed Uplands Landscape - Exploit opportunities for woodland creation on less viable agricultural landholdings. - So the land being earmarked should be considered for Woodlands, if it's not viable as agricultural land (which it is currently being used as). - the document can be read online at http://www.lancashire.gov.uk/media/191686/Composite-1-5.pdf - There are many brownfield sites visible driving around Rossendale, and these should be exhausted before considering ruining the small rural villages</p>

1380	sharon	taylor	-	HS2.8, HS2.9, HS2.10	Object	<p>Facilities in Weir are almost non-existent. No doctors, shops or schools. Having recently moved to Weir we had to wait 2 MONTHS just to get an appointment to register at the local surgery. - - The one primary school, located on the main road at the lower end of Weir, according to neighbours, is subscribed to capacity. Other schools in the area are also feeling the strain. Where are all the children who will be moving to the area, if these houses are built, get an education? Will they have to bus the 90 minutes to Bury as recently shown in an article in the Rossendale Free Press? - - Furthermore, during school pick up and drop off times the road around the primary school becomes incredibly congested and downright dangerous. More pupils will mean more congestion and an increased risk of traffic related accidents. - - The nearest shops and doctors surgery are almost two miles away and, as stated, very difficult to get appointments. If it's like this now how much worse will it get once several hundred more people move into the area? Bus services in Weir are very limited. The result is that private car journeys have to be relied upon for everything. Adding several new estates will multiply the number of journeys being made. A walk around the existing village reveals that almost every house owns at least two cars. Thus it can be surmised that for each proposed new property, at least two cars will be adding to the traffic. During winter when there is snow, people in the estates around Weir, have to park on Burnley Road to avoid being unable to get to work. How will Burnley Road cope with a further 200+ cars being parked on it? This will also impact the road gritters ability to clear and make the roads safe. - - The wider Rossendale area will also be affected by increasing the traffic to and from Weir. The nearest access to the motorway network is approximately 6 miles northwards, 8 miles away westwards, or over 10 miles to the south. The roads in all those directions are single lane carriageways that are always busy. There is very little scope for adding more traffic without causing major holdups for everyone. There are also few alternate routes due to the geography of the region. - - There are far too many improvements required to the current infrastructure and to the village as a whole that would require funding and implementing before such a proposal could be considered. Shops, schools, better road networks would all need to be in place. - - Some of these proposals do not take into consideration parking on a day to day basis. For example, the building around the lower end of Weir on Burnley Road, seems to allow for very little parking. The only option being Burnley Road, further exacerbating the dangers and snarl ups this causes. During the building of these houses where will the contractors park? Again, Burnley Road, causing further disruption & dangers not to mention potential accidents due to muddy roads from construction traffic. Over the last couple of months we've seen the chaos caused by the Electricity works being completed on Burnley road. How much worse will it be with all this building going on? - - Next we need to take into account the</p>

1431	Christopher	Dance	-		Object	<p>Vehicular access- The suggestion that access could come through Hillside Crescent as it would give "improved" access is beyond belief. Those making the suggestion have obviously never tried emerging from Hillside Crescent in a car at busy times. The line of sight to the right at the junction with Burnley Road is reasonable, as the terraced houses on that side are slightly set back. However, those to the left are contiguous with the pavement (see photos sent by email). This means that the line of sight to the left is virtually non-existent and a driver has to wait until there is no traffic from the right and then slowly draw forward to try and see if it is safe to emerge. If it is not, then one often has to reverse back when more traffic comes from the right. Building these houses will double the number of vehicles needing to emerge onto Burnley Road at this dangerous junction. Additionally, residents of Burnley Road have increasingly used Hillside Crescent as a car park, meaning that although it is a double carriageway road, because of this parking on both sides of the road, there is often barely space for a car to get through. Indeed, there have been occasions when I have been unable to get up Hillside Crescent towing my caravan because of the parking situation. The access via Deer Street gives far better line of sight for drivers emerging onto Burnley Road. - Access to primary school- Northern is already oversubscribed. If all developments in Weir proceed, a new primary school will be required. - Access to Secondary school- Many parents already do everything in their power to avoid children going to Fearn's. - Mineral sterilisation- There are known mine workings adjacent to this land which may mean there are coal deposits under it. - Conclusion: Justification- As Northern School is oversubscribed, those not getting a place will find they are far from "within walking distance" and will be in for a very long walk to Bacup, or the County Council may find they are having to fund transport if places are not available within the prescribed distance. The "hourly" bus service stops just after 18.00 so unless a car is available, residents are cut off from all services after this time. Coal risk assessment: there are known mine workings in the village close to this land and may extend under it.</p> <p>Email received 09/10/2017: Further to my discussion with Adrian Smith at the consultation event at Futures park, please ensure these photos are submitted along with my objection to the above proposal made via the consultation website.</p>		<p>With the exception of the Baptist Church/Community Hall, Weir is totally devoid of infrastructure: no shop, no pub and a bus service that is totally inadequate during the day and non-existent after about 18.00. Therefore, the amount of traffic travelling from the village to Bacup will increase significantly if all the proposed developments in Weir proceed. A new primary school will be required because Northern School is already oversubscribed. Weir will lose its village identity.</p>

1482	GARY	BARKER	-		Support	I would very much support the use of the land in this location being used for development, for the following reasons: - - It is central to the Weir village location. - - There is a recreation field close to the site - - The location is close to the main road, and access routes in the area have been recently redeveloped - - The area is supported by a good local primary school. - - The boundaries included are within the existing urban dwellings on the west side of the village, so the proposed area to be included, in my opinion, should be considered as infill, to the village boundary and therefore should be further developed. - - Development of site will benefit the local and surrounding area, bringing more people and wealth to the area. This is very much required given the decline in the local footwear industry over the last two decades.		I have reviewed the other plots in the Local Plan and I support the development of the other areas in the Bacup area. - I believe that it is important that the Rossendale Valley is developed equally through out the area, to ensure that the is not too much congestion in any particularly area. - I therefore strongly agree with any development in the Bacup and surrounding area, so that it can be balanced against the Rawtenstall and Helmshore areas.
1550	Shelley	Carter		SHLAA16071	Support	The small Greenfield pockets to the west of Weir Village HS2.9 (14 homes) would not have much visual impact on the landscape as they would be screened by existing development within the Village. However, they would add to the traffic congestion and result in the loss of wildlife habitat and grazing land.

Reference	HS2.011	Land at Huttock Top Farm, Bacup
------------------	----------------	--

443	Jim	Leach			Object	Bankside Lane is already a hazardous road, access is frequently restricted to existing houses by car. There is existing a sign " Gritting Route, Problem access road " Further Housing and therefore Traffic would only add to the existing problems A Domestic Fire would,at present,be difficult for a Fire Engine to attend during the daytime, - at night ,when everyone is at home it would be impossible These areas should be returned to Green Belt status		Not at Present
-----	-----	-------	--	--	--------	--	--	----------------

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
486	Susan	Ormerod			Object	<p>All of the above sites are in the Bankside Lane area of Bacup. All are Greenfield Sites and should be changed back to this status without delay.</p> <p>All of these sites are currently used by the local people and their children, in one form or another, as well as the local deer herds (of which there are two), foxes, badgers and a host of other wildlife, including the birds of prey from the Stacksteads area.</p> <p>Some of these sites are owned by local farmers to breed and train horses. The vehicle activity on Bankside, where there are three serious hazards on the approach from the town centre due to narrow roads and a blind bend on a steep incline, is already a danger with the local traffic. These three narrow sections are all within a 20 metre stretch and will not allow even two small vehicles to pass. This hazard has been increased by the "home delivery" method of purchasing goods for the already existing occupants and further population increases would inevitably mean increases of delivery wagons and vans.</p> <p>Any changes of road from the Stacksteads area would provide a "rat run" between the town centre and Stacksteads and any road up from an improved "Lodge Lane" would be a worse hazard than Bankside is at the moment. Almost certainly impassible in winter.</p> <p>The current parking situation on Bankside Lane is already causing concern as shown by the council notices which appeared some time ago. Access for the emergency services has already caused hold ups on five occasions know to myself during the past twelve months.</p> <p>In conclusion, these plans, if passed, will implement a serious deterioration in living standards for all existing occupants of the Bankside Lane area and an increased health risk factor for all who use the lane either in a vehicle or as a pedestrian.</p>		
487	Lorna Lucy	Doherty			Object	<p>We live at top end of Bankside Lane. We object most strongly to the proposed 4 new building sites off Bankside Lane. The beginning of Bankside Lane is extremely narrow with room for just one car with no possibilities to widen and very steep, and with no vision round a blind corner. The increase in traffic is definitely not an option due to danger particularly in winter with snow and ice.</p> <p>Also, I believe there is a proposal for Bankside Lane to be continued at the upper end which is now a dead end. This is also totally unacceptable due to the above reasons.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
488	Helen	Koczur			Object	<p>To even consider planning further homes on any part of Bankside Lane, Bacup is totally ludicrous.</p> <p>The lower part of Bankside Lane is exceptionally steep and narrow in 2 sections and cannot cope with any further traffic. On days that the Golf Club holds events, or football teams are playing on the recreation ground, access becomes impossible. In bad weather, the gradient together with the width restrictions leads to chaos and accidents, of which I have not only witnessed but suffered in the past. There is also limited pedestrian access at these dangerous sections. The route CANNOT cope with any further traffic. As these access problems are at the lower part of Bankside Lane ANY future housing expansion at any point further up the lane would affect this section.</p> <p>We recently had road improvement work which proved access problems. I dread to think what would happen to emergency services under these conditions as access will not be easy.</p> <p>The difficult access means that houses do not sell here, so why on earth build more? I do not see an increase in employment opportunities in the area so the occupants of any new build would travel out of the area for work. This would mean that the volume of vehicles would increase to a dangerous level. If some of the build is required to be for social housing, access for young families with prams and elderly would be impossible without transport.</p> <p>There has been a development of houses over in Weir. All have normal road access, not single track as on Bankside Lane, yet in bad weather the access problems cause the main Bacup to Burnley Road to be severely restricted with abandoned vehicles. Putting further houses off Bankside Lane would also cause a similar problem to the centre of Bacup.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
489	Denise	Duffy			Object	<p>I have lived in the Bankside Lane area some 47 years, in effect all of my adult life. The journeys up and down the Lane have become increasingly hazardous and dangerous and I am appalled that RBC is considering allocating 4 locations for new housing.</p> <p>> For a start the blind narrow bend around Ivy Cottage has always been hazardous and the increase in car numbers has made it doubly so over the years. Further traffic will only serve to exacerbate the conditions we experience daily.</p> <p>> Parking and especially double parking along the Lane and even on pavements has increased significantly. You only have to ask your own drivers (bins, gritting) of the difficulties they regularly face. Emergency services , especially Fire Engines, would also confirm their difficulties along the Lane.</p> <p>> As most home owners frequently have more than one car in their families, sometimes up to four cars once adult children start driving, the addition of garages does little to ease the situation. Apart from the fact that garages are often storage places rather than car shelters.</p> <p>> Although I have personally not been involved in an accident, accidents have happened on numerous occasions. The steepness of the lower Lane, especially in winter conditions, calls for careful negotiation. Again, additional traffic will exacerbate the residents safety concerns.</p> <p>Thank you in anticipation for forwarding this to whom ever it concerns</p>		
503		McKeown			Object	<p>I am against the proposed new housing off Bankside Lane as I am worried about road safety with poor visibility of oncoming traffic in areas and speeding vehicles. Also there would be gridlock at the bottom of Bankside Lane if there is to be additional housing because there are not two lanes of traffic which relies on drivers good faith on many occasions as you travel up the hill (there are many difficulties with this now).</p> <p>I am a resident Meadow Way. At present I have increasing issues with run off of rain water which already requires bailing out of water in winter. The new housing area, no longer being fields to absorb the rain water, will impact further on the massive drainage problem I am having to cope with.</p> <p>I would be very keen to know more about sewage system and how and which route the new system will follow as I have sewage pipe work under my side garden which serves about 24 houses.</p> <p>I am concerned about trucks during the building works and the additional dirt on the roads creating slippery areas for vehicles, damage to the road, and being additionally busy leading to increased chance of accidents.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
534	Romanii	Fitton	-		Object	I most certainly want to object to anymore houses being built on or around bankside lane in bacup. The street is congested with cars and wouldn't be able to cope with more vehicles coming up and down it every day. We also love the little bit of green land we have left and don't want it spoiled by any more houses being built.		-
539	Simon	Midgley	-	HS2.1, HS2.12, HS2.14, HS2.32	Object	This site would be accessed from Bankside Lane which is already difficult to navigate at peak traffic periods: it is narrow and is accessed from Market Street via a very steep and narrow hill section. In normal conditions this needs extreme care when navigating, in winter snow and ice this access is dangerous and often impassable. Additional traffic generated by housing on these sites (HS2.1, HS2.12, HS2.14, HS2.32) would make a dangerous situation even worse. Cars are parked on both side of Bankside Lane narrowing it to one car's width in many sections: there is nowhere else for the cars to park. - - Development on sites HS2.1, HS2.12, HS2.14, HS2.32 would also be "skyline" development which residents were told would not be permitted. This would destroy the green character and visual amenity of this part of Bacup - forever. - - Currently farmland, these sites soak up precipitation helping to reduce flood risk which development would increase.		Bankside Lane is an inappropriate area for housing development for the reasons already outlined above. It is important that we do not lose this green space on the Valley side.
540	BRETT	HARRIS	-		Object	BANKSIDE LANE CAN NOT SUPPORT MORE TRAFFIC IT IS ALREADY STRUGGLING WITH THE AMOUNT OF TRAFFIC.		-
543	Thomas	Hammant	-		Object	Objections fall in line with all objections for HS2.13 - relating to safety of cars on Bankside Lane, and the Greenbelt area.		Whilst I understand the need to balance new housing in the area, building on land which is currently used as both a farm and/or public access land is against all previous council policies and should not be entered into lightly. -

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
545	Lisa	Hartley	-		Object	Greenfield site and should remain as such - full of wildlife e.g. 2 deer herds, foxes, badgers and birds of prey. Landowners train and breed horses on this land. - Bankside already extremely congested with traffic- not enough parking facilities now - council have had to put notices up asking people to park more consideratly as emergency services (fire engines) and council services (gritters) have been unable to pass through. - Bankside has 3 very narrow points where only one vehicle can pass at once and these areas are extremely close together in proximity incorporating blind bends as well - more houses would cause more cars causing chaos and accidents. Any through road to stacksteads that might be made would lead to bankside being used as a racing track for cars to pass through from stacksteads trying to avoid the busy main road! This in itself would be extremely dangerous as more houses Lead to more people living on bankside -probably children - resulting in more road traffic accidents and fatalities! We have enough at the moment we don't need anymore. - It would be a nightmare waiting to happen. - Building houses would cause further chaos with wagons attempting to make their way through when there is so little room - home shopping vehicles struggle at moment and are sometimes unable to gain access all the way across bankside! -		Please re think your plans as they will have very serious consequences for both the public and wildlife of bankside!
557	michael	hudson	-		Object	first the bankside lane cannot support any more traffic its a 20 mph zone but traffic goes a lot faster,the road floods a lot. most of that from old newtownroad waters running all the time.the inferstructure cannot cope with any more houses or veicles your concerned resident [...].		i think there is plenty of brown sites around this area that could be used.and empty proerties around not being used.
558	Terry	Nightingale	-		Object	I wish to object to the proposals as follows - - 1. lack of suitable access to to the proposed sites .There is no suitable access to any of these sites with all traffic having to access and exit onto Bankside Lane (see also point 4) - - 2. risk of flooding to properties on Bankside Lane if housing built on green field site to rear. During periods of wet weather rainwater cannot now drain away and as such runs down through these properties gardens onto Bankside lane . increased building will further increase the risk of flooding for these properties - - 3. in addition to the flood risk there will be the increased sewerage demands onto the existing sewerage system on Bankside Lane /Close - - 4. A huge increase in vehicular traffic on an already overcrowded one way in and out Lane . - during winter months lack of available parking / inconsiderate parking on lower Bankside Lane regularly prevents LCC Gritters from being able to access this area . An increase in housing will inevitably bring increased fire risk . - - 5. There will be an environmental impact on wioldlife in the area . Land in the area is frequented by deer and many other types of wildlife . -		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
581	B	Woodrup			Object	<p>We are writing to object to the proposed plans to change areas of previous green belt sites to building sites of potentially 100 new houses. These are our concerns.</p> <p>The bottom of Bankside Lane has three bottle necks very steep and narrow and a bad bend only room for one car, a very narrow pavement on one side. Children will be walking down and up to get to school.</p> <p>The school run will be dangerous the road is already overloaded.</p> <p>In winter people try to park at the bottom of the lane in the morning, ready to go to work, because the road is always gritted. The road is sometimes so icy. It's frightening to drive down, as you could easily crash into the wall or another vehicle parked or moving. I dread to think what could happen with more pedestrians (children).</p> <p>I am also concerned about the fire engines and ambulances and gritter trying to drive up and over bankside lane, especially after 7PM when most residents are home and their vehicles are all parked on the roadside's and pavements. This is a concern now. It's going to be really bad if another 100 houses are to be built. Most households have two cars.</p> <p>What about our wildlife. Bats, hedgehogs, deer, rabbits, badgers, toads and frogs.</p> <p>What about our beautiful countryside and outdoor spaces that we and our children and grandchildren really enjoy.</p> <p>We hope you seriously consider our concerns and objections.</p> <p>It has been mentioned to me that previously planning to build houses was turned down by the ministry of transport. Because of the bottlenecks at the bottom of bankside lane.</p> <p>There's also the question of policing all these extra residents and homes.</p>		
582	G	Pearson			Object	<p>Dear Sirs I will raise my objections to this Development due to the following reasons..</p> <p>The lane is already over loaded with vehicles from the existing houses, the Council has placed notices on the lampposts about the problem of gritting the lane due to traffic.</p> <p>My wife had a vehicle accident Two years ago as a vehicle reversed into her vehicle due to cars parked on Bankside lane.</p> <p>The road itself in a bad state of repair due to traffic movement.</p> <p>When your refuse teams come to collect they complain of the problems of traffic on the Lane.</p> <p>When the Animal farm is allowed to have functions on such as Halloween there are even worse traffic problems.</p> <p>The Green areas currently enjoyed by the locals and their children will be affected and even lost .</p>

584	Craig	Ovenden	Next Century Property Services Ltd		Object	<p>I'm am led to believe that a new draft local development plan includes a proposal to allocate land for housing at 4 locations off Bankside lane? As a long term resident of Bankside lane I would object to the proposal on several counts:</p> <ol style="list-style-type: none"> 1) The lane is already extremely busy and access is always restricted down to a single track lane, if the proposal involves further vehicle access the road would need to be made wider. 2) The lane is in a poor state of repair, adding more traffic would create further ongoing maintenance. 3) We live right at the top of the lane, on refuse collection days, dependent on what time the collection takes place it can take me an extra 10-15 minutes to travel down the lane, the collection drivers are always really obliging and pull over when possible, however due to the amount of parked cars and traffic travelling in the opposite direction I often have to follow behind the vehicle right to the bottom, further housing would only compound the problem. 4) The bend in the road towards the bottom and the further narrowing of the road is a bottle neck often leading to vehicles waiting at the bottom to let oncoming traffic up and down the lane, this sometimes backs up as far as the main road, further housing/vehicular access would cause a danger at the junction with Newchurch road as vehicles que to access the lane. <p>Please can you consider these points before any decision is made to allocate the land for housing.</p>		
586	Sandra	Robinson			Object	<p>This email is in regards to the proposal for housing at 4 locations off Bankside Lane, I am a resident of Bankside Lane,I feel that there is too much traffic at the moment on this narrow road,I am lucky to have off road parking,however most do not which then causes problems for pedestrians.</p>		
592	Jean & Peter	Hannan			Object	<p>I am submitting our opposition to the proposed building plans within the Bankside Lane area. Bankside Lane is already overloaded and congested with motor vehicles and we feel that added traffic will cause untold problems. Inadequate parking facilities already add to this problem and we feel very strongly that the above proposals will potentially cause accidents and traffic delays.</p>

605	Maurice	Leyland			Object	<p>With reference to the above proposed plans I wish to make the strongest objection mainly because of the geography of Bankside Lane and Newchurch Old Road.</p> <p>Bankside Lane Has four pinch points from the town centre to the top of the hill (approx 200yds.) This means only wide enough for one vehicle. If there is a wedding or funeral at the church then there is no room to pass Likewise when events finish at the golf club you can get a stream of traffic coming down the hill which means near misses and hard braking When winter arrives you can almost guarantee there will be some shunts as all the cars off Rose Bank street park on Bankside lane. I know of three cars last winter that were damaged in this way When you have got to the top of the hill, the rules of the highway code have long since been discarded, double parking and parking on the pavement is taken as normal. Thus reducing the lane to single line traffic. When a lorry or wide vehicle attempts to pass sometimes it cannot fit, and I have seen the driver knocking on doors to try to find the owner of the car causing the problem. This is all before you reach Newchurch Old Road. Newchurch Old Road This is no more than an old cart track single car width for its whole length and certainly not fit for any vehicles. Once it was a good tarmac road from Bankside Lane to the farm, but now it is no more than a river bed. Someone? Has been allowed to dig a great hole in the field alongside the lane creating a substantial water flow down the lane after any rainy period, after the rain has stopped the water continues to flow for three to four days. The water has forced a hole through the wall on the lane, creating the problem. Once there was a fire at the farm and the fire engine was damaged scraping between two walls more recently a caravan forced its way through bringing down the wall which had to be rebuilt (the caravan never came back down in one piece). The amount of traffic, and speed, at present is as much as the road can take, taking into account the petting farm traffic and the stables further along the road. Access onto the lane is totally blind due to the wall heights. These are problems we are encountering now, if more houses are built especially the number suggested, who knows what will happen there is a lot more needs doing before houses are erected. Finally Bankside Lane & Newchurch Old Road are one long Cul-De-Sac. So</p>

608	A J	Doherty			Object	<p>Email received 29/09/2017:</p> <p>Dear Sirs</p> <p>I attended the road show at Futures Park on 21st September and saw the four sites you proposed for building upon.</p> <p>I object most strongly to all of them.</p> <p>Bankside Lane has a very narrow access from A 681 with room for one car only at the turning.</p> <p>A very steep incline for some yards and then at Dale Street the road narrows even more, again with room for one car only.</p> <p>The incline is even steeper.</p> <p>Near the end, there is a treacherous incline and turn.</p> <p>Parked cars line the whole of Bankside Lane already.</p> <p>In winter, in spite of efficient gritting by the Council, snow and ice can stop traffic.</p> <p>If the proposed building takes place,</p> <p>In the short term, many heavy vehicles would create chaos to our local traffic.</p> <p>Long term, the traffic would double making access a nightmare.</p> <p>I commend the services of Rossendale Council for their efficient rubbish collection and gritting in winter.</p> <p>I am sure they will tell you how difficult it is already to access Bankside Lane.</p> <p>In the case of an emergency - ambulance or fire - we would be put at great risk of delays.</p> <p>Perhaps we could call a helicopter...</p> <p>Email received 30/09/2017:</p> <p>Bankside Lane Bacup proposed building sites</p> <p>I attended the road show on 21st September 2017 at Futures Park, Bacup</p> <p>I object to any of the proposed building sites because</p> <p>Access is extremely restricted.</p> <p>The entrance to Bankside Lane from A 681 is very narrow and cannot be widened.</p> <p>The road is very steep.</p> <p>It continues between a house to the left and high bank to right leaving room for just one vehicle round a blind bend. The road here is also very steep and cannot be widened.</p> <p>Near the end of Bankside Lane there is another very steep incline, round two corners.</p> <p>The whole of Bankside Lane is congested with parked vehicles.</p> <p>If the proposed building takes place, access will be a nightmare.</p> <p>Already it is amazing that local authority vehicles - refuse collection and gritting in winter - manage so efficiently, but it would be almost impossible to continue were traffic to double.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
						<p>Winter snow and ice make the road dangerous and sometimes impassable. In the short term: probably over several years, heavy vehicles would block access.</p> <p>In the long term: four building sites would probably increase traffic to double what it is now.</p> <p>Ambulance , Fire Services and Police must have easy access and these would be put at risk.</p> <p>What do you suggest? Hire a helicopter?</p> <p>Lastly, you are intending to build on virgin moorland, destroying forever the natural beauty and wildlife it supports.</p>		
611	Christine	Hudson			Object	<p>I am writing in regard to the building of 183 houses in all off Bankside Lane. I drive up and down Bankside Lane most days (week and weekend) and it does get very congested at times with lorries and cars, the lane is not very wide and people who lvie here have to park both sides of the lane which only leaves enough space to get through.</p> <p>The very narrow park of Bankside Lane, as you go up the hill leaves only enough space for single traffic. A lot of people get very frustrated and angry putting it mildley. People forget it is a 20 mile limit so there is often a near miss.</p> <p>If the houses are going to be built 183 in all they will all have to use Bankside, so that means there will be an extra 30 cars. There would be heavy lorries and vans whilst they are being built. Most households are 2 car families hence 380 cars extra.</p> <p>Drainage</p> <p>When we have heavy rainfalls which is often. We get a lot of water coming down from old newchurch road and onto the lane. In the last 5 years we have had flash flooding.</p> <p>One day we were sitting in our front lounge and our wheelie bins were floating about in the front garden. We opened our garage doors front and back and it was like a river running down the garden. All our plants were lost as they were in a pile of mud at the bottom of the garden.</p> <p>If these houses are going to be built, there will have to be better drainage. Also we have some lovely open green spaces around Bacup, that we all enjoy and cherish.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
615	Elaine	Garrard			Object	<p>I wish to object to the proposed housing development sites referenced HS1.11, HS2.12, HS2.13 and HS2.32 which are listed in the housing allocations section of the above plan.</p> <p>The reason for my objection is that vehicles travelling to Bacup Town Centre from each of these sites will need to use Bankside Lane. This will add to the existing traffic which already presents a significant safety hazard for me personally at the steep and narrow section between its junctions with Maden Road and Market Street.</p> <p>I am disabled and have to travel to Bacup from my house via Bankside Lane either by car or whenever possible by mobility scooter. However, because the width of the pavement is very narrow I have to drive my scooter on the roadway and this means choosing the times of my journeys carefully to avoid peak congestion when I would be dangerous for me to use the road. In particular there are two sections of Bankside Lane which narrow to a single lane and where I cannot take evasive action if a hazard incident occurs. I consider therefore that by allowing additional developments along Bankside Lane and hence additional traffic hazards, the council will discriminate unfairly against me and also other disabled road users.</p> <p>On this basis I ask you to remove the above housing sites from the Local Plan unless the pavement or road widths can be improved to an acceptable standard.</p> <p>I attach a photograph which illustrates the difficulties.</p>		
621	David	Carey	-		Object	<p>Bankside Lane is a cul de sac which already has a lot of traffic going up and down, and parking is on road for the most part, making it very difficult bearing in mind the amount of people who already live on bankside lane, to pass. To add an extra 100 houses and the additional traffic this would cause would make it intolerable for existing house owners. - The added pressure of extra traffic would also affect our children, as there is no place on Bankside Lane to play bar on small play area, and for the most part children ride their bikes and play in front of their houses, this would be an additional safety risk. - It would also ruin the countryside feel we have and make it impossible to walk our dogs as you are planning on taking all our recreational grounds from us. - In the winter we have a lot of bad weather and the gritter's find it hard to get up and grit the Lane, it will be worse with the amount of traffic added. - Again no thought has gone into the additional traffic and the impact on the people living on bankside Lane. - - I STRONGLY OBJECT TO THIS PROPOSAL!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! - -</p>		Not at this time

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
648	Robert	Ormerod	-	HS2.11. hS2.12 HS2.13 HS2.32	Object	<p>These four sites are all Greenfield sites. After the council has done a good job at improving this type of site in Bacup it would be absurd to destroy the fields which complement all the wooded areas of our town. The countryside of Rossendale looks bad enough with all the wind farms without destroying the remaining countryside of Rossendale. Our fields and woods are just returning to being used by the local wildlife and wildlife needs open spaces as well as enclosed spaces to live and prosper. - The traffic on Bankside is already becoming dangerous and unacceptable with the one narrow road and the increases of traffic. Nearly all residents now have more than one vehicle and delivery traffic, usually large vans or wagons, have increased tenfold whilst the road has been left to deteriorate. The slow signs, road centre signs and markings are now almost completely gone and the road, which we were all told was due for replacement surfacing was actually patched up, once again, and still has many holes, dips and bumps. This is especially on the blind steep bend from the town centre. Unless the access situation is addressed the many unreported non injury collisions will soon become serious injuries or fatalities. -</p>		Please take these plans away from from the overcrowded area

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
661	CA and VJ	Jennings	Home Owner	HS2.32	Object	<p>I am contesting these housing developments on several grounds. - - My issues and concerns will be submitted, in writing by the closing date of 9th October 2017.</p> <p>Letter received 06/10/2017:</p> <p>The statement "Improving the lives of people in the Borough" is central to the Borough's current "mantra" regarding their fundamental philosophy and how it is applied in all Departments, and in all the things that they do. However, I feel that some of the current proposals as outlined in the above DLP could fall far short of the Council's altruistic intentions.</p> <p>These are our concerns in respect of the Fernhill Crescent, Fernhill Drive and Bankside Lane development proposals:-</p> <ul style="list-style-type: none"> • Conservation - there is an extensive line of "mixed" trees which decorate the hillside from the end of Bankside Lane above Fernhill Crescent and Osborne Terrace. As far as I understand it, we all have a shared commitment to protect and preserve trees and the landscapes on which they reside. From the above plans, it seems that there is the potential for the removal of some of this tree-line on site HS2.32. This would have a huge and negative impact on the aesthetic outlook onto that hillside, and the potential for land slip, soil erosion, water-runoff and flooding on lower levels • Protecting the Environment - there are many issues here that would negatively affect several aspects of the local environment. Some of which resulting from over-capacity and over-crowding caused by the over-expansion in this area by these proposed developments (particularly along Bankside Lane) • Preserving the local Character - the area around an incorporating site HS2.32 is particularly attractive (especially to the West of Bankside lane) and is an asset to the local area and its residents. It offers countryside walks along heritage sites and long established pathways (ideal for walkers, dog-owners, explorers in general and "kids" of all ages) • Infrastructure - this aspect has never been something to celebrate in the Rossendale Valley area: mostly due to the uncompromising geography of the area rather than the incompetence of the local authorities. However, focusing on one point only, transport through the Valley is often difficult, and sometimes almost impossible at certain times of the day. Therefore, the addition of around 200 units along Bankside Lane would severely impact on both movement and parking. AND, the thought of possibly an additional 350 vehicles exiting onto the Bacup/Rawtenstall road and heading through the valley, doesn't bare thinking about!! AND, what about the winter if it's like the Fernhill area, some of it, or all of it, will not be gritted!! • Impact - in my opinion, the impact from these proposals would be many and 		To be submitted before 9th October 2017.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
						<p>wide ranging, but some would militate against the "improvement of lives"</p> <ul style="list-style-type: none"> • Preservation of Wild-life Habitats - the treed areas and adjacent open fields and moorland, are homes for thriving wild-life. In addition to the usual populations of wildlife, we have seen deer, foxes, squirrels, birds of prey and colonies of bats. The retention of range of wild-life would be threatened by the proposed invasion of their "space" • Ecological/Biological Considerations - these extensive developments could severely compromise the 'health', stability and integrity of the land, its trees; also its top-soil and sub-soil and the life forms that inhabit them • Local Heritage Preservation - there are some historical mule tracks, bridal paths & walkways and access routes into Yorkshire in this area, and we have a duty to protect and preserve them • Land Integrity - we have been aware for many years that the land above part of Fernhill Crescent has been subject to land-slip over the years. In fact, we were told by an authoritative figure that the extent of the problem had been measured over time. This weakness in the land caused our builder to reinforce the retaining walls in the back gardens of Nos 22, 24 and 26. Indeed, the retaining wall at No 26 actually collapsed. <p>Interestingly, the field behind these and other FC properties seems to show evidence of land-slip, whereas the adjacent wooded field seems not to suffer this problem</p> <ul style="list-style-type: none"> • Aesthetic Balance - given the attractiveness (in all respects) of this residential area, we would suggest that the proposed plans could severely impact upon the "wholesomeness" of this area, and have a negative effect upon the valuation of properties. Which would be, at least, unfair!!! • Practicality and Compatibility - in conclusion, and looking at just one aspect, when we factor-in access roads, traffic congestion and general disruption over time, and deterioration in the quality of people's lives, is it appropriate or acceptable to further pursue the Fernhill proposals?!? <p>Finally, who is it in the best interests of</p>		
667	Helen	Phythian	N.A.	HS2.11,HS2.12,H Object S2.13 and HS2.32		<p>I wish to object on the grounds that the proposed 100 houses will have at least two cars for each dwelling, this will mean a daily increase of journeys by at least four hundred trips on what is, in two places on Bankside Lane a single track road. - If the developers were to continue the road through to Stacksteads prior to start of the proposed development which would give an option to all residents, then maybe the plans would be viable. At the moment if Bankside Lane is left as is, the resulting traffic jams would increase the risks of accidents and also increase pollution,(drivers trying to pass the two single lane place , one of which is a blind bend as well as single lane, would be revving their cars to restart on an exceptionally steep hill).</p>		<p>overall I understand that the Government is laying down numbers for each area, instead of cramming in houses in every available green space left in Rossendale would it not be better to take a flat area of land and build a new village with all required facilities</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
679	leslie	hargreaves	-	h52.11.12.13. andh52.32	Object	Bankside lane is already completely saturated with cars having to park on the pavements and at times heavy commercial cannot get through ie road gritters and refuse vehicles.This is worse when vehicle that normally park on maden road have to park on bankside lane due to winter conditions i.e. ice and snow. Approximately 50 years ago excavation was started for house building was started on the two fields between lodge land and so called bonks area which was stopped because the area in what they call shifting sand. Acces to bankisde lane is tottally in adequate and I totally object to this proposal as we already have our share of accidents on this road	-	
685	Lesley	Giddins	-		Object	Living immediately adjacent to this site we are very concerned about negative impact. The land behind us is at a higher level and our house is already quite dark. We would have afditional traffic to contend with and it would mean a loss of green space in the area.	-	
714	Marie	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	1) Bankside Lane is already very busy. There's already too many cars going up, down and along Bankside. Adding another 100 or more houses and therefore cars will just add to the congestion. 2) Bankside Lane has tight and narrow bends. Add more traffic to the mix and there will easily be some serious accidents especially in the winter when it snows. 3) Vehicles are already parking on pavements to allow other cars to get past. In case of an emergency (fire or ambulance) the emergency vehicles would already have trouble getting to the destination. Adding those extra cars would make it impossible. The gritter has problems now! 4) The proposed land is home to lots of wildlife including deer, badgers and foxes. Why should we disrupt their habitat? Where would they go? It's not fair on them when they cannot speak up for themselves. 5) 50 years ago they evacuated Bankside because the field was on shifting sands. 6) the local schools are already full, getting a doctors appointment is already difficult without getting extra residents and the same with the dentists. The proposed building seems unrealistic, unreasonable and unsustainable. -	I thought the idea was to build houses on brown sites not green sites. There's plenty of unused, rundown, empty, derelict properties in and around bacup, why not use them? Why take our countryside when there's perfectly good other land to use. Don't ruin it for future generations.	
715	Jennifer	Hargreaves	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	Conversion on Bankside at moment, in the snow when vehicles can't get up the Lane this is what happens. The residents who live on Maiden Road and Rode Street occupy both sides of Bankside. - Ordinarily care are parked on both sides of the Lane a lot on pavements so that ambulances, fire engines can get through! - The gritter has problems as well the Council even put a sign up!! - - Loved on Bankside 52 years, all my married life , and about 50 years ago they tried excavating and stopped because of shifting sand. - - There isn't the infrastructure to accommodate this development as the road down the valley to Rawtenstall , and the road to Rochdale are a nightmare at peak times! - - Schools are full. - - Doctor's appointments are very difficult as it is without extra residents. - - I am completely against this proposal.	Thought the idea Jake Berry agreed to was to build on Brown Sites not Green sites. There are plenty of derelict, empty properties in this area without taking our countryside from us!!! I'm thinking of my children and grandchildren.

718	Joanne	Leyland	-	HS2.11 HS2.12 HS2.13 HS2.32	Object	I've lived on bankside lane for 20 years and I'm strongly objecting for the planning proposals of houses being built it's already overflowing with cars as, most my neighbours and myself have 2 or 3 cars each and every one falls out all the time over parking as it is now so for more familys to be moving will just cause more problems, the roads are to narrow in many places it really will not work. Over the years I've lived here my 2 daughter's along with there friends who also live on bankside lane have grown up playing on the lane and it's so dangerous with the amount of cars going up and down it's an accident waiting to happen		It's just not acepticable to be building more houses with only a narrow road leading up to bankside lane and an average of 200 extra cars it will be an awful place to live and I love living here
729	Stanley	Horsfall			Object	Email received 30/09/2017: I would like to protest again at some of the the plan for bankside lane Email received 02/10/2017: I want to oppose the plan as the traffic on bankside is already congested		
759	Martin	Stansfield	-		Object	The width of the roads and the bends on Bankside Lane are already an accident to happen and cant support any oncrease in traffic,		have the same objection to the other 3 sites on bankside lane
769	Trevor	Bartram			Object	Access to all of the above sites is via Bankside Lane which is struggling to cope with the amount of traffic now using it. Another 150 houses, as proposed, would mean potentially a further 300 vehicles, which would add to an already congested road, there being only one way in and out of the town. - - With regard to the whole of Bacup a house building project of this scale will bring problems with Primary Schools, which are already full, doctors and roads. -		-
770	Jacqueline	Stansfield	-		Object	The road is too narrow and bendy for extra traffic. Near misses everyday sooner or later there will be a serious accident.		I do not think any of the other sites should be built on bankside lane for the same reason.
774	Stanley	Horsfall	-		Object	Bankside lane is already congested with traffic and and cannot take the extra that the plan would cause		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
785	Robert	Astbury	-		Object	Bankside Lane does not have a suitable road to support the additional through-traffic created by additional housing, there are several narrow parts of the road on steep inclines that do not allow two way traffic and these are heavily congested at peak times. Additional housing on Bankside lane (and the connecting side roads) will make access very difficult and impede the access for emergency vehicles. when large vehicles such as lorry's or bin men are on this road; you are unable to pass them and it is difficult to find a place to park for them to pass you, additional housing will only further amplify these access problems. problems will also occur during winter months when some roads are inaccessible due to snow and normally residents park on the lower roads for safety, this will be more dangerous due to increased vehicles needing to do the same with no additional flat parking spaces provided. The development will get rid of a thriving petting farm which brings in much needed tourism to Bacup. local town development is in dire need of renovation and adding more houses will not improve the local community and will only add more strain to local services.		-

906	Graham	Smyth	-	HS2.11 (and 2.12, 2.13, 2.32)	Object	<p>Grounds for objection as follows: - 1. Access: Bankside Lane is narrow, winding & steep with two blind bends, and already heavily used by vehicles. The bends are dangerous, the more so in winter, and such dangers would grow with any increase in traffic. Additionally there are already access problems for larger vehicles (eg. gritter lorries, emergency services) on Bankside Lane because of its narrow width, compounded by on-street parking on both sides (many houses - notably terraces - have nowhere else to park); again the problem would be compounded by more vehicles using the Lane. Access for construction traffic would also be problematic. Opening access from the other end would not be a solution - creating another very steep way, and a potential 'rat run' for traffic seeking to avoid congestion on the main road through the valley. - 2. Infrastructure: there are issues more generally in significantly adding further to housing in Bacup, given the limited scope to improve the already clogged route down the valley to Rawtenstall / the A56/M66 etc. It is likely that many taking new housing in Bacup would be commuting in and out, reducing traffic flow further. - 3. Capacity: Bacup is already at capacity in important areas such as schools, health services, dentists and extended services and lacks the capacity to absorb lots more households. - 4. Flooding dangers – from HS 2.11 in particular, to houses immediately below it, at a much lower level, and to the terrace adjacent to it (60-68) which already often suffers from ground water rising into cellars. - 5. Landscape – would be impacted. These sites, notably HS 2.11 are at a high level, visible from many points so building would visibly add to the erosion of the countryside amenity in Bacup. It would also impact on wildlife in the area.</p>		<p>While accepting that the task set the council is a difficult one, it is my view that further destruction of the countryside areas in and around Bacup should be resisted, and that Bacup has neither the capacity nor the infrastructure to absorb a high number of houses. Bankside Lane in particular is unsuitable as an access route for more housing, which would create dangers and obstacles for vital services.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
907	Carol	Mitchell	-	HS2.11 in particular and also HS 2.12, 2.13 and 2.32	Object	<p>Grounds for objections as follows: - - 1. Access: Bankside Lane is narrow, winding and steep with two blind bends, and already carrying more traffic than is ideal. The dangerous inherent in the bends would increase with growth in traffic; they are also particularly prone to accidents in wintry conditions, which again would be exacerbated. The Lane is narrow throughout its length and now regularly parked up on both sides, creating access problems for larger vehicles (such as gritter lorries, fire engines etc); many householders have nowhere else to park other than the road. The addition of more vehicles (not to mention construction vehicles) having to use the Lane will significantly increase difficulties passing through. If it were intended to create access from the other end, this would create another steep and a potential 'rat run' for traffic seeking to avoid congestion on the main road through the valley – hence adding further to problems. - - 2. Other access issues: adding to the housing stock in Bacup more generally is also problematic, given the limited scope to improve the already clogged route down the valley towards Rawtenstall and the motorway – particularly given the likelihood that the majority of any new housing would be taken by people relying on commuting for employment. - - 3. Capacity: Bacup is already at capacity in important areas such as schools, health services, dentists and extended services and lacks the capacity to absorb many more households. - - 4. Flooding dangers: the field at HS 2.11 is well above the level of houses below it, raising potential flooding hazards to them from building. Interference to thw water table could also pose risks to the adjacent terrace (60-68) which already frequently suffers from ground water rising into the cellars. - - 5. Landscape: the elevation of the area around Bankside Lane also means that there would be an adverse impact on landscape as viewed from various points around and above the town. - -</p>		No
1003	john	dempsey	-	HS2.1 HS2.12 HS2.13 HS2.32	Object	<p>There are 3 separate places at the bottom of Bankside Lane, where the lane narrows to a single track. This means that you always have to stop to allow someone through, no matter what of day. Another 200 or so cars having to use this lane daily, would put an enormous amount of strain on the already stretched and limited road space. - This is an area where there are a lot of families and the extra traffic would be an accident waiting to happen, as many of the children play on or near the road. - One of the areas at the back of the semi detached houses is also an area where various wildlife roam and live. There are foxes, badgers and deer that are regularly seen in this area, making their way in or out of the wood.</p>		Only that we as a resident of Bankside Lane are totally opposed to the redevelopment of this area. We feel that it would spoil a green belt area of Bacup that leads onto the local countryside.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1023	Dave	Harding	-		Object	<p>The suggestion that further housing development is suitable on Bankside Lane is bordering on ridiculous. By the council's own admission, this road is already a "Problem Street for access" with vehicles double parking and the road itself being only wide enough for 1 vehicle to use at one time - in particular near the church and indeed pretty much all the way up to the proposed site HS2.11 and HS2.12. - Further housing would not improve the access and traffic density on this tiny lane - it would make it considerably worse. - - In addition to this, the increased noise and air pollution the extra properties would bring would be considerable - both during and after the building process.</p> <p>Rossendale Council showcase on their website a "clean and green Rossendale". Hardly clean or green if we use all our green spaces for building sites. - - The amenities also need to be improved before building many, many more houses. - - e.g. the options available for children going to secondary school in Bacup are extremely poor. The majority of "good" schools are oversubscribed, so children in Bacup are now being given the choice of a school in "Special Measures" - Fearn. As a parent of a child not far off secondary school, I'm considering moving out of the area - I certainly wouldn't consider moving in. - - The congestion on the main roads is ridiculous at rush hour times & quite simply, there isn't the demand for this many houses in Bacup. The development on New Line / Rockcliffe Rd area has never been finished - purely down to lack of interest from buyers. - - There are many suitable brownfield properties in the area that would be ideal for the right redevelopment however developers like the easy option... - - I'm not against change, however one of the biggest "selling points" of Rossendale are its green and open spaces. Remove these & it's one less reason for living round here. There aren't many left... -</p>		<p>The council should be looking at attracting people to the area by improving amenities, transport, education, shopping etc. Bacup in particular is becoming a joke. No Police Station, public transport is poor, schools are oversubscribed and / or failing miserably, the town centre looks rundown and scruffy etc. Hardly an area that is desirable.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1033	Ewan	Rowland		HS2.1, HS2.12, HS2.13 & HS2.32	Object	<p>The additional houses proposed for the above sites will: - * increase traffic to and from Bankside Lane. The road is narrow and steep at key places along the route which allows only one car at a time to pass at specific points on the route. Driver's visibility is restricted by bends and rises in the road causing blind spots for drivers. Because of the narrowness at specific points, cars, vans and lorries have to swing across the road to pass buildings. - *there will also be an increase in traffic such as delivery vans/lorries and their service vehicles. - * houses opposite The Laurels Care Home at the junction of Maden Road and Bankside Lane have no off road parking and therefore park half on the road and pavement further restrict visibility for up hill and down hill traffic. Vehicles moving off the junction from Maden Road have very limited sight of cars coming down Bankside Lane at this narrow point and are forced to creep out onto Bankside Lane in order to safely access Bankside Lane. This also affects up hill traffic at this point forcing them to stop or slow down. - *vehicles joining Bankside Lane from Dale Street also have limited sight of approaching traffic at its junction and have to creep into the road until drivers have clear sight of up hill or down hill traffic. The road is only one car wide at this junction. - *the problem is compounded by traffic parking close to this junction for those attending services at St Mary Church, Dale Street. - *during the football season especially at weekends there is a high volume of traffic going to Maden Recreation Ground which causes congestion before and after football matches. The park is also popular with families and dogwalkers, most of whom arrive in cars, throughout the year. - *farm vehicles frequently use Maden Road via Bankside Lane on a regular basis which adds to congestion creating further potential hazards for other vehicles and pedestrians using Bankside Lane. - * Pedestrians have to cross the road at pinch points along Bankside because pavements stop due to the narrowness of the road. - * most households have two cars and the proposal to build an additional 140 houses on Bankside Lane will increase traffic by a potential 280 cars. The current access to these developments is inadequate for this amount of daily traffic. -</p>

1142	CHRISTINE	JACKSON	-		Object	<p>ROSSENDALE LOCAL PLAN - BACUP AREA. - Whilst I am totally opposed to the constant development of the whole of Rossendale and the ever changing green belt boundary I feel I must object most strongly to the new proposals in Bacup, which is recognised as the best preserved millll town in the County. - As a resident of Bacup for over 30 years I have seen some of our most beautiful countryside turned into housing developments, many of the houses built over the last 10 years have still not been sold. The fact is that there are already hundreds of empty properties in Bacup, new and old, which could fill our quota. - - Sites HS2.1, HS2.12, HS2.13, HS2.32 (Bankside Lane),HS2.6 AND HS2.7(Todmorden Old Road) and HS2.4 (land off Moorland Terrace) are the most important ones to me personally and I note that the majority of these sites are privately owned, will they be subject to Compulsory Purchase Orders? These privately owned sites sustain the livelihood of their owners who, in this pastoral farming community, raise their livestock. Will these livestock be forced indoors off a natural diet with sunshine and fresh air to be raised like battery hens? - The wildlife in these areas consist of foxes, badgers, small mammals, bats, deer and wild birds, these will all disappear/die without this natural habitat. - The local infrastructure, schools, nurserys, health centres, roads, drainage, police, ambulance, fire cews and public transport is already stretched to maximum capacity, will increasing these services be considered with all this additional pressure to meet demand? - On Bankside Lane in particular the access is already stretched beyond capacity, being only one car width at 3 points, with double-parked cars, steep hills and narrow pavements. Potentially another 200 cars up and down here on a daily basis would literally create havoc. Access off, single track, Todmorden Old Road is also practically impossible. - HS2.32 is an open area at the top of Bankside Lane which is enjoyed by residents of Bankside Lane and higher Stacksteads alike, and has been for many decades. There is also an abundance of wildlife there, it is also on the skyline, building on here would have a huge impact on the views for miles around.</p>		
1242	David	Greenhalgh	-	HS2.1, HS2.12, HS2.13, HS2.32	Object	<p>My objection is that Bankside lane is not capable of taking any more traffic and that extra housing with access onto this road will not only increase congestion even further on this already busy road, but will also be a potential safety hazard as there are already several narrow single car sections on this road, which have blind spots, due to housing and steepness of the road.</p>		
1267	Steven	Fielding	-		Object	<p>The access road of Bankside Lane is already conjested and way to narrow for cars to pass one another. I think it would be ridiculous to build more houses leading to potentially another 200 cars having to use Bankside Lane. - -</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1270	Beverley	Walsh	-		Object	It is overpopulated now and the road was never meant to take heavy use of traffic. Tight narrow bends and doubled park cars. Pavements are narrow and not fit for families with buggies and the disabled using their disabled scooters. There already have been numerous accidents on this road. Access for emergency vehicles is already very difficult. - Wildlife will be destroyed foxes, deers and badger sets etc will disappear. More houses are unsustainable as we have very limited facilities in Bacup. E.g. Primary schools are oversubscribed. The road from Bacup to Rawtenstall will be permanently gridlocked.		-
1271	Demi	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	I object to the plans to build houses on bankside lane for many reasons: - 1) Bankside lane is already congested - everyone already parks on the pavements and it's already quite difficult for gritters, fire engines and larger vehicles to get through. We do not need any more traffic added to this! As this will cause a huge amount of problems, not just for the residents but for the local council and the firebrigade. - 2) There are many narrow bends up Bankside lane therefore adding more cars would definitely be a health and safety issue with the only places left to park being near these bad bends causing collisions especially during the winter. - 3) The sites you are proposing to build on are are habitats of many different animals ranging from deer to foxes and badgers! These animals would lose their homes which would lead to them dying out in this area as they struggle to survive. We don't want to lose any more of our precious wild life which has lived there undisturbed for many years! - 4) Building on some of these sites would also mean cutting down trees and getting rid of the wonderful country side the valley prides itself in so dearly! We need to look after areas like these and not build houses on them. There are many sites way more suitable for new housing that will not cause damage to the environment in the same way - what about old buildings that are no longer used? Why do we not use these first, this would cause so much less damage to the country side! - Building more houses on bankside would not only mean finding more space for houses but also finding a second route up Bankside to allow for more traffic. Bankside lane does not have the space to do this! It would be almost impossible to do this without causing a huge amount of damage and a huge amount of time, effort and money that could be better spent! Overall I think that building up Bankside would be a very big mistake, one which can be avoided!		-
1279	Stephen	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	1) Bankside lane is already congested . It has many narrow parts that will become dangerous if more cars use the lane. - 2). Emergency services would have trouble getting past extra parked cars. - 3) It would have an affect on the wildlife eg deer foxes badgers if the fields disappear .		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1291	Alan	Mickleburgh	-		Object	The local and area infrastructure in Rossendale, and Bacup in particular, is insufficient to support the proposed housing developments. Roads, Public Transport, Schools, Police, NHS Services (GP' s and Dentists) will all suffer a major impact from the proposed developments. I am particularly concerned about the proposals for the Bankside Lane area. - - - Bankside Lane has only one access and departure route, via Market Street. Access is particularly difficult at peak times. - - - There are four single lane sections on Bankside Lane which creates congestion problems at any time. - - - Many households have more than one vehicle, and with restricted availability off road parking, vehicles are often double parked on both sides of the road with two wheels on the footpath. - - - Even at non-peak times, larger vehicles have considerable difficulty negotiating Bankside (eg. Trade deliveries, Council and Emergency Services). - - - Pavements are narrow, particularly where vehicles are double parked, creating major problems for pedestrians and the disabled. - - - Drainage is already a concern, with the amount of water draining from the higher ground. If these developments are approved, the excess water will be unable to be absorbed by the surrounding land and will potentially lead to flooding.		The proposed developments need a major rethink. I am aware that these proposals are a result of Central Government policy, but insufficient thought has been given to the impact on local infrastructure, and too many of the planned developments involve the loss to the community of valuable 'greenfield' sites, rather than using existing 'brownfield' sites.
1296	Sharon	Mickleburgh	-		Object	The reasons for my objection are:- - 1. There is no reasonable access as there is only one road (Bankside Lane) for both in and out. - 2. There are 4 extremely narrow sections on Bankside Lane. In some cases it is only wide enough for one car. - 3. The footpath is extremely narrow for pedestrians to use without increasing the amount of both people and Cars. - 4. It is virtually impossible to get out of Bankside Lane onto Market Street at peak times due to the amount of traffic on the main road. - 5. Turning left from Market Street onto Bankside Lane is very difficult if there is already a car waiting to get out Of Bankside Lane into Market Street as the road entrance is very narrow there. - 6. Some of the houses on Bankside Lane already suffer from water draining down from the fields due to lack of sufficient drains without more houses being built. - 7. I am concerned about the proposed expansion of housing in Bacup as the increased population will cause Problems for NHS facilities (doctors and dentists), schools, roads, public transport and policing. - 8. The Green Areas must remain to protect the environment and the wildlife around us. There are also quite a Number of bats around this area and other species that need protecting		The proposed expansion to Bacup needs to be rethought as it will impact on the local infrastructure immensely. - It will cause problems in both the NHS Services, schools, public transport, roads and policing. Whilst I realise it is Government Policy to build more housing, I think the proposals need to be reconsidered

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1343	Jane	Jones	-	HS2.11, HS2.12, HS2.13 & HS2.32	Object	Development at these sites would attract higher volumes of traffic travelling along Bankside Lane over a more concentrated period of time during the busy morning and early evening periods. This road has limited capacity and the increased levels of traffic could lead to traffic congestion and highway safety issues in this area having a detrimental effect on road safety on Bankside Lane and the busy A681 Market Street junction. - - There are already problems with access for council refuse vehicles due to the parking of residents vehicles along both sides of a narrow road, this has led to the placing of warning notices by the council informing residents that access for emergency vehicles including snow ploughs and gritting trucks is impeded by the number of inconsiderately parked vehicles. - - The vehicular access and car parking arrangements for any new developments would have an unacceptable impact on existing residents in terms of noise and safety, creating a traffic hazard and generating an undue environmental impact, exacerbating existing parking problems and resulting in excessive levels of on-street parking which would adversely affect local residents and the efficiency and safety of the highway network. - The introduction of in excess of 140 new homes; each with an average of 2 – 3 cars per household would produce approximately 300 – 350 additional vehicles per day using Bankside Lane, a road which has single lane pinch point access due to the existing narrowing of the road at its steepest point; which has a gradient of approximately 17%. During the winter months; weather conditions of ice and/or snow constantly prevent 2 wheel drive vehicles from driving up this hill, and lead to accidents when drivers are unable to control vehicles whilst attempting to descend when snow and ice have made this route impassable. -		I am fully aware that there is a need for more housing across Bacup and the whole of Rossendale, but meeting these requirements and government targets for the building of new homes should not be the sole focus of the council. - Understanding the current issues within local residential areas such as limited access due to road lay out, road safety concerns especially when there is an marked increase in the number of vehicles joining the main road from a street with an obstructed view due to the existing buildings (Bank on A681, parking on double yellow lines) should be given the highest priority.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1352	Alicia	Campbell Astbury	-	HS2.13, HS2.32, HS2.11, HS2.12	Object	I have many concerns about the area being developed further for houses. The access road via Bankside Lane is both steep and heavily congested with parked vehicles, with additional traffic there will be issues with passing places being available, as this is already an issue at peak times. - During winter months people at the top of the road leave their cars further down the street, if more cars were to do this the road would be inaccessible. - Bats are known to the area proposed, so how will the new development impact our local wildlife? - Will additional housing cause any issues with rain run off from paving over a large mass of land on top of a hill? Will it cause water-logging of neighbouring properties or any drainage issues? - Land proposed is alongside public right of ways, will new pathways be made available to the local people; children use these paths to get to the recreational ground, which is a safer route as the roads are hazardous with tight bends and lack of pavements on some sections or cars mounting the kerb on others making them inaccessible. - My main concern is the additional traffic on the road and possibly parked cars to emergency services being able to gain access through the street? Many homes on this stretch do not have a drive and the number of cars on the street is excessive and difficult to navigate. Also there are two sections where the road narrows significantly and one of these is steep with a blind corner, additional traffic will add to the danger. - Will extra traffic entering the street cause delays to the main highway as the road isn't wide enough to allow traffic to pass when turning right into Bankside close? - How easy is it for heavy goods vehicles to access the street, especially significant numbers for a development, will this cause delays to residents?	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1375	Margaret	Priestley	-		Object	<p>I have examined the plans and I know the sites well. I wish to object strongly to all the development of houses on or adjacent to Bankside Lane. - - The proposed siting of the developments is particularly ill-considered due to access, - Bankside Lane already has a high volume of traffic to the residential properties in the area. - - There is little pavement for pedestrians, the addition of extra traffic would create a safety hazard for them also. The pavements these days are a safety issue due to the amount of leaves from overhanging trees which the council no longer seem to cut back and maintain causing a buildup of slippery moss on the pavement surfaces. - Access is particularly hazardous in the winter months. The area is not always gritted, resulting in cars being abandoned along Bankside Lane as it becomes inaccessible. This leads to a knock-on effect resulting in access issues higher up Bankside Lane itself. - I therefore fail to see the advantage of building more houses in an already built up and inaccessible locations - In November 2013 due to the untreated surface I myself skidded into the wall just below the golf club during winter weather. - The other issue I would like to mention with Bacup itself< and forward thinking, is the lack of infrastructure with respect to banking. Two of the towns banks were closed last year with I think no objections from the council or at least no fight to keep them open that I am aware of. When the banks go people go out to other areas (e.g. Rawtenstall, Burnley, Rochdale, Bury) This will be the case with new residents, most of whom, if in employment, will be working out of the valley making Rossendale yet more of a commuter belt than it already is. Anyone travelling from Bacup via Rawtenstall or From Bacup to Rochdale can testify to this and know that anymore commuter traffic will be disadvantageous and effects all roads in the valley. People work outside the valley will conduct personal outside of Bacup.. - Therefore, I ask that Rossendale Borough Council refuse planning relating to the building of houses on Bankside Lane..</p>		<p>The redevelopment of the old cinema site on Burnley Road needs to be looked into, the building is currently in a dilapidated condition and will only become more of a danger. I can see this hanging on for years and eventually like Smiths Engineering in Whitworth having to be demolished probably at the councils expense under compulsory purchase!</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1429	Nina	Byers	-		Object	<p>1) There would be a minimum of 200 extra cars using Bankside Lane if these houses were to be built! This would cause major problems with traffic building up at peak times (morning, evening, beginning and end of school times) in both Bankside Lane and Market Street. That corner is particularly tight, especially if there is a car waiting to come out of Bankside Lane. Then imagine a queue of traffic in the narrow, single track areas of Bankside Lane (of which there are 4) and you can see that traffic could easily come to a standstill on Market Street! Sometimes it is very difficult to turn right onto Market Street if there is a lot of traffic. - - 2) There is only one way to access these proposed development sites, via Bankside Lane. There are 4 stretches of the road which are only wide enough for one car. These stretches of road also happen to be on the steepest part of the road with blind bends. In bad weather conditions and at peak times this already causes problems without any extra traffic . There are also several further stretches of road which are only wide enough to get a car through due to people who already live on Bankside Lane needing to park their cars on the road due to them not having off road parking available! - - 3) The pathways for pedestrians are very narrow and non-existent in some places! For example, by Cookoo Hall the path is very narrow! This is also made worse by cars being forced to park partially on the path and bins being stored on the path as there is no sensible alternative due to many houses being built much higher than the road! This makes it difficult for all pedestrians but especially the disabled elderly and parents with prams and young children! - - 4) Surface water run off will cause problems. I live on Bankside Lane, in front of and below Animal Quackers. There is already a lot of water running down from the fields behind us into our garden, which becomes very waterlogged and completely unusable! Our house is also down a flight of stairs which during heavy rainfall resemble a waterfall. I know that some of my neighbours have experienced some flooding into their house as a result of this. If that land was built on then this surface water would increase! This could result in possible flooding due to insufficient drainage. - - 5) There are already problems with the sewers, certainly with my neighbours, several houses either side have regular blockages which need unblocking using rods. Where would the sewerage drain to from the new housing? Would they also run through the same pipes? - - 6) These are all areas of natural beauty and support a lot of wildlife! There are also a lot of bats in the area which are protected.</p>		<p>The infrastructure of the area would be compromised. - - There is no police station - Not enough schools, no high school - Only one doctors surgery in Bacup - Only one Supermarket - Public transport. - No bus route on Bankside Lane as too narrow and steep. - All roads leading out of Bacup are narrow, some are steep and extremely busy at peak times</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1544	Enid & Kenneth	Burke		SHLA16075	Object	<p>We strongly object to the proposed plans to change previous Green Belt sites to building sites mainly on the narrowness and steepness of the pavements and roads. Presently the volume of traffic is overloaded because most households have 2 or more cars. Visitors to the Golf Club, Football Pitches and Petting Farm add to the problem, especially at weekends when the volume of cars and work vehicles doubles. Last winter the council gritting vehicles could now operate in parts because of parked cars/vans. We have also witnessed a number of near "misses" on the bad bend near to the Laurels Nursing Home.</p> <p>The use of outdoor space is essential for our grandchildren and children, to lose this is not acceptable.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1576	David	Thompson			Object	<p>I object to the proposed housing development sites referenced HS2:11, HS2:12, HS2:13 and HS2:32 listed in Chapter 1 (HS2) of the above plan. My concern is that the connectivity of each of these sites to essential facilities in Bacup Town Centre is unsuitable for the following reasons:</p> <p>There are only two routes from the sites to the Town centre, one of which is lodge lane and the other is Bankside lane.</p> <p>Lodge lane is to the South and East of the four sites, and is closed to motor vehicles as a through road. It has a very steep slope with an average gradient of 15% (1 in 7) and therefore does not comply with any national or regional planning guidance as being acceptable for use by pedestrians, the mobility impaired and cyclists. It would therefore be improper to suggest lodge lane as a route from the sites to Bacup Town Centre.</p> <p>This means that Bankside lane is the only acceptable access to the Town Centre for all highway users. However Bankside lane has a particularly steep section for a length of 242 metres between its junctions with Market Street and Maden Road and I believe it to be unsatisfactory as a means of access to the proposed housing developments as evidenced in the following disclosures attached to this letter:</p> <p>Disclosure 1.</p> <ul style="list-style-type: none"> a. Non Compliance with the Lancashire County Council Code of Practice on Mobility , Inclusive Mobility' Section 3 Footways b. Non Compliance with the Lancashire County Council Transport and Design Guidance 'Creating Civilised Streets' Section 5.5 Connected Streets c. Non Compliance with the Department for Transport 'Manual For Streets' Section <p>7.6 Visibility Requirements. (Note this section includes calculations that have safety implications for highway users and I request that it is submitted to LCC Highways Engineers for verification).</p> <p>Disclosure 2.</p> <p>Breach of the Rossendale Draft Local Plan Policies:</p> <p>ENV1 - High Quality Development in the Borough</p> <p>ENV2 - Heritage Assets.</p> <p>Disclosure 3.</p> <p>Prior refusal of a planning application for development off Bankside Lane.</p> <p>On the basis of the above submissions I request that the proposed housing sites HS2:11, HS2:12, HS2:13 and HS2:32 be removed from the Rossendale Draft Local Plan.</p> <p>Please see appendix for attachments</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1586	Adrian	Boyden			Object	Has a resident of Bankside Lane my concerns are of increase in traffic on this busy lane , more accident s and near misses especially on the blind bend . There are no other access routes for residents so to add more traffic is irresponsible.Also how do you propose to get wagons . Machinery .Etc to building sites ? Without causing chaos on a now fragile road .Shows the plans having been thought about properly .		
1588	Alison	Whittaker			Object	<p>I strongly object to these proposed plans to change areas,of previous Green Belt Sites,to building sites.The visual impact of the development will greatly effect my property,building work at the front of my property has already caused loss of existing views and is out of character in terms of its appearance. The proposed development would have a significant adverse impact on the character of the neighbourhood, the green spaces and rural views would be lost changing the landscape of a quiet rural area to an over populated housing estate. There would be significant loss of the open aspect of the current residential properties. The enjoyment of the current views, design and landscaping is an important residential amenity, and the loss of these features would have an adverse impact on the residential amenities of the existing properties.</p> <p>The new development would be out of keeping with the character and appearance of the existing properties adversely impacting on the character and appearance of the communityin particular the green spaces that is valued open space enjoyed by local residents. Furthermore there is a requirement to enhance the local environment including wildlife habitats and rural lands. Further housing development would result in overlooking, unacceptable high density, overshadowing and loss of natural light. Further over development would be overbearing and result in an adverse effect on the residential amenity of the current neighbourhood. Designs that are inappropriate in there context and fail to improve the character and quality of an area and the way it functions should not be approved.</p> <p>Unacceptable over development on Bankside lane would adversely affect highway safety and cause great problems for road users,the lane is just too narrow, steep with a blind bend that is already hazardous for road users. The current infrastructure is insufficient to support further increased vehicular access.Please can this concern be referred to qualified engineers for technical clarity.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1620	Jennifer	Cudworth			Object	<p>I am writing to express my objection to the plans mentioned above.</p> <p>My primary cause for objection is on the grounds of safety. Any proposal to build more houses using Bankside Lane as vehicular access is quite frankly dangerous. Bankside Lane already suffers badly with traffic issues - access to the proposed sites is via a steep, narrow road which is reduced to a single-track for the vast majority by parked vehicles. There have been numerous traffic collisions on Bankside Lane due to poor visibility caused by parked vehicles, and "near misses" are almost a daily occurrence. (The problem is exacerbated in bad weather as the gritter encounters difficulties passing the many parked vehicles, meaning there are often delays in treating the road at the top end of Bankside Lane. In addition there are the emergency services to consider - just a few weeks ago, a fire engine was forced to undertake a dangerous manoeuvre to negotiate a corner that was obstructed by parked vehicles, endangering the crew and causing damage to a resident's grass verge).</p> <p>The proposed building works would add to this situation not only short- to medium-term while large construction vehicles access the site, but also long-term due to the increased number of private vehicles requiring daily access to homes. The element of danger to pedestrians, animals and motorists would be greater still if an access route were to be constructed from the Stacksteads end, as this would inevitably be used as a "rat run" for people travelling between Bacup and Stacksteads and wanting to avoid congestion at Lee Mill. Secondly, the fields currently occupied by Huttock Top Farm, and the area of rough land known locally as "Old Joey's", between the top end of Bankside Lane/Rooley View to one side and Osborne Terrace/Hill Crest to the other, are both habitat to a multitude of wildlife including deer and bats. Both areas are affected by the proposed plans. The destruction of natural landscape and the pollution (noise and environmental) brought about by the construction would drive out the wildlife that residents enjoy sharing our green spaces with. Furthermore, Bacup been cited by English Heritage as the best preserved cotton town in England. The construction of new homes would affect the general appearance of the area to the detriment of Bacup's Heritage status. Also to build on the land locally known as "Old Joey's" (see above) would impact upon the skyline of the Rossendale Valley.</p> <p>In view of the above I would urge you to reject the proposals and keep Bankside Lane a safe place for its residents and wildlife.</p>

1636	Kevin	Woods			Object	<p>I am responding to the proposed local plan to develop 4 building sites (100 new houses) off the Bankside Lane area of Bacup. I strongly oppose the plans as the topography of area is not suitable for further development which increases traffic flow, and should be changed back to green belt site.</p> <p>The reason I consider the area to be unsuitable for this development is that the access via Bankside Lane is too narrow and too steep to support development which increases traffic flow. Bankside Lane is single track in parts with both single and dual road junctions joining. The volume of traffic with existing demands is already a significant risk to safety.</p> <p>Each year for the past 20 years living on Maden Road we have been cut off from vehicular transport/ access at least once, when snow falls. Not all residents are able/ willing to buy a 4-wheel drive vehicle and so many become stranded each year. The consequences of this extend beyond personal inconvenience to being unable to get to work, to access emergency services or to discharge caring responsibilities for elderly relatives. Sometimes, due to the hazard of abandoned vehicles, the lane becomes impassable even with a 4 wheel drive vehicle.</p> <p>Since I have lived on Maden Road (above Bankside Lane) myself and family members have been involved in several traffic incidents on the lane in which the topography (and often weather) have been a significant contributory factor. In 2007, my car was collided into on Bankside Lane by a car travelling from Dale Street, in an incident in which the driver misjudged the traffic travelling from four directions between double and single track roads. My car was badly damaged requiring over £2000 of repair work (not my liability), though fortunately I was unhurt. In 2015 during a sudden heavy snowfall, my son's car slid out of control on a descent of Maden Road, whilst avoiding a driver attempting 'a run' up the hill and other abandoned vehicles. His car was written off, though fortunately he was not seriously hurt.</p> <p>I strongly urge the council to reconsider its proposals and find the necessary development sites or solutions which do not involve any further increase in traffic through Bankside Lane. The area does not have the topography to support any developments which would further increase traffic flow.</p>		
1642	Jane	Trivett			Object	<p>If any one lives on Bankside Lane/Bacup and works for RBC they must surely know that the proposed new build sites make no sense at all. Local people know how steep the lane is and unless major road widening took place it will not work. Bankside Lane is totally unsuitable for any more traffic. The recent road resurfacing proved how difficult it is and the Highways people struggled to hastily finish the job even with road closures. Another 200 plus cars up the lane is ridiculous.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1656	K	Jeppesen			Object	<p>Having bern notified via social media about your proposals regarding the Bankside area in Bacup, I must strongly object to it.</p> <p>I am baffled that such an idea can be a serious one! A number of issues springs to mind, and are so obvious, that its hard to take this proposal serious. Firstly the situation about the traffical access to the higher part of Bankside Lane. Blind bend, steep incline/desent. Abnormally narrow footpaths,- or entirely non-existing footpaths, makes it high risk to use this part of the road as a pedestrian. Not to mention , having to ask your children to use them to catch their school bus or go to activities elsewhere.</p> <p>To my knowledge , we have only by luck ,not had any serious accidents with personal injuries, but there has been plenty of bumps and minor crashes, costing residents here extra expense. I would assume that a further 200 dwellings wil take with it, close to 200 more cars,- probaly 300 in my opinion, which would of course also mean considerable higher risk, using our road. I have not mentioned the roadconditions during wintermonths, when ice and snow , makes using Bankside Lane an absolute gamble.</p> <p>In these condotions, many cars are unable to get up the incline, although many "have a go",and therefore get stranded halfway up, abadoning their car, and soon the road looks like an unorganized car-park. And traffic coming downhill the opporsite way, often find it impossible to stop, or even stear due to the snow/ice.</p> <p>Further more, beeing able to stop at the junction with the busy Market Street at the bottom of the lane, is a hazardous gamble ,even more so. Personally, I have, on a couple of occasions "skated" right out onto Market Street, with only Lady Luck to look after me ! I have seen others do the same, and it can only be a question of time, before some major incident will occur.</p> <p>So it seems to me, that somebody in the council havent done their homework, and certainly not used Bankside Lane very often, because any increase in traffic here, is equivalent to asking for incidents/injuries to residents up here. I would think that the land in question, originally was graded "green field" for a reason !?</p> <p>Deer, fox and multiple othe wildlife, is seen here on a daily basis, the view over the valley too , improves our quality of life, and is a daily pleasure. We live in a nice and quiet part of Bacup, and have been looking forward to keep doing that, into our retirement ,- the older part of us anyway. Neighbouring estates of "affordable housing", as the PM is asking for, sounds to me, like housing for clientel, not nessecary with the same outlook on life values !</p> <p>All in all I'd wish you to reconsider these proposals, as they have clearly not been scrutified thoroughly, before they were published. Let the Rossendale council show , once and for all, that it takes its citizens safety and wellbeing</p>

into account , when making these kind of plans. We have for years , constabty been "awarded" with council tax rates , that hardly were second to none,- unfortunately in the expensive end of the scale, but at the same time only seen cuts and poorer services in return. (swimmingpools, bin collections and household waste centres ring a bell?) Do the right thing, and reinstate green field areas to be what they should rightly be : green fields.

1660	Rachel	Greenhalgh			Object	<p>I would like to register my objection to the proposed changes to previous green belt sites to building sites in Bacup. Under the Draft Local Development Plan, there are plans to allocate building land for housing in the Bankside Lane area (site references HS2.1, HS2.12, HS2.13 & HS2.32). As a resident in the area (MadenRoad), I already know that Bankside Lane is not able to sustain the current levels of traffic and that to build the proposed potential 100 New homes would bring the road into crisis. As you are no doubt aware, Bankside Lane is very steep and narrow- at some points little more than single width. Add into this the fact that the narrowest points also have very poor visibility, meaning vehicles travelling in opposite directions frequently have to perform emergency stops to avoid a collision and often have to reverse to clear the way, creating a new hazard for other approaching drivers. I myself have been involved in such situations several times a week and have serious concerns about the increased risks presented by any proposed housing and the extra traffic they would create.</p> <p>As you are presumably aware, the pavements here are also very narrow and walking along them can be very hazardous as the passing cars often have to come very close to or even mount the pavement to avoid cars coming in the opposite direction. We have seen an increased volume of traffic already coming up the Lane to access the Maden playing fields and also more groups of families and children walking up to the football sessions there. I have huge concerns for their safety if the volume of traffic is significantly increased by new residential traffic too.</p> <p>My primary objection to the proposed plans are centred around the increased dangers of introducing more traffic to an already congested and very narrow access road, however I also believe that we should not be sacrificing our green belt land to provide housing. We are lucky to live in such a beautiful area and we should be doing all we can to protect and sustain the very features which attract people to our town. As we all know, Bacup has not seen the levels of regeneration and investment that some local towns have seen. Indeed the centre of town is currently underoccupied and full of empty buildings. Would our local plan not be better off considering how best to breathe life into these areas rather than eating into green belt land which should be left for all to enjoy and encourage a healthy lifestyle? there have been several studies published in recent years that highlight the importance of the natural world in combating the stresses of modern life and it's positive impact upon mental health. Surely this is a reason to protect our green belt land?</p> <p>Perhaps instead of building new housing around the edges of town, we could look at converting some of the empty commercial sites into apartments and low cost housing which would support those who really need to get onto the housing ladder. We have seen several large housing estates already built in Bacup, somebody which have struggled to sell all their housing stock. Do we</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	Further comment
----	-----------	---------	--------------	-----------------	-----------	---------	-----------------

need to introduce more? There are a large number of existing houses already for sale in the town and some of these have been on the market for some time. Surely building more new homes will only exacerbate this problem? We should be encouraging new people to come and live in our town, but who will want to buy in an area where the resale prospects are not attractive? I apologise for the length of this email but this is an issue I feel vey strongly about. I hope that you will give due consideration to my concerns, and I would appreciate a response from you to confirm the receipt of my objection.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1756	R	Prime			Object	<p>The above sites appertain to the bankside area of Bacup.</p> <p>Over the 50 years that we have lived at 48 Bankside Lane we have seen a huge rise in the amount of traffic using this lane from a mere handful of vehicles in the 1960s to hundreds more at the present time.</p> <p>Bankside Lane is a cul-de-sac and obviously all vehicles going up the lane have to come back by the same route.</p> <p>As well as private houses, there is an old peoples home, a golf club, an animal farm and a recreation ground.</p> <p>So there is a lot of extra traffic because of these business facilities plus ambulances, brewery wagons, horse and animal boxes, fire engines, taxis, delivery and post vans etc etc etc.</p> <p>There are times during day when, if you took a ride up here, you might only see a handful of parked cars, evenings and weekends it is a different story. Yesterday for instance (Friday) from our house I could see only 10 parked cars but today (Saturday) I counted 36 ad that is by just looking out of our front door. Goodness knows how many more are parked further along the lane.</p> <p>I know that there has been talk of connecting bankside lane to newchurch road. But that would be madness and create a "rat run". Don't add anymore traffic please, accidents on the lane are frequent when the first fall of snow comes.</p> <p>Cars try to ascend the hill, can't do and slide back into one another. Likewise on icy days the cars slide down and after end up crashing into the wall or each other.</p> <p>Here are a number of blind junctions namely:-</p> <ul style="list-style-type: none"> princess street lord street dale street police station row <p>junctions with bankside when going up or down the lane.</p> <p>Maden road onto bankside when going down to bacup.</p> <p>Bottlenecks: -</p> <ul style="list-style-type: none"> St mary's vicarage and the opposite houses. Joy cottage and the mount Cuckoo hall and 24/26 bankside <p>These areas especially the one at joy cottage and the mount where the gradient is very steep and narrow is exceptionally bad to negotiate at the best of times.</p> <p>My husband had a car accident a few years ago coming out of dale street where it is very difficult to see cars coming down the lane, fortunately it was not too bad.</p>

1813		Brewster		Land at Huttock Farm, Bacup	Object	<p>We are objecting to the 4 proposed building sites on the Bankside lane area. We object to these plans on the grounds that the main Bankside lane road, which will have to be used to carry all the traffic for these proposed houses, is not adequate as the road is already struggling to accommodate the existing traffic.</p> <p>The stretch of road from Cuckoo Hall down past the church is very narrow, this will cause untold hazards with the volume of vehicles that are going to use the road when construction begins. Not to mention the extra permanent traffic that will be forced to use the road to access their homes. Any further volume of traffic is most certainly going to cause serious accidents and at the very worst, death.</p> <p>We have had an accident on this very stretch of road, so we talk from experience of how dangerous this stretch of road can be.</p> <p>When there is a funeral at the church the whole road is grid locked with cars being blocked in all directions, so with extra vehicles, this is going to make the grid lock even worse.</p> <p>We have a 20 miles per hour speed limit on Bankside lane, but no one seems to adhere to it and nobody seems to know who gives way to who! So, if locals don't know, do you think new residents will?</p> <p>What about when it snows? This stretch of road is absolutely treacherous. When a car is coming up the hill, and another is going down nobody dare stop, so it ends up with traffic both ways skidding all over the place and of course the whole road is blocked. Extra traffic is bound to cause more accidents and somewhere along the lines there WILL BE a death.</p> <p>The plans show that the majority of houses are four bedrooms, this means there will most likely be more than one car per household. So as the plans show, there are to be 200 homes meaning there will be a minimum of 400 hundred extra cars using Bankside Lane. Large parts of the road are only wide enough for one vehicle, and most existing residents can only park their cars on the road because they have no drive.</p> <p>Which brings us to the main point of discussion, Newchurch Road.</p> <p>We can be quite sure that should these houses be built the majority of buyers will be from outside the valley. This means they will be commuting to and from the valley to go to work, when we have ONE ROAD TO AND FROM RAWTENSTALL, to access the M66. This motorway is already chronically over congested as it is. WE HAVE ONE ROAD TO AND FROM BURNLEY, WE HAVE ONE ROAD TO AND FROM TODMORDEN, AND WE HAVE ONE ROAD TO AND FROM ROCHDALE.</p> <p>When we have to have work done on the stretch of road FROM BACUP TO RAWTENSTALL, our main commuting road, to the M66, the backup of traffic is absolutely horrendous with waiting times up to one hour. I doubt we could cope with extra traffic on our ONE ROAD THROUGH TO RAWTENSTALL.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
						<p>So, the extra strain on our one main road is going to have an impact on the whole of the valley.</p> <p>Then we come to our amenities. Can our Health Centre cope with the extra work load? Are there even enough places in our schools?</p> <p>Then what about our green belt, we live in a beautiful valley, which the council should be trying to promote to tourists, instead of being hell bent on destroying this unique part of Lancashire.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1816		Anonymous			Object	<p>I'm writing to object against the proposal to build new houses on Bankside Lane in Bacup there are no way the road can cope with the extra cars will be coming up and down Bankside Lane as I can guarantee that there will be lots of blocked gullies and definitely a lot of potholes and the council cannot afford to keep resurfacing them time after time after year. Think about the bad weather that we get and Bankside Lane is an absolute nightmare to handle the snow icy weather. I heard from a word of mouth that the council are thinking of widening lodge lane to make it an access road who on earth came up with that idea if that road is not gritted properly then the car is going to lose control and cause a massive dangerous car accident. I live in Bacup and drive to Accrington to get to work Monday to Friday and have to leave 2 hours early so I don't get stuck in the tail back of traffic and don't have to leave my engine running to save pollution!</p> <p>Take a look around the valley there are plenty of trees that are over grown that need chopping down that are covering our day light, street/road signs, street lightning lampposts, speed cameras but also dangerous in strong winds that can come down anytime with them being years old and probably dangerous in strong winds that can come down anytime with them being years old and probably dangerous rotten! The trees can be made to good use for example to make fire wood, pencils and paper so there you are creating more jobs but more importantly you can build houses on areas where the trees have been or could be chopped down. You are focusing on the wrong area of Bacup for example New Line , in the fields behind the church next to stubby lee park look further up into the hills you have plenty of land to build on and you can build plenty of safe access roads that would be safer than up here on bankside lane.</p> <p>Think about the road itself on Bankside lane as you come up bankside lane it get narrow just after you pass dale street. The houses on the left hand side of the corner need to be knocked down because it is a serious hazard for cars coming up and down Bankside Lane.</p> <p>What about wildlife around the valley you are just going to push them out they also needs a place to lvie.</p> <p>Think about when drivers are driving down Bankside Lane there are cars parked on the double yellow lines next to the cash machine that makes it 10 times harder for use drivers that are trying to come out of bankside lane.</p> <p>How can the emergency services cope with coming up and down Bankside lane as the cars that car parked outside the first part of the houses don't park their cars properly causing a very tight narrow gap for cars to go through god know ow the emergency services would cope.</p> <p>The council are trying to cram as much in as they can and Bankside lane cannot handle it.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.011	Further comment
1820	Kelly	Holt	Lancashire County Council		Object	<p>BANKSIDE LANE, BACUP - HS2:11, 12, 13 and 32 proposes to allocate land which could result in 137 new dwellings off Bankside Lane which is an unclassified road approximately 1.1km in length varying in width and gradient with several pinch points and heavy on-street parking. To the west of its junction with Thistle Street, Bankside Lane provides the sole access to circa 150 dwellings.</p> <p>The existing layout on Bankside Lane is broadly reflected on the 1845 historic map and would not be considered acceptable under the current standards. The land to the west of Bankside Lane is at a higher level than the road which results in high retaining structures and there are buildings on both sides of Bankside Lane at several points which abut the road with no footway provision. Where there is footway provision, the widths are sub-standard along most sections.</p> <p>There is little opportunity for improvement works to the current road layout within the extents of the adopted highway.</p> <p>The Highway Authority would seek a secondary / emergency access to be provided where more than 100 houses are proposed off a sole access such as Bankside Lane. Therefore any development land allocated off Bankside Lane should provide a secondary vehicle access point onto the highway network. The topography of the land presents difficulty in providing a suitable route and within the land that is proposed for allocation it appears unlikely. The Highway Authority has serious concerns about these sites and the ability to provide a safe and suitable access in accordance with the NPPF and adequate permeability for traffic distribution in accordance with Manual for Streets.</p> <p>HS 2:11 – There is insufficient width at the proposed site access and visibility at the junction of the site access and Bankside Lane cannot be achieved.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
486	Susan	Ormerod			Object	<p>All of the above sites are in the Bankside Lane area of Bacup. All are Greenfield Sites and should be changed back to this status without delay.</p> <p>All of these sites are currently used by the local people and their children, in one form or another, as well as the local deer herds (of which there are two), foxes, badgers and a host of other wildlife, including the birds of prey from the Stacksteads area.</p> <p>Some of these sites are owned by local farmers to breed and train horses. The vehicle activity on Bankside, where there are three serious hazards on the approach from the town centre due to narrow roads and a blind bend on a steep incline, is already a danger with the local traffic. These three narrow sections are all within a 20 metre stretch and will not allow even two small vehicles to pass. This hazard has been increased by the "home delivery" method of purchasing goods for the already existing occupants and further population increases would inevitably mean increases of delivery wagons and vans.</p> <p>Any changes of road from the Stacksteads area would provide a "rat run" between the town centre and Stacksteads and any road up from an improved "Lodge Lane" would be a worse hazard than Bankside is at the moment. Almost certainly impassible in winter.</p> <p>The current parking situation on Bankside Lane is already causing concern as shown by the council notices which appeared some time ago. Access for the emergency services has already caused hold ups on five occasions know to myself during the past twelve months.</p> <p>In conclusion, these plans, if passed, will implement a serious deterioration in living standards for all existing occupants of the Bankside Lane area and an increased health risk factor for all who use the lane either in a vehicle or as a pedestrian.</p>		
487	Lorna Lucy	Doherty			Object	<p>We live at top end of Bankside Lane. We object most strongly to the proposed 4 new building sites off Bankside Lane. The beginning of Bankside Lane is extremely narrow with room for just one car with no possibilities to widen and very steep, and with no vision round a blind corner. The increase in traffic is definitely not an option due to danger particularly in winter with snow and ice.</p> <p>Also, I believe there is a proposal for Bankside Lane to be continued at the upper end which is now a dead end. This is also totally unacceptable due to the above reasons.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
488	Helen	Koczur			Object	<p>To even consider planning further homes on any part of Bankside Lane, Bacup is totally ludicrous.</p> <p>The lower part of Bankside Lane is exceptionally steep and narrow in 2 sections and cannot cope with any further traffic. On days that the Golf Club holds events, or football teams are playing on the recreation ground, access becomes impossible. In bad weather, the gradient together with the width restrictions leads to chaos and accidents, of which I have not only witnessed but suffered in the past. There is also limited pedestrian access at these dangerous sections. The route CANNOT cope with any further traffic. As these access problems are at the lower part of Bankside Lane ANY future housing expansion at any point further up the lane would affect this section.</p> <p>We recently had road improvement work which proved access problems. I dread to think what would happen to emergency services under these conditions as access will not be easy.</p> <p>The difficult access means that houses do not sell here, so why on earth build more? I do not see an increase in employment opportunities in the area so the occupants of any new build would travel out of the area for work. This would mean that the volume of vehicles would increase to a dangerous level. If some of the build is required to be for social housing, access for young families with prams and elderly would be impossible without transport.</p> <p>There has been a development of houses over in Weir. All have normal road access, not single track as on Bankside Lane, yet in bad weather the access problems cause the main Bacup to Burnley Road to be severely restricted with abandoned vehicles. Putting further houses off Bankside Lane would also cause a similar problem to the centre of Bacup.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
489	Denise	Duffy			Object	<p>I have lived in the Bankside Lane area some 47 years, in effect all of my adult life. The journeys up and down the Lane have become increasingly hazardous and dangerous and I am appalled that RBC is considering allocating 4 locations for new housing.</p> <p>> For a start the blind narrow bend around Ivy Cottage has always been hazardous and the increase in car numbers has made it doubly so over the years. Further traffic will only serve to exacerbate the conditions we experience daily.</p> <p>> Parking and especially double parking along the Lane and even on pavements has increased significantly. You only have to ask your own drivers (bins, gritting) of the difficulties they regularly face. Emergency services , especially Fire Engines, would also confirm their difficulties along the Lane.</p> <p>> As most home owners frequently have more than one car in their families, sometimes up to four cars once adult children start driving, the addition of garages does little to ease the situation. Apart from the fact that garages are often storage places rather than car shelters.</p> <p>> Although I have personally not been involved in an accident, accidents have happened on numerous occasions. The steepness of the lower Lane, especially in winter conditions, calls for careful negotiation. Again, additional traffic will exacerbate the residents safety concerns.</p> <p>Thank you in anticipation for forwarding this to whom ever it concerns</p>		
503		McKeown			Object	<p>I am against the proposed new housing off Bankside Lane as I am worried about road safety with poor visibility of oncoming traffic in areas and speeding vehicles. Also there would be gridlock at the bottom of Bankside Lane if there is to be additional housing because there are not two lanes of traffic which relies on drivers good faith on many occasions as you travel up the hill (there are many difficulties with this now).</p> <p>I am a resident Meadow Way. At present I have increasing issues with run off of rain water which already requires bailing out of water in winter. The new housing area, no longer being fields to absorb the rain water, will impact further on the massive drainage problem I am having to cope with.</p> <p>I would be very keen to know more about sewage system and how and which route the new system will follow as I have sewage pipe work under my side garden which serves about 24 houses.</p> <p>I am concerned about trucks during the building works and the additional dirt on the roads creating slippery areas for vehicles, damage to the road, and being additionally busy leading to increased chance of accidents.</p>

534	Romanii	Fitton	-		Object	I most certainly want to object to anymore houses being built on or around bankside lane in bacup. The street is congested with cars and wouldn't be able to cope with more vehicles coming up and down it every day. We also love the little bit of green land we have left and don't want it spoiled by any more houses being built.	-	
539	Simon	Midgley	-	HS2.1, HS2.12, HS2.14, HS2.32	Object	This site would be accessed from Bankside Lane which is already difficult to navigate at peak traffic periods: it is narrow and is accessed from Market Street via a very steep and narrow hill section. In normal conditions this needs extreme care when navigating, in winter snow and ice this access is dangerous and often impassable. Additional traffic generated by housing on these sites (HS2.1, HS2.12, HS2.14, HS2.32) would make a dangerous situation even worse. Cars are parked on both side of Bankside Lane narrowing it to one car's width in many sections: there is nowhere else for the cars to park. - - Development on sites HS2.1, HS2.12, HS2.14, HS2.32 would also be "skyline" development which residents were told would not be permitted. This would destroy the green character and visual amenity of this part of Bacup - forever. - - Currently farmland, these sites soak up precipitation helping to reduce flood risk which development would increase.		Bankside Lane is an inappropriate area for housing development for the reasons already outlined above. It is important that we do not lose this green space on the Valley side.
540	BRETT	HARRIS	-		Object	BANKSIDE LANE CAN NOT SUPPORT MORE TRAFFIC IT IS ALREADY STRUGGLING WITH THE AMOUNT OF TRAFFIC.	-	
543	Thomas	Hammant	-		Object	Objections fall in line with comments for HS2.12 Road Safety and Greenbelt land usage.		Whilst I understand the need to balance new housing in the area, building on land which is currently used as both a farm and/or public access land is against all previous council policies and should not be entered into lightly. -

545	Lisa	Hartley	-		Object	Greenfield site and should remain as such - full of wildlife e.g. 2 deer herds, foxes, badgers and birds of prey. Landowners train and breed horses on this land. - Bankside already extremely congested with traffic- not enough parking facilities now - council have had to put notices up asking people to park more consideratly as emergency services (fire engines) and council services (gritters) have been unable to pass through. - Bankside has 3 very narrow points where only one vehicle can pass at once and these areas are extremely close together in proximity incorporating blind bends as well - more houses would cause more cars causing chaos and accidents. Any through road to stacksteads that might be made would lead to bankside being used as a racing track for cars to pass through from stacksteads trying to avoid the busy main road! This in itself would be extremely dangerous as more houses Lead to more people living on bankside -probably children - resulting in more road traffic accidents and fatalities! We have enough at the moment we don't need anymore. - It would be a nightmare waiting to happen. - Building houses would cause further chaos with wagons attempting to make their way through when there is so little room - home shopping vehicles struggle at moment and are sometimes unable to gain access all the way across bankside! -		Please re think your plans as they will have very serious consequences for both the public and wildlife of bankside!
557	michael	hudson	-		Object	first the bankside lane cannot support any more traffic its a 20 mph zone but traffic goes a lot faster,the road floods a lot. most of that from old newtownroad waters running all the time.the inferstructure cannot cope with any more houses or veicles your concerned resident [...].		i think there is plenty of brown sites around this area that could be used.and empty proerties around not being used.
558	Terry	Nightingale	-		Object	I wish to object to the proposals as follows - - 1. lack of suitable access to to the proposed sites .There is no suitable access to any of these sites with all traffic having to access and exit onto Bankside Lane (see also point 4) - - 2. risk of flooding to properties on Bankside Lane if housing built on green field site to rear. During periods of wet weather rainwater cannot now drain away and as such runs down through these properties gardens onto Bankside lane . increased building will further increase the risk of flooding for these properties - - 3. in addition to the flood risk there will be the increased sewerage demands onto the existing sewerage system on Bankside Lane /Close - - 4. A huge increase in vehicular traffic on an already overcrowded one way in and out Lane . - during winter months lack of available parking / inconsiderate parking on lower Bankside Lane regularly prevents LCC Gritters from being able to access this area . An increase in housing will inevitably bring increased fire risk . - - 5. There will be an environmental impact on wioldlife in the area . Land in the area is frequented by deer and many other types of wildlife . -		-

581	B	Woodrup			Object	<p>We are writing to object to the proposed plans to change areas of previous green belt sites to building sites of potentially 100 new houses. These are our concerns.</p> <p>The bottom of Bankside Lane has three bottle necks very steep and narrow and a bad bend only room for one car, a very narrow pavement on one side. Children will be walking down and up to get to school. The school run will be dangerous the road is already overloaded. In winter people try to park at the bottom of the lane in the morning, ready to go to work, because the road is always gritted. The road is sometimes so icy. It's frightening to drive down, as you could easily crash into the wall or another vehicle parked or moving. I dread to think what could happen with more pedestrians (children).</p> <p>I am also concerned about the fire engines and ambulances and gritter trying to drive up and over bankside lane, especially after 7PM when most residents are home and their vehicles are all parked on the roadside's and pavements. This is a concern now. It's going to be really bad if another 100 houses are to be built. Most households have two cars.</p> <p>What about our wildlife. Bats, hedgehogs, deer, rabbits, badgers, toads and frogs.</p> <p>What about our beautiful countryside and outdoor spaces that we and our children and grandchildren really enjoy.</p> <p>We hope you seriously consider our concerns and objections.</p> <p>It has been mentioned to me that previously planning to build houses was turned down by the ministry of transport. Because of the bottlenecks at the bottom of bankside lane.</p> <p>There's also the question of policing all these extra residents and homes.</p>		
582	G	Pearson			Object	<p>Dear Sirs I will raise my objections to this Development due to the following reasons..</p> <p>The lane is already over loaded with vehicles from the existing houses, the Council has placed notices on the lampposts about the problem of gritting the lane due to traffic.</p> <p>My wife had a vehicle accident Two years ago as a vehicle reversed into her vehicle due to cars parked on Bankside lane.</p> <p>The road itself in a bad state of repair due to traffic movement.</p> <p>When your refuse teams come to collect they complain of the problems of traffic on the Lane.</p> <p>When the Animal farm is allowed to have functions on such as Halloween there are even worse traffic problems.</p> <p>The Green areas currently enjoyed by the locals and their children will be affected and even lost .</p>

584	Craig	Ovenden	Next Century Property Services Ltd		Object	<p>I'm am led to believe that a new draft local development plan includes a proposal to allocate land for housing at 4 locations off Bankside lane? As a long term resident of Bankside lane I would object to the proposal on several counts:</p> <ol style="list-style-type: none"> 1) The lane is already extremely busy and access is always restricted down to a single track lane, if the proposal involves further vehicle access the road would need to be made wider. 2) The lane is in a poor state of repair, adding more traffic would create further ongoing maintenance. 3) We live right at the top of the lane, on refuse collection days, dependent on what time the collection takes place it can take me an extra 10-15 minutes to travel down the lane, the collection drivers are always really obliging and pull over when possible, however due to the amount of parked cars and traffic travelling in the opposite direction I often have to follow behind the vehicle right to the bottom, further housing would only compound the problem. 4) The bend in the road towards the bottom and the further narrowing of the road is a bottle neck often leading to vehicles waiting at the bottom to let oncoming traffic up and down the lane, this sometimes backs up as far as the main road, further housing/vehicular access would cause a danger at the junction with Newchurch road as vehicles que to access the lane. <p>Please can you consider these points before any decision is made to allocate the land for housing.</p>		
586	Sandra	Robinson			Object	<p>This email is in regards to the proposal for housing at 4 locations off Bankside Lane, I am a resident of Bankside Lane,I feel that there is too much traffic at the moment on this narrow road,I am lucky to have off road parking,however most do not which then causes problems for pedestrians.</p>		
592	Jean & Peter	Hannan			Object	<p>I am submitting our opposition to the proposed building plans within the Bankside Lane area. Bankside Lane is already overloaded and congested with motor vehicles and we feel that added traffic will cause untold problems. Inadequate parking facilities already add to this problem and we feel very strongly that the above proposals will potentially cause accidents and traffic delays.</p>

608	A J	Doherty			Object	<p>Email received 29/09/2017: Dear Sirs I attended the road show at Futures Park on 21st September and saw the four sites you proposed for building upon. I object most strongly to all of them. Bankside Lane has a very narrow access from A 681 with room for one car only at the turning. A very steep incline for some yards and then at Dale Street the road narrows even more, again with room for one car only. The incline is even steeper. Near the end, there is a treacherous incline and turn. Parked cars line the whole of Bankside Lane already. In winter, in spite of efficient gritting by the Council, snow and ice can stop traffic. If the proposed building takes place, In the short term, many heavy vehicles would create chaos to our local traffic. Long term, the traffic would double making access a nightmare. I commend the services of Rossendale Council for their efficient rubbish collection and gritting in winter. I am sure they will tell you how difficult it is already to access Bankside Lane. In the case of an emergency - ambulance or fire - we would be put at great risk of delays. Perhaps we could call a helicopter...</p> <p>Email received 30/09/2017: Bankside Lane Bacup proposed building sites I attended the road show on 21st September 2017 at Futures Park, Bacup I object to any of the proposed building sites because Access is extremely restricted. The entrance to Bankside Lane from A 681 is very narrow and cannot be widened. The road is very steep. It continues between a house to the left and high bank to right leaving room for just one vehicle round a blind bend. The road here is also very steep and cannot be widened. Near the end of Bankside Lane there is another very steep incline, round two corners. The whole of Bankside Lane is congested with parked vehicles. If the proposed building takes place, access will be a nightmare. Already it is amazing that local authority vehicles - refuse collection and gritting in winter - manage so efficiently, but it would be almost impossible to continue were traffic to double.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
						<p>Winter snow and ice make the road dangerous and sometimes impassable. In the short term: probably over several years, heavy vehicles would block access.</p> <p>In the long term: four building sites would probably increase traffic to double what it is now.</p> <p>Ambulance , Fire Services and Police must have easy access and these would be put at risk.</p> <p>What do you suggest? Hire a helicopter?</p> <p>Lastly, you are intending to build on virgin moorland, destroying forever the natural beauty and wildlife it supports.</p>		
611	Christine	Hudson			Object	<p>I am writing in regard to the building of 183 houses in all off Bankside Lane. I drive up and down Bankside Lane most days (week and weekend) and it does get very congested at times with lorries and cars, the lane is not very wide and people who live here have to park both sides of the lane which only leaves enough space to get through.</p> <p>The very narrow park of Bankside Lane, as you go up the hill leaves only enough space for single traffic. A lot of people get very frustrated and angry putting it mildly. People forget it is a 20 mile limit so there is often a near miss.</p> <p>If the houses are going to be built 183 in all they will all have to use Bankside, so that means there will be an extra 30 cars. There would be heavy lorries and vans whilst they are being built. Most households are 2 car families hence 380 cars extra.</p> <p>Drainage</p> <p>When we have heavy rainfalls which is often. We get a lot of water coming down from old newchurch road and onto the lane. In the last 5 years we have had flash flooding.</p> <p>One day we were sitting in our front lounge and our wheelie bins were floating about in the front garden. We opened our garage doors front and back and it was like a river running down the garden. All our plants were lost as they were in a pile of mud at the bottom of the garden.</p> <p>If these houses are going to be built, there will have to be better drainage. Also we have some lovely open green spaces around Bacup, that we all enjoy and cherish.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
615	Elaine	Garrard			Object	<p>I wish to object to the proposed housing development sites referenced HS1.11, HS2.12, HS2.13 and HS2.32 which are listed in the housing allocations section of the above plan.</p> <p>The reason for my objection is that vehicles travelling to Bacup Town Centre from each of these sites will need to use Bankside Lane. This will add to the existing traffic which already presents a significant safety hazard for me personally at the steep and narrow section between its junctions with Maden Road and Market Street.</p> <p>I am disabled and have to travel to Bacup from my house via Bankside Lane either by car or whenever possible by mobility scooter. However, because the width of the pavement is very narrow I have to drive my scooter on the roadway and this means choosing the times of my journeys carefully to avoid peak congestion when I would be dangerous for me to use the road. In particular there are two sections of Bankside Lane which narrow to a single lane and where I cannot take evasive action if a hazard incident occurs. I consider therefore that by allowing additional developments along Bankside Lane and hence additional traffic hazards, the council will discriminate unfairly against me and also other disabled road users.</p> <p>On this basis I ask you to remove the above housing sites from the Local Plan unless the pavement or road widths can be improved to an acceptable standard.</p> <p>I attach a photograph which illustrates the difficulties.</p>		
621	David	Carey	-		Object	<p>Bankside Lane is a cul de sac which already has a lot of traffic going up and down, and parking is on road for the most part, making it very difficult bearing in mind the amount of people who already live on bankside lane, to pass. To add an extra 100 houses and the additional traffic this would cause would make it intolerable for existing house owners. - The added pressure of extra traffic would also affect our children, as there is no place on Bankside Lane to play bar on small play area, and for the most part children ride their bikes and play in front of their houses, this would be an additional safety risk. - It would also ruin the countryside feel we have and make it impossible to walk our dogs as you are planning on taking all our recreational grounds from us. - In the winter we have a lot of bad weather and the gritter's find it hard to get up and grit the Lane, it will be worse with the amount of traffic added. - Again no thought has gone into the additional traffic and the impact on the people living on bankside Lane. - - I STRONGLY OBJECT TO THIS PROPOSAL!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! - -</p>		Not at this time

648	Robert	Ormerod	-	HS2.11. hS2.12 HS2.13 HS2.32	Object	<p>These four sites are all Greenfield sites. After the council has done a good job at improving this type of site in Bacup it would be absurd to destroy the fields which complement all the wooded areas of our town. The countryside of Rossendale looks bad enough with all the wind farms without destroying the remaining countryside of Rossendale. Our fields and woods are just returning to being used by the local wildlife and wildlife needs open spaces as well as enclosed spaces to live and prosper. - The traffic on Bankside is already becoming dangerous and unacceptable with the one narrow road and the increases of traffic. Nearly all residents now have more than one vehicle and delivery traffic, usually large vans or wagons, have increased tenfold whilst the road has been left to deteriorate. The slow signs, road centre signs and markings are now almost completely gone and the road, which we were all told was due for replacement surfacing was actually patched up, once again, and still has many holes, dips and bumps. This is especially on the blind steep bend from the town centre. Unless the access situation is addressed the many unreported non injury collisions will soon become serious injuries or fatalities. -</p>		Please take these plans away from from the overcrowded area

661	CA and VJ	Jennings	Home Owner	HS2.32	Object	<p>I am contesting these housing developments on several grounds. - - My issues and concerns will be submitted, in writing by the closing date of 9th October 2017.</p> <p>Letter received 06/10/2017: The statement "Improving the lives of people in the Borough" is central to the Borough's current "mantra" regarding their fundamental philosophy and how it is applied in all Departments, and in all the things that they do. However, I feel that some of the current proposals as outlined in the above DLP could fall far short of the Council's altruistic intentions. These are our concerns in respect of the Fernhill Crescent, Fernhill Drive and Bankside Lane development proposals:-</p> <ul style="list-style-type: none"> • Conservation - there is an extensive line of "mixed" trees which decorate the hillside from the end of Bankside Lane above Fernhill Crescent and Osborne Terrace. As far as I understand it, we all have a shared commitment to protect and preserve trees and the landscapes on which they reside. From the above plans, it seems that there is the potential for the removal of some of this tree-line on site HS2.32. This would have a huge and negative impact on the aesthetic outlook onto that hillside, and the potential for land slip, soil erosion, water-runoff and flooding on lower levels • Protecting the Environment - there are many issues here that would negatively affect several aspects of the local environment. Some of which resulting from over-capacity and over-crowding caused by the over-expansion in this area by these proposed developments (particularly along Bankside Lane) • Preserving the local Character - the area around an incorporating site HS2.32 is particularly attractive (especially to the West of Bankside lane) and is an asset to the local area and its residents. It offers countryside walks along heritage sites and long established pathways (ideal for walkers, dog-owners, explorers in general and "kids" of all ages) • Infrastructure - this aspect has never been something to celebrate in the Rossendale Valley area: mostly due to the uncompromising geography of the area rather than the incompetence of the local authorities. However, focusing on one point only, transport through the Valley is often difficult, and sometimes almost impossible at certain times of the day. Therefore, the addition of around 200 units along Bankside Lane would severely impact on both movement and parking. AND, the thought of possibly an additional 350 vehicles exiting onto the Bacup/Rawtenstall road and heading through the valley, doesn't bare thinking about!! AND, what about the winter if it's like the Fernhill area, some of it, or all of it, will not be gritted!! • Impact - in my opinion, the impact from these proposals would be many and 		To be submitted before 9th October 2017.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
						<p>wide ranging, but some would militate against the "improvement of lives"</p> <ul style="list-style-type: none"> • Preservation of Wild-life Habitats - the treed areas and adjacent open fields and moorland, are homes for thriving wild-life. In addition to the usual populations of wildlife, we have seen deer, foxes, squirrels, birds of prey and colonies of bats. The retention of range of wild-life would be threatened by the proposed invasion of their "space" • Ecological/Biological Considerations - these extensive developments could severely compromise the 'health', stability and integrity of the land, its trees; also its top-soil and sub-soil and the life forms that inhabit them • Local Heritage Preservation - there are some historical mule tracks, bridal paths & walkways and access routes into Yorkshire in this area, and we have a duty to protect and preserve them • Land Integrity - we have been aware for many years that the land above part of Fernhill Crescent has been subject to land-slip over the years. In fact, we were told by an authoritative figure that the extent of the problem had been measured over time. This weakness in the land caused our builder to reinforce the retaining walls in the back gardens of Nos 22, 24 and 26. Indeed, the retaining wall at No 26 actually collapsed. <p>Interestingly, the field behind these and other FC properties seems to show evidence of land-slip, whereas the adjacent wooded field seems not to suffer this problem</p> <ul style="list-style-type: none"> • Aesthetic Balance - given the attractiveness (in all respects) of this residential area, we would suggest that the proposed plans could severely impact upon the "wholesomeness" of this area, and have a negative effect upon the valuation of properties. Which would be, at least, unfair!!! • Practicality and Compatibility - in conclusion, and looking at just one aspect, when we factor-in access roads, traffic congestion and general disruption over time, and deterioration in the quality of people's lives, is it appropriate or acceptable to further pursue the Fernhill proposals?!? <p>Finally, who is it in the best interests of</p>		
667	Helen	Phythian	N.A.	HS2.11,HS2.12,H Object S2.13 and HS2.32		<p>I wish to object on the grounds that the proposed 100 houses will have at least two cars for each dwelling, this will mean a daily increase of journeys by at least four hundred trips on what is, in two places on Bankside Lane a single track road. - If the developers were to continue the road through to Stacksteads prior to start of the proposed development which would give an option to all residents, then maybe the plans would be viable. At the moment if Bankside Lane is left as is, the resulting traffic jams would increase the risks of accidents and also increase pollution,(drivers trying to pass the two single lane place , one of which is a blind bend as well as single lane, would be revving their cars to restart on an exceptionally steep hill).</p>		<p>overall I understand that the Government is laying down numbers for each area, instead of cramming in houses in every available green space left in Rossendale would it not be better to take a flat area of land and build a new village with all required facilities</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
679	leslie	hargreaves	-	h52.11.12.13. andh52.32	Object	Bankside lane is already completely saturated with cars having to park on the pavements and at times heavy commercial cannot get through ie road gritters and refuse vehicles.This is worse when vehicle that normally park on maden road have to park on bankside lane due to winter conditions i.e. ice and snow. Approximately 50 years ago excavation was started for house building was started on the two fields between lodge land and so called bonks area which was stopped because the area in what they call shifting sand. Acces to bankisde lane is tottally in adequate and I totally object to this proposal as we already have our share of accidents on this road		-
714	Marie	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	1) Bankside Lane is already very busy. There's already too many cars going up, down and along Bankside. Adding another 100 or more houses and therefore cars will just add to the congestion. 2) Bankside Lane has tight and narrow bends. Add more traffic to the mix and there will easily be some serious accidents especially in the winter when it snows. 3) Vehicles are already parking on pavements to allow other cars to get past. In case of an emergency (fire or ambulance) the emergency vehicles would already have trouble getting to the destination. Adding those extra cars would make it impossible. The gritter has problems now! 4) The proposed land is home to lots of wildlife including deer, badgers and foxes. Why should we disrupt their habitat? Where would they go? It's not fair on them when they cannot speak up for themselves. 5) 50 years ago they evacuated Bankside because the field was on shifting sands. 6) the local schools are already full, getting a doctors appointment is already difficult without getting extra residents and the same with the dentists. The proposed building seems unrealistic, unreasonable and unsustainable. -		I thought the idea was to build houses on brown sites not green sites. There's plenty of unused, rundown, empty, derelict properties in and around bacup, why not use them? Why take our countryside when there's perfectly good other land to use. Don't ruin it for future generations.
715	Jennifer	Hargreaves	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	Conversion on Bankside at moment, in the snow when vehicles can't get up the Lane this is what happens. The residents who live on Maiden Road and Rode Street occupy both sides of Bankside. - Ordinarily care are parked on both sides of the Lane a lot on pavements so that ambulances, fire engines can get through! - The gritter has problems as well the Council even put a sign up!! - - Loved on Bankside 52 years, all my married life , and about 50 years ago they tried excavating and stopped because of shifting sand. - - There isn't the infrastructure to accommodate this development as the road down the valley to Rawtenstall , and the road to Rochdale are a nightmare at peak times! - - Schools are full. - - Doctor's appointments are very difficult as it is without extra residents. - - I am completely against this proposal.		Thought the idea Jake Berry agreed to was to build on Brown Sites not Green sites. - - - There are plenty of derelict, empty properties in this area without taking our countryside from us!!! - - I'm thinking of my children and grandchildren.

718	Joanne	Leyland	-	HS2.11 HS2.13	HS2.12 HS2.32	Object	I've lived on bankside lane for 20 years and I'm strongly objecting for the planning proposals of houses being built it's already overflowing with cars as, most my neighbours and myself have 2 or 3 cars each and every one falls out all the time over parking as it is now so for more familys to be moving will just cause more problems, the roads are to narrow in many places it really will not work. Over the years I've lived here my 2 daughter's along with there friends who also live on bankside lane have grown up playing on the lane and it's so dangerous with the amount of cars going up and down it's an accident waiting to happen	It's just not acepticable to be building more houses with only a narrow road leading up to bankside lane and an average of 200 extra cars it will be an awful place to live and I love living here
729	Stanley	Horsfall				Object	Email received 30/09/2017: I would like to protest again at some of the the plan for bankside lane Email received 02/10/2017: I want to oppose the plan as the traffic on bankside is already congested	
759	Martin	Stansfield	-			Object	The width of the roads and the bends on Bankside Lane are already an accident to happen and cant support any oncrease in traffic,	have the same objection to the other 3 sites on bankside lane
769	Trevor	Bartram				Object	Access to all of the above sites is via Bankside Lane which is struggling to cope with the amount of traffic now using it. Another 150 houses, as proposed, would mean potentially a further 300 vehicles, which would add to an already congested road, there being only one way in and out of the town. - - With regard to the whole of Bacup a house building project of this scale will bring problems with Primary Schools, which are already full, doctors and roads. -	-
770	Jacqueline	Stansfield	-			Object	The road is too narrow and bendy for extra traffic. Near misses everyday sooner or later there will be a serious accident.	I do not think any of the other sites should be built on bankside lane for the same reason.
774	Stanley	Horsfall	-			Object	Bankside lane is already congested with traffic and and cannot take the extra that the plan would cause	
778	Irene	Prokopowicz	-			Object	I strongly object as there is a need to keep the green area as it supports wild life Badgers, Foxes , Field mice , bats and sometimes deer. Our quality of would take a nose dive the planned 30 houses meaning 60 cars possible light pollution from street lights garden security lights and just more noise. I am deeply concerned about all the issues above we have lived in this house for 43 years so we hope desperately that this pla does not be accepted .	The large amount of traffic the will increase on bankside lane with all the planned builds not child friendly
780	George	Prokopowicz	-			Object	Object on the grounds of increased traffic in an already congested road access which could affect emergency vehicles Also have concerns in increased pollution.The diversity of wild life would be affected I feel quality of life of people living in the area in question would have a negative impact Hope this plan will be regeted	To much traffic on bankside lane already

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
785	Robert	Astbury	-		Object	Bankside Lane does not have a suitable road to support the additional through-traffic created by additional housing, there are several narrow parts of the road on steep inclines that do not allow two way traffic and these are heavily congested at peak times. Additional housing on Bankside lane (and the connecting side roads) will make access very difficult and impede the access for emergency vehicles. when large vehicles such as lorry's or bin men are on this road; you are unable to pass them and it is difficult to find a place to park for them to pass you, additional housing will only further amplify these access problems. problems will also occur during winter months when some roads are inaccessible due to snow and normally residents park on the lower roads for safety, this will be more dangerous due to increased vehicles needing to do the same with no additional flat parking spaces provided. The development will get rid of a thriving petting farm which brings in much needed tourism to Bacup. local town development is in dire need of renovation and adding more houses will not improve the local community and will only add more strain to local services.		-

848	LORRAINE	WINNARD	-		Object	<p>Whilst I am totally opposed to the constant development of the whole of Rossendale and the ever changing green belt boundary I feel I must object most strongly to the new proposals in Bacup. - - As a resident of Bacup for over 30 years I have seen some of our most beautiful countryside turned into housing developments, many of the houses built over the last 10 years have still not been sold. The fact is that there are already hundreds of empty properties in Bacup, new and old, which could fill our quota. - - Sites HS2.1, HS2.12, HS2.13, HS2.32 (Bankside Lane) and HS2.6 AND HS2.7(Todmorden Old Road) are the most important ones to me personally and I note that all but one of these sites are privately owned, will they be subject to Compulsory Purchase Orders? These privately owned sites sustain the livelihood of their owners who, in this pastoral farming community, raise their livestock. Will these livestock be forced indoors off a natural diet with sunshine and fresh air to be raised like battery hens? - - The wildlife in these areas consist of foxes, badgers, small mammals, bats, deer and wild birds, these will all disappear/die without this natural habitat. - - The local infrastructure, schools, nurserys, health centres, roads, drainage, police, ambulance, fire cews and public transport is already stretched to maximum capacity, will increasing these services be considered with all this additional pressure to meet demand? - - On Bankside Lane in particular the access is already stretched beyond capacity, being only one car width at 3 points, with double-parked cars, steep hills and narrow pavements. Potentially another 200 cars up and down here on a daily basis would literally create havoc. Access off, single track, Todmorden Old Road is also practically impossible. - - HS2.32 is an open area at the top of Bankside Lane which is enjoyed by residents of Bankside Lane and higher Stacksteads alike, and has been for many decades. There is also an abundance of wildlife there.</p>		<p>Whilst I am totally opposed to the constant development of the whole of Rossendale and the ever changing green belt boundary I feel I must object most strongly to the new proposals in Bacup. - - As a resident of Bacup for over 30 years I have seen some of our most beautiful countryside turned into housing developments, many of the houses built over the last 10 years have still not been sold. The fact is that there are already hundreds of empty properties in Bacup, new and old, which could fill our quota. - - Sites HS2.1, HS2.12, HS2.13, HS2.32 (Bankside Lane) and HS2.6 AND HS2.7(Todmorden Old Road) are the most important ones to me personally and I note that all but one of these sites are privately owned, will they be subject to Compulsory Purchase Orders? These privately owned sites sustain the livelihood of their owners who, in this pastoral farming community, raise their livestock. Will these livestock be forced indoors off a natural diet with sunshine and fresh air to be raised like battery hens? - - The wildlife in these areas consist of foxes, badgers, small mammals, bats, deer and wild birds, these will all disappear/die without this natural habitat. - - The local infrastructure, schools, nurserys, health centres, roads, drainage, police, ambulance, fire cews and public transport is already stretched to maximum capacity, will increasing these services be considered with all this additional pressure to meet demand? - - On</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
								Bankside Lane in particular the access is already stretched beyond capacity, being only one car width at 3 points, with double-parked cars, steep hills and narrow pavements. Potentially another 200 cars up and down here on a daily basis would literally create havoc. Access off, single track, Todmorden Old Road is also practically impossible. - - HS2.32 is an open area at the top of Bankside Lane which is enjoyed by residents of Bankside Lane and higher Stacksteads alike, and has been for many decades. There is also an abundance of wildlife there.
853	Ian	Read	-	HS2.5 HS2.32 HS2.13 HS2.11 HS2.12	Object	Fernhill Drive is not capable of taking any more traffic, The main Bacup to Rawtenstall carriageway is at it's capacity for traffic. - The site HS2.5 is not a suitable site for hosing and will cause problems on Fernhill Drive. - The site HS2.5 will interfere with the views of the existing houses		Bacup is full and no other housing should be built until the infrastructure in Bacup is improved ie Road to Rawtenstall.

906	Graham	Smyth	-		Object	<p>Grounds for objection as follows: - - 1. Access: Bankside Lane is narrow, winding & steep with two blind bends, and already heavily used by vehicles. The bends are dangerous, the more so in winter, and such dangers would grow with any increase in traffic. Additionally there are already access problems for larger vehicles (eg. gritter lorries, emergency services) on Bankside Lane because of its narrow width, compounded by on-street parking on both sides (many houses - notably terraces - have nowhere else to park); again the problem would be compounded by more vehicles using the Lane. Access for construction traffic would also be problematic. Opening access from the other end would not be a solution - creating another very steep way, and a potential 'rat run' for traffic seeking to avoid congestion on the main road through the valley. - - 2. Infrastructure: there are issues more generally in significantly adding further to housing in Bacup, given the limited scope to improve the already clogged route down the valley to Rawtenstall / the A56/M66 etc. It is likely that many taking new housing in Bacup would be commuting in and out, reducing traffic flow further. - - 3. Capacity: Bacup is already at capacity in important areas such as schools, health services, dentists and extended services and lacks the capacity to absorb lots more households. - - 4. Flooding dangers – from HS 2.11 in particular, to houses immediately below it, at a much lower level, and to the terrace adjacent to it (60-68) which already often suffers from ground water rising into cellars. - - 5. Landscape – would be impacted. These sites, notably HS 2.11 are at a high level, visible from many points so building would visibly add to the erosion of the countryside amenity in Bacup. It would also impact on wildlife in the area.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
907	Carol	Mitchell	-	HS2.11 in particular and also HS 2.12, 2.13 and 2.32	Object	<p>Grounds for objections as follows: - - 1. Access: Bankside Lane is narrow, winding and steep with two blind bends, and already carrying more traffic than is ideal. The dangerous inherent in the bends would increase with growth in traffic; they are also particularly prone to accidents in wintry conditions, which again would be exacerbated. The Lane is narrow throughout its length and now regularly parked up on both sides, creating access problems for larger vehicles (such as gritter lorries, fire engines etc); many householders have nowhere else to park other than the road. The addition of more vehicles (not to mention construction vehicles) having to use the Lane will significantly increase difficulties passing through. If it were intended to create access from the other end, this would create another steep and a potential 'rat run' for traffic seeking to avoid congestion on the main road through the valley – hence adding further to problems. - - 2. Other access issues: adding to the housing stock in Bacup more generally is also problematic, given the limited scope to improve the already clogged route down the valley towards Rawtenstall and the motorway – particularly given the likelihood that the majority of any new housing would be taken by people relying on commuting for employment. - - 3. Capacity: Bacup is already at capacity in important areas such as schools, health services, dentists and extended services and lacks the capacity to absorb many more households. - - 4. Flooding dangers: the field at HS 2.11 is well above the level of houses below it, raising potential flooding hazards to them from building. Interference to thw water table could also pose risks to the adjacent terrace (60-68) which already frequently suffers from ground water rising into the cellars. - - 5. Landscape: the elevation of the area around Bankside Lane also means that there would be an adverse impact on landscape as viewed from various points around and above the town. - -</p>		No
1003	john	dempsey	-	HS2.1 HS2.12 HS2.13 HS2.32	Object	<p>There are 3 separate places at the bottom of Bankside Lane, where the lane narrows to a single track. This means that you always have to stop to allow someone through, no matter what of day. Another 200 or so cars having to use this lane daily, would put an enormous amount of strain on the already stretched and limited road space. - This is an area where there are a lot of families and the extra traffic would be an accident waiting to happen, as many of the children play on or near the road. - One of the areas at the back of the semi detached houses is also an area where various wildlife roam and live. There are foxes, badgers and deer that are regularly seen in this area, making their way in or out of the wood.</p>		Only that we as a resident of Bankside Lane are totally opposed to the redevelopment of this area. We feel that it would spoil a green belt area of Bacup that leads onto the local countryside.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1023	Dave	Harding	-		Object	<p>The suggestion that further housing development is suitable on Bankside Lane is bordering on ridiculous. By the council's own admission, this road is already a "Problem Street for access" with vehicles double parking and the road itself being only wide enough for 1 vehicle to use at one time - in particular near the church and indeed pretty much all the way up to the proposed site HS2.11 and HS2.12. - Further housing would not improve the access and traffic density on this tiny lane - it would make it considerably worse. - - In addition to this, the increased noise and air pollution the extra properties would bring would be considerable - both during and after the building process.</p> <p>Rossendale Council showcase on their website a "clean and green Rossendale". Hardly clean or green if we use all our green spaces for building sites. - - The amenities also need to be improved before building many, many more houses. - - e.g. the options available for children going to secondary school in Bacup are extremely poor. The majority of "good" schools are oversubscribed, so children in Bacup are now being given the choice of a school in "Special Measures" - Fearn. As a parent of a child not far off secondary school, I'm considering moving out of the area - I certainly wouldn't consider moving in. - - The congestion on the main roads is ridiculous at rush hour times & quite simply, there isn't the demand for this many houses in Bacup. The development on New Line / Rockcliffe Rd area has never been finished - purely down to lack of interest from buyers. - - There are many suitable brownfield properties in the area that would be ideal for the right redevelopment however developers like the easy option... - - I'm not against change, however one of the biggest "selling points" of Rossendale are its green and open spaces. Remove these & it's one less reason for living round here. There aren't many left...</p>		<p>The council should be looking at attracting people to the area by improving amenities, transport, education, shopping etc. Bacup in particular is becoming a joke. No Police Station, public transport is poor, schools are oversubscribed and / or failing miserably, the town centre looks rundown and scruffy etc. Hardly an area that is desirable.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1033	Ewan	Rowland		HS2.1, HS2.12, HS2.13 & HS2.32	Object	<p>The additional houses proposed for the above sites will: - * increase traffic to and from Bankside Lane. The road is narrow and steep at key places along the route which allows only one car at a time to pass at specific points on the route. Driver's visibility is restricted by bends and rises in the road causing blind spots for drivers. Because of the narrowness at specific points, cars, vans and lorries have to swing across the road to pass buildings. - *there will also be an increase in traffic such as delivery vans/lorries and their service vehicles. - * houses opposite The Laurels Care Home at the junction of Maden Road and Bankside Lane have no off road parking and therefore park half on the road and pavement further restrict visibility for up hill and down hill traffic. Vehicles moving off the junction from Maden Road have very limited sight of cars coming down Bankside Lane at this narrow point and are forced to creep out onto Bankside Lane in order to safely access Bankside Lane. This also affects up hill traffic at this point forcing them to stop or slow down. - *vehicles joining Bankside Lane from Dale Street also have limited sight of approaching traffic at its junction and have to creep into the road until drivers have clear sight of up hill or down hill traffic. The road is only one car wide at this junction. - *the problem is compounded by traffic parking close to this junction for those attending services at St Mary Church, Dale Street. - *during the football season especially at weekends there is a high volume of traffic going to Maden Recreation Ground which causes congestion before and after football matches. The park is also popular with families and dogwalkers, most of whom arrive in cars, throughout the year. - *farm vehicles frequently use Maden Road via Bankside Lane on a regular basis which adds to congestion creating further potential hazards for other vehicles and pedestrians using Bankside Lane. - * Pedestrians have to cross the road at pinch points along Bankside because pavements stop due to the narrowness of the road. - * most households have two cars and the proposal to build an additional 140 houses on Bankside Lane will increase traffic by a potential 280 cars. The current access to these developments is inadequate for this amount of daily traffic. -</p>

1142	CHRISTINE	JACKSON	-		Object	<p>ROSSENDALE LOCAL PLAN - BACUP AREA. - Whilst I am totally opposed to the constant development of the whole of Rossendale and the ever changing green belt boundary I feel I must object most strongly to the new proposals in Bacup, which is recognised as the best preserved millll town in the County. - As a resident of Bacup for over 30 years I have seen some of our most beautiful countryside turned into housing developments, many of the houses built over the last 10 years have still not been sold. The fact is that there are already hundreds of empty properties in Bacup, new and old, which could fill our quota. - - Sites HS2.1, HS2.12, HS2.13, HS2.32 (Bankside Lane),HS2.6 AND HS2.7(Todmorden Old Road) and HS2.4 (land off Moorland Terrace) are the most important ones to me personally and I note that the majority of these sites are privately owned, will they be subject to Compulsory Purchase Orders? These privately owned sites sustain the livelihood of their owners who, in this pastoral farming community, raise their livestock. Will these livestock be forced indoors off a natural diet with sunshine and fresh air to be raised like battery hens? - The wildlife in these areas consist of foxes, badgers, small mammals, bats, deer and wild birds, these will all disappear/die without this natural habitat. - The local infrastructure, schools, nurserys, health centres, roads, drainage, police, ambulance, fire cews and public transport is already stretched to maximum capacity, will increasing these services be considered with all this additional pressure to meet demand? - On Bankside Lane in particular the access is already stretched beyond capacity, being only one car width at 3 points, with double-parked cars, steep hills and narrow pavements. Potentially another 200 cars up and down here on a daily basis would literally create havoc. Access off, single track, Todmorden Old Road is also practically impossible. - HS2.32 is an open area at the top of Bankside Lane which is enjoyed by residents of Bankside Lane and higher Stacksteads alike, and has been for many decades. There is also an abundance of wildlife there, it is also on the skyline, building on here would have a huge impact on the views for miles around.</p>		
1242	David	Greenhalgh	-	HS2.1, HS2.12, HS2.13, HS2.32	Object	<p>My objection is that Bankside lane is not capable of taking any more traffic and that extra housing with access onto this road will not only increase congestion even further on this already busy road, but will also be a potential safety hazard as there are already several narrow single car sections on this road, which have blind spots, due to housing and steepness of the road.</p>		
1267	Steven	Fielding	-		Object	<p>The access road of Bankside Lane is already conjested and way to narrow for cars to pass one another. I think it would be rediculous to build more houses leading to potentially another 200 cars having to use Bankside Lane. - -</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1270	Beverley	Walsh	-		Object	It is overpopulated now and the road was never meant to take heavy use of traffic. Tight narrow bends and doubled park cars. Pavements are narrow and not fit for families with buggies and the disabled using their disabled scooters. There already have been numerous accidents on this road. Access for emergency vehicles is already very difficult. - Wildlife will be destroyed foxes, deers and badger sets etc will disappear. More houses are unsustainable as we have very limited facilities in Bacup. E.g. Primary schools are oversubscribed. The road from Bacup to Rawtenstall will be permanently gridlocked.		
1271	Demi	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	I object to the plans to build houses on bankside lane for many reasons: - 1) Bankside lane is already congested - everyone already parks on the pavements and it's already quite difficult for gritters, fire engines and larger vehicles to get through. We do not need any more traffic added to this! As this will cause a huge amount of problems, not just for the residents but for the local council and the firebrigade. - 2) There are many narrow bends up Bankside lane therefore adding more cars would definitely be a health and safety issue with the only places left to park being near these bad bends causing collisions especially during the winter. - 3) The sites you are proposing to build on are are habitats of many different animals ranging from deer to foxes and badgers! These animals would lose their homes which would lead to them dying out in this area as they struggle to survive. We don't want to lose any more of our precious wild life which has lived there undisturbed for many years! - 4) Building on some of these sites would also mean cutting down trees and getting rid of the wonderful country side the valley prides itself in so dearly! We need to look after areas like these and not build houses on them. There are many sites way more suitable for new housing that will not cause damage to the environment in the same way - what about old buildings that are no longer used? Why do we not use these first, this would cause so much less damage to the country side! - Building more houses on bankside would not only mean finding more space for houses but also finding a second route up Bankside to allow for more traffic. Bankside lane does not have the space to do this! It would be almost impossible to do this without causing a huge amount of damage and a huge amount of time, effort and money that could be better spent! Overall I think that building up Bankside would be a very big mistake, one which can be avoided!		
1279	Stephen	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	1) Bankside lane is already congested . It has many narrow parts that will become dangerous if more cars use the lane. - 2). Emergency services would have trouble getting past extra parked cars. - 3) It would have an affect on the wildlife eg deer foxes badgers if the fields disappear .		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1291	Alan	Mickleburgh	-		Object	The local and area infrastructure in Rossendale, and Bacup in particular, is insufficient to support the proposed housing developments. Roads, Public Transport, Schools, Police, NHS Services (GP' s and Dentists) will all suffer a major impact from the proposed developments. I am particularly concerned about the proposals for the Bankside Lane area. - - - Bankside Lane has only one access and departure route, via Market Street. Access is particularly difficult at peak times. - - - There are four single lane sections on Bankside Lane which creates congestion problems at any time. - - - Many households have more than one vehicle, and with restricted availability off road parking, vehicles are often double parked on both sides of the road with two wheels on the footpath. - - - Even at non-peak times, larger vehicles have considerable difficulty negotiating Bankside (eg. Trade deliveries, Council and Emergency Services). - - - Pavements are narrow, particularly where vehicles are double parked, creating major problems for pedestrians and the disabled. - - - Drainage is already a concern, with the amount of water draining from the higher ground. If these developments are approved, the excess water will be unable to be absorbed by the surrounding land and will potentially lead to flooding.		The proposed developments need a major rethink. I am aware that these proposals are a result of Central Government policy, but insufficient thought has been given to the impact on local infrastructure, and too many of the planned developments involve the loss to the community of valuable 'greenfield' sites, rather than using existing 'brownfield' sites.
1296	Sharon	Mickleburgh	-		Object	The reasons for my objection are:- - 1. There is no reasonable access as there is only one road (Bankside Lane) for both in and out. - 2. There are 4 extremely narrow sections on Bankside Lane. In some cases it is only wide enough for one car. - 3. The footpath is extremely narrow for pedestrians to use without increasing the amount of both people and Cars. - 4. It is virtually impossible to get out of Bankside Lane onto Market Street at peak times due to the amount of traffic on the main road. - 5. Turning left from Market Street onto Bankside Lane is very difficult if there is already a car waiting to get out Of Bankside Lane into Market Street as the road entrance is very narrow there. - 6. Some of the houses on Bankside Lane already suffer from water draining down from the fields due to lack of sufficient drains without more houses being built. - 7. I am concerned about the proposed expansion of housing in Bacup as the increased population will cause Problems for NHS facilities (doctors and dentists), schools, roads, public transport and policing. - 8. The Green Areas must remain to protect the environment and the wildlife around us. There are also quite a Number of bats around this area and other species that need protecting		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1343	Jane	Jones	-	HS2.11, HS2.12, HS2.13 & HS2.32	Object	Development at these sites would attract higher volumes of traffic travelling along Bankside Lane over a more concentrated period of time during the busy morning and early evening periods. This road has limited capacity and the increased levels of traffic could lead to traffic congestion and highway safety issues in this area having a detrimental effect on road safety on Bankside Lane and the busy A681 Market Street junction. - - There are already problems with access for council refuse vehicles due to the parking of residents vehicles along both sides of a narrow road, this has led to the placing of warning notices by the council informing residents that access for emergency vehicles including snow ploughs and gritting trucks is impeded by the number of inconsiderately parked vehicles. - - The vehicular access and car parking arrangements for any new developments would have an unacceptable impact on existing residents in terms of noise and safety, creating a traffic hazard and generating an undue environmental impact, exacerbating existing parking problems and resulting in excessive levels of on-street parking which would adversely affect local residents and the efficiency and safety of the highway network. - The introduction of in excess of 140 new homes; each with an average of 2 – 3 cars per household would produce approximately 300 – 350 additional vehicles per day using Bankside Lane, a road which has single lane pinch point access due to the existing narrowing of the road at its steepest point; which has a gradient of approximately 17%. During the winter months; weather conditions of ice and/or snow constantly prevent 2 wheel drive vehicles from driving up this hill, and lead to accidents when drivers are unable to control vehicles whilst attempting to descend when snow and ice have made this route impassable. -		I am fully aware that there is a need for more housing across Bacup and the whole of Rossendale, but meeting these requirements and government targets for the building of new homes should not be the sole focus of the council. - Understanding the current issues within local residential areas such as limited access due to road lay out, road safety concerns especially when there is an marked increase in the number of vehicles joining the main road from a street with an obstructed view due to the existing buildings (Bank on A681, parking on double yellow lines) should be given the highest priority.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1352	Alicia	Campbell Astbury	-	HS2.13, HS2.32, HS2.11, HS2.12	Object	<p>I have many concerns about the area being developed further for houses. The access road via Bankside Lane is both steep and heavily congested with parked vehicles, with additional traffic there will be issues with passing places being available, as this is already an issue at peak times. - During winter months people at the top of the road leave their cars further down the street, if more cars were to do this the road would be inaccessible. - Bats are known to the area proposed, so how will the new development impact our local wildlife? - Will additional housing cause any issues with rain run off from paving over a large mass of land on top of a hill? Will it cause water-logging of neighbouring properties or any drainage issues? - Land proposed is alongside public right of ways, will new pathways be made available to the local people; children use these paths to get to the recreational ground, which is a safer route as the roads are hazardous with tight bends and lack of pavements on some sections or cars mounting the kerb on others making them inaccessible. - My main concern is the additional traffic on the road and possibly parked cars to emergency services being able to gain access through the street? Many homes on this stretch do not have a drive and the number of cars on the street is excessive and difficult to navigate. Also there are two sections where the road narrows significantly and one of these is steep with a blind corner, additional traffic will add to the danger. - Will extra traffic entering the street cause delays to the main highway as the road isn't wide enough to allow traffic to pass when turning right into Bankside close? - How easy is it for heavy goods vehicles to access the street, especially significant numbers for a development, will this cause delays to residents?</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1375	Margaret	Priestley	-		Object	<p>I have examined the plans and I know the sites well. I wish to object strongly to all the development of houses on or adjacent to Bankside Lane. - - The proposed siting of the developments is particularly ill-considered due to access, - Bankside Lane already has a high volume of traffic to the residential properties in the area. - - There is little pavement for pedestrians, the addition of extra traffic would create a safety hazard for them also. The pavements these days are a safety issue due to the amount of leaves from overhanging trees which the council no longer seem to cut back and maintain causing a buildup of slippery moss on the pavement surfaces. - Access is particularly hazardous in the winter months. The area is not always gritted, resulting in cars being abandoned along Bankside Lane as it becomes inaccessible. This leads to a knock-on effect resulting in access issues higher up Bankside Lane itself. - I therefore fail to see the advantage of building more houses in an already built up and inaccessible locations - In November 2013 due to the untreated surface I myself skidded into the wall just below the golf club during winter weather. - The other issue I would like to mention with Bacup itself< and forward thinking, is the lack of infrastructure with respect to banking. Two of the towns banks were closed last year with I think no objections from the council or at least no fight to keep them open that I am aware of. When the banks go people go out to other areas (e.g. Rawtenstall, Burnley, Rochdale, Bury) This will be the case with new residents, most of whom, if in employment, will be working out of the valley making Rossendale yet more of a commuter belt than it already is. Anyone travelling from Bacup via Rawtenstall or From Bacup to Rochdale can testify to this and know that anymore commuter traffic will be disadvantageous and effects all roads in the valley. People work outside the valley will conduct personal outside of Bacup.. - Therefore, I ask that Rossendale Borough Council refuse planning relating to the building of houses on Bankside Lane..</p>		<p>The redevelopment of the old cinema site on Burnley Road needs to be looked into, the building is currently in a dilapidated condition and will only become more of a danger. I can see this hanging on for years and eventually like Smiths Engineering in Whitworth having to be demolished probably at the councils expense under compulsory purchase!</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1429	Nina	Byers	-		Object	<p>1) There would be a minimum of 200 extra cars using Bankside Lane if these houses were to be built! This would cause major problems with traffic building up at peak times (morning, evening, beginning and end of school times) in both Bankside Lane and Market Street. That corner is particularly tight, especially if there is a car waiting to come out of Bankside Lane. Then imagine a queue of traffic in the narrow, single track areas of Bankside Lane (of which there are 4) and you can see that traffic could easily come to a standstill on Market Street! Sometimes it is very difficult to turn right onto Market Street if there is a lot of traffic. - - 2) There is only one way to access these proposed development sites, via Bankside Lane. There are 4 stretches of the road which are only wide enough for one car. These stretches of road also happen to be on the steepest part of the road with blind bends. In bad weather conditions and at peak times this already causes problems without any extra traffic . There are also several further stretches of road which are only wide enough to get a car through due to people who already live on Bankside Lane needing to park their cars on the road due to them not having off road parking available! - - 3) The pathways for pedestrians are very narrow and non-existent in some places too! For example, by Cookoo Hall the path is very narrow! This is also made worse by cars being forced to park partially on the path and bins being stored on the path as there is no sensible alternative due to many houses being built much higher than the road! This makes it difficult for all pedestrians but especially the disabled elderly and parents with prams and young children! - - 4) Surface water run off will cause problems. I live on Bankside Lane, in front of and below Animal Quackers. There is already a lot of water running down from the fields behind us into our garden, which becomes very waterlogged and completely unusable! Our house is also down a flight of stairs which during heavy rainfall resemble a waterfall. I know that some of my neighbours have experienced some flooding into their house as a result of this. If that land was built on then this surface water would increase! This could result in possible flooding due to insufficient drainage. - - 5) There are already problems with the sewers, certainly with my neighbours, several houses either side have regular blockages which need unblocking using rods. Where would the sewerage drain to from the new housing? Would they also run through the same pipes? - - 6) These are all areas of natural beauty and support a lot of wildlife! There are also a lot of bats in the area which are protected.</p>		<p>The infrastructure of the area would be compromised. - - There is no police station - Not enough schools, no high school - Only one doctors surgery in Bacup - Only one Supermarket - Public transport. - No bus route on Bankside Lane as too narrow and steep. - All roads leading out of Bacup are narrow, some are steep and extremely busy at peak times</p>

1544	Enid & Kenneth	Burke		SHLAA16076	Object	<p>We strongly object to the proposed plans to change previous Green Belt sites to building sites mainly on the narrowness and steepness of the pavements and roads. Presently the volume of traffic is overloaded because most households have 2 or more cars. Visitors to the Golf Club, Football Pitches and Petting Farm add to the problem, especially at weekends when the volume of cars and work vehicles doubles. Last winter the council gritting vehicles could now operate in parts because of parked cars/vans. We have also witnessed a number of near "misses" on the bad bend near to the Laurels Nursing Home.</p> <p>The use of outdoor space is essential for our grandchildren and children, to lose this is not acceptable.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1576	David	Thompson			Object	<p>I object to the proposed housing development sites referenced HS2:11, HS2:12, HS2:13 and HS2:32 listed in Chapter 1 (HS2) of the above plan. My concern is that the connectivity of each of these sites to essential facilities in Bacup Town Centre is unsuitable for the following reasons:</p> <p>There are only two routes from the sites to the Town centre, one of which is lodge lane and the other is Bankside lane.</p> <p>Lodge lane is to the South and East of the four sites, and is closed to motor vehicles as a through road. It has a very steep slope with an average gradient of 15% (1 in 7) and therefore does not comply with any national or regional planning guidance as being acceptable for use by pedestrians, the mobility impaired and cyclists. It would therefore be improper to suggest lodge lane as a route from the sites to Bacup Town Centre.</p> <p>This means that Bankside lane is the only acceptable access to the Town Centre for all highway users. However Bankside lane has a particularly steep section for a length of 242 metres between its junctions with Market Street and Maden Road and I believe it to be unsatisfactory as a means of access to the proposed housing developments as evidenced in the following disclosures attached to this letter:</p> <p>Disclosure 1.</p> <p>a. Non Compliance with the Lancashire County Council Code of Practice on Mobility , Inclusive Mobility' Section 3 Footways</p> <p>b. Non Compliance with the Lancashire County Council Transport and Design Guidance 'Creating Civilised Streets' Section 5.5 Connected Streets</p> <p>c. Non Compliance with the Department for Transport 'Manual For Streets' Section</p> <p>7.6 Visibility Requirements. (Note this section includes calculations that have safety implications for highway users and I request that it is submitted to LCC Highways Engineers for verification).</p> <p>Disclosure 2.</p> <p>Breach of the Rossendale Draft Local Plan Policies:</p> <p>ENV1 - High Quality Development in the Borough</p> <p>ENV2 - Heritage Assets.</p> <p>Disclosure 3.</p> <p>Prior refusal of a planning application for development off Bankside Lane.</p> <p>On the basis of the above submissions I request that the proposed housing sites HS2:11, HS2:12, HS2:13 and HS2:32 be removed from the Rossendale Draft Local Plan.</p> <p>Please see appendix for attachments</p>

1586	Adrian	Boyden			Object	Has a resident of Bankside Lane my concerns are of increase in traffic on this busy lane , more accident s and near misses especially on the blind bend . There are no other access routes for residents so to add more traffic is irresponsible.Also how do you propose to get wagons . Machinery .Etc to building sites ? Without causing chaos on a now fragile road .Shows the plans having been thought about properly .		
1588	Alison	Whittaker			Object	<p>I strongly object to these proposed plans to change areas,of previous Green Belt Sites,to building sites.The visual impact of the development will greatly effect my property,building work at the front of my property has already caused loss of existing views and is out of character in terms of its appearance. The proposed development would have a significant adverse impact on the character of the neighbourhood, the green spaces and rural views would be lost changing the landscape of a quiet rural area to an over populated housing estate. There would be significant loss of the open aspect of the current residential properties. The enjoyment of the current views, design and landscaping is an important residential amenity, and the loss of these features would have an adverse impact on the residential amenities of the existing properties.</p> <p>The new development would be out of keeping with the character and appearance of the existing properties adversely impacting on the character and appearance of the communityin particular the green spaces that is valued open space enjoyed by local residents. Furthermore there is a requirement to enhance the local environment including wildlife habitats and rural lands. Further housing development would result in overlooking, unacceptable high density, overshadowing and loss of natural light. Further over development would be overbearing and result in an adverse effect on the residential amenity of the current neighbourhood. Designs that are inappropriate in there context and fail to improve the character and quality of an area and the way it functions should not be approved.</p> <p>Unacceptable over development on Bankside lane would adversely affect highway safety and cause great problems for road users,the lane is just too narrow, steep with a blind bend that is already hazardous for road users. The current infrastructure is insufficient to support further increased vehicular access.Please can this concern be referred to qualified engineers for technical clarity.</p>

1620	Jennifer	Cudworth			Object	<p>I am writing to express my objection to the plans mentioned above.</p> <p>My primary cause for objection is on the grounds of safety. Any proposal to build more houses using Bankside Lane as vehicular access is quite frankly dangerous. Bankside Lane already suffers badly with traffic issues - access to the proposed sites is via a steep, narrow road which is reduced to a single-track for the vast majority by parked vehicles. There have been numerous traffic collisions on Bankside Lane due to poor visibility caused by parked vehicles, and "near misses" are almost a daily occurrence. (The problem is exacerbated in bad weather as the gritter encounters difficulties passing the many parked vehicles, meaning there are often delays in treating the road at the top end of Bankside Lane. In addition there are the emergency services to consider - just a few weeks ago, a fire engine was forced to undertake a dangerous manoeuvre to negotiate a corner that was obstructed by parked vehicles, endangering the crew and causing damage to a resident's grass verge).</p> <p>The proposed building works would add to this situation not only short- to medium-term while large construction vehicles access the site, but also long-term due to the increased number of private vehicles requiring daily access to homes. The element of danger to pedestrians, animals and motorists would be greater still if an access route were to be constructed from the Stacksteads end, as this would inevitably be used as a "rat run" for people travelling between Bacup and Stacksteads and wanting to avoid congestion at Lee Mill. Secondly, the fields currently occupied by Huttock Top Farm, and the area of rough land known locally as "Old Joey's", between the top end of Bankside Lane/Rooley View to one side and Osborne Terrace/Hill Crest to the other, are both habitat to a multitude of wildlife including deer and bats. Both areas are affected by the proposed plans. The destruction of natural landscape and the pollution (noise and environmental) brought about by the construction would drive out the wildlife that residents enjoy sharing our green spaces with. Furthermore, Bacup been cited by English Heritage as the best preserved cotton town in England. The construction of new homes would affect the general appearance of the area to the detriment of Bacup's Heritage status. Also to build on the land locally known as "Old Joey's" (see above) would impact upon the skyline of the Rossendale Valley.</p> <p>In view of the above I would urge you to reject the proposals and keep Bankside Lane a safe place for its residents and wildlife.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1636	Kevin	Woods			Object	<p>I am responding to the proposed local plan to develop 4 building sites (100 new houses) off the Bankside Lane area of Bacup. I strongly oppose the plans as the topography of area is not suitable for further development which increases traffic flow, and should be changed back to green belt site.</p> <p>The reason I consider the area to be unsuitable for this development is that the access via Bankside Lane is too narrow and too steep to support development which increases traffic flow. Bankside Lane is single track in parts with both single and dual road junctions joining. The volume of traffic with existing demands is already a significant risk to safety.</p> <p>Each year for the past 20 years living on Maden Road we have been cut off from vehicular transport/ access at least once, when snow falls. Not all residents are able/ willing to buy a 4-wheel drive vehicle and so many become stranded each year. The consequences of this extend beyond personal inconvenience to being unable to get to work, to access emergency services or to discharge caring responsibilities for elderly relatives. Sometimes, due to the hazard of abandoned vehicles, the lane becomes impassable even with a 4 wheel drive vehicle.</p> <p>Since I have lived on Maden Road (above Bankside Lane) myself and family members have been involved in several traffic incidents on the lane in which the topography (and often weather) have been a significant contributory factor. In 2007, my car was collided into on Bankside Lane by a car travelling from Dale Street, in an incident in which the driver misjudged the traffic travelling from four directions between double and single track roads. My car was badly damaged requiring over £2000 of repair work (not my liability), though fortunately I was unhurt. In 2015 during a sudden heavy snowfall, my son's car slid out of control on a descent of Maden Road, whilst avoiding a driver attempting 'a run' up the hill and other abandoned vehicles. His car was written off, though fortunately he was not seriously hurt.</p> <p>I strongly urge the council to reconsider its proposals and find the necessary development sites or solutions which do not involve any further increase in traffic through Bankside Lane. The area does not have the topography to support any developments which would further increase traffic flow.</p>		
1642	Jane	Trivett			Object	<p>If any one lives on Bankside Lane/Bacup and works for RBC they must surely know that the proposed new build sites make no sense at all. Local people know how steep the lane is and unless major road widening took place it will not work. Bankside Lane is totally unsuitable for any more traffic. The recent road resurfacing proved how difficult it is and the Highways people struggled to hastily finish the job even with road closures. Another 200 plus cars up the lane is ridiculous.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1656	K	Jeppesen			Object	<p>Having bern notified via social media about your proposals regarding the Bankside area in Bacup, I must strongly object to it.</p> <p>I am baffled that such an idea can be a serious one! A number of issues springs to mind, and are so obvious, that its hard to take this proposal serious. Firstly the situation about the traffical access to the higher part of Bankside Lane. Blind bend, steep incline/desent. Abnormally narrow footpaths,- or entirely non-existing footpaths, makes it high risk to use this part of the road as a pedestrian. Not to mention , having to ask your children to use them to catch their school bus or go to activities elsewhere.</p> <p>To my knowledge , we have only by luck ,not had any serious accidents with personal injuries, but there has been plenty of bumps and minor crashes, costing residents here extra expense. I would assume that a further 200 dwellings wil take with it, close to 200 more cars,- probaly 300 in my opinion, which would of course also mean considerable higher risk, using our road. I have not mentioned the roadconditions during wintermonths, when ice and snow , makes using Bankside Lane an absolute gamble.</p> <p>In these condotions, many cars are unable to get up the incline, although many "have a go",and therefore get stranded halfway up, abadoning their car, and soon the road looks like an unorganized car-park. And traffic coming downhill the opporsite way, often find it impossible to stop, or even stear due to the snow/ice.</p> <p>Further more, beeing able to stop at the junction with the busy Market Street at the bottom of the lane, is a hazardous gamble ,even more so. Personally, I have, on a couple of occasions "skated" right out onto Market Street, with only Lady Luck to look after me ! I have seen others do the same, and it can only be a question of time, before some major incident will occur.</p> <p>So it seems to me, that somebody in the council havent done their homework, and certainly not used Bankside Lane very often, because any increase in traffic here, is equivalent to asking for incidents/injuries to residents up here. I would think that the land in question, originally was graded "green field" for a reason !?</p> <p>Deer, fox and multiple othe wildlife, is seen here on a daily basis, the view over the valley too , improves our quality of life, and is a daily pleasure. We live in a nice and quiet part of Bacup, and have been looking forward to keep doing that, into our retirement ,- the older part of us anyway. Neighbouring estates of "affordable housing", as the PM is asking for, sounds to me, like housing for clientel, not nessecary with the same outlook on life values !</p> <p>All in all I'd wish you to reconsider these proposals, as they have clearly not been scrutified thoroughly, before they were published. Let the Rossendale council show , once and for all, that it takes its citizens safety and wellbeing</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
						<p>into account , when making these kind of plans. We have for years , constabty been "awarded" with council tax rates , that hardly were second to none,- unfortunately in the expensive end of the scale, but at the same time only seen cuts and poorer services in return. (swimmingpools, bin collections and household waste centres ring a bell?) Do the right thing, and reinstate green field areas to be what they should rightly be : green fields.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1660	Rachel	Greenhalgh			Object	<p>I would like to register my objection to the proposed changes to previous green belt sites to building sites in Bacup. Under the Draft Local Development Plan, there are plans to allocate building land for housing in the Bankside Lane area (site references HS2.1, HS2.12, HS2.13 & HS2.32). As a resident in the area (MadenRoad), I already know that Bankside Lane is not able to sustain the current levels of traffic and that to build the proposed potential 100 New homes would bring the road into crisis. As you are no doubt aware, Bankside Lane is very steep and narrow- at some points little more than single width. Add into this the fact that the narrowest points also have very poor visibility, meaning vehicles travelling in opposite directions frequently have to perform emergency stops to avoid a collision and often have to reverse to clear the way, creating a new hazard for other approaching drivers. I myself have been involved in such situations several times a week and have serious concerns about the increased risks presented by any proposed housing and the extra traffic they would create.</p> <p>As you are presumably aware, the pavements here are also very narrow and walking along them can be very hazardous as the passing cars often have to come very close to or even mount the pavement to avoid cars coming in the opposite direction. We have seen an increased volume of traffic already coming up the Lane to access the Maden playing fields and also more groups of families and children walking up to the football sessions there. I have huge concerns for their safety if the volume of traffic is significantly increased by new residential traffic too.</p> <p>My primary objection to the proposed plans are centred around the increased dangers of introducing more traffic to an already congested and very narrow access road, however I also believe that we should not be sacrificing our green belt land to provide housing. We are lucky to live in such a beautiful area and we should be doing all we can to protect and sustain the very features which attract people to our town. As we all know, Bacup has not seen the levels of regeneration and investment that some local towns have seen. Indeed the centre of town is currently underoccupied and full of empty buildings. Would our local plan not be better off considering how best to breathe life into these areas rather than eating into green belt land which should be left for all to enjoy and encourage a healthy lifestyle? there have been several studies published in recent years that highlight the importance of the natural world in combating the stresses of modern life and it's positive impact upon mental health. Surely this is a reason to protect our green belt land?</p> <p>Perhaps instead of building new housing around the edges of town, we could look at converting some of the empty commercial sites into apartments and low cost housing which would support those who really need to get onto the housing ladder. We have seen several large housing estates already built in Bacup, somebody which have struggled to sell all their housing stock. Do we</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	Further comment
						<p>need to introduce more? There are a large number of existing houses already for sale in the town and some of these have been on the market for some time. Surely building more new homes will only exacerbate this problem? We should be encouraging new people to come and live in our town, but who will want to buy in an area where the resale prospects are not attractive?</p> <p>I apologise for the length of this email but this is an issue I feel vey strongly about. I hope that you will give due consideration to my concerns, and I would appreciate a response from you to confirm the receipt of my objection.</p>	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1756	R	Prime			Object	<p>The above sites appertain to the bankside area of Bacup.</p> <p>Over the 50 years that we have lived at 48 Bankside Lane we have seen a huge rise in the amount of traffic using this lane from a mere handful of vehicles in the 1960s to hundreds more at the present time.</p> <p>Bankside Lane is a cul-de-sac and obviously all vehicles going up the lane have to come back by the same route.</p> <p>As well as private houses, there is an old peoples home, a golf club, an animal farm and a recreation ground.</p> <p>So there is a lot of extra traffic because of these business facilities plus ambulances, brewery wagons, horse and animal boxes, fire engines, taxis, delivery and post vans etc etc etc.</p> <p>There are times during day when, if you took a ride up here, you might only see a handful of parked cars, evenings and weekends it is a different story. Yesterday for instance (Friday) from our house I could see only 10 parked cars but today (Saturday) I counted 36 ad that is by just looking out of our front door. Goodness knows how many more are parked further along the lane. I know that there has been talk of connecting bankside lane to newchurch road. But that would be madness and create a "rat run". Don't add anymore traffic please, accidents on the lane are frequent when the first fall of snow comes.</p> <p>Cars try to ascend the hill, can't do and slide back into one another. Likewise on icy days the cars slide down and after end up crashing into the wall or each other.</p> <p>Here are a number of blind junctions namely:- princess street lord street dale street police station row junctions with bankside when going up or down the lane. Maden road onto bankside when going down to bacup.</p> <p>Bottlenecks: - St mary's vicarage and the opposite houses. Joy cottage and the mount Cuckoo hall and 24/26 bankside</p> <p>These areas especially the one at joy cottage and the mount where the gradient is very steep and narrow is exceptionally bad to negotiate at the best of times.</p> <p>My husband had a car accident a few years ago coming out of dale street where it is very difficult to see cars coming down the lane, fortunately it was not too bad.</p>

1776	Lew	Wright		SHLAA16076	Support	<p>We wish to add our support to the proposal allocate the area of land owned by Mr & Mrs X for residential development.</p> <p>The land has residential properties to the North and West boundaries and Market St to the East. The land is well situated for residential development. The land is almost surrounded by existing residential development. The gradient of the land is such that with careful landscaping any development will not be a prominent feature from the surrounding area. Access is via Bankside Lane, which in places is narrowed, the additional vehicle movements generated from a minor development will be negligible. There are good Public Transport links within Bacup Town Centre, which is within ten minutes' walk from the site. There are a number of public foot paths within close proximity to the site affording access to Market St. We have made a pre app application to your planning dept. on behalf of Mr & Mrs Kay which has received a favourable response.</p>		
1779	Andrew	Heathcote			Object	<p>I would like to oppose any planning application for any additional housing estates on Bankside lane in Bacup. The road can't handle any more traffic, and I believe that this would have a very negative impact on current house prices.</p>		
1790	David	Trivett			Object	<p>SHLAA16076 - Huttock Top Bacup. HS2.12 Greenfield Designated Greenlands. Urban Boundary. Currently Farmland, grassland, wooded area ,ménage and stables. Yield calculated 66 units. Access off Bankside Lane. Bankside Lane which is narrow and steep towards Bacup District Centre.</p> <p>The above proposed development has conflicting information about the calculated yield, site area and designation. The Policies Map shows the area marked HS2.12 with a yield calculated at 30 units with the balance of the site shown as proposed green infrastructure. This suggests the green infrastructure forms part of the flexible approach for the future maybe?</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
1813		Brewster		Huttock Top	Object	<p>We are objecting to the 4 proposed building sites on the Bankside lane area. We object to these plans on the grounds that the main Bankside lane road, which will have to be used to carry all the traffic for these proposed houses, is not adequate as the road is already struggling to accommodate the existing traffic.</p> <p>The stretch of road from Cuckoo Hall down past the church is very narrow, this will cause untold hazards with the volume of vehicles that are going to use the road when construction begins. Not to mention the extra permanent traffic that will be forced to use the road to access their homes. Any further volume of traffic is most certainly going to cause serious accidents and at the very worst, death.</p> <p>We have had an accident on this very stretch of road, so we talk from experience of how dangerous this stretch of road can be.</p> <p>When there is a funeral at the church the whole road is grid locked with cars being blocked in all directions, so with extra vehicles, this is going to make the grid lock even worse.</p> <p>We have a 20 miles per hour speed limit on Bankside lane, but no one seems to adhere to it and nobody seems to know who gives way to who! So, if locals don't know, do you think new residents will?</p> <p>What about when it snows? This stretch of road is absolutely treacherous. When a car is coming up the hill, and another is going down nobody dare stop, so it ends up with traffic both ways skidding all over the place and of course the whole road is blocked. Extra traffic is bound to cause more accidents and somewhere along the lines there WILL BE a death.</p> <p>The plans show that the majority of houses are four bedrooms, this means there will most likely be more than one car per household. So as the plans show, there are to be 200 homes meaning there will be a minimum of 400 hundred extra cars using Bankside Lane. Large parts of the road are only wide enough for one vehicle, and most existing residents can only park their cars on the road because they have no drive.</p> <p>Which brings us to the main point of discussion, Newchurch Road.</p> <p>We can be quite sure that should these houses be built the majority of buyers will be from outside the valley. This means they will be commuting to and from the valley to go to work, when we have ONE ROAD TO AND FROM RAWTENSTALL, to access the M66. This motorway is already chronically over congested as it is. WE HAVE ONE ROAD TO AND FROM BURNLEY, WE HAVE ONE ROAD TO AND FROM TODMORDEN, AND WE HAVE ONE ROAD TO AND FROM ROCHDALE.</p> <p>When we have to have work done on the stretch of road FROM BACUP TO RAWTENSTALL, our main commuting road, to the M66, the backup of traffic is absolutely horrendous with waiting times up to one hour. I doubt we could cope with extra traffic on our ONE ROAD THROUGH TO RAWTENSTALL.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.012	Further comment
						<p>So, the extra strain on our one main road is going to have an impact on the whole of the valley.</p> <p>Then we come to our amenities. Can our Health Centre cope with the extra work load? Are there even enough places in our schools?</p> <p>Then what about our green belt, we live in a beautiful valley, which the council should be trying to promote to tourists, instead of being hell bent on destroying this unique part of Lancashire.</p>		
1820	Kelly	Holt	Lancashire County Council		Object	<p>BANKSIDE LANE, BACUP - HS2:11, 12, 13 and 32 proposes to allocate land which could result in 137 new dwellings off Bankside Lane which is an unclassified road approximately 1.1km in length varying in width and gradient with several pinch points and heavy on-street parking. To the west of its junction with Thistle Street, Bankside Lane provides the sole access to circa 150 dwellings.</p> <p>The existing layout on Bankside Lane is broadly reflected on the 1845 historic map and would not be considered acceptable under the current standards. The land to the west of Bankside Lane is at a higher level than the road which results in high retaining structures and there are buildings on both sides of Bankside Lane at several points which abut the road with no footway provision. Where there is footway provision, the widths are sub-standard along most sections.</p> <p>There is little opportunity for improvement works to the current road layout within the extents of the adopted highway.</p> <p>The Highway Authority would seek a secondary / emergency access to be provided where more than 100 houses are proposed off a sole access such as Bankside Lane. Therefore any development land allocated off Bankside Lane should provide a secondary vehicle access point onto the highway network. The topography of the land presents difficulty in providing a suitable route and within the land that is proposed for allocation it appears unlikely.</p> <p>The Highway Authority has serious concerns about these sites and the ability to provide a safe and suitable access in accordance with the NPPF and adequate permeability for traffic distribution in accordance with Manual for Streets.</p> <p>HS 2.12 – The visibility at the site access and Bankside Lane cannot be achieved and there is insufficient road space to provide a suitable swept path for a large vehicle e.g refuse wagon. There is on-street parking present and the Highway Authority would not support the introduction of parking restrictions on Bankside Lane at this point as there are residents who have no alternative off-street parking provision.</p>

443	Jim	Leach			Object	Bankside Lane is already a hazardous road, access is frequently restricted to existing houses by car. There is existing a sign " Gritting Route, Problem access road " Further Housing and therefore Traffic would only add to the existing problems A Domestic Fire would,at present,be difficult for a Fire Engine to attend during the daytime, - at night ,when everyone is at home it would be impossible These areas should be returned to Green Belt status		Not at Present
486	Susan	Ormerod			Object	<p>All of the above sites are in the Bankside Lane area of Bacup.</p> <p>All are Greenfield Sites and should be changed back to this status without delay.</p> <p>All of these sites are currently used by the local people and their children, in one form or another, as well as the local deer herds (of which there are two), foxes, badgers and a host of other wildlife, including the birds of prey from the Stacksteads area.</p> <p>Some of these sites are owned by local farmers to breed and train horses.</p> <p>The vehicle activity on Bankside, where there are three serious hazards on the approach from the town centre due to narrow roads and a blind bend on a steep incline, is already a danger with the local traffic. These three narrow sections are all within a 20 metre stretch and will not allow even two small vehicles to pass. This hazard has been increased by the "home delivery" method of purchasing goods for the already existing occupants and further population increases would inevitably mean increases of delivery wagons and vans.</p> <p>Any changes of road from the Stacksteads area would provide a "rat run" between the town centre and Stacksteads and any road up from an improved "Lodge Lane" would be a worse hazard than Bankside is at the moment.</p> <p>Almost certainly impassible in winter.</p> <p>The current parking situation on Bankside Lane is already causing concern as shown by the council notices which appeared some time ago. Access for the emergency services has already caused hold ups on five occasions know to myself during the past twelve months.</p> <p>In conclusion, these plans, if passed, will implement a serious deterioration in living standards for all existing occupants of the Bankside Lane area and an increased health risk factor for all who use the lane either in a vehicle or as a pedestrian.</p>

487	Lorna Lucy	Doherty			Object	<p>We live at top end of Bankside Lane. We object most strongly to the proposed 4 new building sites off Bankside Lane. The beginning of Bankside Lane is extremely narrow with room for just one car with no possibilities to widen and very steep, and with no vision round a blind corner. The increase in traffic is definitely not an option due to danger particularly in winter with snow and ice.</p> <p>Also, I believe there is a proposal for Bankside Lane to be continued at the upper end which is now a dead end. This is also totally unacceptable due to the above reasons.</p>

488	Helen	Koczur			Object	<p>To even consider planning further homes on any part of Bankside Lane, Bacup is totally ludicrous.</p> <p>The lower part of Bankside Lane is exceptionally steep and narrow in 2 sections and cannot cope with any further traffic. On days that the Golf Club holds events, or football teams are playing on the recreation ground, access becomes impossible. In bad weather, the gradient together with the width restrictions leads to chaos and accidents, of which I have not only witnessed but suffered in the past. There is also limited pedestrian access at these dangerous sections. The route CANNOT cope with any further traffic. As these access problems are at the lower part of Bankside Lane ANY future housing expansion at any point further up the lane would affect this section.</p> <p>We recently had road improvement work which proved access problems. I dread to think what would happen to emergency services under these conditions as access will not be easy.</p> <p>The difficult access means that houses do not sell here, so why on earth build more? I do not see an increase in employment opportunities in the area so the occupants of any new build would travel out of the area for work. This would mean that the volume of vehicles would increase to a dangerous level. If some of the build is required to be for social housing, access for young families with prams and elderly would be impossible without transport.</p> <p>There has been a development of houses over in Weir. All have normal road access, not single track as on Bankside Lane, yet in bad weather the access problems cause the main Bacup to Burnley Road to be severely restricted with abandoned vehicles. Putting further houses off Bankside Lane would also cause a similar problem to the centre of Bacup.</p>

489	Denise	Duffy			Object	<p>I have lived in the Bankside Lane area some 47 years, in effect all of my adult life. The journeys up and down the Lane have become increasingly hazardous and dangerous and I am appalled that RBC is considering allocating 4 locations for new housing.</p> <p>> For a start the blind narrow bend around Ivy Cottage has always been hazardous and the increase in car numbers has made it doubly so over the years. Further traffic will only serve to exacerbate the conditions we experience daily.</p> <p>> Parking and especially double parking along the Lane and even on pavements has increased significantly. You only have to ask your own drivers (bins, gritting) of the difficulties they regularly face. Emergency services , especially Fire Engines, would also confirm their difficulties along the Lane.</p> <p>> As most home owners frequently have more than one car in their families, sometimes up to four cars once adult children start driving, the addition of garages does little to ease the situation. Apart from the fact that garages are often storage places rather than car shelters.</p> <p>> Although I have personally not been involved in an accident, accidents have happened on numerous occasions. The steepness of the lower Lane, especially in winter conditions, calls for careful negotiation. Again, additional traffic will exacerbate the residents safety concerns.</p> <p>Thank you in anticipation for forwarding this to whom ever it concerns</p>		
503		McKeown			Object	<p>I am against the proposed new housing off Bankside Lane as I am worried about road safety with poor visibility of oncoming traffic in areas and speeding vehicles. Also there would be gridlock at the bottom of Bankside Lane if there is to be additional housing because there are not two lanes of traffic which relies on drivers good faith on many occasions as you travel up the hill (there are many difficulties with this now).</p> <p>I am a resident Meadow Way. At present I have increasing issues with run off of rain water which already requires bailing out of water in winter. The new housing area, no longer being fields to absorb the rain water, will impact further on the massive drainage problem I am having to cope with.</p> <p>I would be very keen to know more about sewage system and how and which route the new system will follow as I have sewage pipe work under my side garden which serves about 24 houses.</p> <p>I am concerned about trucks during the building works and the additional dirt on the roads creating slippery areas for vehicles, damage to the road, and being additionally busy leading to increased chance of accidents.</p>

534	Romanii	Fitton	-		Object	I most certainly want to object to anymore houses being built on or around bankside lane in bacup. The street is congested with cars and wouldn't be able to cope with more vehicles coming up and down it every day. We also love the little bit of green land we have left and don't want it spoiled by any more houses being built.		-
539	Simon	Midgley	-	HS2.1, HS2.12, HS2.14, HS2.32	Object	This site would be accessed from Bankside Lane which is already difficult to navigate at peak traffic periods: it is narrow and is accessed from Market Street via a very steep and narrow hill section. In normal conditions this needs extreme care when navigating, in winter snow and ice this access is dangerous and often impassable. Additional traffic generated by housing on these sites (HS2.1, HS2.12, HS2.14, HS2.32) would make a dangerous situation even worse. Cars are parked on both side of Bankside Lane narrowing it to one car's width in many sections: there is nowhere else for the cars to park. - - Development on sites HS2.1, HS2.12, HS2.14, HS2.32 would also be "skyline" development which residents were told would not be permitted. This would destroy the green character and visual amenity of this part of Bacup - forever. - - Currently farmland, these sites soak up precipitation helping to reduce flood risk which development would increase.		Bankside Lane is an inappropriate area for housing development for the reasons already outlined above. It is important that we do not lose this green space on the Valley side.
540	BRETT	HARRIS	-		Object	BANKSIDE LANE CAN NOT SUPPORT MORE TRAFFIC IT IS ALREADY STRUGGLING WITH THE AMOUNT OF TRAFFIC.		-
543	Thomas	Hammant	-		Object	Additional Housing off Bankside Lane would not be appropriate for a number of reasons. - 1. Road Safety - Bankside Lane is already an overpopulated route, with a large number of houses subject to a single route up to the housing, with a particularly narrow part of road at the lower end of Bankside Lane. I have personally had a car accident at this point, where a car scraped along my car and then drove off, causing damage. The road is not wide enough here for 2 cars to pass. - 2. Parking - The access route up to the back of Huttock farm is currently not a suitable access road, an additional 40 houses as proposed in this particular development, plus the additional areas on Bankside Lane could result in 200 additional cars on an already overpopulated route. - 3. The Green Belt land that is currently occupied by this and all the proposed areas of Bankside Lane, is critical to the area and needs to be maintained for character and wellbeing of the local area. These areas must be retained as Greenbelt as removing this would result in reduction in quality of life. -		Whilst I understand the need to balance new housing in the area, building on land which is currently used as both a farm and/or public access land is against all previous council policies and should not be entered into lightly. -

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
545	Lisa	Hartley	-		Object	Greenfield site and should remain as such - full of wildlife e.g. 2 deer herds, foxes, badgers and birds of prey. Landowners train and breed horses on this land. - Bankside already extremely congested with traffic- not enough parking facilities now - council have had to put notices up asking people to park more consideratly as emergency services (fire engines) and council services (gritters) have been unable to pass through. - Bankside has 3 very narrow points where only one vehicle can pass at once and these areas are extremely close together in proximity incorporating blind bends as well - more houses would cause more cars causing chaos and accidents. Any through road to stacksteads that might be made would lead to bankside being used as a racing track for cars to pass through from stacksteads trying to avoid the busy main road! This in itself would be extremely dangerous as more houses Lead to more people living on bankside -probably children - resulting in more road traffic accidents and fatalities! We have enough at the moment we don't need anymore. - It would be a nightmare waiting to happen. - Building houses would cause further chaos with wagons attempting to make their way through when there is so little room - home shopping vehicles struggle at moment and are sometimes unable to gain access all the way across bankside! -		Please re think your plans as they will have very serious consequences for both the public and wildlife of bankside!

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
555	Alison	Driver	-		Object	<p>There has been no assessment of flood risk at this site from surface water. The risk is significant. In 2012 surface water flooding flooded the house that I live in. I have just accessed flood resilience money and contributed significant personal financial resources to installing all manner of drainage to most effectively deal with the dramatic water ingress onto my property. The surface water assessment is reference SFRA10 this confirms that this area is low risk. I assume this has been a perfunctory desk based assessment carried out without the benefit of a site survey? - Issues that you must consider - 1. there is only one land drain off the hill into the surface water drain on Bankside Lane. That drain runs under my property. - 2. there is a culvert further up the hill above my house. The water from this culvert goes into the land drain which runs under my property. This drain cannot cope with the volume of surface water run off that the geography creates. This causes annual flooding at the front of my property caused by water backing up from the surface drain. United Utilities have confirmed that the cause of this issue is that it is a 6" drain connection into the surface water drain into the road. The maximum diameter of the drain leaving the water chamber at the top of my front steps can only be 6". The force of the water is too great, it fills the chamber and cascades down my steps. I can provide video evidence if required. - In my examination of the evidence presented in the local plan it has been confirmed to me by an officer of the Council that no assessment of sewerage capacity and management has yet been undertaken. Simple physics suggests that sewerage from 40+ homes cannot flow uphill. How will this issue be dealt with when the area lower down the slope than the new houses is existing privately owned property that would prevent access to the main sewers on Bankside Lane. - I conclude, therefore, that identification of site HS213 is based on inaccurate, incomplete data and that identification of this site for housing has not been thoroughly evaluated.</p> <p>Reviewing the evidence for this area I saw no assessment of impact on the local bat population. I believe that there are at least two species of bat in the vicinity, although I am not able to be more certain. I believe that they roost locally in the trees</p>		
557	michael	hudson	-		Object	<p>first the bankside lane cannot support any more traffic its a 20 mph zone but traffic goes a lot faster,the road floods a lot. most of that from old newtownroad waters running all the time.the inferstructure cannot cope with any more houses or veicles your concerned resident [...].</p>		i think there is plenty of brown sites around this area that could be used.and empty proerties around not being used.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
558	Terry	Nightingale	-		Object	<p>I wish to object to the proposals as follows - - 1. lack of suitable access to to the proposed sites .There is no suitable access to any of these sites with all traffic having to access and exit onto Bankside Lane (see also point 4) - - 2. risk of flooding to properties on Bankside Lane if housing built on green field site to rear. During periods of wet weather rainwater cannot now drain away and as such runs down through these properties gardens onto Bankside lane . increased building will further increase the risk of flooding for these properties - - 3. in addition to the flood risk there will be the increased sewerage demands onto the existing sewerage system on Bankside Lane /Close - - 4. A huge increase in vehicular traffic on an already overcrowded one way in and out Lane . - during winter months lack of available parking / inconsiderate parking on lower Bankside Lane regularly prevents LCC Gritters from being able to access this area . An increase in housing will inevitably bring increased fire risk . - - 5. There will be an environmental impact on wioldlife in the area . Land in the area is frequented by deer and many other types of wildlife . -</p>		
581	B	Woodrup			Object	<p>We are writing to object to the proposed plans to change areas of previous green belt sites to building sites of potentially 100 new houses. These are our concerns.</p> <p>The bottom of Bankside Lane has three bottle necks very steep and narrow and a bad bend only room for one car, a very narrow pavement on one side. Children will be walking down and up to get to school. The school run will be dangerous the road is already overloaded. In winter people try to park at the bottom of the lane in the morning, ready to go to work, because the road is always gritted. The road is sometimes so icy. It's frightening to drive down, as you could easily crash intot the wall or another vehicle parked or moving. I dread to think what could happen with more pedestrians (children).</p> <p>I am also concerned about the fire engines and ambulances and gritter trying to drive up and over bankside lane, especially after 7PM when most residents are home and there vehicles are all parked on the roadside's and pavements. This is a concern now. It's going to be really bad if another 100 houses are to be built. Most households have two cars.</p> <p>What about our wildlife. Bats, hedgehogs, deer, rabbits, badgers, toads and frogs.</p> <p>What about our beautiful countryside and outdoor spaces that we and our children and grandchildren really enjoy.</p> <p>We hope you seriously consider our concersn and objections.</p> <p>It has been mentioned to me that previously planning to build houses was turned down by the ministry of transport. Because of the bottlenecks at the bottom of bankside lane.</p> <p>There's also the question of policing all there extra residents and homes.</p>

592	Jean	Peter Hannan			Object	I am submitting our opposition to the proposed building plans within the Bankside Lane area. Bankside Lane is already overloaded and congested with motor vehicles and we feel that added traffic will cause untold problems. Inadequate parking facilities already add to this problem and we feel very strongly that the above proposals will potentially cause accidents and traffic delays.		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
608	A J	Doherty			Object	<p>Email received 29/09/2017: Dear Sirs I attended the road show at Futures Park on 21st September and saw the four sites you proposed for building upon. I object most strongly to all of them. Bankside Lane has a very narrow access from A 681 with room for one car only at the turning. A very steep incline for some yards and then at Dale Street the road narrows even more, again with room for one car only. The incline is even steeper. Near the end, there is a treacherous incline and turn. Parked cars line the whole of Bankside Lane already. In winter, in spite of efficient gritting by the Council, snow and ice can stop traffic. If the proposed building takes place, In the short term, many heavy vehicles would create chaos to our local traffic. Long term, the traffic would double making access a nightmare. I commend the services of Rossendale Council for their efficient rubbish collection and gritting in winter. I am sure they will tell you how difficult it is already to access Bankside Lane. In the case of an emergency - ambulance or fire - we would be put at great risk of delays. Perhaps we could call a helicopter...</p> <p>Email received 30/09/2017: Bankside Lane Bacup proposed building sites I attended the road show on 21st September 2017 at Futures Park, Bacup I object to any of the proposed building sites because Access is extremely restricted. The entrance to Bankside Lane from A 681 is very narrow and cannot be widened. The road is very steep. It continues between a house to the left and high bank to right leaving room for just one vehicle round a blind bend. The road here is also very steep and cannot be widened. Near the end of Bankside Lane there is another very steep incline, round two corners. The whole of Bankside Lane is congested with parked vehicles. If the proposed building takes place, access will be a nightmare. Already it is amazing that local authority vehicles - refuse collection and gritting in winter - manage so efficiently, but it would be almost impossible to continue were traffic to double.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
						<p>Winter snow and ice make the road dangerous and sometimes impassable. In the short term: probably over several years, heavy vehicles would block access.</p> <p>In the long term: four building sites would probably increase traffic to double what it is now.</p> <p>Ambulance , Fire Services and Police must have easy access and these would be put at risk.</p> <p>What do you suggest? Hire a helicopter?</p> <p>Lastly, you are intending to build on virgin moorland, destroying forever the natural beauty and wildlife it supports.</p>		
611	Christine	Hudson			Object	<p>I am writing in regard to the building of 183 houses in all off Bankside Lane. I drive up and down Bankside Lane most days (week and weekend) and it does get very congested at times with lorries and cars, the lane is not very wide and people who live here have to park both sides of the lane which only leaves enough space to get through.</p> <p>The very narrow park of Bankside Lane, as you go up the hill leaves only enough space for single traffic. A lot of people get very frustrated and angry putting it mildly. People forget it is a 20 mile limit so there is often a near miss.</p> <p>If the houses are going to be built 183 in all they will all have to use Bankside, so that means there will be an extra 30 cars. There would be heavy lorries and vans whilst they are being built. Most households are 2 car families hence 380 cars extra.</p> <p>Drainage</p> <p>When we have heavy rainfalls which is often. We get a lot of water coming down from old newchurch road and onto the lane. In the last 5 years we have had flash flooding.</p> <p>One day we were sitting in our front lounge and our wheelie bins were floating about in the front garden. We opened our garage doors front and back and it was like a river running down the garden. All our plants were lost as they were in a pile of mud at the bottom of the garden.</p> <p>If these houses are going to be built, there will have to be better drainage. Also we have some lovely open green spaces around Bacup, that we all enjoy and cherish.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
615	Elaine	Garrard			Object	<p>I wish to object to the proposed housing development sites referenced HS1.11, HS2.12, HS2.13 and HS2.32 which are listed in the housing allocations section of the above plan.</p> <p>The reason for my objection is that vehicles travelling to Bacup Town Centre from each of these sites will need to use Bankside Lane. This will add to the existing traffic which already presents a significant safety hazard for me personally at the steep and narrow section between its junctions with Maden Road and Market Street.</p> <p>I am disabled and have to travel to Bacup from my house via Bankside Lane either by car or whenever possible by mobility scooter. However, because the width of the pavement is very narrow I have to drive my scooter on the roadway and this means choosing the times of my journeys carefully to avoid peak congestion when I would be dangerous for me to use the road. In particular there are two sections of Bankside Lane which narrow to a single lane and where I cannot take evasive action if a hazard incident occurs. I consider therefore that by allowing additional developments along Bankside Lane and hence additional traffic hazards, the council will discriminate unfairly against me and also other disabled road users.</p> <p>On this basis I ask you to remove the above housing sites from the Local Plan unless the pavement or road widths can be improved to an acceptable standard.</p> <p>I attach a photograph which illustrates the difficulties.</p>		
621	David	Carey	-		Object	<p>Bankside Lane is a cul de sac which already has a lot of traffic going up and down, and parking is on road for the most part, making it very difficult bearing in mind the amount of people who already live on bankside lane, to pass. To add an extra 100 houses and the additional traffic this would cause would make it intolerable for existing house owners. - The added pressure of extra traffic would also affect our children, as there is no place on Bankside Lane to play bar on small play area, and for the most part children ride their bikes and play in front of their houses, this would be an additional safety risk. - It would also ruin the countryside feel we have and make it impossible to walk our dogs as you are planning on taking all our recreational grounds from us. - In the winter we have a lot of bad weather and the gritter's find it hard to get up and grit the Lane, it will be worse with the amount of traffic added. - Again no thought has gone into the additional traffic and the impact on the people living on bankside Lane. - - I STRONGLY OBJECT TO THIS PROPOSAL!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! - -</p>		Not at this time

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
648	Robert	Ormerod	-		Object	<p>These four sites are all Greenfield sites. After the council has done a good job at improving this type of site in Bacup it would be absurd to destroy the fields which complement all the wooded areas of our town. The countryside of Rossendale looks bad enough with all the wind farms without destroying the remaining countryside of Rossendale. Our fields and woods are just returning to being used by the local wildlife and wildlife needs open spaces as well as enclosed spaces to live and prosper. - The traffic on Bankside is already becoming dangerous and unacceptable with the one narrow road and the increases of traffic. Nearly all residents now have more than one vehicle and delivery traffic, usually large vans or wagons, have increased tenfold whilst the road has been left to deteriorate. The slow signs, road centre signs and markings are now almost completely gone and the road, which we were all told was due for replacement surfacing was actually patched up, once again, and still has many holes, dips and bumps. This is especially on the blind steep bend from the town centre. Unless the access situation is addressed the many unreported non injury collisions will soon become serious injuries or fatalities. -</p>		Please take these plans away from from the overcrowded area

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
661	CA and VJ	Jennings	Home Owner	HS2.32	Object	<p>I am contesting these housing developments on several grounds. - - My issues and concerns will be submitted, in writing by the closing date of 9th October 2017.</p> <p>Letter received 06/10/2017:</p> <p>The statement "Improving the lives of people in the Borough" is central to the Borough's current "mantra" regarding their fundamental philosophy and how it is applied in all Departments, and in all the things that they do. However, I feel that some of the current proposals as outlined in the above DLP could fall far short of the Council's altruistic intentions.</p> <p>These are our concerns in respect of the Fernhill Crescent, Fernhill Drive and Bankside Lane development proposals:-</p> <ul style="list-style-type: none"> • Conservation - there is an extensive line of "mixed" trees which decorate the hillside from the end of Bankside Lane above Fernhill Crescent and Osborne Terrace. As far as I understand it, we all have a shared commitment to protect and preserve trees and the landscapes on which they reside. From the above plans, it seems that there is the potential for the removal of some of this tree-line on site HS2.32. This would have a huge and negative impact on the aesthetic outlook onto that hillside, and the potential for land slip, soil erosion, water-runoff and flooding on lower levels • Protecting the Environment - there are many issues here that would negatively affect several aspects of the local environment. Some of which resulting from over-capacity and over-crowding caused by the over-expansion in this area by these proposed developments (particularly along Bankside Lane) • Preserving the local Character - the area around an incorporating site HS2.32 is particularly attractive (especially to the West of Bankside lane) and is an asset to the local area and its residents. It offers countryside walks along heritage sites and long established pathways (ideal for walkers, dog-owners, explorers in general and "kids" of all ages) • Infrastructure - this aspect has never been something to celebrate in the Rossendale Valley area: mostly due to the uncompromising geography of the area rather than the incompetence of the local authorities. However, focusing on one point only, transport through the Valley is often difficult, and sometimes almost impossible at certain times of the day. Therefore, the addition of around 200 units along Bankside Lane would severely impact on both movement and parking. AND, the thought of possibly an additional 350 vehicles exiting onto the Bacup/Rawtenstall road and heading through the valley, doesn't bare thinking about!! AND, what about the winter if it's like the Fernhill area, some of it, or all of it, will not be gritted!! • Impact - in my opinion, the impact from these proposals would be many and 		To be submitted before 9th October 2017.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
						<p>wide ranging, but some would militate against the "improvement of lives"</p> <ul style="list-style-type: none"> • Preservation of Wild-life Habitats - the treed areas and adjacent open fields and moorland, are homes for thriving wild-life. In addition to the usual populations of wildlife, we have seen deer, foxes, squirrels, birds of prey and colonies of bats. The retention of range of wild-life would be threatened by the proposed invasion of their "space" • Ecological/Biological Considerations - these extensive developments could severely compromise the 'health', stability and integrity of the land, its trees; also its top-soil and sub-soil and the life forms that inhabit them • Local Heritage Preservation - there are some historical mule tracks, bridal paths & walkways and access routes into Yorkshire in this area, and we have a duty to protect and preserve them • Land Integrity - we have been aware for many years that the land above part of Fernhill Crescent has been subject to land-slip over the years. In fact, we were told by an authoritative figure that the extent of the problem had been measured over time. This weakness in the land caused our builder to reinforce the retaining walls in the back gardens of Nos 22, 24 and 26. Indeed, the retaining wall at No 26 actually collapsed. <p>Interestingly, the field behind these and other FC properties seems to show evidence of land-slip, whereas the adjacent wooded field seems not to suffer this problem</p> <ul style="list-style-type: none"> • Aesthetic Balance - given the attractiveness (in all respects) of this residential area, we would suggest that the proposed plans could severely impact upon the "wholesomeness" of this area, and have a negative effect upon the valuation of properties. Which would be, at least, unfair!!! • Practicality and Compatibility - in conclusion, and looking at just one aspect, when we factor-in access roads, traffic congestion and general disruption over time, and deterioration in the quality of people's lives, is it appropriate or acceptable to further pursue the Fernhill proposals?!? <p>Finally, who is it in the best interests of</p>		
667	Helen	Phythian	N.A.	HS2.11,HS2.12,H Object S2.13 and HS2.32		<p>I wish to object on the grounds that the proposed 100 houses will have at least two cars for each dwelling, this will mean a daily increase of journeys by at least four hundred trips on what is, in two places on Bankside Lane a single track road. - If the developers were to continue the road through to Stacksteads prior to start of the proposed development which would give an option to all residents, then maybe the plans would be viable. At the moment if Bankside Lane is left as is, the resulting traffic jams would increase the risks of accidents and also increase pollution,(drivers trying to pass the two single lane place , one of which is a blind bend as well as single lane, would be revving their cars to restart on an exceptionally steep hill).</p>		<p>overall I understand that the Government is laying down numbers for each area, instead of cramming in houses in every available green space left in Rossendale would it not be better to take a flat area of land and build a new village with all required facilities</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
679	leslie	hargreaves	-	h52.11.12.13. andh52.32	Object	Bankside lane is already completely saturated with cars having to park on the pavements and at times heavy commercial cannot get through ie road gritters and refuse vehicles.This is worse when vehicle that normally park on maden road have to park on bankside lane due to winter conditions i.e. ice and snow. Approximately 50 years ago excavation was started for house building was started on the two fields between lodge land and so called bonks area which was stopped because the area in what they call shifting sand. Acces to bankisde lane is tottally in adequate and I totally object to this proposal as we already have our share of accidents on this road		-
714	Marie	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	1) Bankside Lane is already very busy. There's already too many cars going up, down and along Bankside. Adding another 100 or more houses and therefore cars will just add to the congestion. 2) Bankside Lane has tight and narrow bends. Add more traffic to the mix and there will easily be some serious accidents especially in the winter when it snows. 3) Vehicles are already parking on pavements to allow other cars to get past. In case of an emergency (fire or ambulance) the emergency vehicles would already have trouble getting to the destination. Adding those extra cars would make it impossible. The gritter has problems now! 4) The proposed land is home to lots of wildlife including deer, badgers and foxes. Why should we disrupt their habitat? Where would they go? It's not fair on them when they cannot speak up for themselves. 5) 50 years ago they evacuated Bankside because the field was on shifting sands. 6) the local schools are already full, getting a doctors appointment is already difficult without getting extra residents and the same with the dentists. The proposed building seems unrealistic, unreasonable and unsustainable. -		I thought the idea was to build houses on brown sites not green sites. There's plenty of unused, rundown, empty, derelict properties in and around bacup, why not use them? Why take our countryside when there's perfectly good other land to use. Don't ruin it for future generations.
715	Jennifer	Hargreaves	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	Conversion on Bankside at moment, in the snow when vehicles can't get up the Lane this is what happens. The residents who live on Maiden Road and Rode Street occupy both sides of Bankside. - Ordinarily care are parked on both sides of the Lane a lot on pavements so that ambulances, fire engines can get through! - The gritter has problems as well the Council even put a sign up!! - - Loved on Bankside 52 years, all my married life , and about 50 years ago they tried excavating and stopped because of shifting sand. - - There isn't the infrastructure to accommodate this development as the road down the valley to Rawtenstall , and the road to Rochdale are a nightmare at peak times! - - Schools are full. - - Doctor's appointments are very difficult as it is without extra residents. - - I am completely against this proposal.		Thought the idea Jake Berry agreed to was to build on Brown Sites not Green sites. - - - There are plenty of derelict, empty properties in this area without taking our countryside from us!!! - - I'm thinking of my children and grandchildren.

718	Joanne	Leyland	-	HS2.11 HS2.13	HS2.12 HS2.32	Object	I've lived on bankside lane for 20 years and I'm strongly objecting for the planning proposals of houses being built it's already overflowing with cars as most my neighbours and myself have 2 or 3 cars each and every one falls out all the time over parking as it is now so for more familys to be moving will just cause more problems, the roads are to narrow in many places it really will not work. Over the years I've lived here my 2 daughter's along with there friends who also live on bankside lane have grown up playing on the lane and it's so dangerous with the amount of cars going up and down it's an accident waiting to happen	It's just not acepticable to be building more houses with only a narrow road leading up to bankside lane and an average of 200 extra cars it will be an awful place to live and I love living here
729	Stanley	Horsfall				Object	Email received 30/09/2017: I would like to protest again at some of the the plan for bankside lane Email received 02/10/2017: I want to oppose the plan as the traffic on bankside is already congested	
759	Martin	Stansfield	-			Object	The width of the roads and the bends on Bankside Lane are already an accident to happen and cant support any oncrease in traffic,	have the same objection to the other 3 sites on bankside lane
769	Trevor	Bartram				Object	Access to all of the above sites is via Bankside Lane which is struggling to cope with the amount of traffic now using it. Another 150 houses, as proposed, would mean potentially a further 300 vehicles, which would add to an already congested road, there being only one way in and out of the town. - - With regard to the whole of Bacup a house building project of this scale will bring problems with Primary Schools, which are already full, doctors and roads. -	-
770	Jacqueline	Stansfield	-			Object	The road is too narrow and bendy for extra traffic. Near misses everyday sooner or later there will be a serious accident.	I do not think any of the other sites should be built on bankside lane for the same reason.
774	Stanley	Horsfall	-			Object	Bankside lane is already congested with traffic and and cannot take the extra that the plan would cause	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
785	Robert	Astbury	-		Object	<p>Bankside Lane does not have a suitable road to support the additional through-traffic created by additional housing, there are several narrow parts of the road on steep inclines that do not allow two way traffic and these are heavily congested at peak times. Additional housing on Bankside lane (and the connecting side roads) will make access very difficult and impede the access for emergency vehicles. when large vehicles such as lorry's or bin men are on this road; you are unable to pass them and it is difficult to find a place to park for them to pass you, additional housing will only further amplify these access problems. problems will also occur during winter months when some roads are inaccessible due to snow and normally residents park on the lower roads for safety, this will be more dangerous due to increased vehicles needing to do the same with no additional flat parking spaces provided. The development will get rid of a thriving petting farm which brings in much needed tourism to Bacup. local town development is in dire need of renovation and adding more houses will not improve the local community and will only add more strain to local services.</p>	-

906	Graham	Smyth	-		Object	<p>Grounds for objection as follows: - - 1. Access: Bankside Lane is narrow, winding & steep with two blind bends, and already heavily used by vehicles. The bends are dangerous, the more so in winter, and such dangers would grow with any increase in traffic. Additionally there are already access problems for larger vehicles (eg. gritter lorries, emergency services) on Bankside Lane because of its narrow width, compounded by on-street parking on both sides (many houses - notably terraces - have nowhere else to park); again the problem would be compounded by more vehicles using the Lane. Access for construction traffic would also be problematic. Opening access from the other end would not be a solution - creating another very steep way, and a potential 'rat run' for traffic seeking to avoid congestion on the main road through the valley. - - 2. Infrastructure: there are issues more generally in significantly adding further to housing in Bacup, given the limited scope to improve the already clogged route down the valley to Rawtenstall / the A56/M66 etc. It is likely that many taking new housing in Bacup would be commuting in and out, reducing traffic flow further. - - 3. Capacity: Bacup is already at capacity in important areas such as schools, health services, dentists and extended services and lacks the capacity to absorb lots more households. - - 4. Flooding dangers – from HS 2.11 in particular, to houses immediately below it, at a much lower level, and to the terrace adjacent to it (60-68) which already often suffers from ground water rising into cellars. - - 5. Landscape – would be impacted. These sites, notably HS 2.11 are at a high level, visible from many points so building would visibly add to the erosion of the countryside amenity in Bacup. It would also impact on wildlife in the area.</p>

907	Carol	Mitchell	-	HS2.11 in particular and also HS 2.12, 2.13 and 2.32	Object	<p>Grounds for objections as follows: - - 1. Access: Bankside Lane is narrow, winding and steep with two blind bends, and already carrying more traffic than is ideal. The dangerous inherent in the bends would increase with growth in traffic; they are also particularly prone to accidents in wintry conditions, which again would be exacerbated. The Lane is narrow throughout its length and now regularly parked up on both sides, creating access problems for larger vehicles (such as gritter lorries, fire engines etc); many householders have nowhere else to park other than the road. The addition of more vehicles (not to mention construction vehicles) having to use the Lane will significantly increase difficulties passing through. If it were intended to create access from the other end, this would create another steep and a potential 'rat run' for traffic seeking to avoid congestion on the main road through the valley – hence adding further to problems. - - 2. Other access issues: adding to the housing stock in Bacup more generally is also problematic, given the limited scope to improve the already clogged route down the valley towards Rawtenstall and the motorway – particularly given the likelihood that the majority of any new housing would be taken by people relying on commuting for employment. - - 3. Capacity: Bacup is already at capacity in important areas such as schools, health services, dentists and extended services and lacks the capacity to absorb many more households. - - 4. Flooding dangers: the field at HS 2.11 is well above the level of houses below it, raising potential flooding hazards to them from building. Interference to thw water table could also pose risks to the adjacent terrace (60-68) which already frequently suffers from ground water rising into the cellars. - - 5. Landscape: the elevation of the area around Bankside Lane also means that there would be an adverse impact on landscape as viewed from various points around and above the town. - -</p>		No
1003	john	dempsey	-	HS2.1 HS2.12 HS2.13 HS2.32	Object	<p>There are 3 separate places at the bottom of Bankside Lane, where the lane narrows to a single track. This means that you always have to stop to allow someone through, no matter what of day. Another 200 or so cars having to use this lane daily, would put an enormous amount of strain on the already stretched and limited road space. - This is an area where there are a lot of families and the extra traffic would be an accident waiting to happen, as many of the children play on or near the road. - One of the areas at the back of the semi detached houses is also an area where various wildlife roam and live. There are foxes, badgers and deer that are regularly seen in this area, making their way in or out of the wood.</p>		Only that we as a resident of Bankside Lane are totally opposed to the redevelopment of this area. We feel that it would spoil a green belt area of Bacup that leads onto the local countryside.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1023	Dave	Harding	-		Object	<p>The suggestion that further housing development is suitable on Bankside Lane is bordering on ridiculous. By the council's own admission, this road is already a "Problem Street for access" with vehicles double parking and the road itself being only wide enough for 1 vehicle to use at one time - in particular near the church and indeed pretty much all the way up to the proposed site HS2.11 and HS2.12. - Further housing would not improve the access and traffic density on this tiny lane - it would make it considerably worse. - - In addition to this, the increased noise and air pollution the extra properties would bring would be considerable - both during and after the building process.</p> <p>Rossendale Council showcase on their website a "clean and green Rossendale". Hardly clean or green if we use all our green spaces for building sites. - - The amenities also need to be improved before building many, many more houses. - - e.g. the options available for children going to secondary school in Bacup are extremely poor. The majority of "good" schools are oversubscribed, so children in Bacup are now being given the choice of a school in "Special Measures" - Fearn. As a parent of a child not far off secondary school, I'm considering moving out of the area - I certainly wouldn't consider moving in. - - The congestion on the main roads is ridiculous at rush hour times & quite simply, there isn't the demand for this many houses in Bacup. The development on New Line / Rockcliffe Rd area has never been finished - purely down to lack of interest from buyers. - - There are many suitable brownfield properties in the area that would be ideal for the right redevelopment however developers like the easy option... - - I'm not against change, however one of the biggest "selling points" of Rossendale are its green and open spaces. Remove these & it's one less reason for living round here. There aren't many left... -</p>		<p>The council should be looking at attracting people to the area by improving amenities, transport, education, shopping etc. Bacup in particular is becoming a joke. No Police Station, public transport is poor, schools are oversubscribed and / or failing miserably, the town centre looks rundown and scruffy etc. Hardly an area that is desirable.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1033	Ewan	Rowland		HS2.1, HS2.12, HS2.13 & HS2.32	Object	<p>The additional houses proposed for the above sites will: - * increase traffic to and from Bankside Lane. The road is narrow and steep at key places along the route which allows only one car at a time to pass at specific points on the route. Driver's visibility is restricted by bends and rises in the road causing blind spots for drivers. Because of the narrowness at specific points, cars, vans and lorries have to swing across the road to pass buildings. - *there will also be an increase in traffic such as delivery vans/lorries and their service vehicles. - * houses opposite The Laurels Care Home at the junction of Maden Road and Bankside Lane have no off road parking and therefore park half on the road and pavement further restrict visibility for up hill and down hill traffic. Vehicles moving off the junction from Maden Road have very limited sight of cars coming down Bankside Lane at this narrow point and are forced to creep out onto Bankside Lane in order to safely access Bankside Lane. This also affects up hill traffic at this point forcing them to stop or slow down. - *vehicles joining Bankside Lane from Dale Street also have limited sight of approaching traffic at its junction and have to creep into the road until drivers have clear sight of up hill or down hill traffic. The road is only one car wide at this junction. - *the problem is compounded by traffic parking close to this junction for those attending services at St Mary Church, Dale Street. - *during the football season especially at weekends there is a high volume of traffic going to Maden Recreation Ground which causes congestion before and after football matches. The park is also popular with families and dogwalkers, most of whom arrive in cars, throughout the year. - *farm vehicles frequently use Maden Road via Bankside Lane on a regular basis which adds to congestion creating further potential hazards for other vehicles and pedestrians using Bankside Lane. - * Pedestrians have to cross the road at pinch points along Bankside because pavements stop due to the narrowness of the road. - * most households have two cars and the proposal to build an additional 140 houses on Bankside Lane will increase traffic by a potential 280 cars. The current access to these developments is inadequate for this amount of daily traffic. -</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1201	Stephen	Anderson	N/A		Not Applicable	The suggested allocation is impractical, but there are approaches that would allow for the residential development of part of the site. - - The site suffers from significant challenges, particularly access and drainage. - - Water runoff from the site currently regularly causes issues to properties on Bankside Lane. Developing the site is likely to exacerbate these issues, or make it unviable in order to resolve the issues. - - In respect of access, Bankside Lane already suffers from capacity issues, primarily due to a lack of off street parking and Newchurch Old Road is a single track historic cart route which has been locally widened with passing places to support the intensification of use at 'Quackers Farm' as a petting farm. - - Developing the site for residential use would be a significant intensification of use, based on the initial density suggestion used for Local Plan purposes. Newchurch Old Road does not have sufficient capacity to cope in its current form and widening at the key point, the junction with Bankside Lane, is not possible without the ownership of residential property being altered. - - An alternative approach would be to redevelop the farm itself for a small number of dwellings, which could be a mix of sizes, tenure types and affordability, re-using the existing buildings and adding in new dwellings. - - This approach would also protect and potentially improve the amenity of local residents given the challenges they have faced with the petting farm use. - - It should be noted that some of the farm buildings appear to be historic in nature, potentially as early as 17th Century and are likely to be recognised on Rossendale's emerging Local List, making them desirable to preserve and enhance.		On balance, the Draft Local Plan is the best and most well balanced option.
1242	David	Greenhalgh	-	HS2.1, HS2.12, HS2.13, HS2.32	Object	My objection is that Bankside lane is not capable of taking any more traffic and that extra housing with access onto this road will not only increase congestion even further on this already busy road, but will also be a potential safety hazard as there are already several narrow single car sections on this road, which have blind spots, due to housing and steepness of the road.		-
1267	Steven	Fielding	-		Object	The access road of Bankside Lane is already congested and way too narrow for cars to pass one another. I think it would be ridiculous to build more houses leading to potentially another 200 cars having to use Bankside Lane. - -		
1270	Beverley	Walsh	-		Object	It is overpopulated now and the road was never meant to take heavy use of traffic. Tight narrow bends and doubled park cars. Pavements are narrow and not fit for families with buggies and the disabled using their disabled scooters. There already have been numerous accidents on this road. Access for emergency vehicles is already very difficult. - Wildlife will be destroyed foxes, deers and badger sets etc will disappear. More houses are unsustainable as we have very limited facilities in Bacup. E.g. Primary schools are oversubscribed. The road from Bacup to Rawtenstall will be permanently gridlocked.		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1271	Demi	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	I object to the plans to build houses on bankside lane for many reasons: - 1) Bankside lane is already congested - everyone already parks on the pavements and it's already quite difficult for gritters, fire engines and larger vehicles to get through. We do not need any more traffic added to this! As this will cause a huge amount of problems, not just for the residents but for the local council and the firebrigade. - 2) There are many narrow bends up Bankside lane therefore adding more cars would definitely be a health and safety issue with the only places left to park being near these bad bends causing collisions especially during the winter. - 3) The sites you are proposing to build on are habitats of many different animals ranging from deer to foxes and badgers! These animals would lose their homes which would lead to them dying out in this area as they struggle to survive. We don't want to lose any more of our precious wild life which has lived there undisturbed for many years! - 4) Building on some of these sites would also mean cutting down trees and getting rid of the wonderful country side the valley prides itself in so dearly! We need to look after areas like these and not build houses on them. There are many sites way more suitable for new housing that will not cause damage to the environment in the same way - what about old buildings that are no longer used? Why do we not use these first, this would cause so much less damage to the country side! - Building more houses on bankside would not only mean finding more space for houses but also finding a second route up Bankside to allow for more traffic. Bankside lane does not have the space to do this! It would be almost impossible to do this without causing a huge amount of damage and a huge amount of time, effort and money that could be better spent! Overall I think that building up Bankside would be a very big mistake, one which can be avoided!	-	
1279	Stephen	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	1) Bankside lane is already congested . It has many narrow parts that will become dangerous if more cars use the lane. - 2). Emergency services would have trouble getting past extra parked cars. - 3) It would have an affect on the wildlife eg deer foxes badgers if the fields disappear .	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1291	Alan	Mickleburgh	-		Object	The local and area infrastructure in Rossendale, and Bacup in particular, is insufficient to support the proposed housing developments. Roads, Public Transport, Schools, Police, NHS Services (GP' s and Dentists) will all suffer a major impact from the proposed developments. I am particularly concerned about the proposals for the Bankside Lane area. - - - Bankside Lane has only one access and departure route, via Market Street. Access is particularly difficult at peak times. - - - There are four single lane sections on Bankside Lane which creates congestion problems at any time. - - - Many households have more than one vehicle, and with restricted availability off road parking, vehicles are often double parked on both sides of the road with two wheels on the footpath. - - - Even at non-peak times, larger vehicles have considerable difficulty negotiating Bankside (eg. Trade deliveries, Council and Emergency Services). - - - Pavements are narrow, particularly where vehicles are double parked, creating major problems for pedestrians and the disabled. - - - Drainage is already a concern, with the amount of water draining from the higher ground. If these developments are approved, the excess water will be unable to be absorbed by the surrounding land and will potentially lead to flooding.		
1296	Sharon	Mickleburgh	-		Object	The reasons for my objection are:- - 1. There is no reasonable access as there is only one road (Bankside Lane) for both in and out. - 2. There are 4 extremely narrow sections on Bankside Lane. In some cases it is only wide enough for one car. - 3. The footpath is extremely narrow for pedestrians to use without increasing the amount of both people and Cars. - 4. It is virtually impossible to get out of Bankside Lane onto Market Street at peak times due to the amount of traffic on the main road. - 5. Turning left from Market Street onto Bankside Lane is very difficult if there is already a car waiting to get out Of Bankside Lane into Market Street as the road entrance is very narrow there. - 6. Some of the houses on Bankside Lane already suffer from water draining down from the fields due to lack of sufficient drains without more houses being built. - 7. I am concerned about the proposed expansion of housing in Bacup as the increased population will cause Problems for NHS facilities (doctors and dentists), schools, roads, public transport and policing. - 8. The Green Areas must remain to protect the environment and the wildlife around us. There are also quite a Number of bats around this area and other species that need protecting		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1343	Jane	Jones	-	HS2.11, HS2.12, HS2.13 & HS2.32	Object	Development at these sites would attract higher volumes of traffic travelling along Bankside Lane over a more concentrated period of time during the busy morning and early evening periods. This road has limited capacity and the increased levels of traffic could lead to traffic congestion and highway safety issues in this area having a detrimental effect on road safety on Bankside Lane and the busy A681 Market Street junction. - - There are already problems with access for council refuse vehicles due to the parking of residents vehicles along both sides of a narrow road, this has led to the placing of warning notices by the council informing residents that access for emergency vehicles including snow ploughs and gritting trucks is impeded by the number of inconsiderately parked vehicles. - - The vehicular access and car parking arrangements for any new developments would have an unacceptable impact on existing residents in terms of noise and safety, creating a traffic hazard and generating an undue environmental impact, exacerbating existing parking problems and resulting in excessive levels of on-street parking which would adversely affect local residents and the efficiency and safety of the highway network. - The introduction of in excess of 140 new homes; each with an average of 2 – 3 cars per household would produce approximately 300 – 350 additional vehicles per day using Bankside Lane, a road which has single lane pinch point access due to the existing narrowing of the road at its steepest point; which has a gradient of approximately 17%. During the winter months; weather conditions of ice and/or snow constantly prevent 2 wheel drive vehicles from driving up this hill, and lead to accidents when drivers are unable to control vehicles whilst attempting to descend when snow and ice have made this route impassable. -		I am fully aware that there is a need for more housing across Bacup and the whole of Rossendale, but meeting these requirements and government targets for the building of new homes should not be the sole focus of the council. - Understanding the current issues within local residential areas such as limited access due to road lay out, road safety concerns especially when there is an marked increase in the number of vehicles joining the main road from a street with an obstructed view due to the existing buildings (Bank on A681, parking on double yellow lines) should be given the highest priority.

1349	Nigel	Fagg	Alf's Blackbelt Academy	Proposed Plan to build 47 units above Fernhill Crescent and introduce a link road between the end of Bankhouse Lane to Hill Crest	Object	There are already issues with the traffic and the condition of the road surface on Fernhill Drive due to the majority of houses having no parking facilities, the proposed introduction of an additional 47 units would only make things a whole lot worse. For years the residents on Osbourne Terrace, Fernhill Drive, Fernhill Crescent, Fernhill Close, Fernhill Place and Fernhill Park have endured issues traversing up and down Fernhill Drive with issues relating to the number of parked cars and the really poor road surface. A further 47 units would create another 70 plus vehicles travelling up and down an already in sufficient road system which has already experienced quite a number of minor accidents. - - As a resident of Fernhill Crescent I do not particularly look forward to having houses above me as this is likely to lower the value of my own house which I feel is an unacceptable situation for a resident who has lived in the location for 35 plus years. The reduction of the existing green belt is only going to make the area even less of a desirable place to live. - - Instead of building on green land, planners should be using their talents in developing existing housing that has fallen into a state of disrepair which would only enhance the area and not make it look the way it currently does which is pretty depressing. There are many houses in Rossendale that are unoccupied and in a sorry state of repair. Just imagine what could be done with a degree of creativity at a fraction of the cost. As i drive home I travel past many locations that need some TLC to make them a decent property.		The objection is not only on my behalf but also my wife, we are both totally against any development in the surrounding area. I also cannot believe that the first we heard of this was on Friday 6th October with a note dropped through the letter box, giving me little time to respond not sure what would have happened had we been away for the weekend. - - Does not seem a very just and fair system to us.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1352	Alicia	Campbell Astbury	-	HS2.13, HS2.32, HS2.11, HS2.12	Object	<p>I have many concerns about the area being developed further for houses. The access road via Bankside Lane is both steep and heavily congested with parked vehicles, with additional traffic there will be issues with passing places being available, as this is already an issue at peak times. - During winter months people at the top of the road leave their cars further down the street, if more cars were to do this the road would be inaccessible. - Bats are known to the area proposed, so how will the new development impact our local wildlife? - Will additional housing cause any issues with rain run off from paving over a large mass of land on top of a hill? Will it cause water-logging of neighbouring properties or any drainage issues? - Land proposed is alongside public right of ways, will new pathways be made available to the local people; children use these paths to get to the recreational ground, which is a safer route as the roads are hazardous with tight bends and lack of pavements on some sections or cars mounting the kerb on others making them inaccessible. - My main concern is the additional traffic on the road and possibly parked cars to emergency services being able to gain access through the street? Many homes on this stretch do not have a drive and the number of cars on the street is excessive and difficult to navigate. Also there are two sections where the road narrows significantly and one of these is steep with a blind corner, additional traffic will add to the danger. - Will extra traffic entering the street cause delays to the main highway as the road isn't wide enough to allow traffic to pass when turning right into Bankside close? - How easy is it for heavy goods vehicles to access the street, especially significant numbers for a development, will this cause delays to residents?</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1375	Margaret	Priestley	-		Object	<p>I have examined the plans and I know the sites well. I wish to object strongly to all the development of houses on or adjacent to Bankside Lane. - - The proposed siting of the developments is particularly ill-considered due to access, - Bankside Lane already has a high volume of traffic to the residential properties in the area. - - There is little pavement for pedestrians, the addition of extra traffic would create a safety hazard for them also. The pavements these days are a safety issue due to the amount of leaves from overhanging trees which the council no longer seem to cut back and maintain causing a buildup of slippery moss on the pavement surfaces. - Access is particularly hazardous in the winter months. The area is not always gritted, resulting in cars being abandoned along Bankside Lane as it becomes inaccessible. This leads to a knock-on effect resulting in access issues higher up Bankside Lane itself. - I therefore fail to see the advantage of building more houses in an already built up and inaccessible locations - In November 2013 due to the untreated surface I myself skidded into the wall just below the golf club during winter weather. - The other issue I would like to mention with Bacup itself< and forward thinking, is the lack of infrastructure with respect to banking. Two of the towns banks were closed last year with I think no objections from the council or at least no fight to keep them open that I am aware of. When the banks go people go out to other areas (e.g. Rawtenstall, Burnley, Rochdale, Bury) This will be the case with new residents, most of whom, if in employment, will be working out of the valley making Rossendale yet more of a commuter belt than it already is. Anyone travelling from Bacup via Rawtenstall or From Bacup to Rochdale can testify to this and know that anymore commuter traffic will be disadvantageous and effects all roads in the valley. People work outside the valley will conduct personal outside of Bacup.. - Therefore, I ask that Rossendale Borough Council refuse planning relating to the building of houses on Bankside Lane..</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1429	Nina	Byers	-		Object	<p>1) There would be a minimum of 200 extra cars using Bankside Lane if these houses were to be built! This would cause major problems with traffic building up at peak times (morning, evening, beginning and end of school times) in both Bankside Lane and Market Street. That corner is particularly tight, especially if there is a car waiting to come out of Bankside Lane. Then imagine a queue of traffic in the narrow, single track areas of Bankside Lane (of which there are 4) and you can see that traffic could easily come to a standstill on Market Street! Sometimes it is very difficult to turn right onto Market Street if there is a lot of traffic. - - 2) There is only one way to access these proposed development sites, via Bankside Lane. There are 4 stretches of the road which are only wide enough for one car. These stretches of road also happen to be on the steepest part of the road with blind bends. In bad weather conditions and at peak times this already causes problems without any extra traffic . There are also several further stretches of road which are only wide enough to get a car through due to people who already live on Bankside Lane needing to park their cars on the road due to them not having off road parking available! - - 3) The pathways for pedestrians are very narrow and non-existent in some places too! For example, by Cookoo Hall the path is very narrow! This is also made worse by cars being forced to park partially on the path and bins being stored on the path as there is no sensible alternative due to many houses being built much higher than the road! This makes it difficult for all pedestrians but especially the disabled elderly and parents with prams and young children! - - 4) Surface water run off will cause problems. I live on Bankside Lane, in front of and below Animal Quackers. There is already a lot of water running down from the fields behind us into our garden, which becomes very waterlogged and completely unusable! Our house is also down a flight of stairs which during heavy rainfall resemble a waterfall. I know that some of my neighbours have experienced some flooding into their house as a result of this. If that land was built on then this surface water would increase! This could result in possible flooding due to insufficient drainage. - - 5) There are already problems with the sewers, certainly with my neighbours, several houses either side have regular blockages which need unblocking using rods. Where would the sewerage drain to from the new housing? Would they also run through the same pipes? - - 6) These are all areas of natural beauty and support a lot of wildlife! There are also a lot of bats in the area which are protected.</p>		<p>The infrastructure of the area would be compromised. - - There is no police station - Not enough schools, no high school - Only one doctors surgery in Bacup - Only one Supermarket - Public transport. - No bus route on Bankside Lane as too narrow and steep. - All roads leading out of Bacup are narrow, some are steep and extremely busy at peak times</p>

1458	Jodie	Fairfax	-	Housing Site Allocations - specifically the sites behind Bankside Lane and at the back of Rooley View, but on housing development in general on any green land	Object	<p>I am a current resident of Bacup living on Edward Street with my husband. My parents (who live on Rooley View) and my sister and her family who live on Bankside Lane will also be objecting as will many of their neighbours. - - Empty houses already in Bacup abd Stacksteads - Firstly, I question the need for housing at all. If it is proven that housing is required, then there are hundreds of current buildings lying vacant in Bacup, as well as vacant industrial units where housing could easily be developed without touching the green land around Bacup and it's surrounding areas. In fact, from my house, within 20 yards of my front door, there are 4 houses boarded up that could easily be affordable housing. Not to mention no end of vacant properties on Newchurch Road through Bacup and Stacksteads. The Britannia Estate is still partially empty and those houses have been on the market for 2 -3 years already. - - Infrastructure - we have no police dedicated to the area; schools that are already oversubscribed, no high school or colleges; roads are already in a state of disrepair; public transport links are confined to the centre only; the healthcare in the area could not sustain the influx - doctors, dentists, not to mention no hospital. - - Width of roads (congestion) and width and lack of paths - specifically looking at Bankside Lane, the roads are already congested, double parking is rife. My husband drives a van and struggles to drive it up Bankside. The volume of vehicles required for a large housing development would not be feasible on the current road structures let alone the volume of extra residents using the road. Also, the paths are already too narrow for - the elderly, disabled and parents with prams and young children. - - Surface drainage problems and sewerage problems - possible flooding in some of the areas (e.g. Bankside Lane). Also, there is already existing issues with sewerage on Bankside Lane. The pipes frequently get blocked and overflow. My brother in law is a water specialist and had regularly unblocked it with rods so it stops running into his and other residents gardens. More sewage is not sustainable with the current system. - - Traffic in and out of Bacup at peak times - I commute to Salford daily. It often takes me 30 - 40 minutes to drive the 10 minutes to Rawtenstall at rush hour. This would increase. - - Wildlife and Areas of natural beauty - As already mentioned, I don't believe there is a need to build on green land, for example, behind Bankside near Animal Quackers. The impact on local residents, the environment and wildlife in the area will be catastrophic, and when there are many other options within current buildings and land, and so many empty houses, I don't believe this is needed. -</p>

1544	Enid & Kenneth	Burke		SHLAA16077	Object	<p>We strongly object to the proposed plans to change previous Green Belt sites to building sites mainly on the narrowness and steepness of the pavements and roads. Presently the volume of traffic is overloaded because most households have 2 or more cars. Visitors to the Golf Club, Football Pitches and Petting Farm add to the problem, especially at weekends when the volume of cars and work vehicles doubles. Last winter the council gritting vehicles could now operate in parts because of parked cars/vans. We have also witnessed a number of near "misses" on the bad bend near to the Laurels Nursing Home.</p> <p>The use of outdoor space is essential for our grandchildren and children, to lose this is not acceptable.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1576	David	Thompson			Object	<p>I object to the proposed housing development sites referenced HS2:11, HS2:12, HS2:13 and HS2:32 listed in Chapter 1 (HS2) of the above plan. My concern is that the connectivity of each of these sites to essential facilities in Bacup Town Centre is unsuitable for the following reasons:</p> <p>There are only two routes from the sites to the Town centre, one of which is lodge lane and the other is Bankside lane.</p> <p>Lodge lane is to the South and East of the four sites, and is closed to motor vehicles as a through road. It has a very steep slope with an average gradient of 15% (1 in 7) and therefore does not comply with any national or regional planning guidance as being acceptable for use by pedestrians, the mobility impaired and cyclists. It would therefore be improper to suggest lodge lane as a route from the sites to Bacup Town Centre.</p> <p>This means that Bankside lane is the only acceptable access to the Town Centre for all highway users. However Bankside lane has a particularly steep section for a length of 242 metres between its junctions with Market Street and Maden Road and I believe it to be unsatisfactory as a means of access to the proposed housing developments as evidenced in the following disclosures attached to this letter:</p> <p>Disclosure 1.</p> <p>a. Non Compliance with the Lancashire County Council Code of Practice on Mobility , Inclusive Mobility' Section 3 Footways</p> <p>b. Non Compliance with the Lancashire County Council Transport and Design Guidance 'Creating Civilised Streets' Section 5.5 Connected Streets</p> <p>c. Non Compliance with the Department for Transport 'Manual For Streets' Section</p> <p>7.6 Visibility Requirements. (Note this section includes calculations that have safety implications for highway users and I request that it is submitted to LCC Highways Engineers for verification).</p> <p>Disclosure 2.</p> <p>Breach of the Rossendale Draft Local Plan Policies:</p> <p>ENV1 - High Quality Development in the Borough</p> <p>ENV2 - Heritage Assets.</p> <p>Disclosure 3.</p> <p>Prior refusal of a planning application for development off Bankside Lane.</p> <p>On the basis of the above submissions I request that the proposed housing sites HS2:11, HS2:12, HS2:13 and HS2:32 be removed from the Rossendale Draft Local Plan.</p> <p>Please see appendix for attachments</p>

1586	Adrian	Boyden			Object	Has a resident of Bankside Lane my concerns are of increase in traffic on this busy lane , more accident s and near misses especially on the blind bend . There are no other access routes for residents so to add more traffic is irresponsible.Also how do you propose to get wagons . Machinery .Etc to building sites ? Without causing chaos on a now fragile road .Shows the plans having been thought about properly .		
1588	Alison	Whittaker			Object	<p>I strongly object to these proposed plans to change areas,of previous Green Belt Sites,to building sites.The visual impact of the development will greatly effect my property,building work at the front of my property has already caused loss of existing views and is out of character in terms of its appearance. The proposed development would have a significant adverse impact on the character of the neighbourhood, the green spaces and rural views would be lost changing the landscape of a quiet rural area to an over populated housing estate. There would be significant loss of the open aspect of the current residential properties. The enjoyment of the current views, design and landscaping is an important residential amenity, and the loss of these features would have an adverse impact on the residential amenities of the existing properties.</p> <p>The new development would be out of keeping with the character and appearance of the existing properties adversely impacting on the character and appearance of the communityin particular the green spaces that is valued open space enjoyed by local residents. Furthermore there is a requirement to enhance the local environment including wildlife habitats and rural lands. Further housing development would result in overlooking, unacceptable high density, overshadowing and loss of natural light. Further over development would be overbearing and result in an adverse effect on the residential amenity of the current neighbourhood. Designs that are inappropriate in there context and fail to improve the character and quality of an area and the way it functions should not be approved.</p> <p>Unacceptable over development on Bankside lane would adversely affect highway safety and cause great problems for road users,the lane is just too narrow, steep with a blind bend that is already hazardous for road users. The current infrastructure is insufficient to support further increased vehicular access.Please can this concern be referred to qualified engineers for technical clarity.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1620	Jennifer	Cudworth			Object	<p>I am writing to express my objection to the plans mentioned above.</p> <p>My primary cause for objection is on the grounds of safety. Any proposal to build more houses using Bankside Lane as vehicular access is quite frankly dangerous. Bankside Lane already suffers badly with traffic issues - access to the proposed sites is via a steep, narrow road which is reduced to a single-track for the vast majority by parked vehicles. There have been numerous traffic collisions on Bankside Lane due to poor visibility caused by parked vehicles, and "near misses" are almost a daily occurrence. (The problem is exacerbated in bad weather as the gritter encounters difficulties passing the many parked vehicles, meaning there are often delays in treating the road at the top end of Bankside Lane. In addition there are the emergency services to consider - just a few weeks ago, a fire engine was forced to undertake a dangerous manoeuvre to negotiate a corner that was obstructed by parked vehicles, endangering the crew and causing damage to a resident's grass verge).</p> <p>The proposed building works would add to this situation not only short- to medium-term while large construction vehicles access the site, but also long-term due to the increased number of private vehicles requiring daily access to homes. The element of danger to pedestrians, animals and motorists would be greater still if an access route were to be constructed from the Stacksteads end, as this would inevitably be used as a "rat run" for people travelling between Bacup and Stacksteads and wanting to avoid congestion at Lee Mill. Secondly, the fields currently occupied by Huttock Top Farm, and the area of rough land known locally as "Old Joey's", between the top end of Bankside Lane/Rooley View to one side and Osborne Terrace/Hill Crest to the other, are both habitat to a multitude of wildlife including deer and bats. Both areas are affected by the proposed plans. The destruction of natural landscape and the pollution (noise and environmental) brought about by the construction would drive out the wildlife that residents enjoy sharing our green spaces with. Furthermore, Bacup been cited by English Heritage as the best preserved cotton town in England. The construction of new homes would affect the general appearance of the area to the detriment of Bacup's Heritage status. Also to build on the land locally known as "Old Joey's" (see above) would impact upon the skyline of the Rossendale Valley.</p> <p>In view of the above I would urge you to reject the proposals and keep Bankside Lane a safe place for its residents and wildlife.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1636	Kevin	Woods			Object	<p>I am responding to the proposed local plan to develop 4 building sites (100 new houses) off the Bankside Lane area of Bacup. I strongly oppose the plans as the topography of area is not suitable for further development which increases traffic flow, and should be changed back to green belt site.</p> <p>The reason I consider the area to be unsuitable for this development is that the access via Bankside Lane is too narrow and too steep to support development which increases traffic flow. Bankside Lane is single track in parts with both single and dual road junctions joining. The volume of traffic with existing demands is already a significant risk to safety.</p> <p>Each year for the past 20 years living on Maden Road we have been cut off from vehicular transport/ access at least once, when snow falls. Not all residents are able/ willing to buy a 4-wheel drive vehicle and so many become stranded each year. The consequences of this extend beyond personal inconvenience to being unable to get to work, to access emergency services or to discharge caring responsibilities for elderly relatives. Sometimes, due to the hazard of abandoned vehicles, the lane becomes impassable even with a 4 wheel drive vehicle.</p> <p>Since I have lived on Maden Road (above Bankside Lane) myself and family members have been involved in several traffic incidents on the lane in which the topography (and often weather) have been a significant contributory factor. In 2007, my car was collided into on Bankside Lane by a car travelling from Dale Street, in an incident in which the driver misjudged the traffic travelling from four directions between double and single track roads. My car was badly damaged requiring over £2000 of repair work (not my liability), though fortunately I was unhurt. In 2015 during a sudden heavy snowfall, my son's car slid out of control on a descent of Maden Road, whilst avoiding a driver attempting 'a run' up the hill and other abandoned vehicles. His car was written off, though fortunately he was not seriously hurt.</p> <p>I strongly urge the council to reconsider its proposals and find the necessary development sites or solutions which do not involve any further increase in traffic through Bankside Lane. The area does not have the topography to support any developments which would further increase traffic flow.</p>		
1642	Jane	Trivett			Object	<p>If any one lives on Bankside Lane/Bacup and works for RBC they must surely know that the proposed new build sites make no sense at all. Local people know how steep the lane is and unless major road widening took place it will not work. Bankside Lane is totally unsuitable for any more traffic. The recent road resurfacing proved how difficult it is and the Highways people struggled to hastily finish the job even with road closures. Another 200 plus cars up the lane is ridiculous.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1656	K	Jeppesen			Object	<p>Having bern notified via social media about your proposals regarding the Bankside area in Bacup, I must strongly object to it.</p> <p>I am baffled that such an idea can be a serious one! A number of issues springs to mind, and are so obvious, that its hard to take this proposal serious. Firstly the situation about the traffical access to the higher part of Bankside Lane. Blind bend, steep incline/desent. Abnormally narrow footpaths,- or entirely non-existing footpaths, makes it high risk to use this part of the road as a pedestrian. Not to mention , having to ask your children to use them to catch their school bus or go to activities elsewhere.</p> <p>To my knowledge , we have only by luck ,not had any serious accidents with personal injuries, but there has been plenty of bumps and minor crashes, costing residents here extra expense. I would assume that a further 200 dwellings wil take with it, close to 200 more cars,- probaly 300 in my opinion, which would of course also mean considerable higher risk, using our road. I have not mentioned the roadconditions during wintermonths, when ice and snow , makes using Bankside Lane an absolute gamble.</p> <p>In these condotions, many cars are unable to get up the incline, although many "have a go",and therefore get stranded halfway up, abadoning their car, and soon the road looks like an unorganized car-park. And traffic coming downhill the opporsite way, often find it impossible to stop, or even stear due to the snow/ice.</p> <p>Further more, beeing able to stop at the junction with the busy Market Street at the bottom of the lane, is a hazardous gamble ,even more so. Personally, I have, on a couple of occasions "skated" right out onto Market Street, with only Lady Luck to look after me ! I have seen others do the same, and it can only be a question of time, before some major incident will occur.</p> <p>So it seems to me, that somebody in the council havent done their homework, and certainly not used Bankside Lane very often, because any increase in traffic here, is equivalent to asking for incidents/injuries to residents up here. I would think that the land in question, originally was graded "green field" for a reason !?</p> <p>Deer, fox and multiple othe wildlife, is seen here on a daily basis, the view over the valley too , improves our quality of life, and is a daily pleasure. We live in a nice and quiet part of Bacup, and have been looking forward to keep doing that, into our retirement ,- the older part of us anyway. Neighbouring estates of "affordable housing", as the PM is asking for, sounds to me, like housing for clientel, not nessecary with the same outlook on life values !</p> <p>All in all I'd wish you to reconsider these proposals, as they have clearly not been scrutified thoroughly, before they were published. Let the Rossendale council show , once and for all, that it takes its citizens safety and wellbeing</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
						<p>into account , when making these kind of plans. We have for years , constabty been "awarded" with council tax rates , that hardly were second to none,- unfortunately in the expensive end of the scale, but at the same time only seen cuts and poorer services in return. (swimmingpools, bin collections and household waste centres ring a bell?) Do the right thing, and reinstate green field areas to be what they should rightly be : green fields.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1660	Rachel	Greenhalgh			Object	<p>I would like to register my objection to the proposed changes to previous green belt sites to building sites in Bacup. Under the Draft Local Development Plan, there are plans to allocate building land for housing in the Bankside Lane area (site references HS2.1, HS2.12, HS2.13 & HS2.32). As a resident in the area (MadenRoad), I already know that Bankside Lane is not able to sustain the current levels of traffic and that to build the proposed potential 100 New homes would bring the road into crisis. As you are no doubt aware, Bankside Lane is very steep and narrow- at some points little more than single width. Add into this the fact that the narrowest points also have very poor visibility, meaning vehicles travelling in opposite directions frequently have to perform emergency stops to avoid a collision and often have to reverse to clear the way, creating a new hazard for other approaching drivers. I myself have been involved in such situations several times a week and have serious concerns about the increased risks presented by any proposed housing and the extra traffic they would create.</p> <p>As you are presumably aware, the pavements here are also very narrow and walking along them can be very hazardous as the passing cars often have to come very close to or even mount the pavement to avoid cars coming in the opposite direction. We have seen an increased volume of traffic already coming up the Lane to access the Maden playing fields and also more groups of families and children walking up to the football sessions there. I have huge concerns for their safety if the volume of traffic is significantly increased by new residential traffic too.</p> <p>My primary objection to the proposed plans are centred around the increased dangers of introducing more traffic to an already congested and very narrow access road, however I also believe that we should not be sacrificing our green belt land to provide housing. We are lucky to live in such a beautiful area and we should be doing all we can to protect and sustain the very features which attract people to our town. As we all know, Bacup has not seen the levels of regeneration and investment that some local towns have seen. Indeed the centre of town is currently underoccupied and full of empty buildings. Would our local plan not be better off considering how best to breathe life into these areas rather than eating into green belt land which should be left for all to enjoy and encourage a healthy lifestyle? there have been several studies published in recent years that highlight the importance of the natural world in combating the stresses of modern life and it's positive impact upon mental health. Surely this is a reason to protect our green belt land?</p> <p>Perhaps instead of building new housing around the edges of town, we could look at converting some of the empty commercial sites into apartments and low cost housing which would support those who really need to get onto the housing ladder. We have seen several large housing estates already built in Bacup, somebody which have struggled to sell all their housing stock. Do we</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
						<p>need to introduce more? There are a large number of existing houses already for sale in the town and some of these have been on the market for some time. Surely building more new homes will only exacerbate this problem? We should be encouraging new people to come and live in our town, but who will want to buy in an area where the resale prospects are not attractive?</p> <p>I apologise for the length of this email but this is an issue I feel vey strongly about. I hope that you will give due consideration to my concerns, and I would appreciate a response from you to confirm the receipt of my objection.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1756	R	Prime			Object	<p>The above sites appertain to the bankside area of Bacup.</p> <p>Over the 50 years that we have lived at 48 Bankside Lane we have seen a huge rise in the amount of traffic using this lane from a mere handful of vehicles in the 1960s to hundreds more at the present time.</p> <p>Bankside Lane is a cul-de-sac and obviously all vehicles going up the lane have to come back by the same route.</p> <p>As well as private houses, there is an old peoples home, a golf club, an animal farm and a recreation ground.</p> <p>So there is a lot of extra traffic because of these business facilities plus ambulances, brewery wagons, horse and animal boxes, fire engines, taxis, delivery and post vans etc etc etc.</p> <p>There are times during day when, if you took a ride up here, you might only see a handful of parked cars, evenings and weekends it is a different story. Yesterday for instance (Friday) from our house I could see only 10 parked cars but today (Saturday) I counted 36 ad that is by just looking out of our front door. Goodness knows how many more are parked further along the lane.</p> <p>I know that there has been talk of connecting bankside lane to newchurch road. But that would be madness and create a "rat run". Don't add anymore traffic please, accidents on the lane are frequent when the first fall of snow comes.</p> <p>Cars try to ascend the hill, can't do and slide back into one another. Likewise on icy days the cars slide down and after end up crashing into the wall or each other.</p> <p>Here are a number of blind junctions namely:- princess street lord street dale street police station row junctions with bankside when going up or down the lane. Maden road onto bankside when going down to bacup.</p> <p>Bottlenecks: - St mary's vicarage and the opposite houses. Joy cottage and the mount Cuckoo hall and 24/26 bankside</p> <p>These areas especially the one at joy cottage and the mount where the gradient is very steep and narrow is exceptionally bad to negotiate at the best of times.</p> <p>My husband had a car accident a few years ago coming out of dale street where it is very difficult to see cars coming down the lane, fortunately it was not too bad.</p>

1779	Andrew	Heathcote			Object	I would like to oppose any planning application for any additional housing estates on Bankside lane in Bacup. The road can't handle any more traffic, and I believe that this would have a very negative impact on current house prices.		
1790	David	Trivett		SHLAA16077 Land south of Huttock Top Farm Bacup	Object	<p>SHLAA16077- Land south of Huttock Top Farm Bacup. HS2.13 Greenfield. Countryside adjoining the urban area. Currently Grassland and private garden, small area of storage for the farm. Yield calculated 40 units. Access off Bankside Lane via Newchurch (Old) Road which is a narrow lane. The proposed development access is identified incorrectly as Newchurch Road in Appendix E.</p> <p>(...)</p> <p>The images provided to illustrate the pinch points and hazards already present with the existing volume of traffic on Bankside Lane. Winter conditions make these sections of Bankside Lane even more hazardous.</p> <p>More houses means more associated traffic for residents, visitors, large delivery vehicles, refuse vehicles, emergency services vehicles. More traffic joining Market Street at a difficult junction.</p> <p>All the development proposals with connections to Bankside Lane should be abandoned on the grounds of public highways safety.</p> <p>Access is also required by vehicles to and from Animal Quackers, Maden Recreation Ground and Bacup Golf Club.</p> <p>Why generate more traffic by the proposed developments with access via Bankside Lane?</p> <p>Please see appendix for photographs.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
1813		Brewster		Land south of Huttock Top Farm	Object	<p>We are objecting to the 4 proposed building sites on the Bankside lane area. We object to these plans on the grounds that the main Bankside lane road, which will have to be used to carry all the traffic for these proposed houses, is not adequate as the road is already struggling to accommodate the existing traffic.</p> <p>The stretch of road from Cuckoo Hall down past the church is very narrow, this will cause untold hazards with the volume of vehicles that are going to use the road when construction begins. Not to mention the extra permanent traffic that will be forced to use the road to access their homes. Any further volume of traffic is most certainly going to cause serious accidents and at the very worst, death.</p> <p>We have had an accident on this very stretch of road, so we talk from experience of how dangerous this stretch of road can be.</p> <p>When there is a funeral at the church the whole road is grid locked with cars being blocked in all directions, so with extra vehicles, this is going to make the grid lock even worse.</p> <p>We have a 20 miles per hour speed limit on Bankside lane, but no one seems to adhere to it and nobody seems to know who gives way to who! So, if locals don't know, do you think new residents will?</p> <p>What about when it snows? This stretch of road is absolutely treacherous. When a car is coming up the hill, and another is going down nobody dare stop, so it ends up with traffic both ways skidding all over the place and of course the whole road is blocked. Extra traffic is bound to cause more accidents and somewhere along the lines there WILL BE a death.</p> <p>The plans show that the majority of houses are four bedrooms, this means there will most likely be more than one car per household. So as the plans show, there are to be 200 homes meaning there will be a minimum of 400 hundred extra cars using Bankside Lane. Large parts of the road are only wide enough for one vehicle, and most existing residents can only park their cars on the road because they have no drive.</p> <p>Which brings us to the main point of discussion, Newchurch Road.</p> <p>We can be quite sure that should these houses be built the majority of buyers will be from outside the valley. This means they will be commuting to and from the valley to go to work, when we have ONE ROAD TO AND FROM RAWTENSTALL, to access the M66. This motorway is already chronically over congested as it is. WE HAVE ONE ROAD TO AND FROM BURNLEY, WE HAVE ONE ROAD TO AND FROM TODMORDEN, AND WE HAVE ONE ROAD TO AND FROM ROCHDALE.</p> <p>When we have to have work done on the stretch of road FROM BACUP TO RAWTENSTALL, our main commuting road, to the M66, the backup of traffic is absolutely horrendous with waiting times up to one hour. I doubt we could cope with extra traffic on our ONE ROAD THROUGH TO RAWTENSTALL.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.013	Further comment
						<p>So, the extra strain on our one main road is going to have an impact on the whole of the valley.</p> <p>Then we come to our amenities. Can our Health Centre cope with the extra work load? Are there even enough places in our schools?</p> <p>Then what about our green belt, we live in a beautiful valley, which the council should be trying to promote to tourists, instead of being hell bent on destroying this unique part of Lancashire.</p>		
1820	Kelly	Holt	Lancashire County Council		Object	<ul style="list-style-type: none"> BANKSIDE LANE, BACUP - HS2:11, 12, 13 and 32 proposes to allocate land which could result in 137 new dwellings off Bankside Lane which is an unclassified road approximately 1.1km in length varying in width and gradient with several pinch points and heavy on-street parking. To the west of its junction with Thistle Street, Bankside Lane provides the sole access to circa 150 dwellings. <p>The existing layout on Bankside Lane is broadly reflected on the 1845 historic map and would not be considered acceptable under the current standards. The land to the west of Bankside Lane is at a higher level than the road which results in high retaining structures and there are buildings on both sides of Bankside Lane at several points which abut the road with no footway provision. Where there is footway provision, the widths are sub-standard along most sections.</p> <p>There is little opportunity for improvement works to the current road layout within the extents of the adopted highway.</p> <p>The Highway Authority would seek a secondary / emergency access to be provided where more than 100 houses are proposed off a sole access such as Bankside Lane. Therefore any development land allocated off Bankside Lane should provide a secondary vehicle access point onto the highway network. The topography of the land presents difficulty in providing a suitable route and within the land that is proposed for allocation it appears unlikely.</p> <p>The Highway Authority has serious concerns about these sites and the ability to provide a safe and suitable access in accordance with the NPPF and adequate permeability for traffic distribution in accordance with Manual for Streets.</p>

55	Kirsty	Walker	-		Object	The drainage in my garden is already terrible, the garden in winter turns into what only can be described as a swamp, I am concerned that putting more houses behind my house would just exacerbate the issue. I also feel that putting houses on that site would decrease the value of my home greatly for when we come to sell, the views and greenery are a selling point, it was why my partner and I purchased the house originally. I also do not believe that the roads can actually handle more traffic, even now the roads down to the main road are congested and are dangerous, there have been a number of incidents of children being run over on pennine road, one quite recently, and more traffic just increases that risk. - I worry that adding more houses to that site will give criminals a better chance of sneaking into the gardens on goldcrest avenues as they will have more cover. - The field is also a haven to wildlife, Its great to have somewhere on your doorstep to show children where wildlife lives. I also see a lot of people use the area to walk their dogs, and the bike track is the only area close to pennine road for the children to go! It keeps them out of trouble, something which, some of the children of Bacup have a hard time steering clear of! -		There are other areas in Bacup to build on that wouldn't cause as much disruption to as many people. I do believe we need more houses but there needs to be more thought out into it. The roads are horrendous as it is, if 4000 houses are built which schools will the extra children attend? As ours are full enough! Same for the doctors surgeries, there's a week long wait for a doctor. Imagine at least another 16,000 people adding to it.
61	lucy	Greenwood	-		Object	I strongly object to houses being built on the grass area behind my house as this particular area is used by so many people including my self, my children. - Its the one place people love to go to let the kids run free. Familys go their on a sunny day , play ball etc, walk the dog and make use of the open space. Bike riders, den building thats what i would like to see when i look out the window not houses and certainly not next to my fence , might as well put them on the door step. - W e already have poor drainage when it rains heavily. - Also their would be more traffic passing by and already this year a child has been run over , right outside my door infact . The only way to build houses on this location is to build another road.		I would like you to take into consideration the peoples views on this particular site . as it is well used by so many and we would like to continue to do so. - Kids use it , familys use it, denbuilding,dogwalking,exercise. its a very sociable place loved by all and not to mention the view its GREAT
62	Dominique	McCormack	-		Object	I object to houses being built behind Pennine Road as I live on Pennine Road and it is nice to see the fields and view. - - Lots of wildlife life on the fields behind us and need that habitat. - - It's already crowded enough. To have a house behind mine it would invade our privacy. - - The roads are already full of pot holes more houses and cars would make this even worse.		-
63	Annemarie	Carey	-		Object	I object to houses behind pennine road. I like to look out of my kitchen window and see the beautiful view fields and animals. - - And to have houses at the back of pennine road would spoil it. - - as we have a own privacy. - - I Like feeding wildlife. and see the amazing view. -		-

64	Paul	Barnes-towers	-		Object	The space is used by many people, dog walkers, children playing in the fields it's a safe place for them away from the road. Only a couple of months ago a young child was in a road traffic accident with life threatening injuries this space was used for air ambulance to land adding vital time to saving the child's life. Bacup is losing a lot of its beautiful scenery to development it would cause a lot of congestion and more traffic which there is already a high volume of. It's getting quite crowded up this area being able to see into neighbours gardens and windows		Bacup is a small village and quite busy with traffic. When there are road works it brings the place to a standstill, creating more housing would cause more congestion with commuters passing through to work out of town as there is not much employment in the valley. If you are to build then do so to bring trade e.g. employment, amenities, cinema, leisure centre, things to attract public to valley and make it a thriving place like Todmorden or Rawtenstall, Ramsbottom not just somewhere to get a hair cut and a takeaway to eat.
879	Nick	Earnshaw	-		Object	A travellers site bordering 2 townships is asking for trouble. The site is completely unsuitable for one entrance to our 'prospering valley'. People comment about Nimby's - damn right, Bacup doesn't need this sort of community on its doorstep. The adjacent moorlands will become a dump from the travelling tree gangs and scrap dealers.		I understand the need for some more housing, but please - drive around the valley, look at all the derelict and run down sites that exist already and build on them. Our valley infrastructure is overwhelmed already.. Roads are shocking, services stretched and minimum investment at the top of the valley (RBC inheriting the Lee quarry - it's a disgrace for the money spent on it, it should be a landmark). Grow a pair as a council and tell the policy makers Rossendale is full and stop ruining the only tourist attraction we have - our countryside location.

1771	Mohammed	Ali Ahmed	Lancashire County Council		Not Applicable	1 Comments Relating to Estates The county council has previously proposed the designation of its land holding off Industrial Street and Gladstone Street in Bacup for residential development purposes. This area of land was subsequently assessed as part of the SHLAA Stages 1 & 2 Assessment of 2017. The Borough Council now proposes to designate a smaller area of land for housing development; specifically excluding the site of the former Bacup Nursery and land immediately to the south of Gladstone Crescent. It is the view of the County Council that there is no overriding land use planning reason why this land should not be included in the proposed housing site HS2.23. The former pens and allotment uses of the land to the south of Gladstone Crescent have declined to a point where they are of negligible value for that purpose. The site of the former Bacup Nursery is demonstrably brownfield and, whilst it sits at a slightly lower level from the adjoining proposed housing site HS2.23, the difference is not considered to be so adverse as to preclude an appropriate engineered solution to connect with the proposed housing land immediately to the east. This would facilitate its co-joining with the proposed housing site, (similarly accessed from the higher point on the Gladstone Street frontage). The County Council therefore requests that these two areas of land be included within the housing site allocation HS2.23.

Reference	HS2.024	Land at Blackwood Road and north of Blackwood Road, Stacksteads
------------------	----------------	--

93	Norman	Crook	-	Land north of Blackwood Road, Stacksteads	Support	The site is suitable for housing for the following reasons: - - 1. The site is previously developed (brownfield) and has no special landscape, ecological or scenic value. - - 2. The land has no value as strategic open land (e.g. as green belt, farmland, etc.) and would not compromise policies to protect the wider countryside. - - 3. It will benefit the local area by improving housing choice, contributing to accessible open space, environmental and local highway and footpath improvements. - - 4. The site has potential for a high quality, sustainable mixed housing development. - - 5. The site is close to facilities and services and is sustainable in terms of accessibility. - - 6. The site is deliverable and developable within the Plan period.		No. - - If further information, clarification or explanation is required, please do not hesitate to contact the Agent.

747	John	Foster			Support	<p>I have recently being emailed concerning the Draft Local Plan, particularly the Policy HS18:Self build and custom houses, that identifies specific sites for self build projects.</p> <p>Many thanks for this information; I understand that this is a draft plan and it may be many months/years before this land is available, however, I would like to register my interest at this stage, particularly in HS2.28 - Booth road/woodland mount. This would be ideally positioned for my self.</p> <p>Having being looking for land in the Brittania/whitworth/newline/Bacup area for a number years and failing to find any within my budget (most single plots of land for sale are aimed at larger, 4 bed properties whereas I am aiming to build a more modest 3 bed detached bungalow) I am eager to receive any information on possible future plots available.</p> <p>Most of the land designated is in the Rossedale valley, and not on the Bacup to Whitworth side - which was disappointing.</p> <p>Thanks again</p>

1465	SEE AGENT DETAILS	SEE AGENT DETAILS	B AND E BOYS LIMITED		Not Applicable	<p>WE SUPPORT THE ALLOCATION OF THE SITE FOR RESIDENTIAL DEVELOPMENT, HOWEVER THIS SHOULD BE EXTENDED BEYOND 'SELF BUILD' DWELLINGS - PLEASE SEE DETAILED REPRESENTATION FOR FULL DETAILS.</p> <p>Email received 11/10/2017:</p> <p>1. INTRODUCTION 1.1 Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. Following the adoption of the Local Plan Part 1: Core Strategy in November 2011, RBC commenced work on its Local Plan Part 2: Site Allocations and Development Management Policies. However, this document was halted in favour of the preparation of a full new Local Plan which has now been issued for consultation from Monday 24 July to Monday 9 October 2017. This edition of the Local Plan comprises the Regulation 18 consultation document which sets out the Council's preferred approach to future housing, employment and leisure uses over the Plan period. Once adopted the Local Plan will replace the Core Strategy (2011).</p> <p>1.2 Within the draft Local Plan, sites have been proposed for development (for housing or employment use), for environmental protection and for recreation uses, as identified on the Draft Policies Map. Changes are also proposed to the existing Green Belt and the Urban Boundary. Also, four additional Conservation Areas, along with an extension to an existing Conservation Area, are being considered. 1.3 Documents included in the Draft Local Plan Consultation are the Draft Local Plan (Written Statement), the accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan. 1.4 The evidence base which supports the Local Plan comprises the following documents: • Strategic Housing Land Availability Assessment (SHLAA) (2017). • Strategic Housing Market Assessment (SHMA) (2017). • Employment Land Review (2017). • Green Belt Review (2016). • Environmental Network Study (2017). • Gypsies and Travellers Accommodation Assessment (2016). • Town Centre, Retail, Leisure and Tourism Study (2017). • Playing Pitch Strategy (2016) (previously published). • Strategic Flood Risk Assessment (SFRA) (2016). • Local Plan Viability Study 2015 and Updated Viability Study in relation to Affordable Housing (2017). • Landscape Study (2015) (previously published). • Landscape capacity study for wind energy developments in the South Pennines (2014) (previously published). • Heritage Impact Assessment of Housing Sites (2017). 1.5 In addition to the above documents, the Council's Sustainability Appraisal, although not strictly evidence, has informed the development of the draft policies.</p> <p>BACKGROUND</p> <p>1.6 Hourigan Connolly is instructed to review and comment on the emerging Local Plan in relation to land at Booth Road/Woodland Mount, Stacksteads.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.028	Further comment
						<p>The site has been allocated for housing; Reference HS2.28.</p> <p>1.7 The 0.3 ha site lies to the north of Booth Road in the northern part of the settlement of Stacksteads and comprises the garden land to the residential property known as Heath Hill House.</p> <p>SCOPE</p> <p>1.8 In preparing these submissions we have reviewed the documents mentioned above as well as other documents forming the evidence base that underpins the emerging Local Plan.</p> <p>1.9 This document follows earlier Representations and discussions made by Mr Brian Boys as part of previous consultation stages in the Local Plan process, albeit that parts of the Local Plan were subsequently halted in favour of a complete new Local Plan.</p> <p>OVERVIEW</p> <p>1.10 The starting point for consideration of the emerging Local Plan document is the well-established principle embodied in Paragraph 158 of the National Planning Policy Framework (hereafter referred to as the Framework) that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>2. LEGISLATIVE & POLICY CONTEXT</p> <p>INTRODUCTION</p> <p>2.1 In this Chapter we set out the relevant legislative and policy context before going on to examine the Council's Local Plan document.</p> <p>LEGISLATIVE CONTEXT</p> <p>2.2 Part 2 of the Planning & Compulsory Purchase Act 2004 (As amended) deals with Local Development.</p> <p>2.3 The RBC Local Plan is being brought forward following changes to the Development Plan making system in England which are set out in the Localism Act 2011. Part 6 Sections 109 – 144 of the Localism Act deal with Planning.</p> <p>2.4 Following revocation of the North West Regional Strategy (RS) in May 2013, Council's such as RBC will set their own housing and employment targets against objectively assessed needs.</p> <p>2.5 The Town & Country Planning (Local Planning) (England) Regulations (SI No. 767) came into force on 6 April 2012 and guide the preparation of Local Plans.</p> <p>MINISTERIAL STATEMENTS</p> <p>2.6 In his Written Statement of 23 March 2012 the then Minister for Decentralisation and Cities the Rt. Hon Greg Clark MP referred to a pressing need to ensure that the planning system does everything it can to help England secure a swift return to economic growth. He urged local planning authorities to make every effort to identify and meet the housing, business and other development needs of their areas.</p> <p>2.7 The National Planning Policy Framework (hereafter referred to as the</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.028	Further comment
						<p>Framework) (see below) was subsequently published on 27 March 2012 and urges local planning authorities to boost significantly the supply of housing.</p> <p>2.8 In his Written Statement of 6 September 2012 the Secretary of State for Communities and Local Government the Rt. Hon Eric Pickles MP noted an increase in house building starts between 2009 and 2011 but said that there was far more to do to provide homes to meet Britain’s demographic needs and to help generate local economic growth.</p> <p>2.9 There can be no doubt that house building is a driver of the local economy besides providing homes for local people.</p> <p>FRAMEWORK REQUIREMENTS</p> <p>2.10 Paragraphs 150 to 185 of the Framework deal with Plan-making.</p> <p>2.11 The importance of the Local Plan is identified as the key to delivering sustainable development and a cornerstone of the development management process (Paragraph 150 refers).</p> <p>2.12 The requirement for Local Plans to be prepared with the objective of contributing to the achievement of sustainable development is embodied in Paragraph 151 of the Framework and stems from the requirements set out under Section 39(2) of the Planning & Compulsory Purchase Act 2004. Local Plans must also be consistent with the principles and policies of the Framework.</p> <p>2.13 Paragraph 152 of the Framework requires local planning authorities to seek opportunities to achieve and secure net gains for each of the three dimensions of sustainable development. These three dimensions are defined in Paragraph 7 of the framework as economic, social and environmental. According to Paragraph 7 of the Framework these dimensions give rise to the need for the planning system to perform a number of roles:</p> <ul style="list-style-type: none"> • “an economic role – contributing to building a strong, responsive and competitive economy, by ensuring that sufficient land of the right type is available in the right places and at the right time to support growth and innovation; and by identifying and coordinating development requirements, including the provision of infrastructure; • a social role – supporting strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and future generations; and by creating a high quality built environment, with accessible local services that reflect the community’s needs and support its health, social and cultural well-being; and • an environmental role – contributing to protecting and enhancing our natural, built and historic environment; and, as part of this, helping to improve biodiversity, use natural resources prudently, minimise waste and pollution, and mitigate and adapt to climate change including moving to a low carbon economy”. <p>2.14 Paragraph 8 of the Framework states that the roles mentioned in Paragraph 7 should not be undertaken in isolation, because they are mutually</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.028	Further comment
						<p>dependant and should be sought jointly and simultaneously through the planning system.</p> <p>2.15 The importance of Local Plans taking into account local circumstances is highlighted in Paragraph 10 of the Framework to ensure that they respond to the different opportunities for achieving sustainable development.</p> <p>2.16 Paragraph 152 of the Framework goes on to deal with adverse impacts on any of the dimensions of sustainable development and sets out three tests:</p> <ul style="list-style-type: none"> • Firstly significant adverse impacts on any of the dimensions should be avoided, and where possible, alternative options which reduce or eliminate such impacts should be pursued. • Where adverse impacts are unavoidable, measures to mitigate the impact should be considered. • Where adequate mitigation measures are not possible, compensatory measures may be appropriate. <p>2.17 Paragraph 154 of the Framework requires Local Plans to be aspirational but realistic and address the spatial implications of economic, social and environmental change.</p> <p>2.18 The requirement for local planning authorities to set out strategic priorities for their areas in their Local Plans is established in Paragraph 156 of the Framework. Such policies are required to deliver:</p> <ul style="list-style-type: none"> • “the homes and jobs needed in the area; • the provision of retail, leisure and other commercial development; • the provision of infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat); • the provision of health, security, community and cultural infrastructure and other local facilities; and • climate change mitigation and adaptation, conservation and enhancement of the natural and historic environment, including landscape”. <p>2.19 The importance of using a robust and proportionate evidence base for Plan making is dealt with in Paragraphs 158 to 177 of the Framework. Paragraph 158 is of particular relevance to these submissions: “Each local planning authority should ensure that the Local Plan is based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. Local planning authorities should ensure that their assessment of and strategies for housing, employment and other uses are integrated, and that they take full account of relevant market and economic signals”.</p> <p>2.20 A number of topics are discussed and for the purpose of this document we will focus on housing (Paragraph 159), business (Paragraphs 160 – 161), infrastructure (Paragraph 162) and environment (Paragraphs 165 – 168). HOUSING</p> <p>2.21 Paragraph 159 outlines the importance of preparing a Strategic Housing</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.028	Further comment
						<p>Market Assessment (SHMA) to assess full housing needs and a Strategic Housing Land Availability Assessment (SHLAA) to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period.</p> <p>2.22 Of particular importance is the requirement for the SHMA to identify the scale and mix of housing and the range of tenures that the local population is likely to need over the Plan period which:</p> <ul style="list-style-type: none"> • “meets household and population projections, taking account of migration and demographic change; • addresses the need for all types of housing, including affordable housing and the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes); and • caters for housing demand and the scale of housing supply necessary to meet this demand”. <p>BUSINESS</p> <p>2.23 Paragraph 160 of the Framework outlines the importance of local planning authorities having a clear understanding (from a robust evidence base) of business needs within the economic markets operating in and across their area.</p> <p>2.24 Paragraph 161 of the Framework establishes the importance of understanding business needs (both quantitative and qualitative) and ensuring that sufficient suitable land (both existing and future) is available to meet needs.</p> <p>INFRASTRUCTURE</p> <p>2.25 An objective of government policy is the delivery of growth. Central to this objective is ensuring that infrastructure has the capacity or can be enhanced to deliver growth. A number of factors are outlined in Paragraph 162 of the Framework which need to be considered at a local level including transport, water, foul drainage, energy, telecommunications, waste, health, social care, education, flood risk and coastal change management.</p> <p>ENVIRONMENT</p> <p>2.26 Paragraphs 165 to 168 of the Framework deal with environmental matters and set out the requirement that a sustainability appraisal which meets the requirements of the European Directive on strategic environmental assessment should be an integral part of the plan preparation process, and should consider all the likely significant effects on the environment, economic and social factors.</p> <p>SOUNDNESS</p> <p>2.27 Paragraph 182 of the Framework deals with the examination of Local Plans. The Local Plan will be examined by an independent inspector whose role is to assess whether the plan has been prepared in accordance with the Duty to Cooperate, legal and procedural requirements, and whether it is</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.028	Further comment
						<p>sound. Local planning authorities are required to submit Plans for examination which they consider “sound” – namely that they are:</p> <ul style="list-style-type: none"> • “Positively prepared – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development; • Justified – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence; • Effective – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and • Consistent with national policy – the plan should enable the delivery of sustainable development in accordance with the policies in the Framework”. <p>NATIONAL PLANNING PRACTICE GUIDANCE – LAUNCHED 6 MARCH 2014</p> <p>2.28 On 28 August 2013 the government launched its draft National Planning Practice Guidance (NPPG). The draft NPPG was subject to consultation for 6 weeks and was launched on 6 March in its final form. The NPPG replaces some 230 planning guidance documents but will result in no amendments to the Framework.</p> <p>2.29 The Housing and Economic Land Availability Assessment section of the NPPG is worthy of specific mention in relation to this Report, in particular paragraph 030 (reference ID: 3-030-20140306 confirms): “Housing requirement figures in up-to-date adopted Local Plans should be used as the starting point for calculating the five year supply. Considerable weight should be given to the housing requirement figures in adopted Local Plans, which have successfully passed through the examination process, unless significant new evidence comes to light. It should be borne in mind that evidence which dates back several years, such as that drawn from revoked regional strategies, may not adequately reflect current needs.”</p> <p>2.30 The NPPG deals with deliverable sites as follows at paragraph 031 (Reference ID 3-031-20140306): “WHAT CONSTITUTES A ‘DELIVERABLE SITE’ IN THE CONTEXT OF HOUSING POLICY? Deliverable sites for housing could include those that are allocated for housing in the development plan and sites with planning permission (outline or full that have not been implemented) unless there is clear evidence that schemes will not be implemented within five years. However, planning permission or allocation in a development plan is not a prerequisite for a site being deliverable in terms of the five-year supply. Local planning authorities will need to provide robust, up to date evidence to support the deliverability of sites, ensuring that their judgments on deliverability are clearly and transparently set out. If there are no significant constraints (e.g. infrastructure) to overcome such as infrastructure sites not allocated within a development plan or without planning permission</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.028	Further comment
						<p>can be considered capable of being delivered within a five-year timeframe. The size of sites will also be an important factor in identifying whether a housing site is deliverable within the first 5 years. Plan makers will need to consider the time it will take to commence development on site and build out rates to ensure a robust five-year housing supply.”</p> <p>2.31 In regards to how often a Local Plan should be reviewed, the NPPG states at paragraph 008 of the section titled ‘Local Plans’ (Reference ID 12-008-20140306) that: “HOW OFTEN SHOULD A LOCAL PLAN BE REVIEWED? To be effective plans need to be kept up-to-date. Policies will age at different rates depending on local circumstances, and the local planning authority should review the relevance of the Local Plan at regular intervals to assess whether some or all of it may need updating. Most Local Plans are likely to require updating in whole or in part at least every five years. Reviews should be proportionate to the issues in hand. Local Plans may be found sound conditional upon a review in whole or in part within five years of the date of adoption.”</p> <p>GOVERNMENT CONSULTATION ON STANDARDISED METHODOLOGY FOR HOUSING NEED (SEPTEMBER 2017)</p> <p>2.32 On 14 September 2017 the Government announced a consultation on a Standardised Methodology for Assessing Local Housing Need, the basis of which was included in the White Paper (February 2017) and is aimed at helping local authorities plan for the right homes in the right places.</p> <p>2.33 As the consultation document sets out, the root cause of the dysfunctional housing market in the UK is that for too long we have not built enough homes. The Government is aiming to deliver 1.5 million new homes between 2015-2022 and is attempting to create a system which is clear and transparent for local authorities. The new methodology will apply to all future plans, with the exception of those which have been submitted or will be submitted before 31 March 2018.</p> <p>2.34 The standard methodology is principally aimed at tackling problems of affordability as the proposed formula simply uplifts the household projections figure, based on market signals.</p> <p>2.35 For Rossendale the proposed standard methodology has little impact on the annual housing requirement (which, it is suggested should be 212 rather than the current 265 dwellings per annum). However, it should be noted that the proposed standard methodology is currently on consultation and may therefore be subject to changes in due course. It is also worth noting the heavy speculation that the proposed methodology focuses on growth in the south east to the detriment of other parts of the UK, in particular the north west.</p> <p>2.36 Crucially the provision of the right type of housing in the right locations is considered to be relevant to this Representation.</p> <p>3. POLICY HS2: HOUSING SITE ALLOCATIONS</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.028	Further comment
						<p>INTRODUCTION</p> <p>3.1 Policy HS2: Housing Site Allocations identifies all sites within the Borough which have been allocated for residential development. For each site allocated, site area, capacity, delivery timescales and the type of residential allocation is identified.</p> <p>3.2 Land at Booth Road/Woodland Mount is identified as Housing Allocation Ref. HS2.28 as shown below.</p> <p>Fig. 1 Extract from Site Allocations Table (Policy HS2)</p> <p>3.3 The proposed allocation is identified in Figure 2.</p> <p>3.4 We support the aims of the Local Plan to identify key development sites which are central to the delivery of the overall strategy for new housing.</p> <p>3.5 The site is in single land ownership, being solely within the ownership of Mr Brian Boys. The allocation site is made up of private garden land which is bordered on all sides by trees and is located in the north of Stacksteads. To the north of the site is open countryside with the predominant surrounding land use being residential in nature.</p> <p>3.6 The allocation site has not been the subject of any previous planning applications.</p> <p>3.7 There are no environmental or statutory designations or other technical considerations that would prejudice the residential development of the site. The site is sustainably located and is capable of delivering housing now.</p> <p>3.8 Land at Booth Road/Woodland Mount is available and deliverable and we therefore support the identified delivery timescale of 1-5 years.</p> <p>3.9 However, we consider that the proposed number of units referred to (10 units) could be increased in this location. It is stated in a footnote to the allocations table that 'when calculating the potential numbers of housing on each site a density of 30 dwellings per hectare has been used unless more detailed information is available'. Density could appropriately be increased in this location due to the site's location and its surroundings.</p> <p>3.10 In addition, we consider that the allocation for self-build only is too restrictive and may hinder the delivery of this sustainable residential development site within the timeframe specified.</p> <p>SUGGESTED MODIFICATION</p> <p>3.11 To ensure that this site delivers to its full potential, and the timescales for delivery are not hindered, it is suggested that the Council make a modification to the draft Local Plan document to simply allocate the site for housing, rather than self-build more specifically, for up to 25 dwellings. The Proposals Map should also be amended to show the site as orange (as with other allocated housing sites) rather than red to identify self-build housing sites only, thereby not restricting development on this site and indicating that the site can deliver housing within the early part of the Plan period.</p> <p>3.12 At a time when the Council is directed to significantly boost the supply of housing in accordance with Paragraph 47 of the Framework, it is suggested</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.028	Further comment
						<p>that the Local Plan should simply allocate sites for housing, rather restricting the nature of the potential developer/builder.</p> <p>4. POLICY HS18: SELF BUILD AND CUSTOM BUILT HOUSES</p> <p>INTRODUCTION</p> <p>4.1 The site at Booth Road / Woodland Mount, Stacksteads has been identified as suitable for self build and custom built houses as detailed under Policy HS18. The policy states that this is to ensure a variety of housing provision and is in line with government aspirations to promote self/custom build dwellings as a mainstream housing option.</p> <p>4.2 Whilst we support the notion of providing variety in terms of housing options, we consider that limiting sites to self/custom build may hinder the delivery of much needed residential development on sustainable sites. It is particularly pertinent to note that within the explanation to Policy HS18 it is states that, in relation to self/custom build housing, 'evidence from the SHMA indicates that the level of demand for plots is currently low in Rossendale'. We consider that whilst some sites may lend themselves to this more readily, sites should not be identified under Policy HS18 specifically, with support for individuals who would like to build or commission their own home being supported on a case by case basis.</p> <p>SUGGESTED MODIFICATION</p> <p>4.3 Policy HS18 should be amended to remove specific site references in order to ensure that the policy and sites allocations are not unduly restrictive. The policy can still set out the Council's commitment to support individuals who would like to build or commission their own home where this is appropriate and there is some certainty in relation to delivery.</p> <p>5. CONCLUSIONS</p> <p>5.1 The starting point for consideration of the Council's draft Local Plan document is the well-established principle embodied in Paragraph 158 of the Framework that Development Plans must be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area.</p> <p>5.2 Notwithstanding concerns expressed in this Representation about the Evidence Base which supports the preparation of this draft Local Plan Part document, the subject site should continue to form part of the Council's housing growth strategy and we support its proposed housing allocation, subject to the changes set out in this Representation.</p> <p>5.3 Our client's site is capable of being developed for residential purposes now. Please see appendix</p>

1820	Kelly	Holt	Lancashire County Council		Object	HS 2:29 – Tunstead - The privately maintained unnamed road (possibly known locally as Cop Lane) carries public footpath 56 and is insufficient in width to accommodate any development traffic. There is heavy on-street parking on the lane which further narrows the width and the residents have no alternative off-street parking. An alternative vehicular access would be required and the options appear very due to the proximity of existing properties.

Reference HS2.032 Land off Newchurch Old Road, Bacup

443	Jim	Leach			Object	This area has for more than forty years been a natural habitat for Wildlife, Squirrels, Badgers, Foxes, and Weasels, Plus many varieties of wild birds. This area is also used as an ideal off-road area for exercising Dogs and Horses - To lose this Oasis Bankside Lane is already a hazardous road, access is frequently restricted to existing houses by car. There is existing a sign " Gritting Route, Problem access road " Further Housing and therefore Traffic would only add to the existing problems A Domestic Fire would,at present,be difficult for a Fire Engine to attend during the daytime, at night ,when everyone is at home it would be impossible These areas should be returned to Green Belt status		Not at Present

486	Susan	Ormerod			Object	<p>All of the above sites are in the Bankside Lane area of Bacup. All are Greenfield Sites and should be changed back to this status without delay.</p> <p>All of these sites are currently used by the local people and their children, in one form or another, as well as the local deer herds (of which there are two), foxes, badgers and a host of other wildlife, including the birds of prey from the Stacksteads area.</p> <p>Some of these sites are owned by local farmers to breed and train horses. The vehicle activity on Bankside, where there are three serious hazards on the approach from the town centre due to narrow roads and a blind bend on a steep incline, is already a danger with the local traffic. These three narrow sections are all within a 20 metre stretch and will not allow even two small vehicles to pass. This hazard has been increased by the "home delivery" method of purchasing goods for the already existing occupants and further population increases would inevitably mean increases of delivery wagons and vans.</p> <p>Any changes of road from the Stacksteads area would provide a "rat run" between the town centre and Stacksteads and any road up from an improved "Lodge Lane" would be a worse hazard than Bankside is at the moment. Almost certainly impassible in winter.</p> <p>The current parking situation on Bankside Lane is already causing concern as shown by the council notices which appeared some time ago. Access for the emergency services has already caused hold ups on five occasions know to myself during the past twelve months.</p> <p>In conclusion, these plans, if passed, will implement a serious deterioration in living standards for all existing occupants of the Bankside Lane area and an increased health risk factor for all who use the lane either in a vehicle or as a pedestrian.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
488	Helen	Koczur			Object	<p>To even consider planning further homes on any part of Bankside Lane, Bacup is totally ludicrous.</p> <p>The lower part of Bankside Lane is exceptionally steep and narrow in 2 sections and cannot cope with any further traffic. On days that the Golf Club holds events, or football teams are playing on the recreation ground, access becomes impossible. In bad weather, the gradient together with the width restrictions leads to chaos and accidents, of which I have not only witnessed but suffered in the past. There is also limited pedestrian access at these dangerous sections. The route CANNOT cope with any further traffic. As these access problems are at the lower part of Bankside Lane ANY future housing expansion at any point further up the lane would affect this section.</p> <p>We recently had road improvement work which proved access problems. I dread to think what would happen to emergency services under these conditions as access will not be easy.</p> <p>The difficult access means that houses do not sell here, so why on earth build more? I do not see an increase in employment opportunities in the area so the occupants of any new build would travel out of the area for work. This would mean that the volume of vehicles would increase to a dangerous level. If some of the build is required to be for social housing, access for young families with prams and elderly would be impossible without transport.</p> <p>There has been a development of houses over in Weir. All have normal road access, not single track as on Bankside Lane, yet in bad weather the access problems cause the main Bacup to Burnley Road to be severely restricted with abandoned vehicles. Putting further houses off Bankside Lane would also cause a similar problem to the centre of Bacup.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
489	Denise	Duffy			Object	<p>I have lived in the Bankside Lane area some 47 years, in effect all of my adult life. The journeys up and down the Lane have become increasingly hazardous and dangerous and I am appalled that RBC is considering allocating 4 locations for new housing.</p> <p>> For a start the blind narrow bend around Ivy Cottage has always been hazardous and the increase in car numbers has made it doubly so over the years. Further traffic will only serve to exacerbate the conditions we experience daily.</p> <p>> Parking and especially double parking along the Lane and even on pavements has increased significantly. You only have to ask your own drivers (bins, gritting) of the difficulties they regularly face. Emergency services , especially Fire Engines, would also confirm their difficulties along the Lane.</p> <p>> As most home owners frequently have more than one car in their families, sometimes up to four cars once adult children start driving, the addition of garages does little to ease the situation. Apart from the fact that garages are often storage places rather than car shelters.</p> <p>> Although I have personally not been involved in an accident, accidents have happened on numerous occasions. The steepness of the lower Lane, especially in winter conditions, calls for careful negotiation. Again, additional traffic will exacerbate the residents safety concerns.</p> <p>Thank you in anticipation for forwarding this to whom ever it concerns</p>		
503		McKeown			Object	<p>I am against the proposed new housing off Bankside Lane as I am worried about road safety with poor visibility of oncoming traffic in areas and speeding vehicles. Also there would be gridlock at the bottom of Bankside Lane if there is to be additional housing because there are not two lanes of traffic which relies on drivers good faith on many occasions as you travel up the hill (there are many difficulties with this now).</p> <p>I am a resident Meadow Way. At present I have increasing issues with run off of rain water which already requires bailing out of water in winter. The new housing area, no longer being fields to absorb the rain water, will impact further on the massive drainage problem I am having to cope with.</p> <p>I would be very keen to know more about sewage system and how and which route the new system will follow as I have sewage pipe work under my side garden which serves about 24 houses.</p> <p>I am concerned about trucks during the building works and the additional dirt on the roads creating slippery areas for vehicles, damage to the road, and being additionally busy leading to increased chance of accidents.</p>

534	Romanii	Fitton	-		Object	I most certainly want to object to anymore houses being built on or around bankside lane in bacup. The street is congested with cars and wouldn't be able to cope with more vehicles coming up and down it every day. We also love the little bit of green land we have left and don't want it spoiled by any more houses being built.		-
539	Simon	Midgley	-	HS2.1, HS2.12, HS2.14, HS2.32	Object	This site would be accessed from Bankside Lane which is already difficult to navigate at peak traffic periods: it is narrow and is accessed from Market Street via a very steep and narrow hill section. In normal conditions this needs extreme care when navigating, in winter snow and ice this access is dangerous and often impassable. Additional traffic generated by housing on these sites (HS2.1, HS2.12, HS2.14, HS2.32) would make a dangerous situation even worse. Cars are parked on both side of Bankside Lane narrowing it to one car's width in many sections: there is nowhere else for the cars to park. - - Development on sites HS2.1, HS2.12, HS2.14, HS2.32 would also be "skyline" development which residents were told would not be permitted. This would destroy the green character and visual amenity of this part of Bacup - forever. - - Currently farmland, these sites soak up precipitation helping to reduce flood risk which development would increase.		Bankside Lane is an inappropriate area for housing development for the reasons already outlined above. It is important that we do not lose this green space on the Valley side.
540	BRETT	HARRIS	-		Object	BANKSIDE LANE CAN NOT SUPPORT MORE TRAFFIC IT IS ALREADY STRUGGLING WITH THE AMOUNT OF TRAFFIC.		-
543	Thomas	Hammant	-		Object	As well as the other objections made in line with HS2.13 which are true for all developments on Bankside Lane, in particularly this area is used for health and wellbeing of many adults and animals, and is a public right of way and bridleway used for horse		Whilst I understand the need to balance new housing in the area, building on land which is currently used as both a farm and/or public access land is against all previous council policies and should not be entered into lightly. -

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
545	Lisa	Hartley	-		Object	Greenfield site and should remain as such - full of wildlife e.g. 2 deer herds, foxes, badgers and birds of prey. Landowners train and breed horses on this land. - Bankside already extremely congested with traffic- not enough parking facilities now - council have had to put notices up asking people to park more consideratly as emergency services (fire engines) and council services (gritters) have been unable to pass through. - Bankside has 3 very narrow points where only one vehicle can pass at once and these areas are extremely close together in proximity incorporating blind bends as well - more houses would cause more cars causing chaos and accidents. Any through road to stacksteads that might be made would lead to bankside being used as a racing track for cars to pass through from stacksteads trying to avoid the busy main road! This in itself would be extremely dangerous as more houses Lead to more people living on bankside -probably children - resulting in more road traffic accidents and fatalities! We have enough at the moment we don't need anymore. - It would be a nightmare waiting to happen. - Building houses would cause further chaos with wagons attempting to make their way through when there is so little room - home shopping vehicles struggle at moment and are sometimes unable to gain access all the way across bankside! -		Please re think your plans as they will have very serious consequences for both the public and wildlife of bankside!
553	ALLAN PETER AND YVONNE	WEBB	-		Object	1. The building of these proposed houses is on the top of a very steep hill. - 2. These buildings would be on the sky line and directly above some of the houses on Fernhill Crescent. There were problems caused by the building of houses at the end of Bankside Lane previously because they can be seen above the sky line. - 3. As the occupiers of 24, Fernhill Crescent we are very worried about possible land-slip, as there are numerous mature trees whose roots secure the land on the side of the hill. The hillside is very ridged already, which suggest there could be some land slip. - 4. Top of the hill is quite flat and holds much rain water, hence reducing possible flooding of our dwellings and the danger of causing excess water to flow into the River Irwell, which is prone to flood when in spate. - 5. Main excess would be along Bankside Lane which is quite narrow, especially where it leads into Bacup town centre. It would be extremely difficult to make access onto Osborne Terrace or Hill Crest because of the steepness of the hillsides. During snowy or wintry weather these roads can be treacherous causing people to leave their cars on the main roads. - 6. Beautiful wooded area would be destroyed. - 7. Bats reside in the trees near to our house and are frequently seen flying around in the evening. (See Bat Conservation Trust). Deer are occasionally seen as well as foxes and badgers. There is also plenty of bird activity. - 8. The area is used by walkers, pony trekkers who make their way down into Stacksteads and dog walkers. - - By all means use brown site areas, but for goodness sake, leave the few green spaces left to us for our enjoyment and recreation. My grandson cried when he heard us discussing the possible building of houses on an area we have walked on and played on for years.		We've tried to be as concise and honest as possible. - - Peter and Yvonne Webb

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
557	michael	hudson	-		Object	first the bankside lane cannot support any more traffic its a 20 mph zone but traffic goes a lot faster,the road floods a lot. most of that from old newtownroad waters running all the time.the inferstructure cannot cope with any more houses or veicles your concerned resident [...].		i think there is plenty of brown sites around this area that could be used.and empty proerties around not being used.
558	Terry	Nightingale	-		Object	I wish to object to the proposals as follows - - 1. lack of suitable acess to to the proposed sites .There is no suitable access to any of these sites with all traffic having to access and exit onto Bankside Lane (see also point 4) - - 2. risk of flooding to properties on Bankside Lane if housing built on green field site to rear. During periods of wet weather rainwater cannot now drain away and as such runs down through these properties gardens onto Bankside lane . increased building will further increase the risk of flooding for these properties - - 3. in addition to the flood risk there will be the increased sewerage demands onto the existing sewerage system on Bankside Lane /Close - - 4. A huge increase in vehicular traffic on an already overcrowded one way in and out Lane . - during winter months lack of available parking / inconsiderate parking on lower Bankside Lane regularly prevents LCC Gritters from being able to access this area . An increase in housing will inevitably bring increased fire risk . - - 5. There will be an environmental impact on wioldlife in the area . Land in the area is frequented by deer and many other types of wildlife . -		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
581	B	Woodrup			Object	<p>We are writing to object to the proposed plans to change areas of previous green belt sites to building sites of potentially 100 new houses. These are our concerns.</p> <p>The bottom of Bankside Lane has three bottle necks very steep and narrow and a bad bend only room for one car, a very narrow pavement on one side. Children will be walking down and up to get to school.</p> <p>The school run will be dangerous the road is already overloaded.</p> <p>In winter people try to park at the bottom of the lane in the morning, ready to go to work, because the road is always gritted. The road is sometimes so icy. It's frightening to drive down, as you could easily crash into the wall or another vehicle parked or moving. I dread to think what could happen with more pedestrians (children).</p> <p>I am also concerned about the fire engines and ambulances and gritter trying to drive up and over bankside lane, especially after 7PM when most residents are home and their vehicles are all parked on the roadside's and pavements. This is a concern now. It's going to be really bad if another 100 houses are to be built. Most households have two cars.</p> <p>What about our wildlife. Bats, hedgehogs, deer, rabbits, badgers, toads and frogs.</p> <p>What about our beautiful countryside and outdoor spaces that we and our children and grandchildren really enjoy.</p> <p>We hope you seriously consider our concerns and objections.</p> <p>It has been mentioned to me that previously planning to build houses was turned down by the ministry of transport. Because of the bottlenecks at the bottom of bankside lane.</p> <p>There's also the question of policing all these extra residents and homes.</p>		
582	G	Pearson			Object	<p>Dear Sirs I will raise my objections to this Development due to the following reasons..</p> <p>The lane is already over loaded with vehicles from the existing houses, the Council has placed notices on the lampposts about the problem of gritting the lane due to traffic.</p> <p>My wife had a vehicle accident Two years ago as a vehicle reversed into her vehicle due to cars parked on Bankside lane.</p> <p>The road itself in a bad state of repair due to traffic movement.</p> <p>When your refuse teams come to collect they complain of the problems of traffic on the Lane.</p> <p>When the Animal farm is allowed to have functions on such as Halloween there are even worse traffic problems.</p> <p>The Green areas currently enjoyed by the locals and their children will be affected and even lost .</p>

584	Craig	Ovenden	Next Century Property Services Ltd		Object	<p>I'm am led to believe that a new draft local development plan includes a proposal to allocate land for housing at 4 locations off Bankside lane? As a long term resident of Bankside lane I would object to the proposal on several counts:</p> <ol style="list-style-type: none"> 1) The lane is already extremely busy and access is always restricted down to a single track lane, if the proposal involves further vehicle access the road would need to be made wider. 2) The lane is in a poor state of repair, adding more traffic would create further ongoing maintenance. 3) We live right at the top of the lane, on refuse collection days, dependent on what time the collection takes place it can take me an extra 10-15 minutes to travel down the lane, the collection drivers are always really obliging and pull over when possible, however due to the amount of parked cars and traffic travelling in the opposite direction I often have to follow behind the vehicle right to the bottom, further housing would only compound the problem. 4) The bend in the road towards the bottom and the further narrowing of the road is a bottle neck often leading to vehicles waiting at the bottom to let oncoming traffic up and down the lane, this sometimes backs up as far as the main road, further housing/vehicular access would cause a danger at the junction with Newchurch road as vehicles que to access the lane. <p>Please can you consider these points before any decision is made to allocate the land for housing.</p>		
586	Sandra	Robinson			Object	<p>This email is in regards to the proposal for housing at 4 locations off Bankside Lane, I am a resident of Bankside Lane,I feel that there is too much traffic at the moment on this narrow road,I am lucky to have off road parking,however most do not which then causes problems for pedestrians.</p>		
592	Jean & Peter	Hannan			Object	<p>I am submitting our opposition to the proposed building plans within the Bankside Lane area. Bankside Lane is already overloaded and congested with motor vehicles and we feel that added traffic will cause untold problems. Inadequate parking facilities already add to this problem and we feel very strongly that the above proposals will potentially cause accidents and traffic delays.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
608	A J	Doherty			Object	<p>Email received 29/09/2017: Dear Sirs I attended the road show at Futures Park on 21st September and saw the four sites you proposed for building upon. I object most strongly to all of them. Bankside Lane has a very narrow access from A 681 with room for one car only at the turning. A very steep incline for some yards and then at Dale Street the road narrows even more, again with room for one car only. The incline is even steeper. Near the end, there is a treacherous incline and turn. Parked cars line the whole of Bankside Lane already. In winter, in spite of efficient gritting by the Council, snow and ice can stop traffic. If the proposed building takes place, In the short term, many heavy vehicles would create chaos to our local traffic. Long term, the traffic would double making access a nightmare. I commend the services of Rossendale Council for their efficient rubbish collection and gritting in winter. I am sure they will tell you how difficult it is already to access Bankside Lane. In the case of an emergency - ambulance or fire - we would be put at great risk of delays. Perhaps we could call a helicopter...</p> <p>Email received 30/09/2017: Bankside Lane Bacup proposed building sites I attended the road show on 21st September 2017 at Futures Park, Bacup I object to any of the proposed building sites because Access is extremely restricted. The entrance to Bankside Lane from A 681 is very narrow and cannot be widened. The road is very steep. It continues between a house to the left and high bank to right leaving room for just one vehicle round a blind bend. The road here is also very steep and cannot be widened. Near the end of Bankside Lane there is another very steep incline, round two corners. The whole of Bankside Lane is congested with parked vehicles. If the proposed building takes place, access will be a nightmare. Already it is amazing that local authority vehicles - refuse collection and gritting in winter - manage so efficiently, but it would be almost impossible to continue were traffic to double.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
						<p>Winter snow and ice make the road dangerous and sometimes impassable. In the short term: probably over several years, heavy vehicles would block access.</p> <p>In the long term: four building sites would probably increase traffic to double what it is now.</p> <p>Ambulance , Fire Services and Police must have easy access and these would be put at risk.</p> <p>What do you suggest? Hire a helicopter?</p> <p>Lastly, you are intending to build on virgin moorland, destroying forever the natural beauty and wildlife it supports.</p>		
611	Christine	Hudson			Object	<p>I am writing in regard to the building of 183 houses in all off Bankside Lane. I drive up and down Bankside Lane most days (week and weekend) and it does get very congested at times with lorries and cars, the lane is not very wide and people who live here have to park both sides of the lane which only leaves enough space to get through.</p> <p>The very narrow park of Bankside Lane, as you go up the hill leaves only enough space for single traffic. A lot of people get very frustrated and angry putting it mildly. People forget it is a 20 mile limit so there is often a near miss.</p> <p>If the houses are going to be built 183 in all they will all have to use Bankside, so that means there will be an extra 30 cars. There would be heavy lorries and vans whilst they are being built. Most households are 2 car families hence 380 cars extra.</p> <p>Drainage</p> <p>When we have heavy rainfalls which is often. We get a lot of water coming down from old newchurch road and onto the lane. In the last 5 years we have had flash flooding.</p> <p>One day we were sitting in our front lounge and our wheelie bins were floating about in the front garden. We opened our garage doors front and back and it was like a river running down the garden. All our plants were lost as they were in a pile of mud at the bottom of the garden.</p> <p>If these houses are going to be built, there will have to be better drainage. Also we have some lovely open green spaces around Bacup, that we all enjoy and cherish.</p>

615	Elaine	Garrard			Object	<p>I wish to object to the proposed housing development sites referenced HS1.11, HS2.12, HS2.13 and HS2.32 which are listed in the housing allocations section of the above plan.</p> <p>The reason for my objection is that vehicles travelling to Bacup Town Centre from each of these sites will need to use Bankside Lane. This will add to the existing traffic which already presents a significant safety hazard for me personally at the steep and narrow section between its junctions with Maden Road and Market Street.</p> <p>I am disabled and have to travel to Bacup from my house via Bankside Lane either by car or whenever possible by mobility scooter. However, because the width of the pavement is very narrow I have to drive my scooter on the roadway and this means choosing the times of my journeys carefully to avoid peak congestion when I would be dangerous for me to use the road. In particular there are two sections of Bankside Lane which narrow to a single lane and where I cannot take evasive action if a hazard incident occurs. I consider therefore that by allowing additional developments along Bankside Lane and hence additional traffic hazards, the council will discriminate unfairly against me and also other disabled road users.</p> <p>On this basis I ask you to remove the above housing sites from the Local Plan unless the pavement or road widths can be improved to an acceptable standard.</p> <p>I attach a photograph which illustrates the difficulties.</p>		
621	David	Carey	-		Object	<p>Bankside Lane is a cul de sac which already has a lot of traffic going up and down, and parking is on road for the most part, making it very difficult bearing in mind the amount of people who already live on bankside lane, to pass. To add an extra 100 houses and the additional traffic this would cause would make it intolerable for existing house owners. - The added pressure of extra traffic would also affect our children, as there is no place on Bankside Lane to play bar on small play area, and for the most part children ride their bikes and play in front of their houses, this would be an additional safety risk. - It would also ruin the countryside feel we have and make it impossible to walk our dogs as you are planning on taking all our recreational grounds from us. - In the winter we have a lot of bad weather and the gritter's find it hard to get up and grit the Lane, it will be worse with the amount of traffic added. - Again no thought has gone into the additional traffic and the impact on the people living on bankside Lane. - - I STRONGLY OBJECT TO THIS PROPOSAL!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! - -</p>		Not at this time

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
648	Robert	Ormerod	-		Object	<p>These four sites are all Greenfield sites. After the council has done a good job at improving this type of site in Bacup it would be absurd to destroy the fields which complement all the wooded areas of our town. The countryside of Rossendale looks bad enough with all the wind farms without destroying the remaining countryside of Rossendale. Our fields and woods are just returning to being used by the local wildlife and wildlife needs open spaces as well as enclosed spaces to live and prosper. - The traffic on Bankside is already becoming dangerous and unacceptable with the one narrow road and the increases of traffic. Nearly all residents now have more than one vehicle and delivery traffic, usually large vans or wagons, have increased tenfold whilst the road has been left to deteriorate. The slow signs, road centre signs and markings are now almost completely gone and the road, which we were all told was due for replacement surfacing was actually patched up, once again, and still has many holes, dips and bumps. This is especially on the blind steep bend from the town centre. Unless the access situation is addressed the many unreported non injury collisions will soon become serious injuries or fatalities. -</p>		Please take these plans away from from the overcrowded area

661	CA and VJ	Jennings	Home Owner	HS2.32	Object	<p>I am contesting these housing developments on several grounds. - - My issues and concerns will be submitted, in writing by the closing date of 9th October 2017.</p> <p>Letter received 06/10/2017:</p> <p>The statement "Improving the lives of people in the Borough" is central to the Borough's current "mantra" regarding their fundamental philosophy and how it is applied in all Departments, and in all the things that they do. However, I feel that some of the current proposals as outlined in the above DLP could fall far short of the Council's altruistic intentions.</p> <p>These are our concerns in respect of the Fernhill Crescent, Fernhill Drive and Bankside Lane development proposals:-</p> <ul style="list-style-type: none"> • Conservation - there is an extensive line of "mixed" trees which decorate the hillside from the end of Bankside Lane above Fernhill Crescent and Osborne Terrace. As far as I understand it, we all have a shared commitment to protect and preserve trees and the landscapes on which they reside. From the above plans, it seems that there is the potential for the removal of some of this tree-line on site HS2.32. This would have a huge and negative impact on the aesthetic outlook onto that hillside, and the potential for land slip, soil erosion, water-runoff and flooding on lower levels • Protecting the Environment - there are many issues here that would negatively affect several aspects of the local environment. Some of which resulting from over-capacity and over-crowding caused by the over-expansion in this area by these proposed developments (particularly along Bankside Lane) • Preserving the local Character - the area around an incorporating site HS2.32 is particularly attractive (especially to the West of Bankside lane) and is an asset to the local area and its residents. It offers countryside walks along heritage sites and long established pathways (ideal for walkers, dog-owners, explorers in general and "kids" of all ages) • Infrastructure - this aspect has never been something to celebrate in the Rossendale Valley area: mostly due to the uncompromising geography of the area rather than the incompetence of the local authorities. However, focusing on one point only, transport through the Valley is often difficult, and sometimes almost impossible at certain times of the day. Therefore, the addition of around 200 units along Bankside Lane would severely impact on both movement and parking. AND, the thought of possibly an additional 350 vehicles exiting onto the Bacup/Rawtenstall road and heading through the valley, doesn't bare thinking about!! AND, what about the winter if it's like the Fernhill area, some of it, or all of it, will not be gritted!! • Impact - in my opinion, the impact from these proposals would be many and 		To be submitted before 9th October 2017.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
						<p>wide ranging, but some would militate against the "improvement of lives"</p> <ul style="list-style-type: none"> • Preservation of Wild-life Habitats - the treed areas and adjacent open fields and moorland, are homes for thriving wild-life. In addition to the usual populations of wildlife, we have seen deer, foxes, squirrels, birds of prey and colonies of bats. The retention of range of wild-life would be threatened by the proposed invasion of their "space" • Ecological/Biological Considerations - these extensive developments could severely compromise the 'health', stability and integrity of the land, its trees; also its top-soil and sub-soil and the life forms that inhabit them • Local Heritage Preservation - there are some historical mule tracks, bridal paths & walkways and access routes into Yorkshire in this area, and we have a duty to protect and preserve them • Land Integrity - we have been aware for many years that the land above part of Fernhill Crescent has been subject to land-slip over the years. In fact, we were told by an authoritative figure that the extent of the problem had been measured over time. This weakness in the land caused our builder to reinforce the retaining walls in the back gardens of Nos 22, 24 and 26. Indeed, the retaining wall at No 26 actually collapsed. <p>Interestingly, the field behind these and other FC properties seems to show evidence of land-slip, whereas the adjacent wooded field seems not to suffer this problem</p> <ul style="list-style-type: none"> • Aesthetic Balance - given the attractiveness (in all respects) of this residential area, we would suggest that the proposed plans could severely impact upon the "wholesomeness" of this area, and have a negative effect upon the valuation of properties. Which would be, at least, unfair!!! • Practicality and Compatibility - in conclusion, and looking at just one aspect, when we factor-in access roads, traffic congestion and general disruption over time, and deterioration in the quality of people's lives, is it appropriate or acceptable to further pursue the Fernhill proposals?!? <p>Finally, who is it in the best interests of</p>		
667	Helen	Phythian	N.A.	HS2.11,HS2.12,H Object S2.13 and HS2.32		<p>I wish to object on the grounds that the proposed 100 houses will have at least two cars for each dwelling, this will mean a daily increase of journeys by at least four hundred trips on what is, in two places on Bankside Lane a single track road. - If the developers were to continue the road through to Stacksteads prior to start of the proposed development which would give an option to all residents, then maybe the plans would be viable. At the moment if Bankside Lane is left as is, the resulting traffic jams would increase the risks of accidents and also increase pollution,(drivers trying to pass the two single lane place , one of which is a blind bend as well as single lane, would be revving their cars to restart on an exceptionally steep hill).</p>		<p>overall I understand that the Government is laying down numbers for each area, instead of cramming in houses in every available green space left in Rossendale would it not be better to take a flat area of land and build a new village with all required facilities</p>

679	leslie	hargreaves	-	h52.11.12.13. andh52.32	Object	Bankside lane is already completely saturated with cars having to park on the pavements and at times heavy commercial cannot get through ie road gritters and refuse vehicles.This is worse when vehicle that normally park on maden road have to park on bankside lane due to winter conditions i.e. ice and snow. Approximately 50 years ago excavation was started for house building was started on the two fields between lodge land and so called bonks area which was stopped because the area in what they call shifting sand. Acces to bankisde lane is tottally in adequate and I totally object to this proposal as we already have our share of accidents on this road	-	
714	Marie	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	1) Bankside Lane is already very busy. There's already too many cars going up, down and along Bankside. Adding another 100 or more houses and therefore cars will just add to the congestion. 2) Bankside Lane has tight and narrow bends. Add more traffic to the mix and there will easily be some serious accidents especially in the winter when it snows. 3) Vehicles are already parking on pavements to allow other cars to get past. In case of an emergency (fire or ambulance) the emergency vehicles would already have trouble getting to the destination. Adding those extra cars would make it impossible. The gritter has problems now! 4) The proposed land is home to lots of wildlife including deer, badgers and foxes. Why should we disrupt their habitat? Where would they go? It's not fair on them when they cannot speak up for themselves. 5) 50 years ago they evacuated Bankside because the field was on shifting sands. 6) the local schools are already full, getting a doctors appointment is already difficult without getting extra residents and the same with the dentists. The proposed building seems unrealistic, unreasonable and unsustainable. -	I thought the idea was to build houses on brown sites not green sites. There's plenty of unused, rundown, empty, derelict properties in and around bacup, why not use them? Why take our countryside when there's perfectly good other land to use. Don't ruin it for future generations.	
715	Jennifer	Hargreaves	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	Conversion on Bankside at moment, in the snow when vehicles can't get up the Lane this is what happens. The residents who live on Maiden Road and Rode Street occupy both sides of Bankside. - Ordinarily care are parked on both sides of the Lane a lot on pavements so that ambulances, fire engines can get through! - The gritter has problems as well the Council even put a sign up!! - - Loved on Bankside 52 years, all my married life , and about 50 years ago they tried excavating and stopped because of shifting sand. - - There isn't the infrastructure to accommodate this development as the road down the valley to Rawtenstall , and the road to Rochdale are a nightmare at peak times! - - Schools are full. - - Doctor's appointments are very difficult as it is without extra residents. - - I am completely against this proposal.	Thought the idea Jake Berry agreed to was to build on Brown Sites not Green sites. - - - There are plenty of derelict, empty properties in this area without taking our countryside from us!!! - - I'm thinking of my children and grandchildren.

718	Joanne	Leyland	-		Object	I've lived on bankside lane for 20 years and I'm strongly objecting for the planning proposals of houses being built it's already overflowing with cars as, most my neighbours and myself have 2 or 3 cars each and every one falls out all the time over parking as it is now so for more familys to be moving will just cause more problems, the roads are to narrow in many places it really will not work. Over the years I've lived here my 2 daughter's along with there friends who also live on bankside lane have grown up playing on the lane and it's so dangerous with the amount of cars going up and down it's an accident waiting to happen		It's just not acepticable to be building more houses with only a narrow road leading up to bankside lane and an average of 200 extra cars it will be an awful place to live and I love living here
729	Stanley	Horsfall			Object	Email received 30/09/2017: I would like to protest again at some of the the plan for bankside lane Email received 02/10/2017: I want to oppose the plan as the traffic on bankside is already congested		
759	Martin	Stansfield	-		Object	The width of the roads and the bends on Bankside Lane are already an accident to happen and cant support any oncrease in traffic,		have the same objection to the other 3 sites on bankside lane
769	Trevor	Bartram			Object	Access to all of the above sites is via Bankside Lane which is struggling to cope with the amount of traffic now using it. Another 150 houses, as proposed, would mean potentially a further 300 vehicles, which would add to an already congested road, there being only one way in and out of the town. - - With regard to the whole of Bacup a house building project of this scale will bring problems with Primary Schools, which are already full, doctors and roads. -		-
770	Jacqueline	Stansfield	-		Object	The road is too narrow and bendy for extra traffic. Near misses everyday sooner or later there will be a serious accident.		I do not think any of the other sites should be built on bankside lane for the same reason.
774	Stanley	Horsfall	-		Object	Bankside lane is already congested with traffic and and cannot take the extra that the plan would cause		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
785	Robert	Astbury	-		Object	Bankside Lane does not have a suitable road to support the additional through-traffic created by additional housing, there are several narrow parts of the road on steep inclines that do not allow two way traffic and these are heavily congested at peak times. Additional housing on Bankside lane (and the connecting side roads) will make access very difficult and impede the access for emergency vehicles. when large vehicles such as lorry's or bin men are on this road; you are unable to pass them and it is difficult to find a place to park for them to pass you, additional housing will only further amplify these access problems. problems will also occur during winter months when some roads are inaccessible due to snow and normally residents park on the lower roads for safety, this will be more dangerous due to increased vehicles needing to do the same with no additional flat parking spaces provided. The development will get rid of a thriving petting farm which brings in much needed tourism to Bacup. local town development is in dire need of renovation and adding more houses will not improve the local community and will only add more strain to local services.		-

853	Ian	Read	-	HS2.5 HS2.32 HS2.13 HS2.11 HS2.12	Object	Fernhill Drive is not capable of taking any more traffic, The main Bacup to Rawtenstall carriageway is at it's capacity for traffic. - The site HS2.5 is not a suitable site for hosing and will cause problems on Fernhill Drive. - The site HS2.5 will interfere with the views of the existing houses		Bacup is full and no other housing should be built until the infrastructure in Bacup is improved ie Road to Rawtenstall.
857	Lucy	Beaumont	-	Hs2.32 + Hs2.5	Object	We use the hillside behind fernhill crescent extending down to bankside on a weekly basis with our young children, explaoring the area, looking a local wild life & animals. These green areas are used regularly by members of the public on a daily basis. What a shame to ruin it for the whole community when so many empty unoccupied houses are scattered around rossendale. It is lovely to have access to such a beautiful green area just a minute from our home..our children have spend many hours exploring and playing here.. - - The second proposal site Hs2.5 is just off fernhill drive.. A road already backed up with parked cars the majority of the time. The road surface needs adressing at present with pot holes all over, more houses and cars conjesting this area would be awful for residents who already live in the area!		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
879	Nick	Earnshaw	-		Object	Having lived very near the proposed area for over 20 years, and deciding to extend my property and stay in this area, rather than move, I am appalled at the proposal of ruining one of the nicest and accessible areas on this side of Stacksteads. Any more development will be skylined on this side of the valley. A valuable local focal point for walking and exercise will be lost. The area is well used by adults and children alike. I have personally carried out maintenance and litter picking on this area and am proud to have a little bit of countryside on my doorstep to look after for everyone's benefit.		I understand the need for some more housing, but please - drive around the valley, look at all the derelict and run down sites that exist already and build on them. Our valley infrastructure is overwhelmed already.. Roads are shocking, services stretched and minimum investment at the top of the valley (RBC inheriting the Lee quarry - it's a disgrace for the money spent on it, it should be a landmark). Grow a pair as a council and tell the policy makers Rossendale is full and stop ruining the only tourist attraction we have - our countryside location.
906	Graham	Smyth	-		Object	Grounds for objection as follows: - - 1. Access: Bankside Lane is narrow, winding & steep with two blind bends, and already heavily used by vehicles. The bends are dangerous, the more so in winter, and such dangers would grow with any increase in traffic. Additionally there are already access problems for larger vehicles (eg. gritter lorries, emergency services) on Bankside Lane because of its narrow width, compounded by on-street parking on both sides (many houses - notably terraces - have nowhere else to park); again the problem would be compounded by more vehicles using the Lane. Access for construction traffic would also be problematic. Opening access from the other end would not be a solution - creating another very steep way, and a potential 'rat run' for traffic seeking to avoid congestion on the main road through the valley. - - 2. Infrastructure: there are issues more generally in significantly adding further to housing in Bacup, given the limited scope to improve the already clogged route down the valley to Rawtenstall / the A56/M66 etc. It is likely that many taking new housing in Bacup would be commuting in and out, reducing traffic flow further. - - 3. Capacity: Bacup is already at capacity in important areas such as schools, health services, dentists and extended services and lacks the capacity to absorb lots more households. - - 4. Flooding dangers – from HS 2.11 in particular, to houses immediately below it, at a much lower level, and to the terrace adjacent to it (60-68) which already often suffers from ground water rising into cellars. - - 5. Landscape – would be impacted. These sites, notably HS 2.11 are at a high level, visible from many points so building would visibly add to the erosion of the countryside amenity in Bacup. It would also impact on wildlife in the area.		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
907	Carol	Mitchell	-	HS2.11 in particular and also HS 2.12, 2.13 and 2.32	Object	<p>Grounds for objections as follows: - 1. Access: Bankside Lane is narrow, winding and steep with two blind bends, and already carrying more traffic than is ideal. The dangerous inherent in the bends would increase with growth in traffic; they are also particularly prone to accidents in wintry conditions, which again would be exacerbated. The Lane is narrow throughout its length and now regularly parked up on both sides, creating access problems for larger vehicles (such as gritter lorries, fire engines etc); many householders have nowhere else to park other than the road. The addition of more vehicles (not to mention construction vehicles) having to use the Lane will significantly increase difficulties passing through. If it were intended to create access from the other end, this would create another steep and a potential 'rat run' for traffic seeking to avoid congestion on the main road through the valley – hence adding further to problems. - 2. Other access issues: adding to the housing stock in Bacup more generally is also problematic, given the limited scope to improve the already clogged route down the valley towards Rawtenstall and the motorway – particularly given the likelihood that the majority of any new housing would be taken by people relying on commuting for employment. - 3. Capacity: Bacup is already at capacity in important areas such as schools, health services, dentists and extended services and lacks the capacity to absorb many more households. - 4. Flooding dangers: the field at HS 2.11 is well above the level of houses below it, raising potential flooding hazards to them from building. Interference to thw water table could also pose risks to the adjacent terrace (60-68) which already frequently suffers from ground water rising into the cellars. - 5. Landscape: the elevation of the area around Bankside Lane also means that there would be an adverse impact on landscape as viewed from various points around and above the town.</p>		No
1003	john	dempsey	-	HS2.1 HS2.12 HS2.13 HS2.32	Object	<p>There are 3 separate places at the bottom of Bankside Lane, where the lane narrows to a single track. This means that you always have to stop to allow someone through, no matter what of day. Another 200 or so cars having to use this lane daily, would put an enormous amount of strain on the already stretched and limited road space. - This is an area where there are a lot of families and the extra traffic would be an accident waiting to happen, as many of the children play on or near the road. - One of the areas at the back of the semi detached houses is also an area where various wildlife roam and live. There are foxes, badgers and deer that are regularly seen in this area, making their way in or out of the wood.</p>		Only that we as a resident of Bankside Lane are totally opposed to the redevelopment of this area. We feel that it would spoil a green belt area of Bacup that leads onto the local countryside.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1023	Dave	Harding	-		Object	<p>The suggestion that further housing development is suitable on Bankside Lane is bordering on ridiculous. By the council's own admission, this road is already a "Problem Street for access" with vehicles double parking and the road itself being only wide enough for 1 vehicle to use at one time - in particular near the church and indeed pretty much all the way up to the proposed site HS2.11 and HS2.12. - Further housing would not improve the access and traffic density on this tiny lane - it would make it considerably worse. - - In addition to this, the increased noise and air pollution the extra properties would bring would be considerable - both during and after the building process.</p> <p>Rossendale Council showcase on their website a "clean and green Rossendale". Hardly clean or green if we use all our green spaces for building sites. - - The amenities also need to be improved before building many, many more houses. - - e.g. the options available for children going to secondary school in Bacup are extremely poor. The majority of "good" schools are oversubscribed, so children in Bacup are now being given the choice of a school in "Special Measures" - Fearn. As a parent of a child not far off secondary school, I'm considering moving out of the area - I certainly wouldn't consider moving in. - - The congestion on the main roads is ridiculous at rush hour times & quite simply, there isn't the demand for this many houses in Bacup. The development on New Line / Rockcliffe Rd area has never been finished - purely down to lack of interest from buyers. - - There are many suitable brownfield properties in the area that would be ideal for the right redevelopment however developers like the easy option... - - I'm not against change, however one of the biggest "selling points" of Rossendale are its green and open spaces. Remove these & it's one less reason for living round here. There aren't many left... -</p>		<p>The council should be looking at attracting people to the area by improving amenities, transport, education, shopping etc. Bacup in particular is becoming a joke. No Police Station, public transport is poor, schools are oversubscribed and / or failing miserably, the town centre looks rundown and scruffy etc. Hardly an area that is desirable.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1033	Ewan	Rowland		HS2.1, HS2.12, HS2.13 & HS2.32	Object	<p>The additional houses proposed for the above sites will: - * increase traffic to and from Bankside Lane. The road is narrow and steep at key places along the route which allows only one car at a time to pass at specific points on the route. Driver's visibility is restricted by bends and rises in the road causing blind spots for drivers. Because of the narrowness at specific points, cars, vans and lorries have to swing across the road to pass buildings. - *there will also be an increase in traffic such as delivery vans/lorries and their service vehicles. - * houses opposite The Laurels Care Home at the junction of Maden Road and Bankside Lane have no off road parking and therefore park half on the road and pavement further restrict visibility for up hill and down hill traffic. Vehicles moving off the junction from Maden Road have very limited sight of cars coming down Bankside Lane at this narrow point and are forced to creep out onto Bankside Lane in order to safely access Bankside Lane. This also affects up hill traffic at this point forcing them to stop or slow down. - *vehicles joining Bankside Lane from Dale Street also have limited sight of approaching traffic at its junction and have to creep into the road until drivers have clear sight of up hill or down hill traffic. The road is only one car wide at this junction. - *the problem is compounded by traffic parking close to this junction for those attending services at St Mary Church, Dale Street. - *during the football season especially at weekends there is a high volume of traffic going to Maden Recreation Ground which causes congestion before and after football matches. The park is also popular with families and dogwalkers, most of whom arrive in cars, throughout the year. - *farm vehicles frequently use Maden Road via Bankside Lane on a regular basis which adds to congestion creating further potential hazards for other vehicles and pedestrians using Bankside Lane. - * Pedestrians have to cross the road at pinch points along Bankside because pavements stop due to the narrowness of the road. - * most households have two cars and the proposal to build an additional 140 houses on Bankside Lane will increase traffic by a potential 280 cars. The current access to these developments is inadequate for this amount of daily traffic. -</p>

1142	CHRISTINE	JACKSON	-		Object	<p>ROSSENDALE LOCAL PLAN - BACUP AREA. - Whilst I am totally opposed to the constant development of the whole of Rossendale and the ever changing green belt boundary I feel I must object most strongly to the new proposals in Bacup, which is recognised as the best preserved milll town in the County. - As a resident of Bacup for over 30 years I have seen some of our most beautiful countryside turned into housing developments, many of the houses built over the last 10 years have still not been sold. The fact is that there are already hundreds of empty properties in Bacup, new and old, which could fill our quota. - Sites HS2.1, HS2.12, HS2.13, HS2.32 (Bankside Lane),HS2.6 AND HS2.7(Todmorden Old Road) and HS2.4 (land off Moorland Terrace) are the most important ones to me personally and I note that the majority of these sites are privately owned, will they be subject to Compulsory Purchase Orders? These privately owned sites sustain the livelihood of their owners who, in this pastoral farming community, raise their livestock. Will these livestock be forced indoors off a natural diet with sunshine and fresh air to be raised like battery hens? - The wildlife in these areas consist of foxes, badgers, small mammals, bats, deer and wild birds, these will all disappear/die without this natural habitat. - The local infrastructure, schools, nurserys, health centres, roads, drainage, police, ambulance, fire cews and public transport is already stretched to maximum capacity, will increasing these services be considered with all this additional pressure to meet demand? - On Bankside Lane in particular the access is already stretched beyond capacity, being only one car width at 3 points, with double-parked cars, steep hills and narrow pavements. Potentially another 200 cars up and down here on a daily basis would literally create havoc. Access off, single track, Todmorden Old Road is also practically impossible. - HS2.32 is an open area at the top of Bankside Lane which is enjoyed by residents of Bankside Lane and higher Stacksteads alike, and has been for many decades. There is also an abundance of wildlife there, it is also on the skyline, building on here would have a huge impact on the views for miles around.</p>

1175	Lesley	Earnshaw	-		Object	As a resident we enjoy this area greatly for walking. We exercise ourselves and our dogs, see children playing and building dens, see a range of wildlife and just escape into our beautiful countryside. Horse riders take safe routes away from the valley traffic and noise. After 20 years of living here, I have seen our roads for the whole of Fernhill disintergrate and be unsuitable for the current level of traffic never mind adding to the situation. Roads are patched and pot holed and no money seems available to put this right. School's are full, local amenities are stretched already. We have limited banking facilities, shops and recreation areas. We cannot support the current level of people well with residents from this end of the valley needing to travel to swim, shop and bank. How then does adding more "improve the lives of people in the borough"? We have limited spaces for children to play away from traffic. The woods off Fernhill team with a variety of wildlife that we enjoy supporting. My husband and I take great pride in trying to keep the area clean by litter picking and helping with the footpaths. We are dismayed that this land would be potentially destroyed for yet more houses despite many houses standing empty in the valley. We have been told by elderly residents that the land you suggest is not suitable due to unstable land beneath. Our little patch of woodland that we so love and would so miss. An area of calm and peace. It would change our skyline dramatically from our beautiful trees to a block of ugly housing. - This seems to have all happened very quietly with consultations coming and going without any of us being informed. We found out with a few days to the deadline of 9th October from a note from a resident through our door, not from any department of Rossendale council, which all feels very underhand. - I'm not sure how this site is in any way in the best interests of local residents. The land off Fernhill Drive would again add more traffic to the already crumbling road. Poor choices! -		Bring the infrastructure to Bacup to support such schemes. Our town is dying in comparison to Rawtenstall. They have bars, banks, a range of wonderful shops, swimming pool and sports facilities, the train, the Newhallhey project, the Ski slope, park, museum What do we have?

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1201	Stephen	Anderson	N/A		Support	<p>Whilst there are challenges to developing this site for residential use that would require the property market to be more robust before it would be viable (noting that it is programmed for later in the Local Plan period), it is the most practical and logical site for development along Bankside Lane. - - Bankside Lane suffers from capacity issues driven by a lack of off street parking along its length, topography and a single viable route in and out, which would need to be factored in to defining the nature of residential development on the site. Given the evidence base and the relatively affluent demographic profile of the Bankside Lane area, adding a smaller number of larger aspirational homes would seem to be an appropriate way forward for the development of the site, whilst preventing an undue increase in pressure on the capacity of Bankside Lane and its infrastructure. - - It would be impractical to look at Newchurch Old Road as an access route into this site, as this would require a widening of the access into land which is in private ownership, resolution of some challenging topographical issues and an impact on the amenity of a far larger number of local residents than is the case for using Bankside Lane as the primary access. - - It is also important to note that the site does have amenity value to local residents and that the site includes the historic cart track from Bacup to Newchurch, a 'hollow way' which continues on from Newchurch Old Road and provides a green pedestrian / bridle link from Bankside Lane into Stacksteads and retains historic fabric which is highly likely to be captured within the emerging Rossendale Local List. It would therefore be desirable to preserve and enhance these historic features and the path network they support as part of the development of the site. - - Therefore, developed intelligently and sensitively, the site should be acceptable and viable for residential development.</p>		On balance, the Draft Local Plan is the best and most well balanced option.
1242	David	Greenhalgh	-		Object	<p>My objection is that Bankside lane is not capable of taking any more traffic and that extra housing with access onto this road will not only increase congestion even further on this already busy road, but will also be a potential safety hazard as there are already several narrow single car sections on this road, which have blind spots, due to housing and steepness of the road.</p>		-
1267	Steven	Fielding	-		Object	<p>The access road of Bankside Lane is already congested and way to narrow for cars to pass one another. I think it would be ridiculous to build more houses leading to potentially another 200 cars having to use Bankside Lane. - -</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1270	Beverley	Walsh	-		Object	It is overpopulated now and the road was never meant to take heavy use of traffic. Tight narrow bends and doubled park cars. Pavements are narrow and not fit for families with buggies and the disabled using their disabled scooters. There already have been numerous accidents on this road. Access for emergency vehicles is already very difficult. - Wildlife will be destroyed foxes, deers and badger sets etc will disappear. More houses are unsustainable as we have very limited facilities in Bacup. E.g. Primary schools are oversubscribed. The road from Bacup to Rawtenstall will be permanently gridlocked.		
1271	Demi	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	I object to the plans to build houses on bankside lane for many reasons: - 1) Bankside lane is already congested - everyone already parks on the pavements and it's already quite difficult for gritters, fire engines and larger vehicles to get through. We do not need any more traffic added to this! As this will cause a huge amount of problems, not just for the residents but for the local council and the firebrigade. - 2) There are many narrow bends up Bankside lane therefore adding more cars would definitely be a health and safety issue with the only places left to park being near these bad bends causing collisions especially during the winter. - 3) The sites you are proposing to build on are are habitats of many different animals ranging from deer to foxes and badgers! These animals would lose their homes which would lead to them dying out in this area as they struggle to survive. We don't want to lose any more of our precious wild life which has lived there undisturbed for many years! - 4) Building on some of these sites would also mean cutting down trees and getting rid of the wonderful country side the valley prides itself in so dearly! We need to look after areas like these and not build houses on them. There are many sites way more suitable for new housing that will not cause damage to the environment in the same way - what about old buildings that are no longer used? Why do we not use these first, this would cause so much less damage to the country side! - Building more houses on bankside would not only mean finding more space for houses but also finding a second route up Bankside to allow for more traffic. Bankside lane does not have the space to do this! It would be almost impossible to do this without causing a huge amount of damage and a huge amount of time, effort and money that could be better spent! Overall I think that building up Bankside would be a very big mistake, one which can be avoided!		
1279	Stephen	Hartley	-	HS2.11, HS2.12, HS2.13, HS2.32	Object	1) Bankside lane is already congested . It has many narrow parts that will become dangerous if more cars use the lane. - 2). Emergency services would have trouble getting past extra parked cars. - 3) It would have an affect on the wildlife eg deer foxes badgers if the fields disappear .		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1291	Alan	Mickleburgh	-		Object	The local and area infrastructure in Rossendale, and Bacup in particular, is insufficient to support the proposed housing developments. Roads, Public Transport, Schools, Police, NHS Services (GP' s and Dentists) will all suffer a major impact from the proposed developments. I am particularly concerned about the proposals for the Bankside Lane area. - - - Bankside Lane has only one access and departure route, via Market Street. Access is particularly difficult at peak times. - - - There are four single lane sections on Bankside Lane which creates congestion problems at any time. - - - Many households have more than one vehicle, and with restricted availability off road parking, vehicles are often double parked on both sides of the road with two wheels on the footpath. - - - Even at non-peak times, larger vehicles have considerable difficulty negotiating Bankside (eg. Trade deliveries, Council and Emergency Services). - - - Pavements are narrow, particularly where vehicles are double parked, creating major problems for pedestrians and the disabled. - - - Drainage is already a concern, with the amount of water draining from the higher ground. If these developments are approved, the excess water will be unable to be absorbed by the surrounding land and will potentially lead to flooding.		
1296	Sharon	Mickleburgh	-		Object	The reasons for my objection are:- - 1. There is no reasonable access as there is only one road (Bankside Lane) for both in and out. - 2. There are 4 extremely narrow sections on Bankside Lane. In some cases it is only wide enough for one car. - 3. The footpath is extremely narrow for pedestrians to use without increasing the amount of both people and Cars. - 4. It is virtually impossible to get out of Bankside Lane onto Market Street at peak times due to the amount of traffic on the main road. - 5. Turning left from Market Street onto Bankside Lane is very difficult if there is already a car waiting to get out Of Bankside Lane into Market Street as the road entrance is very narrow there. - 6. Some of the houses on Bankside Lane already suffer from water draining down from the fields due to lack of sufficient drains without more houses being built. - 7. I am concerned about the proposed expansion of housing in Bacup as the increased population will cause Problems for NHS facilities (doctors and dentists), schools, roads, public transport and policing. - 8. The Green Areas must remain to protect the environment and the wildlife around us. There are also quite a Number of bats around this area and other species that need protecting		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1343	Jane	Jones	-	HS2.11, HS2.12, HS2.13 & HS2.32	Object	Development at these sites would attract higher volumes of traffic travelling along Bankside Lane over a more concentrated period of time during the busy morning and early evening periods. This road has limited capacity and the increased levels of traffic could lead to traffic congestion and highway safety issues in this area having a detrimental effect on road safety on Bankside Lane and the busy A681 Market Street junction. - - There are already problems with access for council refuse vehicles due to the parking of residents vehicles along both sides of a narrow road, this has led to the placing of warning notices by the council informing residents that access for emergency vehicles including snow ploughs and gritting trucks is impeded by the number of inconsiderately parked vehicles. - - The vehicular access and car parking arrangements for any new developments would have an unacceptable impact on existing residents in terms of noise and safety, creating a traffic hazard and generating an undue environmental impact, exacerbating existing parking problems and resulting in excessive levels of on-street parking which would adversely affect local residents and the efficiency and safety of the highway network. - The introduction of in excess of 140 new homes; each with an average of 2 – 3 cars per household would produce approximately 300 – 350 additional vehicles per day using Bankside Lane, a road which has single lane pinch point access due to the existing narrowing of the road at its steepest point; which has a gradient of approximately 17%. During the winter months; weather conditions of ice and/or snow constantly prevent 2 wheel drive vehicles from driving up this hill, and lead to accidents when drivers are unable to control vehicles whilst attempting to descend when snow and ice have made this route impassable. -		I am fully aware that there is a need for more housing across Bacup and the whole of Rossendale, but meeting these requirements and government targets for the building of new homes should not be the sole focus of the council. - Understanding the current issues within local residential areas such as limited access due to road lay out, road safety concerns especially when there is an marked increase in the number of vehicles joining the main road from a street with an obstructed view due to the existing buildings (Bank on A681, parking on double yellow lines) should be given the highest priority.

1352	Alicia	Campbell Astbury	-	HS2.13, HS2.32, HS2.11, HS2.12	Object	I have many concerns about the area being developed further for houses. The access road via Bankside Lane is both steep and heavily congested with parked vehicles, with additional traffic there will be issues with passing places being available, as this is already an issue at peak times. - During winter months people at the top of the road leave their cars further down the street, if more cars were to do this the road would be inaccessible. - Bats are known to the area proposed, so how will the new development impact our local wildlife? - Will additional housing cause any issues with rain run off from paving over a large mass of land on top of a hill? Will it cause water-logging of neighbouring properties or any drainage issues? - Land proposed is alongside public right of ways, will new pathways be made available to the local people; children use these paths to get to the recreational ground, which is a safer route as the roads are hazardous with tight bends and lack of pavements on some sections or cars mounting the kerb on others making them inaccessible. - My main concern is the additional traffic on the road and possibly parked cars to emergency services being able to gain access through the street? Many homes on this stretch do not have a drive and the number of cars on the street is excessive and difficult to navigate. Also there are two sections where the road narrows significantly and one of these is steep with a blind corner, additional traffic will add to the danger. - Will extra traffic entering the street cause delays to the main highway as the road isn't wide enough to allow traffic to pass when turning right into Bankside close? - How easy is it for heavy goods vehicles to access the street, especially significant numbers for a development, will this cause delays to residents?	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1375	Margaret	Priestley	-		Object	<p>I have examined the plans and I know the sites well. I wish to object strongly to all the development of houses on or adjacent to Bankside Lane. - - The proposed siting of the developments is particularly ill-considered due to access, - Bankside Lane already has a high volume of traffic to the residential properties in the area. - - There is little pavement for pedestrians, the addition of extra traffic would create a safety hazard for them also. The pavements these days are a safety issue due to the amount of leaves from overhanging trees which the council no longer seem to cut back and maintain causing a buildup of slippery moss on the pavement surfaces. - Access is particularly hazardous in the winter months. The area is not always gritted, resulting in cars being abandoned along Bankside Lane as it becomes inaccessible. This leads to a knock-on effect resulting in access issues higher up Bankside Lane itself. - I therefore fail to see the advantage of building more houses in an already built up and inaccessible locations - In November 2013 due to the untreated surface I myself skidded into the wall just below the golf club during winter weather. - The other issue I would like to mention with Bacup itself< and forward thinking, is the lack of infrastructure with respect to banking. Two of the towns banks were closed last year with I think no objections from the council or at least no fight to keep them open that I am aware of. When the banks go people go out to other areas (e.g. Rawtenstall, Burnley, Rochdale, Bury) This will be the case with new residents, most of whom, if in employment, will be working out of the valley making Rossendale yet more of a commuter belt than it already is. Anyone travelling from Bacup via Rawtenstall or From Bacup to Rochdale can testify to this and know that anymore commuter traffic will be disadvantageous and effects all roads in the valley. People work outside the valley will conduct personal outside of Bacup.. - Therefore, I ask that Rossendale Borough Council refuse planning relating to the building of houses on Bankside Lane..</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1429	Nina	Byers	-		Object	<p>1) There would be a minimum of 200 extra cars using Bankside Lane if these houses were to be built! This would cause major problems with traffic building up at peak times (morning, evening, beginning and end of school times) in both Bankside Lane and Market Street. That corner is particularly tight, especially if there is a car waiting to come out of Bankside Lane. Then imagine a queue of traffic in the narrow, single track areas of Bankside Lane (of which there are 4) and you can see that traffic could easily come to a standstill on Market Street! Sometimes it is very difficult to turn right onto Market Street if there is a lot of traffic. - - 2) There is only one way to access these proposed development sites, via Bankside Lane. There are 4 stretches of the road which are only wide enough for one car. These stretches of road also happen to be on the steepest part of the road with blind bends. In bad weather conditions and at peak times this already causes problems without any extra traffic . There are also several further stretches of road which are only wide enough to get a car through due to people who already live on Bankside Lane needing to park their cars on the road due to them not having off road parking available! - - 3) The pathways for pedestrians are very narrow and non-existent in some places too! For example, by Cookoo Hall the path is very narrow! This is also made worse by cars being forced to park partially on the path and bins being stored on the path as there is no sensible alternative due to many houses being built much higher than the road! This makes it difficult for all pedestrians but especially the disabled elderly and parents with prams and young children! - - 4) Surface water run off will cause problems. I live on Bankside Lane, in front of and below Animal Quackers. There is already a lot of water running down from the fields behind us into our garden, which becomes very waterlogged and completely unusable! Our house is also down a flight of stairs which during heavy rainfall resemble a waterfall. I know that some of my neighbours have experienced some flooding into their house as a result of this. If that land was built on then this surface water would increase! This could result in possible flooding due to insufficient drainage. - - 5) There are already problems with the sewers, certainly with my neighbours, several houses either side have regular blockages which need unblocking using rods. Where would the sewerage drain to from the new housing? Would they also run through the same pipes? - - 6) These are all areas of natural beauty and support a lot of wildlife! There are also a lot of bats in the area which are protected.</p>		<p>The infrastructure of the area would be compromised. - - There is no police station - Not enough schools, no high school - Only one doctors surgery in Bacup - Only one Supermarket - Public transport. - No bus route on Bankside Lane as too narrow and steep. - All roads leading out of Bacup are narrow, some are steep and extremely busy at peak times</p>

1458	Jodie	Fairfax	-	Housing Site Allocations - specifically the sites behind Bankside Lane and at the back of Rooley View, but on housing development in general on any green land	Object	<p>I am a current resident of Bacup living on Edward Street with my husband. My parents (who live on Rooley View) and my sister and her family who live on Bankside Lane will also be objecting as will many of their neighbours. - - Empty houses already in Bacup abd Stacksteads - Firstly, I question the need for housing at all. If it is proven that housing is required, then there are hundreds of current buildings lying vacant in Bacup, as well as vacant industrial units where housing could easily be developed without touching the green land around Bacup and it's surrounding areas. In fact, from my house, within 20 yards of my front door, there are 4 houses boarded up that could easily be affordable housing. Not to mention no end of vacant properties on Newchurch Road through Bacup and Stacksteads. The Britannia Estate is still partially empty and those houses have been on the market for 2 -3 years already. - - Infrastructure - we have no police dedicated to the area; schools that are already oversubscribed, no high school or colleges; roads are already in a state of disrepair; public transport links are confined to the centre only; the healthcare in the area could not sustain the influx - doctors, dentists, not to mention no hospital. - - Width of roads (congestion) and width and lack of paths - specifically looking at Bankside Lane, the roads are already congested, double parking is rife. My husband drives a van and struggles to drive it up Bankside. The volume of vehicles required for a large housing development would not be feasible on the current road structures let alone the volume of extra residents using the road. Also, the paths are already too narrow for - the elderly, disabled and parents with prams and young children. - - Surface drainage problems and sewerage problems - possible flooding in some of the areas (e.g. Bankside Lane). Also, there is already existing issues with sewerage on Bankside Lane. The pipes frequently get blocked and overflow. My brother in law is a water specialist and had regularly unblocked it with rods so it stops running into his and other residents gardens. More sewage is not sustainable with the current system. - - Traffic in and out of Bacup at peak times - I commute to Salford daily. It often takes me 30 - 40 minutes to drive the 10 minutes to Rawtenstall at rush hour. This would increase. - - Wildlife and Areas of natural beauty - As already mentioned, I don't believe there is a need to build on green land, for example, behind Bankside near Animal Quackers. The impact on local residents, the environment and wildlife in the area will be catastrophic, and when there are many other options within current buildings and land, and so many empty houses, I don't believe this is needed. -</p>		<p>I am a current resident of Bacup living on Edward Street with my husband. 1544	Enid & Kenneth	Burke		SHLAA16079	Object	<p>We strongly object to the proposed plans to change previous Green Belt sites to building sites mainly on the narrowness and steepness of the pavements and roads. Presently the volume of traffic is overloaded because most households have 2 or more cars. Visitors to the Golf Club, Football Pitches and Petting Farm add to the problem, especially at weekends when the volume of cars and work vehicles doubles. Last winter the council gritting vehicles could now operate in parts because of parked cars/vans. We have also witnessed a number of near "misses" on the bad bend near to the Laurels Nursing Home.</p> <p>The use of outdoor space is essential for our grandchildren and children, to lose this is not acceptable.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1576	David	Thompson			Object	<p>I object to the proposed housing development sites referenced HS2:11, HS2:12, HS2:13 and HS2:32 listed in Chapter 1 (HS2) of the above plan. My concern is that the connectivity of each of these sites to essential facilities in Bacup Town Centre is unsuitable for the following reasons:</p> <p>There are only two routes from the sites to the Town centre, one of which is lodge lane and the other is Bankside lane.</p> <p>Lodge lane is to the South and East of the four sites, and is closed to motor vehicles as a through road. It has a very steep slope with an average gradient of 15% (1 in 7) and therefore does not comply with any national or regional planning guidance as being acceptable for use by pedestrians, the mobility impaired and cyclists. It would therefore be improper to suggest lodge lane as a route from the sites to Bacup Town Centre.</p> <p>This means that Bankside lane is the only acceptable access to the Town Centre for all highway users. However Bankside lane has a particularly steep section for a length of 242 metres between its junctions with Market Street and Maden Road and I believe it to be unsatisfactory as a means of access to the proposed housing developments as evidenced in the following disclosures attached to this letter:</p> <p>Disclosure 1.</p> <p>a. Non Compliance with the Lancashire County Council Code of Practice on Mobility , Inclusive Mobility' Section 3 Footways</p> <p>b. Non Compliance with the Lancashire County Council Transport and Design Guidance 'Creating Civilised Streets' Section 5.5 Connected Streets</p> <p>c. Non Compliance with the Department for Transport 'Manual For Streets' Section</p> <p>7.6 Visibility Requirements. (Note this section includes calculations that have safety implications for highway users and I request that it is submitted to LCC Highways Engineers for verification).</p> <p>Disclosure 2.</p> <p>Breach of the Rossendale Draft Local Plan Policies:</p> <p>ENV1 - High Quality Development in the Borough</p> <p>ENV2 - Heritage Assets.</p> <p>Disclosure 3.</p> <p>Prior refusal of a planning application for development off Bankside Lane.</p> <p>On the basis of the above submissions I request that the proposed housing sites HS2:11, HS2:12, HS2:13 and HS2:32 be removed from the Rossendale Draft Local Plan.</p> <p>Please see appendix for attachments</p>

1586	Adrian	Boyden			Object	Has a resident of Bankside Lane my concerns are of increase in traffic on this busy lane , more accident s and near misses especially on the blind bend . There are no other access routes for residents so to add more traffic is irresponsible.Also how do you propose to get wagons . Machinery .Etc to building sites ? Without causing chaos on a now fragile road .Shows the plans having been thought about properly .		
1588	Alison	Whittaker			Object	<p>I strongly object to these proposed plans to change areas,of previous Green Belt Sites,to building sites.The visual impact of the development will greatly effect my property,building work at the front of my property has already caused loss of existing views and is out of character in terms of its appearance. The proposed development would have a significant adverse impact on the character of the neighbourhood, the green spaces and rural views would be lost changing the landscape of a quiet rural area to an over populated housing estate. There would be significant loss of the open aspect of the current residential properties. The enjoyment of the current views, design and landscaping is an important residential amenity, and the loss of these features would have an adverse impact on the residential amenities of the existing properties.</p> <p>The new development would be out of keeping with the character and appearance of the existing properties adversely impacting on the character and appearance of the communityin particular the green spaces that is valued open space enjoyed by local residents. Furthermore there is a requirement to enhance the local environment including wildlife habitats and rural lands. Further housing development would result in overlooking, unacceptable high density, overshadowing and loss of natural light. Further over development would be overbearing and result in an adverse effect on the residential amenity of the current neighbourhood. Designs that are inappropriate in there context and fail to improve the character and quality of an area and the way it functions should not be approved.</p> <p>Unacceptable over development on Bankside lane would adversely affect highway safety and cause great problems for road users,the lane is just too narrow, steep with a blind bend that is already hazardous for road users. The current infrastructure is insufficient to support further increased vehicular access.Please can this concern be referred to qualified engineers for technical clarity.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1620	Jennifer	Cudworth			Object	<p>I am writing to express my objection to the plans mentioned above.</p> <p>My primary cause for objection is on the grounds of safety. Any proposal to build more houses using Bankside Lane as vehicular access is quite frankly dangerous. Bankside Lane already suffers badly with traffic issues - access to the proposed sites is via a steep, narrow road which is reduced to a single-track for the vast majority by parked vehicles. There have been numerous traffic collisions on Bankside Lane due to poor visibility caused by parked vehicles, and "near misses" are almost a daily occurrence. (The problem is exacerbated in bad weather as the gritter encounters difficulties passing the many parked vehicles, meaning there are often delays in treating the road at the top end of Bankside Lane. In addition there are the emergency services to consider - just a few weeks ago, a fire engine was forced to undertake a dangerous manoeuvre to negotiate a corner that was obstructed by parked vehicles, endangering the crew and causing damage to a resident's grass verge).</p> <p>The proposed building works would add to this situation not only short- to medium-term while large construction vehicles access the site, but also long-term due to the increased number of private vehicles requiring daily access to homes. The element of danger to pedestrians, animals and motorists would be greater still if an access route were to be constructed from the Stacksteads end, as this would inevitably be used as a "rat run" for people travelling between Bacup and Stacksteads and wanting to avoid congestion at Lee Mill. Secondly, the fields currently occupied by Huttock Top Farm, and the area of rough land known locally as "Old Joey's", between the top end of Bankside Lane/Rooley View to one side and Osborne Terrace/Hill Crest to the other, are both habitat to a multitude of wildlife including deer and bats. Both areas are affected by the proposed plans. The destruction of natural landscape and the pollution (noise and environmental) brought about by the construction would drive out the wildlife that residents enjoy sharing our green spaces with. Furthermore, Bacup been cited by English Heritage as the best preserved cotton town in England. The construction of new homes would affect the general appearance of the area to the detriment of Bacup's Heritage status. Also to build on the land locally known as "Old Joey's" (see above) would impact upon the skyline of the Rossendale Valley.</p> <p>In view of the above I would urge you to reject the proposals and keep Bankside Lane a safe place for its residents and wildlife.</p>

1636	Kevin	Woods			Object	<p>I am responding to the proposed local plan to develop 4 building sites (100 new houses) off the Bankside Lane area of Bacup. I strongly oppose the plans as the topography of area is not suitable for further development which increases traffic flow, and should be changed back to green belt site.</p> <p>The reason I consider the area to be unsuitable for this development is that the access via Bankside Lane is too narrow and too steep to support development which increases traffic flow. Bankside Lane is single track in parts with both single and dual road junctions joining. The volume of traffic with existing demands is already a significant risk to safety.</p> <p>Each year for the past 20 years living on Maden Road we have been cut off from vehicular transport/ access at least once, when snow falls. Not all residents are able/ willing to buy a 4-wheel drive vehicle and so many become stranded each year. The consequences of this extend beyond personal inconvenience to being unable to get to work, to access emergency services or to discharge caring responsibilities for elderly relatives. Sometimes, due to the hazard of abandoned vehicles, the lane becomes impassable even with a 4 wheel drive vehicle.</p> <p>Since I have lived on Maden Road (above Bankside Lane) myself and family members have been involved in several traffic incidents on the lane in which the topography (and often weather) have been a significant contributory factor. In 2007, my car was collided into on Bankside Lane by a car travelling from Dale Street, in an incident in which the driver misjudged the traffic travelling from four directions between double and single track roads. My car was badly damaged requiring over £2000 of repair work (not my liability), though fortunately I was unhurt. In 2015 during a sudden heavy snowfall, my son's car slid out of control on a descent of Maden Road, whilst avoiding a driver attempting 'a run' up the hill and other abandoned vehicles. His car was written off, though fortunately he was not seriously hurt.</p> <p>I strongly urge the council to reconsider its proposals and find the necessary development sites or solutions which do not involve any further increase in traffic through Bankside Lane. The area does not have the topography to support any developments which would further increase traffic flow.</p>		
1642	Jane	Trivett			Object	<p>If any one lives on Bankside Lane/Bacup and works for RBC they must surely know that the proposed new build sites make no sense at all. Local people know how steep the lane is and unless major road widening took place it will not work. Bankside Lane is totally unsuitable for any more traffic. The recent road resurfacing proved how difficult it is and the Highways people struggled to hastily finish the job even with road closures. Another 200 plus cars up the lane is ridiculous.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
1656	K	Jeppesen			Object	<p>Having bern notified via social media about your proposals regarding the Bankside area in Bacup, I must strongly object to it.</p> <p>I am baffled that such an idea can be a serious one! A number of issues springs to mind, and are so obvious, that its hard to take this proposal serious. Firstly the situation about the traffical access to the higher part of Bankside Lane. Blind bend, steep incline/desent. Abnormally narrow footpaths,- or entirely non-existing footpaths, makes it high risk to use this part of the road as a pedestrian. Not to mention , having to ask your children to use them to catch their school bus or go to activities elsewhere.</p> <p>To my knowledge , we have only by luck ,not had any serious accidents with personal injuries, but there has been plenty of bumps and minor crashes, costing residents here extra expense. I would assume that a further 200 dwellings wil take with it, close to 200 more cars,- probaly 300 in my opinion, which would of course also mean considerable higher risk, using our road. I have not mentioned the roadconditions during wintermonths, when ice and snow , makes using Bankside Lane an absolute gamble.</p> <p>In these condotions, many cars are unable to get up the incline, although many "have a go",and therefore get stranded halfway up, abadoning their car, and soon the road looks like an unorganized car-park. And traffic coming downhill the opporsite way, often find it impossible to stop, or even stear due to the snow/ice.</p> <p>Further more, beeing able to stop at the junction with the busy Market Street at the bottom of the lane, is a hazardous gamble ,even more so. Personally, I have, on a couple of occasions "skated" right out onto Market Street, with only Lady Luck to look after me ! I have seen others do the same, and it can only be a question of time, before some major incident will occur.</p> <p>So it seems to me, that somebody in the council havent done their homework, and certainly not used Bankside Lane very often, because any increase in traffic here, is equivalent to asking for incidents/injuries to residents up here. I would think that the land in question, originally was graded "green field" for a reason !?</p> <p>Deer, fox and multiple othe wildlife, is seen here on a daily basis, the view over the valley too , improves our quality of life, and is a daily pleasure. We live in a nice and quiet part of Bacup, and have been looking forward to keep doing that, into our retirement ,- the older part of us anyway. Neighbouring estates of "affordable housing", as the PM is asking for, sounds to me, like housing for clientel, not nessecary with the same outlook on life values !</p> <p>All in all I'd wish you to reconsider these proposals, as they have clearly not been scrutified thoroughly, before they were published. Let the Rossendale council show , once and for all, that it takes its citizens safety and wellbeing</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
						<p>into account , when making these kind of plans. We have for years , constabty been "awarded" with council tax rates , that hardly were second to none,- unfortunately in the expensive end of the scale, but at the same time only seen cuts and poorer services in return. (swimmingpools, bin collections and household waste centres ring a bell?) Do the right thing, and reinstate green field areas to be what they should rightly be : green fields.</p>

1660	Rachel	Greenhalgh			Object	<p>I would like to register my objection to the proposed changes to previous green belt sites to building sites in Bacup. Under the Draft Local Development Plan, there are plans to allocate building land for housing in the Bankside Lane area (site references HS2.1, HS2.12, HS2.13 & HS2.32). As a resident in the area (MadenRoad), I already know that Bankside Lane is not able to sustain the current levels of traffic and that to build the proposed potential 100 New homes would bring the road into crisis. As you are no doubt aware, Bankside Lane is very steep and narrow- at some points little more than single width. Add into this the fact that the narrowest points also have very poor visibility, meaning vehicles travelling in opposite directions frequently have to perform emergency stops to avoid a collision and often have to reverse to clear the way, creating a new hazard for other approaching drivers. I myself have been involved in such situations several times a week and have serious concerns about the increased risks presented by any proposed housing and the extra traffic they would create.</p> <p>As you are presumably aware, the pavements here are also very narrow and walking along them can be very hazardous as the passing cars often have to come very close to or even mount the pavement to avoid cars coming in the opposite direction. We have seen an increased volume of traffic already coming up the Lane to access the Maden playing fields and also more groups of families and children walking up to the football sessions there. I have huge concerns for their safety if the volume of traffic is significantly increased by new residential traffic too.</p> <p>My primary objection to the proposed plans are centred around the increased dangers of introducing more traffic to an already congested and very narrow access road, however I also believe that we should not be sacrificing our green belt land to provide housing. We are lucky to live in such a beautiful area and we should be doing all we can to protect and sustain the very features which attract people to our town. As we all know, Bacup has not seen the levels of regeneration and investment that some local towns have seen. Indeed the centre of town is currently underoccupied and full of empty buildings. Would our local plan not be better off considering how best to breathe life into these areas rather than eating into green belt land which should be left for all to enjoy and encourage a healthy lifestyle? there have been several studies published in recent years that highlight the importance of the natural world in combating the stresses of modern life and it's positive impact upon mental health. Surely this is a reason to protect our green belt land?</p> <p>Perhaps instead of building new housing around the edges of town, we could look at converting some of the empty commercial sites into apartments and low cost housing which would support those who really need to get onto the housing ladder. We have seen several large housing estates already built in Bacup, somebody which have struggled to sell all their housing stock. Do we</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
						<p>need to introduce more? There are a large number of existing houses already for sale in the town and some of these have been on the market for some time. Surely building more new homes will only exacerbate this problem? We should be encouraging new people to come and live in our town, but who will want to buy in an area where the resale prospects are not attractive?</p> <p>I apologise for the length of this email but this is an issue I feel vey strongly about. I hope that you will give due consideration to my concerns, and I would appreciate a response from you to confirm the receipt of my objection.</p>		
1683	E. Oliver and Beryl	Finnegan			Object	<p>Having studied this proposed development we are more confused than enlightened.</p> <p>Where is the line of development, if it is as we understand we wish to make a objection and our reasons why we object to the development in general.</p> <p>As we understand, the proposal is to build up to 200 houses, most on the existing Bankside Lane development and quite a number on a linear development extending beyond the top of Bankside Lane, parallel to Fernhill Crescent and Osborne Terrace.</p> <p>In our opinion this must be the most inappropriate area to build, the road network cannot cope with the existing traffic volume, local people and business are avoiding travelling on the Bacup to Rawtenstall road at several times of the day due to sheer volume of traffic causing a three mile queue.</p> <p>We are assuming if this folly goes ahead there will be no development on the skyline behind Fernhill Crescent, surely planning permission would not allow this.</p> <p>We are assuming the wooded area overlooking Fernhill Crescent and Osborne Terrace would not be effected as these are a haven for wildlife, and local families, there is a wide variety of birds in these woods, including a colony of bats, the animals' include rabbits, squirrels and even deer.</p> <p>This area is a haven for family groups who walk the ancient tracks and paths of this wonderful area in safety, well away from the danger and pollution of overcrowded roads.</p> <p>This wooded area was created for another important reason, and that was to stabilize the hillside, when we first moved into this house the hillside was so unstable the retaining wall in our back garden was undermined by land slip and had to be demolished and rebuilt, this also happened to several of our neighbours, after the wooded area was created none of us had any more problems with land heave.</p>		
1779	Andrew	Heathcote			Object	<p>I would like to oppose any planning application for any additional housing estates on Bankside lane in Bacup. The road can't handle any more traffic, and I believe that this would have a very negative impact on current house prices.</p>

1790	David	Trivett		SHLAA16079	Object	SHLAA16079 - Land off Newchurch Old Road Bacup. HS2.32 Greenfield. Designated Greenlands. Countryside adjoining the urban area. Currently Grazing Land in part (horse related activities) woodland area and shrubland area. Yield calculated 93 units. Access via Sow Clough Road or Bankside Lane. The above proposed development access has conflicting information about the calculated yield, site area and access. The Policies Map shows the area marked HS2.32 with a yield calculated at 47 units. Appendix E notes "the steep slope to the south of the site has been excluded from the area available for development." This area is shown as green infrastructure on the Policies Map. This precludes access via Sow Clough Lane and restricts the site access to Bankside Lane. (...) The development reference SHLAA16709 HS2.32 is proposed for a Greenfield and Greenlands site where trees were planted as whips on rough moorland circa 25 years ago. The proposal for 47 units on this site will destroy the woodland area, removing the habitat for the groups of Roe deer we sometimes see from our living room window; a beautiful sight. The badgers, foxes and birdlife to be found in this open access green space will be lost to more housing. "Protecting our green spaces and promoting business are key priorities for our council." "Keep Rossendale Green" Greenfield, Greenlands woodland habitat proposed for development SHLAA16079 HS2.32. Land off Newchurch Old Road. Access via Bankside Lane. Green infrastructure. Mitigating CO2 and flood potential to the valley floor. Natural wildlife corridor, a stepping stone habitat for biodiversity. This site should be protected not developed for housing. (...) Policy ENV12: Trees and Hedgerows SHLAA16079 - Land off Newchurch Old Road Bacup. HS2.32 This development will have an impact on the Policies ENV11 and ENV12. Can we keep the established woodland and not develop this site please?

1813		Brewster		Land off Newchurch Old Road	Object	<p>We are objecting to the 4 proposed building sites on the Bankside lane area. We object to these plans on the grounds that the main Bankside lane road, which will have to be used to carry all the traffic for these proposed houses, is not adequate as the road is already struggling to accommodate the existing traffic.</p> <p>The stretch of road from Cuckoo Hall down past the church is very narrow, this will cause untold hazards with the volume of vehicles that are going to use the road when construction begins. Not to mention the extra permanent traffic that will be forced to use the road to access their homes. Any further volume of traffic is most certainly going to cause serious accidents and at the very worst, death.</p> <p>We have had an accident on this very stretch of road, so we talk from experience of how dangerous this stretch of road can be.</p> <p>When there is a funeral at the church the whole road is grid locked with cars being blocked in all directions, so with extra vehicles, this is going to make the grid lock even worse.</p> <p>We have a 20 miles per hour speed limit on Bankside lane, but no one seems to adhere to it and nobody seems to know who gives way to who! So, if locals don't know, do you think new residents will?</p> <p>What about when it snows? This stretch of road is absolutely treacherous. When a car is coming up the hill, and another is going down nobody dare stop, so it ends up with traffic both ways skidding all over the place and of course the whole road is blocked. Extra traffic is bound to cause more accidents and somewhere along the lines there WILL BE a death.</p> <p>The plans show that the majority of houses are four bedrooms, this means there will most likely be more than one car per household. So as the plans show, there are to be 200 homes meaning there will be a minimum of 400 hundred extra cars using Bankside Lane. Large parts of the road are only wide enough for one vehicle, and most existing residents can only park their cars on the road because they have no drive.</p> <p>Which brings us to the main point of discussion, Newchurch Road.</p> <p>We can be quite sure that should these houses be built the majority of buyers will be from outside the valley. This means they will be commuting to and from the valley to go to work, when we have ONE ROAD TO AND FROM RAWTENSTALL, to access the M66. This motorway is already chronically over congested as it is. WE HAVE ONE ROAD TO AND FROM BURNLEY, WE HAVE ONE ROAD TO AND FROM TODMORDEN, AND WE HAVE ONE ROAD TO AND FROM ROCHDALE.</p> <p>When we have to have work done on the stretch of road FROM BACUP TO RAWTENSTALL, our main commuting road, to the M66, the backup of traffic is absolutely horrendous with waiting times up to one hour. I doubt we could cope with extra traffic on our ONE ROAD THROUGH TO RAWTENSTALL.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.032	Further comment
						<p>So, the extra strain on our one main road is going to have an impact on the whole of the valley.</p> <p>Then we come to our amenities. Can our Health Centre cope with the extra work load? Are there even enough places in our schools?</p> <p>Then what about our green belt, we live in a beautiful valley, which the council should be trying to promote to tourists, instead of being hell bent on destroying this unique part of Lancashire.</p>		
1820	Kelly	Holt	Lancashire County Council		Not Applicable	<p>BANKSIDE LANE, BACUP - HS2:11, 12, 13 and 32 proposes to allocate land which could result in 137 new dwellings off Bankside Lane which is an unclassified road approximately 1.1km in length varying in width and gradient with several pinch points and heavy on-street parking. To the west of its junction with Thistle Street, Bankside Lane provides the sole access to circa 150 dwellings.</p> <p>The existing layout on Bankside Lane is broadly reflected on the 1845 historic map and would not be considered acceptable under the current standards. The land to the west of Bankside Lane is at a higher level than the road which results in high retaining structures and there are buildings on both sides of Bankside Lane at several points which abut the road with no footway provision. Where there is footway provision, the widths are sub-standard along most sections.</p> <p>There is little opportunity for improvement works to the current road layout within the extents of the adopted highway.</p> <p>The Highway Authority would seek a secondary / emergency access to be provided where more than 100 houses are proposed off a sole access such as Bankside Lane. Therefore any development land allocated off Bankside Lane should provide a secondary vehicle access point onto the highway network. The topography of the land presents difficulty in providing a suitable route and within the land that is proposed for allocation it appears unlikely.</p> <p>The Highway Authority has serious concerns about these sites and the ability to provide a safe and suitable access in accordance with the NPPF and adequate permeability for traffic distribution in accordance with Manual for Streets.</p> <p>HS 2.32 – Subject to the provision of a secondary vehicle access to the site being provided (Lodge Lane has been reviewed and discounted due to its narrow width over a significant length and gradient), this site could be considered acceptable. A pedestrian and cycle link to Osbourne Terrace would be necessary to support the sustainability of the site and provide a suitable walking distance to the nearest bus stops on Newchurch Road , the local Primary School and food shop.</p>

Reference						HS2.033	Land at Kirkhill Avenue, Haslingden	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
3	Natalie	Hutton	-		Object	I currently live on Kirkhill Avenue in Haslingden and we have a real problem with water coming from the land behind us. During the winter we have three rivers that are now a permanent feature. Several home on the Avenue has also flooded and the fire brigade have been called out to drain the water away. - - There are a large number of trees which are situated on the land, not only does this provide a home for the local wildlife but they also help to soak up some of the water that is coming down the hill. If you take those trees away you will just be causing more water to come down the hill into the houses. - - Is t not against planning regulations to allow building on land that has a flooding issue? - - the field that you are purposing to take away is the only green space around Hillside estate and Kirkhill Avenue so is used regularly by dog walkers and children who need a safe area to play.		I would like to questions how many times this consultation is going to take place.
707	Julie	Erwin	-		Object	The site (green space for community) is part of the original planning permission granted for existing housing and is maintained as such (grass cutting, path, bridge and land drain maintenance) - -Existing road and Moorland Rise unadopted and insufficient for extra traffic - -Kirkhill Ave and Moorland Rise are already dangerous in winter. This would only get worse with more houses - -Putting access onto Kirkhill Road would be dangerous (poor visibility, too steep) and create a 'rat run' from Bury Road, through Longshoot/Hillside estate - an area with many children and older people, putting them at risk - -The land is prone to flooding from water off the hillsides - -The land is now an established wild-life area - -The site is well used by local people from all around for dog walking, horse riding and children playing		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
1001	Martin	Yates	-		Object	<p>Whilst acknowledging the provision of new homes are required to meet the needs of the growing population my objection to this area having been designated for housing will definitely adversely impact on the views from adjacent properties by severely breaking the skyline, will have a detrimental effect upon the openness and informal recreational use of children playing and locals exercising their dogs, which may of course lead to further footpath fouling albeit none of this will not impact on the view from our property. - Development of 22 units here will definitely have an unacceptable impact on the appearance of the area, will not enhance the street scene and will have a detrimental impact to the amenity of the occupiers of adjacent properties in terms of visual amenity, privacy, overlooking, massing and pollution. - Any development will result in the loss of a large and safe space in a quiet residential area that is in recreational use without the foreseeable replacement of the same type, of equal or greater quality in an appropriate location that is accessible from the same local community and as we all know recreation areas make a significant contribution to quality of life, they not only provide opportunities to participate in outdoor pursuits, they also have a positive impact on environmental quality and are important for health and well-being. It is also an area of wildlife from a variety of birds, deer and bats. - Development of 22 units here would take away a well used safe recreational space used all year round by families, walkers, equestrian's, dog walkers and children whatever the weather including rain and especially snow. - Vehicular access from Kirkhill Road would be very difficult in view of the prevailing speed of vehicles, the standard of access required from a classified road with the appropriate visibility splays and/or a roundabout and therefore unlikely to be given consent which means the only access will be from Kirkhill Avenue. The additional traffic generated by the development both in its construction and final usage would only exacerbate the existing poor road condition and as neither Moorland Rise nor Kirkhill Avenue are adopted, [I believe the council have refused to adopt these roads because they claim the drainage is inadequate, the road is insufficient for emergency and service vehicle to pass, albeit I don't understand why emergency vehicles should be travelling opposite directions at the same time and Kirkhill Avenue cannot be adopted as it is off an un-adopted road] therefore any repair cost would fall to the residents. - The increased traffic flow from both construction traffic and final users will impact severely on Kirkhill Avenue, Moorland Rise and also Sandown Road giving rise to further carriageway problems and frozen patches during winter conditions which will raise real safety concerns especially when children are going to school.</p>		An alternative that may be considered is only allowing building on the Northern section of HA2.33, as this is no longer maintained, water logged in places and the timber walkways and bridge are in need of serious repair and leaving the Southern grassed area as it is

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
1081	Christine	Goldthorp	-	SHLAA16319	Object	Development of residential units Kirkhill. - - I know this area well and wish to object strongly to the development of houses in this location. This area remains Greenbelt and development would result in urban sprawl and destruction of a recreational area. - - The site specific landscape study 2015 concluded that the majority of the site was not suitable for development due to the impact on landscape, high risk development area for the Coal Authority, potential land contamination and surface water flood risk. - - The loss of green space here has the potential to affect the flood zoning which is already in zone 2 and affected by medium surface water flooding. The footpaths are often small rivers in the rains and houses on Kirkhill have previously flooded. - - Footpaths run through this green site and the land itself promotes physical activity for the surrounding community, a play area for children and dog walking. Development would destroy this. - - There is likely to be an increase in noise disturbance during development and subsequently with increased residency and traffic. - - Access would need to be created. The LCC Highways understandably, have concerns with access from Kirkhill Road so Kirkhill Avenue is the only option and it is unadopted. The resulting increase in traffic would affect both the busy Hillside estate where there is a primary school and Moorland Rise which is also unadopted. - - Furthermore, there is the potential to reduce wildlife including European protected species that are found in this area such as bats. There are habitat corridors at the site which would be reduced, restricting the movement of wildlife using these habitats. -

1371	Daniela	Ripa	-		Object	<p>I object to the allocation of HS2.33 for housing at Kirkhill Avenue, Haslingden. This allocation comprises Areas A and B of the Kirkhill and Moorland Haslingden sites of the Landscape Study Document (2015). This document identifies that these parcels are not suitable for development on landscape grounds, in particular Area B, which would result in moderate to substantial adverse harm to the landscape. The proposed allocation directly conflicts with the evidence base as the Landscape Study Document (2015, pages 152-157) identifies Areas C and E of the Kirkhill and Moorland parcel as potentially suitable for development with mitigation. Area E is to the north of Brynbella Drive within the under construction Taylor Wimpey development at the Former Rossendale Hospital Site (known as Dale Moor View) and this should be allocated for housing instead of HS2.33 and removed from the Green Belt on the grounds that: it is a logical phase 2 of this recent development; the infrastructure is already in place for this to be brought forward in the short to medium term, with a signalised junction at Union Road/Haslingden Road and potential for access from Brynbella Drive; and it would be in line with the Landscape Study (2015) which identifies only a moderate degree of harm would arise to the landscape, which is far less harm than would arise from the allocation of HS2.33 (moderate to substantial adverse harm). - - In addition, the requirement to bring the entirety of Hillside Road/Kirkhill Avenue to adoptable standards presents a challenge to the delivery of the housing allocation.</p>

The proposed allocation directly conflicts with the evidence base. The Landscape Study Document (2015, pages 152-157) identifies Areas C and E of the Kirkhill and Moorland parcel as potentially suitable for development with mitigation. Area E is to the north of Brynbella Drive within the under construction Taylor Wimpey development at the Former Rossendale Hospital Site (known as Dale Moor View) and this should be allocated for housing instead of HS2.33 on the grounds that: it is a logical phase 2 of this recent development; the infrastructure is already in place for this to be brought forward in the short to medium term, with a signalised junction at Union Road/Haslingden Road and potential for access from Brynbella Drive; and it would be in line with the Landscape Study (2015) which identifies only a moderate degree of harm would arise, which is far less harm than would arise from the allocation of HS2.33 (moderate to substantial adverse harm). In addition, the requirement to bring the entirety of Hillside Road/Kirkhill Avenue to adoptable standards presents a challenge to the delivery of the housing allocation.

1766			Peel Holdings (Land and Property) Ltd		Not Applicable	<p>1. Introduction</p> <p>1.1 This representation is prepared by Turley on behalf of our client Peel Holdings (Land & Property) Limited (hereafter “Peel” or “our client”). It provides comments to Rossendale Borough Council (RBC) in respect of the Rossendale Draft Local Plan1 (July 2017) (‘DLP’) which is currently the subject of public consultation.</p> <p>1.2 This document relates exclusively to the promotion of land at Kirkhill Avenue and Moorland Rise, Haslingden, as a development opportunity. It should be considered in conjunction with the overarching representation submitted by Turley on behalf of Peel.</p> <p>Draft Rossendale Local Plan</p> <p>1.3 As set out in the overarching representation submitted, Peel has continuously and historically engaged with the plan-making process for Rossendale. This has included the submission of detailed representations to the previous Core Strategy and the draft Lives and Landscapes DPD (since withdrawn), including Development Frameworks that set out the development potential at four sites:</p> <ul style="list-style-type: none"> • Land at Kirkhill Avenue and Moorland Rise, Haslingden (allocated in part) • Land at Haslam Farm, Rawtenstall (allocated in part) • Land at Blackburn Road, Edenfield (allocated) • Land at Burnley Road, Edenfield (not allocated) <p>1.4 Peel welcomes the progress which has been made on the emerging Local Plan and supports, in principle, the proposals for development within it. In particular, Peel strongly supports the allocation of land at Kirkhill Avenue in Haslingden, Haslam Farm in Rawtenstall, and Blackburn Road in Edenfield, which include some or all of three of the sites previously put forward (as above).</p> <p>1.5 It is noted, however, that additional work is required to ensure that the emerging Local Plan is capable of meeting the full development needs of the Borough. Additional land will need to be allocated for residential development, above that which has been identified in the DLP.</p> <p>1.6 This opportunity is being taken to make representations in relation to the sites previously identified by Peel as capable of accommodating development in the Borough that have not been put forward in the DLP for allocation and/or Green Belt release. Peel is preparing updated Development Frameworks which will promote and justify its landholdings within Rossendale. Matters addressed below and in the overarching representation which directly affect its landholdings will be discussed in detail in each Development Framework.</p> <p>Additional Site Allocations</p> <p>1.7 In the context of the need for the Rossendale DLP to allocate additional land for development, Peel wish to reiterate the development opportunities at each of the four sites previously identified, as well as proposing a further</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
						<p>potential site at Rossendale Golf Club.</p> <p>1.8 These sites can each provide a deliverable housing development site in sustainable locations adjoining existing settlements. Initial reviews of site constraints and opportunities, landscape and highways have indicated that there are no significant barriers to development.</p> <p>Development Frameworks</p> <p>1.9 Further site appraisals are being undertaken to inform updated Development Frameworks which will be provided to the Council in due course.</p> <p>1.10 The updated Development Frameworks will:</p> <ul style="list-style-type: none"> • Provide analysis of the site constraints and opportunities. • Where relevant provide details of the findings of further technical assessment (such as highways, flood risk, ground conditions). • Consider the key principles for development of the site. • Present a proposed site layout plan illustrating development parcels, access, landscaping, etc. • Comment on the economic benefits of development. • Address comments / observations made within the recently published evidence base for the emerging Local Plan. <p>Proposed Development Opportunities</p> <p>1.11 In advance of the full Development Frameworks, the individual site representations are submitted providing initial reviews of the development opportunities.</p> <p>1.12 The Sites are represented as follows:</p> <ul style="list-style-type: none"> • Land at Kirkhill Avenue and Moorland Rise, Haslingden (this document) • Land at Haslam Farm, Rawtenstall • Land at Blackburn Road, Edenfield • Land at Burnley Road, Edenfield • Land at Rossendale Golf Course, Helmshore <p>1.13 This representation relates to land at Kirkhill Avenue and Moorland Rise and includes:</p> <ul style="list-style-type: none"> • Section 2: A description of the site and its location • Section 3: Details of the consideration of the site in the Strategic Housing Land Assessment (SHLAA)2 and a review of the planning policy context including the Draft Local Plan • Section 4: A Green Belt appraisal, commenting on the findings of the Green Belt Review • Section 5: Concluding comments <p>1.14 Peel would welcome discussions with RBC and other stakeholders regarding the emerging Local Plan and the merits of the sites promoted here for residential development.</p> <p>2. Opportunity Site Site Description</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
						<p>2.1 The land at Kirkhill Avenue and Moorland Rise comprises two sites - land at Kirkhill Avenue (A) and land at Moorland Rise (B) on the eastern edge of Haslingden.</p> <p>2.2 Site A extends to c. 2.4 ha (5.9 acres) and is located to the north east of Kirkhill Avenue. It comprises open grassland, which rises towards the north and east and is used for informal recreation. Kirkhill Road forms much of the northern and eastern boundary of the site. Kirkhill Avenue forms the southern boundary of the site beyond which lies a large residential estate. Residential properties form the western boundary.</p> <p>2.3 Site B extends to c. 5.05 ha (12.47 acres) and is located to the east of Moorland Rise, Haslingden. Comprising open land, the site is bound to the north, south and west by residential properties. St Mary's Roman Catholic Primary School and playing fields lie south west of the site. Immediately north west of the site is a modern housing estate, comprising detached houses. Haslingden Old Road forms the north eastern part of the boundary; the remaining eastern boundary is defined a track. The south eastern boundary is defined by a footpath.</p> <p>Local Facilities</p> <p>2.4 The sites lie approximately 0.75 km to the east of Haslingden Town Centre, with Rawtenstall Town Centre approximately 3.5 km to the east. Haslingden Town Centre is home to a number of services and amenities including a dental surgeries; off-licence / grocery stores; national banks and building societies; and a pharmacy. The nearest large supermarket (Tesco superstore) is located c. 0.7 km south of the site.</p> <p>2.5 St Mary's Roman Catholic Primary School is the closest primary school to the site, located c. 0.3 km south of the site. All Saints Roman Catholic High School is c. 2.5 km south of the site, with Haslingden High School 2 km away. There are a total of 5 secondary schools and 18 primary schools within 5 km of the site.</p> <p>2.6 There are a number of bus stops located along Manchester Road in the centre of Haslingden c. 0.75 km south of the site. These stops are served up to every 10 minutes by the 464, 244 and 484 bus services, which connect Haslingden with Bury and Rochdale in the south, Rawtenstall in the West and Blackburn, Accrington and Burnley in the north. The nearest train station is located 8.5 km north of the site in Accrington. The site is also well connected to both the local and national highway, with the A56 c. 0.75 km from the site which connects to the M66 (c. 5.5 km) and in turn the M62 and M60 (c. 20 km).</p> <p>3. Planning Policy Context Consideration in SHLAA</p> <p>3.1 The Draft Local Plan evidence base includes the 2017 Strategic Housing Land Availability Assessment (SHLAA), which aims to identify the land supply</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
						<p>for housing within the administrative boundary of Rossendale within the next 15 years (2017 – 2032).</p> <p>3.2 Site A: Land at Kirkhill Avenue was promoted in the SHLAA (Site Ref 16319). The SHLAA Site Assessment confirmed that it is a viable and achievable site for up to 22 homes in the short term (1-5 years), subject to overcoming site constraints. Peel consider that the site could accommodate 50 units.</p> <p>3.3 The SHLAA notes that the site specific landscape study (2015) concluded that the majority of the site was not suitable for development on landscape grounds, but it is argued in the assessment that the site can become suitable in the medium to long term with appropriate landscape mitigation. The site is considered to be suitable for a housing development subject to the mitigation of the constraints identified.</p> <p>3.4 Site B: Land at Moorland Rise was assessed in the SHLAA (Site Ref 16395) but not promoted for development due primarily to landscape impact, and due to access constraints and electricity wayleaves. The SHLAA noted that the site is physically developable if these issues can be resolved. Moorland Rise was previously identified as an area for Green Belt Review and release from Green Belt in the 2011 Core Strategy.</p> <p>Local Plan Part 2: Site Allocations and Development Management DPD</p> <p>3.5 The Draft LP Part 2 was withdrawn. Within that plan, 'Site A' – Kirkhill Avenue was proposed for housing development (site ref. H36). Part of 'Site B' – Moorland Rise - comprising 1.2ha of land to the south west of the site, was proposed as safeguarded land by the LP Part 2 (site ref. H92), with a potential capacity of 30 dwellings. The wider site comprising c. 5.05 ha of land located to the east of residential dwellings on Moorland Rise, which would have remained within the Green Belt in the LP Part2.</p> <p>3.6 Representations made by Peel in response to that Plan supported the housing allocations and made further comment in relation to landscape and access to support the proposal. Both matters can be resolved through mitigation, which will be considered fully and illustrated in the updated Development Framework.</p> <p>Saved Policies</p> <p>3.7 As the Local Plan Part 2: Site Allocations and Development Management DPD" (LP Part 2) was not taken forward by Rossendale BC, in relation to site allocations and designations, the Proposals Map and Saved Policies3 remain relevant as part of the development plan.</p> <p>3.8 The Proposals Map identifies the Site as outside the Urban Boundary (Policy DS1); Site A being in an open 'Countryside Area' (Policy C1) and Site B being within the Green Belt (Policy DS3).</p> <p>3.9 However, Policy 1 of the Core Strategy states that the Urban Boundary defined in Local Plan Saved Policy DS1 and the Green Belt boundary defined in Saved Policy DS3, will be reviewed and where necessary amended in the Site</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
						<p>Allocations DPD. The reviews would take into account criteria set out in Policy 1 including:</p> <ul style="list-style-type: none"> • Where small scale selective rounding off of Green Belt boundaries would promote sustainable development opportunities. • An extension/amendment to the urban boundary would not adversely affect aspects of the natural environment. <p>3.10 Moorland Rise was identified as an area for Green Belt Review and release from Green Belt in the 2011 Core Strategy. Core Strategy Figure 15 identifies the east of Haslingden as an area for Green Belt review. Rossendale Draft Local Plan</p> <p>3.11 As discussed in the overarching representation, the Draft Local Plan (DLP) recognises that some release of Green Belt land will be required to meet the housing requirements and the NPPF requirement for the Council to maintain a 5 year land supply of deliverable sites (DLP, page 12).</p> <p>3.12 The evidence presented in the DLP indicates that 4,425 dwellings will need to be delivered over the period to 2034. Considering the under provision of 425 dwellings since the adoption of the Core Strategy and the potential land supply from non- Green Belt sources of 2,907 dwellings, there is a significant gap of approximately 1,518 dwellings.</p> <p>3.13 The Draft Local Plan proposes areas for release from Green Belt, allowing for a delivery of a further 715 dwellings. It is therefore evident that the Green Belt releases proposed by the DLP need to be more than doubled - to accommodate 1,518 dwellings - if the emerging Local Plan is to be found sound.</p> <p>3.14 In relation to Site A specifically, the DLP proposes to extend the urban boundary to include this land and it is proposed to be allocated for housing development, Ref. HS2.33: – ‘Land at Kirkhill Aveune, Haslingden’ 0.74ha, for 22 dwellings, deliverable within 1-5 years.</p> <p>3.15 Peel supports this proposal and welcomes the allocation of the site.</p> <p>3.16 In respect of the land at Moorland Rise (Site B) however, the DLP does not propose to include this land within the Urban Boundary and the site would remain designated Green Belt. Policy SD2: Urban Boundaries directs all development within such boundaries ‘except where development specifically needs to be located within a countryside location and the development enhances the rural character of the area.’</p> <p>3.17 As above, it is clear that there is a significant gap between the housing land supply identified in the DLP and the demand, which cannot be met by non-Green Belt sites alone.</p> <p>3.18 Peel contends that the inclusion of the Moorland Rise (Site B) land as a housing allocation and its release from Green Belt would be in keeping with the NPPF and would assist in achieving the shortfall of land within the Borough for the necessary housing development to meet demand.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
						<p>Continuation of the proposal to release this land from the Green Belt as in the Lives and Landscapes Plan, albeit it is now a housing site and not safeguarded land.</p> <p>3.19 The following section considers the role of the land in terms of its contribution to Green Belt purposes in greater detail.</p> <p>4. Green Belt Appraisal</p> <p>4.1 The land at Moorland Rise (Site B), is currently designated as Green Belt. A Green Belt review⁴ (GBR) forms part of the evidence base for the DLP which has informed the plan's proposed retention of the Site as Green Belt.</p> <p>4.2 The strategic purpose of the area of Green Belt which the Site forms part, is primarily to provide separation between Haslingden and Rawtenstall to the east. It also contributes to the separation of those two towns in the north from Edenfield to the south.</p> <p>4.3 The Site sits is on the eastern periphery of Haslingden. Site B at Moorland Rise corresponds with the western part of GBR Parcel P13, closest to the development at the edge of Haslingden, see below.</p> <p>Figure 4.1: P13 (Site location indicated)</p> <p>4.4 It is important to note at the outset that there are very clear and accepted exceptional circumstances which justify the release of significant amounts of land from the Green Belt to meet Rossendale's housing and employment needs. All land within the current Green Belt, fulfils at least some aspects of Green Belt purposes. As such, it will not be possible to meet the identified housing needs of Rossendale without some impact on the Green Belt.</p> <p>4.5 It is also important to note when considering what land to release from the Green Belt to be clear that the "golden thread" which runs through plan making and decision taking is the achievement of sustainable development. The NPPF confirms this at paragraph 84 when it states that "...when drawing up or reviewing Green Belt boundaries local planning authorities should take account of the need to promote sustainable patterns of development...". In considering the release of land from Green Belt it is therefore essential to consider what releases of land will achieve sustainable development while minimising the impacts on the purposes of Green Belt.</p> <p>Purpose 1: To check the unrestricted sprawl of large built-up areas</p> <p>4.6 The GBR notes that Haslingden is not considered to be a large built up area, and therefore Green belt surrounding it cannot play a role in achieving this purpose.</p> <p>4.7 Peel agrees with this assessment.</p> <p>Purpose 2 - To prevent neighbouring towns merging into one another</p> <p>4.8 The GBR considers that parcel P13 has a strong role in preventing towns merging, namely Haslingden and Rawtenstall. These settlements are within very close proximity (within 0.5km) and have good intervisibility in the lower lying areas to the south. The GBR considers that Pike Law - an area of elevated</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
						<p>land - forms a visual barrier between the two settlements that is of critical importance. It notes that the parcel plays an essential role in preventing the merging or erosion of the visual gap between Haslingden and Rawtenstall, any new development that took place within the parcel could lead a loss of openness and the perception of narrowing the gap between the two neighbouring towns.</p> <p>4.9 Peel disagrees with this assessment. It is considered that it is incorrect to treat Haslingden and Rawtenstall as separate settlements for the purpose of the Green Belt review. Whilst they may be distinct in terms of their urban character, they have already physically merged. The curtilages of properties at the east of Haslingden (to the rear of Yarmouth Avenue) and at the west of Rawtenstall (at the rear of the former NHS site off Haslingden Road) are back-to-back; the buildings in this location are very close.</p> <p>4.10 In any case, when considering only the western strip of the parcel P13 (the location of Site B land at Moorland Rise), in isolation from the eastern part of the parcel, the contribution to this purpose is even further limited. As set out in Peel's representation to the Local Plan Part 2, the release of the site would not significantly reduce the distance between Haslingden and Rawtenstall as the gap between the two settlements in this location would reduce by only 100m and would still be approximately 300m wide at the closest point.</p> <p>4.11 Therefore it is concluded that the land could be released from Green Belt without harm to this purpose.</p> <p>Purpose 3 - To assist in safeguarding the countryside from encroachment</p> <p>4.12 The GBR found that the parcel's contribution in this respect was moderate. It found a sense of encroachment within the parcel as a result of the visual influence of the neighbouring settlement edge of Haslingden to the west and a small number of residential properties in the east. Despite this urbanising influence, the GBR found that the parcel displays characteristics of the open countryside, but lacks a strong and intact rural character. Due to the elevated topography of Pike Law, located within the parcel, the neighbouring settlements of Haslingden, Rawtenstall and Helmshore are highly visible from within it, although this does not substantially detract from its character.</p> <p>4.13 Peel considers that the land within their ownership does not accord with this assessment. The site adjoins the settlement of Haslingden and does not include the higher ground to the east (the remainder of the parcel P13), where Pike Law is located, which is of a more rural character. In following existing field boundaries lined on the eastern perimeter the development would be contained, maintaining the openness of the land to the east.</p> <p>4.14 Whilst it is accepted that it is important to protect the countryside from encroachment, it is considered that the release of Site B, together with the proposed DLP allocation to the north at Kirkhill Avenue, would be a logical extension to Haslingden, and that any limited harm in this respect would be</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
						<p>outweighed by the benefit of meeting housing land supply requirements in a sustainable location.</p> <p>Purpose 4 - To preserve the setting and special character of historic towns</p> <p>4.15 The GBR considered that P13 has intervisibility with Rawtenstall Town Centre. The openness of the parcel is not considered to form key part of the setting of these historic settlements but could form part of the wider setting; therefore effects of development within the parcel on the character of the historic settlements would be limited.</p> <p>4.16 Peel agrees with this assessment. Residential development to the edge of the existing developed area of Haslingden would not have a detrimental impact on the setting or character of Rawtenstall or Haslingden town centres.</p> <p>Purpose 5 - Assist in urban regeneration by encouraging the recycling of derelict and other urban land</p> <p>4.17 The GBR notes that all parcels make an equally significant contribution to this purpose.</p> <p>4.18 The DLP proposes to optimise the re-use of brownfield sites to meet development needs and in doing so support ongoing urban regeneration.</p> <p>4.19 As noted above, and in the overarching representation, the supply of deliverable brownfield land is insufficient to deliver the number and type of new homes and employment land required to meet the needs of the borough. As such, the extent of urban regeneration/ brown field development which can be achieved is not sufficient to meet Rossendale's sustainable growth needs and must be accompanied by development on Green Belt land. Exceptional circumstances to justify Green Belt release have been proven through the Greater Manchester Spatial Framework. The release of land from the Green Belt will not therefore undermine this purpose.</p> <p>Green Belt Appraisal Conclusion</p> <p>4.20 The strategic purpose of the area of Green Belt which the Site forms part, is primarily to provide separation between Haslingden and Rawtenstall to the east. It also contributes to the separation of those two towns in the north from Edenfield to the south.</p> <p>4.21 Site B does not contribute to that strategic Green Belt function. It has been assessed in the GBR as part of a larger parcel, extending to the east including higher ground at Pike Law. The GBR accepts that this is not an area of Green Belt that restricts the sprawl of built up areas. Peel contests the view that Site B has any role to play on preventing Rawtenstall and Haslingden from merging, due to its isolated peripheral location within the context of the wider Green Belt parcel.</p> <p>4.22 Sensitive site masterplanning, together with the housing allocation to the north at Kirkhill Avenue (Site A), would deliver a sustainably located housing development. The proposed boundary will provide a long term defensible Green Belt boundary with the field boundaries to the east being strengthened with additional landscaping.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.033	Further comment
						<p>4.23 It is considered that this Site is suitable for development and is in a highly sustainable location. Its release from the Green Belt will therefore contribute to a sustainable pattern of development which makes the most of proximity to nearby highway infrastructure. There are therefore clear exceptional circumstances to justify its release from the Green Belt.</p> <p>4.24 Peel strongly supports the allocation of Site A and recommends the Council allocate Site B to ensure sufficient land is allocated to support the housing needs of the borough.</p> <p>5. Conclusion</p> <p>5.1 In relation to Peel's land interests in the Borough, this document concerns one of four sites which have been subject of previous Development Frameworks and representations in the context of the Local Plan development. Updates to these frameworks will be provided to RBC in due course, setting out a clear vision and proposals for the development of these sites.</p> <p>5.2 This representation provides an initial review of the development opportunity at Kirkhill Avenue and Moorland Rise, Haslingden, including details of the site and its location, consideration of the site in the Strategic Housing Land Assessment (SHLAA) and planning policy; and a Green Belt appraisal, commenting on the findings of the Green Belt Review which forms part of the evidence base to the DLP</p> <p>5.3 Peel would welcome discussions with RBC and other stakeholders regarding the emerging Local Plan and the merits of the sites promoted for residential development.</p> <p>5.4 Site A has been allocated for housing development in the DLP. Peel strongly supports this allocation.</p> <p>5.5 The SHLAA identifies Site B as having potential for development, but with landscape impact as the major constraint; the DLP proposes it remain within Green Belt. Peel considers that the site can be developed with sensitivity to landscape features, and together with the allocated site, there is potential for a logical extension to the west side of Haslingden. The updated Development Framework to follow this representation will further illustrate the opportunity for the development of this site and give comfort that it should reasonably be released for development.</p> <p>5.6 Peel requests the designation of Land at Kirkhill Avenue and Moorland Rise, Haslingden in its entirety as a housing allocation.</p> <p>Please see appendix</p>

Reference		HS2.037		Land adjacent Park Avenue / Criccieth Close, Haslingden				
529	Sherry	Long	-		Object	The plan on placing a housing development off Park Avenue/Criccieth Close needs further consultation. This is a community used area for walking dogs, and use by members of the Victoria Park Estate as it was known on the original plan. This parcel of land is subject to flooding in the autumn, winter and early spring every year. Talking to some of the residents who have been on Park Avenue since the 1940s, they tell me that there was a large lodge down at the bottom of the street. When this estate was built it was filled in with dirt, but never drained properly, hence it stays wet for a good part of the year. A developer will probably struggle to get it dry enough to build on; think muskeg!! It gets wet and stays wet and is not stable for large equipment which may sink in the boggy ground. Original property owners have restrictive covenants which prohibit alterations in use which would decrease property values of this estate. My husband is an original property owner. - However, you need to be aware there are other issues: in winter, when it snows, a large part of the residents cannot get their cars up the hill on Park Avenue due to snow and ice. We have identified the problems to both Lancashire County Council and Rossendale Borough Council voicing concerns about getting out of the estate but also how emergency vehicles might get in should the need arise in snowy conditions. Again the issue has not been addressed. The road is barely being maintained with the traffic from 100 households on this estate (many of the households having more than 1 car). There is not enough space for further access off Park Avenue which is already used as parking for events in and around Victoria Park. - We are concerned what another housing development will do to property values of this estate. - We will be keeping an eye on this open space and your future plans and will raise challenges with our neighbours if we need to protect our interests.	-	We believe it is a bad decision to open this space up for development.
703	Christopher	Fairclough	-		Object	I think that additional housing on Park Avenue will make an already busy and dangerous road when trying to enter and exit onto Manchester Road even more busy and dangerous. The road is already a single lane due to parking on both sides of the road towards the top of Park Avenue.	-	
704	Laura	Fairclough	-		Object	I think that additional housing on Park Avenue will make an already busy and dangerous road when trying to enter and exit onto Manchester Road even more busy and dangerous. The road is already a single lane due to parking on both sides of the road towards the top of Park Avenue.	-

Reference		HS2.040		Land adjacent 53 Grane Road, Haslingden				
712	Lynn	Brown	-		Object	The area is one of the few green areas remaining on Grane Road and will impact on the view and property value of my house. It will also affect the Blue lamp recreational area off Grane Road.		I have already been subjected to Rossendale Planning ignoring the views of local residents and can only hope that they take views on board this time!
Number of comments		HS2.040		1				
Reference		HS2.042		Hollin Way, Rawtenstall				
7	J	Wilson	-		Object	Too many 'new builds' do not maintain the existing character of the area. Many farm houses (including a grade 2 listed) in this area. County feel would be lost. - Schools, dentists and Doctors in this area are oversubscribed. - The road into Rawtenstall is constantly backed up with traffic despite recent traffic light adjustments. Linking Hollin way onto Lime Tree Grove would increase traffic on the estate ,particularly those trying to escape Burnley Road traffic, therefore posing a risk to children in the area. The field provides home to many different types of wildlife and is an area family's enjoy. Countryside views would be spoiled.		Rossendale has enough houses, people and traffic. Constant building is turning our lovely valley into a town. More people cause more litter and pollution. Schools are oversubscribed and children are losing fields in which they play. Those of us who were lucky enough to be born here worry about the future of what was/is an area of natural beauty which must be protected!

635	Ross	Hemsley	-		Object	The use of this land for housing was raised several years ago and was not taken forward then for several reasons, principally access and congestion issues. - - In the intervening years the amount of traffic using Hollin Lane has dramatically increased following the building of the Alder Grange 6th Form Centre and the growth of the Nursery attached to St Pauls school. Twice a day when schools are in the area becomes completely choked up with vehicles, parking restrictions are ignored and parents sit waiting for their kids quite often with their engines running. - - Once the parents have picked up or dropped off they then sit on the hill of Hollins Lane waiting to join the extremely busy Burnley Road which in any event gets backed up towards Crawshawbooth every morning. - - By building more houses at HS2.44 the developers would only add to the pressure on the already overloaded roads infrastructure, put even more pressure on local schools and other resources such as healthcare. - - The width of Hollin Lane itself once it splits from Calder Avenue is single track and as such would be unable to cope with the number of vehicles that the plan would generate. - - Ross Hemsley FCILT -		Rossendale is an amazing place to live and to work and is blessed with some unique and stunning landscape which should be protected. - - The fact that it is generally in a valley means that the amount of land available is finite and can only support so much development. - - If there is to be growth it must be made in a manner which can be supported by the surrounding infrastructure. Anybody trying to get to Haslingden or even worse Manchester in the morning is faced with long traffic queues and delays. Recently the traffic has backed up to Newhallhey roundabout several times as the M66 cannot cope with the volumes joining it from the A56 and A682 simultaneously. - - There has been talk of turning the railway into a commuter line, that is highly unlikely. - - I have always been a keen cyclist but despite talk of developing safe cycling routes the volumes of traffic just continue to rise, making cycling at any other time than early mornings at weekends extremely dangerous.

757	Anne	King	-		Object	<p>The following issues arise out of the Council's proposal to build 51 houses on the area HS2.44 of the Local Plan - - ACCESS - Access to the site is down a narrow single track lane. There is no space to allow two-way traffic. Even if one-way traffic was to be put in place, there is no space to allow for a pavement. The latter is necessary to allow safe access from the proposed houses to the local nursery, primary and secondary schools. - - The proposed access is on an almost blind bend which is already dangerous to negotiate at peak periods and school opening and closing times. - - Walkers from other areas in the north of the estate have to cross the lane on their way to school. Having increased traffic entering and exiting to and from the proposed housing would endanger walkers, children in particular, not all of whom have adult supervision. - - Already, parents park along the sides of all local roads at the start and close of the school day. It will be dangerous and difficult to exit the lane onto the blind bend as parked cars will make it difficult to see traffic coming down the hill from the top of the estate. - - Traffic coming up the hill from Burnley Road and turning right into Calder Road, towards the schools, already have to negotiate a blind bend. Adding another road to this junction will increase the difficulties at what is already a very dangerous turning, especially at peak periods. - - The junction of Hollin Lane and Burnley Road is already very heavy at peak hours of the day. Long tailbacks are common on week days as traffic from various roads on the estate only have access to Burnley Road from Hollin Lane. They also have to contend with the traffic coming up Hollin Lane and turning into Calder Road to access the two schools and nursery. Additional traffic coming from the new houses would increase the chaos, especially at this bend. - - ADDITIONAL AMENITIES REQUIRED - Current Rawtenstall nursery and primary schools are almost at capacity. What arrangements are being made to increase the capacity of these or build new school premises to accommodate the children from the houses proposed by the plan? - - What consideration is being given to the pressure additional housing will put on local GP and Dental surgeries? - Waiting lists for appointments are already very long. Additional families will need access to these already overburdened facilities. - - - - -</p>		<p>It is accepted that the council has a duty to build new housing to meet government requirements. This objection is not against additional housing. The objection is raised due to the dangers and pressures the proposed housing would put upon the local area and its residents.</p>

761	David	King	n/a		Object	<p>The Council Proposal to designate the land for the construction of 51 houses has the following flaws to likely successful completion. - Access to HS 2.44 - The only present access is viable a single vehicle width, narrow lane with steep sloping shoulders supporting the gardens of a substantial number of properties. There would be inadequate access for emergency vehicles, delivery vehicles, domestic access via cars (100+ for 51 houses?) over the approximate 150 metre stretch of lane and no space for a pedestrian pavement. - - The lane meets the presently adopted highway at the junction of Calder Road and Hollin Lane on a sloping section of road at a blind bend. This is particularly busy with many parked cars at the start and end of the working day for the Secondary School, Primary School and Children's Nursery which have access and egress via the same junction. There is also the high volume of foot traffic of adults and children at the same time leading to a likelihood of road traffic accidents. - There would likely be an increase on the volume of traffic using the Hollin Lane junction to enter Burnley Road for access north and south to the principal road networks. - - Local Amenities - The Primary and Secondary schools are at virtual capacity. The addition of 51 larger houses would bring greater pressure on schools. There is no mention of extra provision in this area or for Shops, Pharmacies, Doctor's and Dental Surgeries to support the enlarged community.</p>		<p>The need for extra housing is appreciated but developments should be on a logical, sympathetic basis - where such developments can be accommodated into the community with safe road access meeting the required, stipulated standards and the provision of increased community facilities to supplement the existing infrastructure which is under substantial pressure and reaching/has reached capacity.</p>
766	Jennifer	Bailey	-		Object	<p>We have an important wildlife site on the land in question. - The land is already prone to flooding which will worsen with building. - The proposed access lane is a single track lane providing no opportunity for safe vehicle access, safe walking or cycling. - The local infrastructure is already struggling to cope with the volume of traffic in the locality. There is considerable traffic on the Constablee Estate due to the 4 school facilities on Calder Road and parent and staff parking is already blocking entrances into side streets and causing access problems in and out of the Estate. - There is a high volume of traffic using Burnley Road and any slight disruption causes long delays for several miles. Increasing housing on Constablee and up towards Crawshawbooth will create even more traffic delays. Air and noise pollution will increase which will damage the Valley's reputation as a rural area. - There are no plans to improve public transport in and out of the Valley and safe cycling is not a priority for the Council therefore we will have more cars, more pollution, more parking issues and more poor health issues. - Our facilities - GP and dental services, schools etc are over stretched . -</p>		<p>Parking around the Valley is becoming a problem for cyclists and pedestrians. Cars park on double yellow lines and on junctions on a daily basis particularly on Calder Road for school pick up causing great difficulties for pedestrians trying to cross the busy road. Cars are also parking regularly on double yellow lines on Bank Street and there appears to be little policing of illegal parking. - - There is a poor attitude towards cycling in the Valley and cars are regularly parked on the few cycleways that have been allocated. Perhaps more people would cycle to work or school if cyclists were given more consideration and priority by the Council. The condition of road surfaces around the Valley makes cycling extremely dangerous at present. - - -</p>

781	Christine	Selim	-		Object	<p>Access to the site is down a narrow lane that will require to be widened even if this is so there will not be enough space for a footpath and would be hazardous to children parents and pushchairs. - The proposed access is on a blind bend which is made worse by traffic coming up Hollin lane and turning into Calder Rd towards the schools and nursery which are already overprescribed. - Crossing this area would be dangerous from residents from the other side of the estate. - Parents already park at ,schools leaving times all up Pendleton Ave and on the pavements and across drives,this of course would be increased. - The infrastructure must be carefully scrutinized as to Medicaland Dental services which are already overloaded and have to wait weeks for appointments. What arrangements are being made to increase this capacity and that of the schools.</p>		<p>It is appreciated that more affordable homes are required t,he objections are raised duetto the dangers and pressures that would be put on local services and safety as to the roads around the area.</p>

1036	L	Bower	c/o agent		Support	<p>Policy HS2: Housing Allocations (Site HS2.44 – Land at Hollin Lane, Rawtenstall) - - Emery Planning is instructed by Mrs Lorraine Bower to submit representations to the above consultation document. Mrs Bower is the owner of part of Site HS2.44 – Land at Hollin Lane. Our client owns SHLAA16184. - - We have been instructed by the family for a number of years and took an active part in the Part 1 Examination and through the more recent consultations. Our client has also undertaken site specific work which has been submitted to the Council as part of the justification for the allocation of our client’s land. Therefore we welcome the allocation of the site in the plan. - - We strongly support the inclusion the allocation of the land at Hollin Lane (site ref: H2.44) and its inclusion within the urban boundary. - - The allocation of the site is in accordance with the adopted Core Strategy, and it is capable of making a full contribution to housing land supply in the borough in the short term. As will be noted we consider that the policy wording should be amended, hence the reason why the objection box on the form has been checked. - The site is greenfield land situated outside of the existing settlement boundary. However the site is located in an accessible location adjacent to the settlement boundary, and is surrounded by residential development to the west and partly to the north, a farm complex to the east, and a brook runs along the southern boundary with Alder Grange Community College to the south. The site represents a logical rounding off opportunity. A number of trees and planting is located along the brook, and would form the basis of a defensible urban boundary as part of a landscaping scheme. - - Our client controls the site and we can confirm that it is achievable and immediately available for development with the knowledge the plan is progressing and the site is allocated. The site is considered to be suitable for development, and there are no technical or environmental constraints. Further detailed site specific work would be considered further as part of any future application. - - The site is identified for development in years 6-15 of the plan. Our client is currently awaiting adoption of the plan prior to submitting a planning application, but would consider an early application if it were to be supported by the Council. The site should be identified in Years 1 to 5. - - Although the principle purpose of these representations is to support the proposed allocation of the site, we also have comments on a number of other policies as set out below.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.044	Further comment
1484	Eileen	Ainsworth	-		Object	<p>Access will be via Hollin Lane, a narrow single track bordered by gardens. It will not be wide enough. There will be bottlenecks and no room for pedestrians. Air quality will be detrimentally affected. Over 140 cars entering and egressing will pose a risk to health and safety. Vehicles will travel from Hollin Lane to Burnley Road, an area which is already busy due to school traffic. The development will exacerbate this hazard. The steep hill down to Burnley Road can be icy, occasionally dangerous to drive down. Residents park vehicles on Burnley Road to ensure getting to work. More residents mean more cars parked on Burnley Road. - In assessing the site, the council states "access is a major constraint and significant new infrastructure is required." In 2003, the council stated "Hollin Lane cannot be made to adoptable standard and cannot serve further residential development without causing material harm to highway safety." Therefore, is a new road proposed? Where and at what cost? Are there available school places? Will the GP cope? - The development will impact on natural land drains. The council considers 50% of the area is medium water flood risk and 10% is high. This is underestimated. Topography shows a gradient. The area is already very wet. There could inevitably be subsidence as there is on Hurst Crescent caused by a much smaller housing development. Another statistic is "10% of the site is within a woodland stepping stone." This is an Important Wildlife Site. The wildlife does not stay within that 10%. There are owls, foxes, herons, jackdaws and bats that live in this greenbelt area. They will perhaps be eradicated. Greenbelt land has been specified for the benefit of the environment, for us and for future generations. We should be protecting it and not moving boundaries to suit. The council is unnecessarily moving the urban boundary as there are brownfield sites that should be developed.</p>		<p>In 2015, following the previous consultation, the council's Forward Planning team after considering the responses received was to prepare a response to the issues raised and produce a report in which all the representations would be addressed. Has that report been completed and is it to be published.?</p>

1499	Roger	Ainsworth	-		Object	The increase in size of the nearby Alder Grange schools in 2012 has led to such high volumes of traffic that long lines of cars etc. are a twice daily occurrence during term time. This is happening "now" before any extra housing is put in place. Hollin Way is already congested. The extra traffic will exacerbate this. - Access via Hollin Lane or Downham Avenue will require reconstruction work which will cause major disruption both environmentally and logistically. It is likely that such a costly project could be proposed on paper but become unfeasible after commencement. A disaster in the making as the council will be left to resolve the difficulties and complete the project at the taxpayer's expense. To use Downham Avenue would change the nature of the Constable Lee estate making it incredibly busy and dangerous for existing residents and school children. Hollin Lane would become a rat run. - Moving the urban boundary to ensure the proposed site can be developed is short sighted, tragic for the environment, will be seriously detrimental to wildlife in the nearby IWS and also involve the demolition of existing houses and gardens. To cynically move the urban boundary to include this greenbelt land just because it is available is inexcusable. - These concerns have been given to the council in 2015 and before. They have been ignored in favour of using a totally inappropriate site. They have shamefully gone for the easy option without regard to the environment. There are so many other possible developmental sites in Rossendale having much less environmental and structural impact I question the Council planners' decision to include this site in the first place. -

1257	Elizabeth	Ward	-		Object	We are concerned about this site allocation as it would impact on our immediate locality and access would be very difficult for construction traffic . Buildings would impact on light to the side of our home and would ruin our outlook considerably along with noise and traffic congestion on already busy roads.		
------	-----------	------	---	--	--------	---	--	--

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.045	Further comment
1258	Janice	Crawford	-		Object	<p>My objection is on the grounds that there is no suitable access to this site:- - - no</p> <p>On a 2D map there appears to be access from Willow Avenue, but there are 3 houses on this avenue, one mine and the other 2 my brothers. This is private land, not an adopted highway, therefore we would strongly object to being forced to provide right of access for construction traffic over our land. - -</p> <p>Access to Willow Avenue is either up LimeTree Grove from Burnley Road, which is a steep, twisting lane with walls on either side, barely wide enough for one vehicle and a pedestrian to pass safely. The walls are deteriorating and the lane was at one point given a weight limit by LCC of 3.5 tonnes. In a recent renovation scheme at The Elms the skip waggon refused to come up this lane, therefore I do not think it is suitable for construction traffic.</p> <p>Alternatively access could be down the hill from Slaidburn Avenue on the Constablelee estate, but again this is a one lane road currently blocked by LCC bollards because it was deemed unsafe for through traffic over 20 yrs ago. I seriously doubt that construction traffic would be able to negotiate the corner into Willow Avenue. - - Possible access from Whalley Drive has been blocked by private driveways and potential access from the main road via Cribden Street is unlikely because of the gradient on the hillside. - - Obviously you need to see the piece of land to understand the narrowness of the Lime Tree Grove access and gradient of the approach from Cribden Street. Therefore, I respectfully suggest that you visit the site before suggesting that it could possibly be built upon.</p>

1765	Harry and Audrey	Foster			Object	<p>Having spoken to X last week regarding my concerns re the proposed planning for houses adjacent to Willow Avenue, Constablee (HS2.45) I hereby submit my concerns in writing as advised.</p> <p>The issues I am concerned about are</p> <ul style="list-style-type: none"> : the access to the site whilst the houses are being constructed : the access when people are living in them <p>The reasons for the concerns are that Lime Tree Grove is a single track lane with bollards separating it into 2 parts. I am led to believe that large heavy traffic will be unable to access the site from the bottom of Lime Tree Grove to turn onto Willow Avenue.</p> <p>Access from the top of Lime Tree Grove will involve coming down Slaidburn Avenue which is already congested with parked vehicles . It would then need to travel down Lime Tree Grove - a single track lane and also involve the removal of the bollards. Even if the bollards were temporarily removed there is an raised island on which they are standing.</p> <p>This lane is used by many people on foot including lots of children and people with prams walking to the 2 nearby schools and is not suitable for heavy wagons . The removal of these bollards would also encourage other vehicles to travel along the lane with possible consequences . This road is highly unsuitable for the subsequent volume of traffic that would ensue. We have already witnessed one incident where a young girl had a very lucky escape from being pinned to the wall when the bollards were being repaired.</p> <p>Trusting you will give these points your serious consideration when deciding about this proposal and seek possible alternative routes of access.</p>		
1802		Rusden			Not Applicable	<p>it has come to our attention that MSM have been given permission to build 10 houses on Willows Avenue off Lime Tree Grove HS2.45 on the local plan written statement (Regulation18 Draft) page 9 as a resident of Lime Tree Grove and carers of an elderly mother-in-law we are concerned as to where access is going to be as Lime Tree Grove is a single track lane and would not be suitable for heavy traffic in fact it has a sign at the bottom saying unsuitable for motor vehicles to come either up or down if it was made into a road or you open it up it would become a rat run for school and very dangerous to residents, as a resident of Lime Tree Grove I would like to be kept informed on this matter as it will make our property deflate in price if we come to sell, we do actually pay very high council tax .</p>

1808	John and Helen	Pilling			Object	<p>I refer to our recent telephone conversation regarding the Draft Local Plan for Rossendale and the consultation which has taken place. I also refer to the recent SHLAA assessment of the land bordering numbers 31 to 37 Slaidburn Avenue, Constablee, Rawtenstall and the possible use of this land for constructing 10 housing units.</p> <p>In view of this I wish to make the following comments:</p> <ol style="list-style-type: none"> 1. The properties on the West side of Slaidburn Avenue would be overlooked by any development and would suffer a loss of amenity,ie. open aspect / outlook. 2. We feel that there must be some measure of doubt as to the suitability of the site in view of a severe land fall away along the edge of the proposed site. 3. The access to the site is solely from Lime Tree Grove via Willow Avenue. This would take on even greater significance given recent concerns regarding traffic volumes using Lime Tree Grove which has resulted in traffic bollards and reduction to a one way system below Willow Avenue. The concerns regarding safety which preceded the restriction on Lime Tree Grove would be all the more relevant with the traffic increase from any development on this site. 4. Emergency vehicles need adequate road width to access houses. Lime Tree Grove is 8feet wide at its narrowest point. Willow Avenue (a private road) is also narrow and vehicles parked there could create a problem. 5. The site / piece of waste land in question provides a valuable ' soak away' for rain water and, in the event of heavy rain, reduces the amount of water moving down the slope and affecting properties adjacent to Burnley Road. <p>This letter is supported by residents at X, X and X Slaidburn Avenue</p>		
1821	Pamela	Anthony			Object	<p>I believe that my neighbour has sent a statement regarding our concerns for building on the land identified above.</p> <p>I am in agreement with his comments and would be grateful if you would add me to the mailing list in order that I am informed if anything is proceeding with building on this land.</p>

614	Patricia	Bernard			Object	<p>I have objections regarding this proposal for housing allocated land which lies adjacent to Goodshaw Lane. My primary objection is the possible increase in traffic from these new developments.</p> <p>Goodshaw Lane is a very narrow lane which is used by parents and children to walk to and from school each day. It is also used by many dog walkers, cyclists, horse-riders and walkers. The kennel's customers access along this lane also and there are two disability scooter drivers who use this part of the land when going into Crawshawbooth village.</p> <p>My worry is that if access from these proposed new developments is allowed onto Goodshaw lane there would be an increase in traffic flow. There is only a tiny strip of pavement along the entirety of the lane, a mere handful street lights and two 'blind bends'all of which is not conducive to increased usage.</p> <p>My other objection is regarding the proposed change to the settlement boundary on goodshaw lane.</p> <p>St Mary's and All Saints church on goodshaw lane are two churches combined and have a busy weekly calendar of events plus funerals etc and unfortunately they have no parking facilities. If the new settlement boundary is put in place then it is possible the land it would then enclose will become developed. This would cause huge problems for the church and local residents along Goodshaw Avenue and possible parking problems for any future developments.</p> <p>There are also the other issues of extra traffic going into Rawtenstall, not enough school places, doctors or dentists to facilitate these proposed new housing developments.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.047	Further comment
711	Sally	Dewhurst	-		Object	<p>Local Plan should prioritise sites to avoid developers 'cherry picking' the easiest and most picturesque sites: Recognising that there is a 15 year plan, the development of the identified sites should follow a strict plan and be in 3 phases. The first phase should be to develop all brownfield sites regardless of any difficulty at which point the demand for further development should be assessed. Should demand persist then the second phase, should be to develop the remaining sites within the existing urban boundary after which further demand for housing should again be assessed. Only at this point should developing sites within the extended urban boundary be considered. The plan needs to ensure that the Rossendale countryside is preserved until it is absolutely necessary to develop these sites.</p> <p>• Goodshaw Lane is a single track lane, which is totally unsuitable for extra traffic: Site access is poor and unsafe contrary to the assessment in SHLA16203.</p> <p>• Loss of Open Space Amenity for existing residen</p> <p>• Rawshawbooth primary is already oversubscribed: 58 first choice applications were made in 2017 for 45 places resulting in 13 children not being given a place. The school has already had to impose a geographical priority area due to demand. Children within Loveclough will be forced to attend schools in either Burnley or Rawtenstall as their local village school is oversubscribed. There is no firm plan of how to resolve this issue.</p> <p>• Further development would exacerbate travel problems: As a resident who works in Manchester there are already considerable issues with commuting from Loveclough along Burnley road into Rawtenstall and then continuing along the M66. The Rossendale infrastructure delivery document is simply a list of issues with no practical or deliverable solutions and indeed forecasts 'transport issues to deteriorate over the plan period' with their being no realistic option to improve congestion into Rawtenstall due to the topography of the area.</p>		<p>If the consensus is a need for more housing on this site after addressing these legitimate concerns then development should not be for the commercial gain of the council and developers at the expense of existing residents.</p> <p>A suggested way forward is to leave a 100yd amenity space between the existing and new developments to include a suitable screening programme</p> <p>A master plan for the site should be in place and development should be in keeping with the surrounding buildings, many of which are bungalows.</p> <p>Restrictions should also be placed upon the hours of construction for the consideration of existing residents.</p>

725	Denise	Smith			Object	<p>I have objections regarding this proposal for housing allocated land which lies adjacent to Goodshaw Lane. My primary objection is the possible increase in traffic from these new developments.</p> <p>Goodshaw Lane is a very narrow lane which is used by parents and children to walk to and from school each day. It is also used by many dog-walkers, cyclists, horse-riders and walkers. The kennel's customers access along this lane also and there are two disability scooter drivers who use this part of the lane when going into crawshawbooth village.</p> <p>My worry is that if access from these proposed new developments is allowed onto goodshaw lane there would be an increase in traffic flow. There is only a tiny strip of pavement along the entirety of the lane, a mere handful of street lights and two 'blind bends'all of which is not conducive to increased usage.</p> <p>My other objection is regarding the proposed change to the settlement boundary on Goodshaw Lane.</p> <p>St Mary's and All Saints church on goodshaw lane are two churches combined and have a busy weekly calendar or events plus funerals etc and unfortunately they have no parking facilities. If the new settlement boundary is put in place then it is possible the land it would then enclose will become developed. This would cause huge problems for the church and local residents along Goodshaw Avenue and possible parking problems for any future developments.</p> <p>There are also the other issues of extra traffic going into Rawtenstall, not enough school places, doctors or dentists to facilitate these proposed new housing developments.</p>

1061	Rachael	Rogers	-	HS2.50; HS2.52; HS2.49; HS2.47; HS2.51 and	Object	<p>The proposed extra houses in the HS2 sites quoted above will further exacerbate traffic issues within the valley. - - In the first instance Goodshaw Lane is a single track road in beautiful surroundings which is currently used extensively by cyclists and walkers thus promoting a healthier lifestyle. The extra traffic already on the lane caused by the extensions at Willows, Wags and Whiskers is problematic when walking children to the primary school which backs into the lane - children have to squash against the sides as the cars rush past (There is little paved area). This is a concern for the safety of both children and cyclists not to mention a potential reduction in the number of people selecting to walk - when as one of the most unhealthy areas of the country we are seeking to promote healthier lifestyles. - - Secondly Burnley Road will also struggle to accommodate the extra traffic. The traffic on a morning queuing to get through Rawtenstall enroute to Manchester currently can extend as far as Reeds Holme. This will only become worse with the extra houses and subsequent vehicles. - - The proposed extra houses in the HS2 sites quoted above will also need to be accommodated by the local Primary School. This year alone many local children were unable to access a place at Crawshawbooth School unless they had a sibling already attending. This results in children having to travel further to schools with the associated extra cars in the road. The only option would be to extend the school for which there is no facility. An extension would require a double form entry ensuring that the school lost its identity as a village school. In addition to this there have already been a number of 'near misses' involving children and cars around the school increasing numbers will only make the situation worse. - - Changing the urban boundary in the site near the Old Baptist Chapel and Hawthorn Farm will alter the whole setting for the Chapel (a protected English Heritage site). The Chapel is the oldest Baptist church in the country and enjoys visitors from across the world. This is a 'jewel' of Rossendale which should be preserved and protected in its natural setting.</p>		no

1065	Julian	Rogers	-	HS2.50, HS2.52, HS2.49, HS2.47 & HS2.51	Object	My key objections to the above site allocation numbers are around the impact on Goodshaw Lane, the local school, Crawshawbooth Primary and the main road (A682). - - Goodshaw Lane - This narrow single track lane is already very busy. It is widely used by walkers and cyclists who often have to get into the gutter and hedges to allow cars through. This is particularly the case during the school run. There have been many near misses with cars going too fast up and down the lane. The proposals will only add much more traffic to Goodshaw Lane - , exacerbating an already dangerous situation. - - Crawshawbooth Primary School - As a governor at this school, I am very aware of the problems many parents are experiencing trying to get their children into this school. The scope of the proposals means that the school would need to be greatly extended to accommodate the extra children who would be living in the new houses. This would certainly impact on the family feel of the school but more importantly, add to the traffic chaos which exists around the school at the beginning and end of the school day. It would create much more traffic travelling up and down Goodshaw Lane. - - Main road (A682) - This road is extremely busy at peak times. Traffic can be queued up as far as Reedsholme in the mornings getting down to Rawtenstall. The scale of these proposals will only add to these problems.		No.
1144	Victoria	Holt	-		Object	. Goodshaw lane is a single track lane which is unsuitable for even moderate traffic. The lane is extensively used by walkers, dog walkers, horse riders and children riding bikes. Extra traffic would pose a danger to existing residents and would discourage healthy outdoor activities. - - . Crawshawbooth Primary school is already oversubscribed with 58 first choice applications being made in 2017 for 45 places. Children living in loveclough will be forced to attend schools in either Burnley or Rawtenstall causing yet more traffic in Rossendale. There appears to be no firm plan to resolve this issue. - - . Development would further exacerbate travel problems. It already takes 30-45 minutes to travel from Loveclough to Rawtenstall between 8.30am and 9.30 am. Again there seems to be no firm plan to resolve this issue. In fact, the Rossendale Infrastructure Delivery Document forecasts, "transport issues to deteriorate over the plan period". - - . The Local Plan should be designed to ensure that developers do not "cherry pick" sites for ease and profit. Recognising that there is a 15 year plan the development of the identified sites should take place over three phases with an assessment of housing needs be carried out at the end of each phase - 1. The development of brownfield sites. - 2. Should demand persist: The development of remaining sites in the existing urban boundary. - 3. Should demand still persist: The development of sites in the extended urban boundary. - - . Loveclough is a rural hamlet. The people who live here made a choice to live in an area with no shops, little traffic and plenty of country side. By developing here you are taking this lifestyle away from the existing families of Loveclough.		-

1236	JULIAN	ASHWORTH	-	HS2.47 (4 SITES)	Object	SHLAA 16203 ,16205 ,16206 , 16207 . - - 1. Concerns about the northward extension of the urban boundary from Badgercote Estate . - - 2.The impact of these 4 sites on the rural nature of this part Loveclough . - - 3 .The visual effects of this amount of properties on 3 sides of Swinshaw Hall . - - 4 .The access & egress for these sites ,whether on the A682 or Goodshaw Lane would seem to be potentially highly problematic . - - 5. Worries for the Terraced Houses being affected by land instability & drainage issues both in the long & short term .		1. It is difficult to make detailed comments without knowing the types of property proposed . - - 2. However , properties with a relatively low profile will have less visual impact & thus may be more acceptable particularly for the 2 Northern sites .
1575	David	Hempsall	Limey Valley Residents Association		Not Applicable	<p>Area A</p> <p>HS2.47 SHLAA16203 Land adjacent Goodshaw Bowling Green, Loveclough (13 houses): The LVRA sees no issues with this site other than access. Can Goodshaw Lane (which is effectively a single track lane) and the A682 support another 26 cars per day?</p> <p>HS2.47 SHLAA16205 Cornfield, off Goodshaw Lane adjacent to Swinshaw Hall, Loveclough (14 houses): The LVRA sees no issues with this site other than access. Can Goodshaw Lane (effectively a single track lane and the A682 support another 28 cars per day? A planning application was refused in 1976. Whilst the association has no details on this, the LVRA would draw to the planners' attention the fact that the Cotton Meadow is an extensive Quaker burial site. There is extant at the Friends Meeting House a map confirming this. It is also the association's understanding that a detailed survey of the site was undertaken in the recent past, though LVRA has no information on the outcome of this.</p> <p>HS2.47 SHLAA16206 Swinshaw Hall, Loveclough (31 houses): The LVRA sees no issues with this site other than access. Can the A682 support another 62 cars per day? There is also the issue of Quaker burials in this area.</p> <p>HS2.47 SHLAA16207 Land to the north of Swinshaw Hall, Loveclough (24 houses): The LVRA sees no issues with this site other than access. Can the A682 support another 48 cars per day? There is also the issue of Quaker burials in this area. The association's main concern is that the development of these four parcels of land in Area A will amount to an extension of the Badgercote estate to the north as far as the borough boundary. A total of 82 dwellings has the potential for an additional 150-plus cars accessing the already busy (and often congested) A682 Burnley Road for ingress and egress. An additional 200-300 residents will require the services of doctors and dentists and some will require school places. It is the association's view that these infrastructure issues need addressing before development, rather than RBC and LCC having to play catch-up. This principle needs to be applied across the piece. It is the LVRA's view that for the reasons outlined, this proposal should be much reduced in scale.</p>

1106	sheila	newton	-		Object	Although this is a mixed site it is on the West side of Burnley Road North of Crawshawbooth which the Council has made an undertaking to protect from development where possible. - Given that there are 3 more allocated sites for up to 70 houses on the directly opposite side of the road where building is feasible, to build up the area on both sides of the main road would be congested, adding to traffic access problems and detracting from the desirability of any houses built on the east side by reducing the views to open countryside on the West.		
1388	Stan	Ainsworth	-		Not Applicable	We wish you to consider extending this proposed housing site to include land adjoining it on the Northern side of Commercial Street - see attached - It is as sustainably located as that shown on the proposed plan under HS2.49. - It is a flat piece of land formerly used as a playing field but long since abandoned as such Please see appendix for plans.		Plans to be forwarded -

562	Phillip	Byrne	-		Object	<p>The previous Local Plan (2011 – 2016) issued by the council recommended approximately 12 houses be developed on this site. This plan identified an area of land approximately 0.2 hectares and was realistic in its expectations. The new recommendation almost doubles the number of houses to be built and identifies additional land to allow this increase that is unsuitable for the following reasons:</p> <ul style="list-style-type: none"> - 1. Residential amenity - The additional land released to double the number of houses being built is very steep in nature and will result in overshadowing, loss of outlook and loss of privacy to the detriment of residential amenity. The impact of these factors will be proportional to how close the new houses are to existing buildings. - The original proposal for 12 houses on the level land adjacent to Laburnum Cottages would not create such an impact. - 2. Grade II listed Church of St Mary and All Saints - The revised parcel of land proposed for this recommendation now adjoins the graveyard of the Church of St Mary and All Saints. Building houses too close to this graveyard will impact both the Grade II listed building and the houses themselves as follows: <ul style="list-style-type: none"> - For a listed building, Part (1) of section 66 of the Planning (Listed Buildings and Conservation Areas) Act 1990 mandates, “preserving the building or its setting or any features of special architectural or historic interest which it possesses.” - The setting of the church and, more importantly, the graveyard will be significantly affected if the additional houses are built close to its boundary. - The graveyard will be at a higher elevation than the new houses and the flow of groundwater will cause leached chemicals including ammonia, formaldehyde (from embalming) chloride and metals to wash into their grounds if they are too close. The Environment Agency has recognised the risk and has published guidance to ensure public safety. <p>- In summary, the proposal for building 12 homes on the level land adjacent to Laburnum Cottages, published in the Local Plan (2011 – 2016), was realistic in its expectations and would not have raised any objections. I urge the council to re-assess their revision and return to the original proposal.</p>		-

596	P	Byrne			Object	<p>Further to the publication of your draft local plan and presentation thereof, I would like to formally put on record my objection to the following proposal contained therein:</p> <p>HS2.51 - Land adjacent laburnum Cottages, 8126 155</p> <p>This change proposes building 23 houses on 0.77 hectares of greenfield land. The previous Local Plan (2011 - 2016) issued by the council recommended approximately 12 houses be developed on this site. This plan identified an area of land approximately 0.2 hectares and was realistic in its expectations. The new recommendation almost doubles the number of houses to be built and identifies additional land to allow this increase that is unsuitable for the following reasons:</p> <p>1. Residential amenity</p> <p>The additional land released to double the number of houses being built is very steep in nature and will result in overshadowing, loss of outlook and loss of privacy to the detriment of residential amenity. The impact of these factors will be proportional to how close the new houses are to existing buildings. The original proposal for 12 houses on the level land adjacent to Laburnum Cottages would not create such an impact.</p> <p>2. Grade II listed Church of St Mary and All Saints</p> <p>The revised parcel of land proposed for this recommendation now adjoins the graveyard of the Church of St Marys and All Saints. Building houses too close to this graveyard will impact both the Grade II listed building and the houses themselves as follows:</p> <p>For a listed building, Part (1) of section 66 of the Planning (listed buildings and conservation areas) act 1990 mandates, "preserving the building or its setting or any features of special architectural or historic interest which it possesses.". The setting of the church and, more importantly, the graveyard will be significantly affected if the additional houses are built close to its boundary. The graveyard will be at a higher elevation than the new houses and the flow of groundwater will cause leached chemicals including ammonia, formaldehyde (from embalming) chloride and metals to wash into their grounds if they are too close. The environmental agency has recognised the risk and has published guidance to ensure public safety.</p> <p>In summary, the proposal for building 12 homes on the level land adjacent to Laburnum cottages published in the local plan (2011-2016), was realistic in its expectations and would not have raised any objections. I urge the council to re-assess their revision and return to the original proposal.</p>		
790	Paul	Meller	-		Object	<p>I've lived on church street for many years. I'd like to object as the area can not take any more traffic coming up the street as it is dangerous now for children to play out. The field is a play area for the children in this area.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.051	Further comment
812	Marie	Hargreaves	-	SHLAA 16197	Object	I strongly object to the proposed plan - the building of 23 houses on greenfield land. - COUNCIL SITE ASSESSMENTS- The site is accessible via Church St, the street is congested due to on-street parking. - I fully agree with this assessment, it is often impossible for residents to park outside of their own homes. - From Church St. the exit to Burnley Rd. is difficult. - Part of the site is at present used as a play area and has been for many years. - - Church of St. Mary's and All Saints - The setting of the church and most importantly the graveyard will be adversely affected if houses are built close to its boundary. The church is a Grade 11 listed building, surely as such every effort must be made to preserve it and the area it stands in, not just for now but for prosperity. - - I fully accept that some houses have to be built but it would be wonderful to keep some green spaces that I am sure would be appreciated not only by the local populace but also by our wildlife especially the badgers, foxes, birds and bats that frequent this area.		I am convinced you already know that we are all very concerned that the existing infrastructure is only coping with difficulty. I do not envy you your task of providing more schools, doctors, dentists, roads etc. to satisfy the needs of the increased population who will fill these houses.
825	Claire	Smith	-		Object	This recreational site is a safe play area between houses and away from main roads which is used by many children. This site was allocated as a recreational site when previous recreational land was given over to the Hawthorne Meadows development.	-	
828	Nicholas	Smith	-		Object	This recreational site is a safe play area between houses and away from main roads which is used by many children. This site was allocated as a recreational site when previous recreational land was given over to the Hawthorne Meadows development. - -	-	
1050	Derek	Keeble	-		Object	Although I think this is partly brown land site proposed to be extended to the east of Goodshaw Lane, it is old brown land. at present Goodshaw Lane can not cope with more traffic and it is an accident waiting to happen both on the lane and at its junction. Recent developments on Albert Rd, the residents have been informed by the police that they can no longer park on it and the only alternative is Goodshaw Lane. This means more cars parked on Goodshaw Lane, the reason for this is to give residents of 10 Goodshaw Lane and 669 Burnley Rd access to Goodshaw lane as they class the exit to Burnley Rd to dangerous so if the traffic is increased onto Goodshaw Lane this would be very dangerous as all the accesses onto Goodshaw Lane are blind exits and no future developements should be given access to Goodshaw Lane.		No

1053	James	Pilling		SHLAA 16197	Object	Regarding the plot of land identified as Land Adjacent Laburnum Cottages – SHLAA 16197. - Although not overlooking the land and therefore not directly adversely affected by the proposal to bring it within the urban boundary we should like to register an objection on the grounds that it is probably the only piece of flat, level land available for children to play on. Certainly there are other playing areas but none of them are suitable for ball games. - - In these times when we all complain about the tendency of children to spend their free time engrossed in electronic devices it seems to us that we should be encouraging them to get out in the fresh air instead of reducing their opportunities for doing so. - - It's not well advertised but there are a number of badgers in the area with a set almost certainly located in or near the plot concerned. They frequently forage in our garden and, although they damage the lawn I feel that it's a price worth paying to know that we are home to a species which most people in this country have never seen in the wild. Badgers are not a source of bovine TB in this area and it would be a great shame if their habitat were to be destroyed just for the sake of a few houses. After all, they were there first!		-

1061	Rachael	Rogers	-	HS2.50; HS2.52; HS2.49; HS2.47; HS2.51 and	Object	<p>The propped extra houses in the HS2 sites quoted above will further exacerbate traffic issues within the valley. - - In the first instance Goodshaw Lane is a single track road in beautiful surroundings which is currently used extensively by cyclists and walkers thus promoting a healthier lifestyle. The extra traffic already on the lane caused by the extensions at Willows, Wags and Whiskers is problematic when walking children to the primary school which backs into the lane - children have to squash against the sides as the cars rush past (There is little paved area). This is a concern for the safety of both children and cyclists not to mention a potential reduction in the number of people selecting to walk - when as one of the most unhealthy areas of the country we are seeking to promote healthier lifestyles. - - Secondly Burnley Road will also struggle to accommodate the extra traffic. The traffic on a morning queuing to get through Rawtenstall enroute to Manchester currently can extend as far as Reeds Holme. This will only become worse with the extra houses and subsequent vehicles. - - The propped extra houses in the HS2 sites quoted above will also need to be accommodated by the local Primary School. This year alone many local children were unable to access a place at Crawshawbooth School unless they had a sibling already attending. This results in children having to travel further to schools with the associated extra cars in the road. The only option would be to extend the school for which there is no facility. An extension would require a double form entry ensuring that the school lost its identity as a village school. In addition to this there have already been a number of 'near misses' involving children and cars around the school increasing numbers will only make the situation worse. - - Changing the urban boundary in the site near the Old Baptist Chapel and Hawthorn Farm will alter the whole setting for the Chapel (a protected English Heritage site). The Chapel is the oldest Baptist church in the country and enjoys visitors from across the world. This is a 'jewel' of Rossendale which should be preserved and protected in its natural setting.</p>		no

1065	Julian	Rogers	-	HS2.50, HS2.52, HS2.49, HS2.47 & HS2.51	Object	My key objections to the above site allocation numbers are around the impact on Goodshaw Lane, the local school, Crawshawbooth Primary and the main road (A682). - - Goodshaw Lane - This narrow single track lane is already very busy. It is widely used by walkers and cyclists who often have to get into the gutter and hedges to allow cars through. This is particularly the case during the school run. There have been many near misses with cars going too fast up and down the lane. The proposals will only add much more traffic to Goodshaw Lane - , exacerbating an already dangerous situation. - - Crawshawbooth Primary School - As a governor at this school, I am very aware of the problems many parents are experiencing trying to get their children into this school. The scope of the proposals means that the school would need to be greatly extended to accommodate the extra children who would be living in the new houses. This would certainly impact on the family feel of the school but more importantly, add to the traffic chaos which exists around the school at the beginning and end of the school day. It would create much more traffic travelling up and down Goodshaw Lane. - - Main road (A682) - This road is extremely busy at peak times. Traffic can be queued up as far as Reedsholme in the mornings getting down to Rawtenstall. The scale of these proposals will only add to these problems.		No.

1559	Ken	Iveson		SHLAA 16197	Object	<p>The proposal is the building of 23 houses on 0.77 hectares of greenfield land of which a percentage is a recreational field. This area has been maintained and mown as a playing field for the past thirty plus years. It was to replace the park (now Hawthorne Meadows) dismantled after a child was seriously injured on the slide. It is the only level playing field in the area on which football cricket can be played safely. Areas like this are being promoted by the government for a healthier community.</p> <p>Access to the proposed site is via Church St. which is already congested by cars parking on both sides of the road making passage difficult to existing properties at the top of the road (Hawthorne Meadows etc.), The exit to Burnley Rd-is dangerous as traffic approaches quickly from the bend in the road to the north. The prospect of at least another forty cars is daunting. The church of St. Mary's and All Saints is a listed building with its graveyard bordering the proposed site. During construction of 126, Goodshaw Lane, because of land movement, bones were uncovered which needed to be held in the church and re-buried. There is a potential that this may recur if foundations and site work are carried out in the vicinity of the graveyard. New houses would detract from its setting and historic value.</p> <p>I think we are all aware that because of the necessity of new houses being built to accommodate an ever increasing population much of the countryside is being encroached upon. Surely we need to keep small parcels of land to provide a wild life corridor and haven for small nesting birds, foxes, badgers, deer and owls. There is a badger sett on the land, please can you assure me that this will be dealt with in the correct manner. For the past eight years we have been fortunate enough to feed and enjoy watching a wide variety of creatures in the greenfield land in question.(A fact we have never generally advertised) (Photograph included) Finally, surely the infrastructure of the area must be dealt with before any more houses are built.</p> <p>Please see appendix for photos</p>		
1575	David	Hempsall	Limey Valley Residents Association	SHLAA16197	Not Applicable	<p>HS2.51 SHLAA16197 Land adjacent Laburnum Cottages, Crawshawbooth (3 houses):</p> <p>The association sees no issues with this site other than that any such development will take away a much used play area. Any future plans should include some provision of this facility. The narrow access is also problematical.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.051	Further comment
1682	Grahame	Meeks			Object	<p>I object to the plan to build on the field and play area behind Laburnum cottages.</p> <p>The play area does get mowed and the kids play football and other games etc. As a kid myself we would come home from school and go to the (Molly Ring). At Crawshawbooth School we would play football on the field and go on the park, now you can't get on the field and there is nothing on the park. Should we be trying to get the kids of today playing out and not sat in front of a screen in their bedrooms. I have 5 grandchildren and 1 on the way of my own (where will they play).</p> <p>Traffic</p> <p>The traffic and parking on Goodshaw Ave and nearby roads is horrendous and trying to get to Rawtenstall at certain times.</p> <p>School</p> <p>The school can't accommodate the influx of children and over crowding.</p> <p>Doctors</p> <p>The Doctors surgeries, dentists etc. You just can't get in.</p> <p>Wildlife</p> <p>There is a lot of different wildlife badgers, bats, owls etc on the land. The traffic and overcrowding can only get worse with all the development over the years and more to come.</p> <p>i.e. Penny Dell / Badger Court / Hammer Ave / Hawthorn Meadows / Goodshaw Fold / Saundesr Close / Crawshaw Grange / Reedsholme / Constablee.</p> <p>And another to come the sights at J.B Broadleys on Burnley Road.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.051	Further comment
1793	T	Meeks			Object	<p>As a resident, homeowner and valued member of this community I would like to formally object to the proposal of building 23 houses on 0.77 hectares' of Greenfield land.</p> <p>I strongly object for the following reasons:-</p> <ol style="list-style-type: none"> 1. Effect on listed buildings and conservation areas Grade II listed Church of St Marys will be severely effected. Not only the setting of the church but its grounds, infrastructure and most importantly its graves. Some of which are those of the deceased from the world war. These could be disturbed if construction takes place as well as the church becoming at risk of decay and therefore loosing its historical value. 2. Archaeology A church has been stood on this site since 1542 with the current church being built in the later 1829 In relation to its architectural value this shows significance for its culture and history and therefore should be maintained. Construction and building on this site could potentially affect / damage archaeological findings that belong to or remain a part of the Grade II listed building. - Paying particular reference to the historical value of the church and its grounds many local schools and nurseries use this history for educational purposes. 3. loss of trees and wildlife (Nature conservation) The trees and woodland area provides a safe haven for wildlife. Building would mean the disturbance of protected species such as badgers, wild birds, foxes and bats not to mention their natural habitats. - Wildlife in this area has also become of a particular interest of local authorities- in the education of local schools and nurseries. To take this away from them would mean they have nowhere local to visit and learn about nature. 4. Road access Building of more houses would only create more traffic. This would create more congestion causing people to over park on roads. This is already an ongoing issue as emergency services can often struggle accessing properties due to residents blocking the roads access. Road users such as cyclists and pedestrians are finding it hard to use the cycle lanes and pathways due to residents over parking and blocking them. (This is only going to get worse if more people are housed in the area). 5. Traffic generation The generation of traffic is already a cause for concern. as many road users are finding it difficult to access certain areas causing more congestion and accidents on the roads paying particular reference to children and families trying to access their schools and local amenities. 6. Overcrowding population 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	Further comment
						<p>Amenities such as schools, nurseries, doctors surgeries, dentists etc are already overcrowded. Resulting in individuals not being able to access their own resources as well as being refused local health care treatment and educational needs.</p> <p>7. Drainage and flooding Goodshaw lane is already at a medium to high risk of flooding particularly after a down pour. Building and construction of this land is only going to disturb the natural drains already underground to help prevent this. Blockages will occur and the flooding will increase posing the risk to residents homes. Blocked drains will create sewage and more flooding, which will not only have a devastating effect on the homes and family life of residents but also on the environment particularly if this sewage gets into the local rivers and streams.</p> <p>8. OVERLOOKING/LOSS OF PRIVACY Building 23 houses in an area which is well secluded and private accessible to local members of the community and used by local residents would have a negative effect on everyone. I.e. children will no longer be able to play on the fields, schools and nurseries would no longer be able to use the areas for educational purposes. Other members of the public i.e. dog walkers, wildlife enthusiasts, horse riders etc will no longer have access. Residents living in houses that overlook the fields will no longer have privacy. All of the current houses that stand are owned to families, many of which with young children. How can you assure the safeguarding of our children? To conclude There are many issues raised above that should be taken into consideration and the reasons to strongly object to the proposed plans. Therefore such planning should be reassessed.</p>

1106	sheila	newton	-		Object	This site is greenfield and is on the West side of Burnley Road which the Council has made an undertaking to protect from development where possible. - It is also at the top of Goodshawfold Road at the junction with Burnley Road which is already a traffic hazard. To add yet more cars coming out onto the Main road from there is dangerous.		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.052	Further comment
1454	Vivien	Pascoe	-		Support	<p>I write as representative of the owners of the land (who are Rawtenstall residents), identified as the northern part of Land North of the Jester. The parcel of land is available for development, not held back by the owners, who are conscious of the need to meet the provision for new housing in the Borough. As identified by the Council in the draft report, it is suitable for residential development, being bounded on 3 sides by residential properties. There are local amenities in Crawshawbooth and a Social Club close by. Being situated near bus stops on Burnley Rd, there are good transport links to all amenities, with regular services to Burnley and Rawtenstall. Independent services and access off Goodshawfold Lane, are not dependent on other developments, with existing water and drainage services for surrounding properties. A draft layout produced provides firm evidence that a layout of 8 dwellings is achievable, without detriment to local amenity. The dwellings will be constructed in materials matching the local vernacular, with hard and soft landscape incorporating sustainable drainage design. Whilst taking into account overlooking, space standards, relationship to existing properties to provide a sustainable, attractive development, the visual amenity of the neighbouring properties is considered. - Ground, mining and contamination reports indicate that there are no prohibitive expenses to develop. A very small part of the parcel of land is within a Mineral Safeguarding area for sandstone and the owner has obtained a Mineral Safeguarding Assessment. The report concludes that given the significant risks of impact and the proximity of existing residential properties, the location is unlikely to be considered suitable for mineral extraction. The most significant potential air quality impact would be associated with fugitive dust emissions from extraction works and re-suspended dust from HGV movements. "The exemption requirements of Policy M2 of the Lancashire Minerals and Waste Local plan have been engaged."</p> <p>Letter received 09.09.2017: I represent the onwer of the northern parcel of the site identified as SHLAA16219 included in the draft emrging Local Plan document. Within the document, it is stated the the interest to develop has not been renewed, however, the letter of 15th December referrred to may have been sent to the previous owners. Please register my details as the contact for the landowner (of 3 years) who wishes to develop the site and record this interest. The parcel of land to the North has previously been considered as a separate parcel of land and it is requested the this site be considered seperately from the land forming the remaining part of SHLAA16219, as the intentions of the landowners has been stated as 'unknown'. In support of this, please see enclosed draft sketch proposals showing</p>

						<p>alternative house types and numbers and I would appreciate your feedback on the same.</p> <p>If you have any queries, please do not hesitate to contact me.</p> <p>Please see plans in appendix.</p>		
1575	David	Hempsall	Limey Valley Residents Association	SHLAA16219	Object	<p>Area B</p> <p>HS2.47 SHLAA16219 Land north of The Jester, Burnley Road, Rawtenstall (50 houses):</p> <p>It is a matter of record that residents have long been opposed to any significant development west of the A682 Burnley Road. In the past, both ward councillors and RBC planners have given undertakings to protect the rural outlook looking west from the A682. Equal attention must be given to the interests of those living to the west whose visual aspect looking east would be adversely affected by this proposed development.</p> <p>For this area to be considered for development represents an unwelcome U-turn, all the more significant because it flies in the face of two Appeal Decisions made by the Planning Inspectorate – APP/B2355/W/15/3130570 and APP/B2355/C/16/3158284 - both of which upheld the principle of retaining the rural aspect of the area.</p> <p>Moreover, what is outlined has the potential to launch a further 50-100 vehicles, twice per day, on to the already busy (and often congested) A682 Burnley Road. Any suggestion that access is possible via Goodshawfold Road is risible: the junction is already hazardous and has been the site of recent collisions and any number of near-misses. A new junction would simply compound existing problems with the main road.</p> <p>The association notes that the owner of the northern one-eighth of the land brought forward has shown no interest at this time. None the less, the prospect of RBC and its planners reneging on an understanding sustained since 2009 and upheld by two appeals to the Planning Inspectorate is disappointing in the extreme.</p> <p>It is the LVRA's view that for the reasons outlined, this proposal should be withdrawn in whole.</p>

74	Edmund	Dixon	-	ENV 1 and ENV11 Flood	Object	This policy says there should be no adverse impact on the natural environmental biodiversity and green infrastructure unless suitable mitigating measures are proposed. - - With reference to HS 2.53 I cannot see how mitigating measures can be effective for 40-year old woodland, in that it will take 40 years to replace this habitat elsewhere; if the woodlane can be replaced elsewhere, the houses could be built elsewhere - - and - Dobbin Wood is part of a stepping stone of habitat along the Valley side, such as is due for specific enhancement or protection under policy ENV 5. - The environmental network study para 5.57 highlights the benefits of woodland in reducing peak flows by up to 50%. Removal of Dobbin Wood will increase the flood risk UNACCEPTABLY for residents sited below this land.		POLITICS: both main parties have recently campaigned to 'Keep Rossendale Green.' If you have any integrity you will ensure that Dobbin Wood remains green and is not built on, in accordance with the original CPO (1983) 'for the purposes of preserving or enhancing the beauty' of this key local asset. - - METHODOLOGY: over 10% of homes in my road (BB4 7PD) appear to have been unoccupied for the last 5 years.The local plan should factor in the number of vacant homes and bring these into use before desecrating irreplaceable areas of woodland within the urban boundary. - - HOLISTIC PLANNING: the Council and local MP need to prevail upon the government to develop a holistic approach to planning, delegated to local level which respects our topography and local housing needs, not imposed national targets, and maintains police stations, health and education infrastructure and museums of national significance if the local economy is to be developed; or, if austerity is to be imposed, plan on building fewer houses and accept that the local population will shrink. -

502	Keith	Girling			Object	<p>I will leave it to others more qualified than I, to comment upon the generalities of the Draft Local Plan [DLP] and focus upon the inclusion within Housing Site Allocations of the Site SHLAA16171 Johnny Barn Farm Cloughfold. I am assuming that the recent announcement by Jake Berry in respect of mandated but reduced housing requirements for Rossendale will give rise to some review of the DLP.</p> <p>I will précis and update the detailed questions I submitted 5 July 2017 in respect of the "Evidence Base":</p> <ol style="list-style-type: none"> 1. It is clear that this site cannot be developed in a environmentally sustainable and/or economically viable manner and should be removed from the list of available sites. 2. The Urban Boundary has been adjusted in the DLP to accomodate the proposals of Planning Application 2015/0517. On 16th July 2014 RBC Council resolved that the Urban Boundary should remain unaltered "unless developer can demonstrate impacts can be satisfactorily resolved". This is not the case, so the Urban Boundary remains as before. 3. Site Access is inadequate for development purposes [demonstrated during recent works] and to service a new built environment of thirty households. 4. Residents have made extensive responses to RBC on a revised Flood Risk Assessment [FRA] published for Planning Application 2015/0517, and these are not repeated here. This FRA proposes considerable changes from previous versions but these are entirely inadequate and seriously flawed in respect of a surface water management plan; existing and new infrastructure issues within the context of large civil engineering requirements and potentially serious land instability; and, management and maintenance. I would hope that Lancashire County Council as The Lead Local Flood Authority will not be able to agree these proposals. 5. You will be aware that the land is contaminated. From 21st August 2017 to 13th September the Applicant for 2015/0517 undertook excavations to remove asbestos from site without planning permission or other notice to agencies and the community. The applicant showed complete contempt and disdain for the planning process, asbestos removal protocols, and the authority of RBC whose Officers asked on two documented occasions for the works to stop. Other agencies including HSE and elected representatives are involved and independent investigation and verification of the safety of the site, including for the health and welfare of residents and their families are being sought. 6. The site remains for sale on Rightmove.com. 7. It is for others to judge whether the recent evidenced conduct of the Applicant, and/or their financial circumstances [in the public domain] would mean that any "conditions" attached to an Outline Planning Permission [were that to be granted] would have any likelihood of being satisfactorily

527	John	Howat	N/A	HS2.82,HS2.86,H S2.53,HS2.54,HS 2.58,HS2.54,HS2 .57,HS2.54, HS2.56,HS2.84 , Land at Marl Pits.	Object	<p>Observations on Proposed Local Plan for Rossendale. - - Having viewed the 2017 proposed Local Plan for Rossendale and discussing it with a member of the Planning Department at a recent local consultation meeting on Thursday 7th September, I feel obliged to make the following objections and following observations. - - Access. - There appears no have been no consideration of the extra traffic that the proposed developments will generate. From a personal point of view I am particularly concerned by those schemes in Rawtenstall, some requiring extending the Urban Boundary into the countryside, that are contiguous with and likely to be accessed from Newchurch Road. Principally these are: - - Dark Lane Football Ground, HS2.82 (58 Houses). - St Peters Road, Newchurch, HS2.86 (9 Houses). - Johnny Barn Farm, HS2.53 (30 Houses). - Land east of Johnny Barn Farm, HS2.54 (105 Houses) - Higher Cloughfold, HS2.58 (7 Houses). - West of Dobbin Lane, HS2.54 (27Houses). - Land at Conway Road, HS2.57 (5 Houses). - Land between Newchurch Road & Bacup Road, HS2.54 (55 Houses). - Hurst Platt, HS 2.56 (8 Houses). - Peel Street, Clough Fold, HS 2.84 (8 Houses) - - In addition the plan shows a proposal that Urban Boundary behind Marl Pits be moved north to Balladen Clough and although no actual figure or HS reference is given, a figure of 55 houses has been quoted informally in the past. - - Permission has recently been granted for two houses outside the existing Urban Boundary, in a greenfield site, (2015/0308). Although it appears that there is no intention to move the boundary to accommodate them. - - Potentially therefore there are 369 new houses planned that will have their main access via Newchurch Road. Assuming that each household has two cars (738 cars) each making just one trip out and one trip back each day (1476 daily journeys) for 323 days a year (allowing for six weeks holidays) this will be a minimum of 476,748 new car journeys along all or part of Newchurch Road each year. In addition there will be journeys generated by visitors, deliveries and services such as refuse collection. Newchurch Road, downhill from Marl Pits to Rawtenstall, will become exceptionally busy; entrance and exit from Union Street already difficult, will become virtually impossible; an intolerable situation. - - As long as I can remember (30 years or more) there have been problems with access to and from Chapel Hill via the Union Street /Newchurch Road Junction. In 1993, at the public enquiry into objections to the then proposed District Local Plan, it was noted that Rossendale Borough Council considered that Union Street was unsuitable and there were "... severe highway problems in the area" and "... that no additional traffic at all should be allowed to aggravate the situation". The Inspector, Mr D. Gill, added a comment to his ruling on Urban Boundary changes in the area, "... that the present arrangement (for traffic) is certainly below standard". - - None-the-less, over subsequent years, RBC has sanctioned further developments in the area including the making of a rear entrance to Alder Grange School with access via Union Street, which at</p>		I have not commented on individual sites as it is the effect that the sum of these sites will have on the traffic on Newchurch Road that is my concern.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.053	Further comment
						<p>peak periods has worsened the situation considerably, both for pedestrians using the narrow pavements and vehicles dropping off or collecting children. -</p> <p>There are real problems with access from Newchurch Road up Union Street onto Hurst Lane and onwards onto Chapel Hill. Union Street is a steep hill with residents parking which only allows one-way traffic the majority of the time. It is treacherous in winter conditions and at times only four-wheel drive vehicles can ascend; descent too can be extremely awkward when the road is icy. - -</p> <p>The exit from Union Street on to Newchurch Road has become increasingly difficult, as traffic has inexorably increased. There is limited visibility to the east and the road the west it is compromised by the bus stops on both sides and cars parked outside the convenience store. The latter obstruct the carriageway causing vehicles leaving Union Street and turning down Newchurch Road to travel some distance on the wrong side of the road, at times in the face of oncoming traffic. Cars entering from Newchurch Road are often blind to vehicles descending Union Street and this results in awkward maneuvering, with traffic on the main road impeded by cars waiting to ascend Union Street as a result. This is a particular problem for those cars entering Union Street from the east. - - - The single track available at the bottom end of Union Street as a result of residents' parking, can be blocked by vehicles which stop half way up to unload passengers or goods. In recent years large lorries connecting with the conversion of the redundant public house, The Old House at Home, to housing and the (apparently never-ending) construction of the eight new houses behind Hurst Platt have added to the chaos at the bottom of the street as they negotiate the tight junction between Green Street and Union Street (often in reverse) or on to Newchurch Road.</p> <p>Newchurch Road is increasingly busy and joining it from Union Street is often very difficult, especially if traffic is backed up from the pedestrian crossing and traffic lights at the Rams Head/St Mary's Way. Frequently one is reliant on a good-natured driver giving way. - - There is real concern amongst the residents in Waingate that Fire, Ambulances and other emergency vehicles would at times be unable to reach their destination expeditiously. - - There are no alternative routes onto Chapel Hill. The continuation of Hurst Lane from the top of Union Street down hill to Newchurch Road is little more than an alley, a very narrow single track with no pavements. It cannot be considered as an adequate substitute for Union Street except in the occasional emergency. Only cars can use it. Waingate Road is no longer suitable for vehicular traffic. - - It would appear from planning application 2015/0308 that Lancashire County Council do not see a problem with the traffic on Newchurch Road and Union Street and access to properties on Chapel Hill. It is clear that none of their officers have lived in the area and to my knowledge no one has spoken to the residents. If they had, I suspect they perhaps would hold a different view. It seems that in allocating the various areas along Newchurch Road for extra housing in the Local Plan, there has been neither</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.053	Further comment
						<p>recognition of the problems of Union Street nor consideration as to how they may be alleviated. - - A traffic census was seen to be carried out a few years ago but as it was during half-term, when there was no school traffic, its value therefore must be in doubt and of course it did not take into account those changes that will ensue should the current Local District Plan come to fruition along Newchurch Road as proposed. Should, as was intimated during the consultation meeting I attended, a further study on traffic in Rawtenstall be commissioned, can I urge you to involve to the residents of Waingate, Hurst Lane, Hurst Crescent and Union Street as part of the study? - - Facilities. - Other than to permit a surfeit of supermarkets, RBC appears to have given no consideration to the infrastructure required to support any major increase of housing/population. General Practice surgeries are struggling with the current patient demand and attracting Doctors into existing practices to fill vacancies proves very difficult. Recruitment to new practices is impossible. Currently there are insufficient Medical graduates choosing General Practice as a career. There is also dearth of NHS Dental Surgeries and it may necessary to travel out of the Borough to register for NHS treatment. There appears to be no possibility of extending existing primary or secondary schools nor is there the finance to build new ones. - - Alternative Sites and Uses. - In general I object to the use of greenfield sites to accommodate additional housing. There appears to be no map or register of brownfield sites, which should be completely replaced by residential schemes before any consideration is given to extending the Urban Boundary to provide building land. There are several large redundant buildings which should be sympathetically converted to residential use as apartments as has been done elsewhere both in Rossendale and neighbouring towns and cities. Examples include the old cinema on Bacup Road, vacant and available for many years. It should be converted, with compulsory preservation of the external structure, to two floors of apartments and the ground floor used for residents' parking. Similarly, St John's Church, Crawshawbooth, recently on the market, would make a fine block of flats. The abandoned Kwiksave/Poundland store by the railway station should be demolished and the site made available for new housing. It is not needed for an out of town retail site. - - The plan to move the Urban Boundary at Marl Pits should be abandoned. The area is crossed by a well-used and much-loved rural footpath which would be lost if it was subsequently urbanised. In any case the land at the west end of the plot slopes steeply to the brook and is unsuitable for building. There is currently no vehicular access to the area unless the RBC is to allow it through the Marl Pits car park, which would be unacceptable. A possible alternative use for this land, maintaining its greenfield status, would be as a campsite for tourists, with hard standings for touring caravans and pitches for tents. A dedicated domestic block close to the leisure centre would be acceptable; access could be through the leisure centre car park. An administrative office could be</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.053	Further comment
						<p>established in the leisure centre itself, or as part of the domestic block. This type of facility is sorely needed in Rossendale if, as the RBC professes, the tourist industry is to be promoted and developed. The campsite could be administered and promoted as part of the Leisure Centre. - - Suggested Action. - I am well aware of the pressure applied by Central Government to the RBC to provide affordable and new dwellings. However, now that the target has been reduced by approximately 50% to 2,100, I urge the Council to abandon any proposals for land outwith the Urban Boundary and concentrate development on redundant buildings, brownfield and other former industrial sites. - - 19th September 2017 -</p>		
591	G	Ashworth			Object	<p>Following discussions at the meeting at kay street baptist churc on Thursday 7th september, I am writing about the proposed planning development of the above site, and to formally object.</p> <p>At the meeting we were informed that Rossendale has been directed to build a further 3,500 houses to meet demand, however it was not clearly explained how this figure has been arrived at or where the anticipated inhabitants will come from. There are already lots of empty properties in Rossendale which should be filled before considering building more.</p> <p>According to the consultation documents, the baove mentioned area of approximately 3.5 hectares has been earmarkedfor the construction of just over 100 houses. The addition of so many houses and the associated vehicles, wo;; have a huge impact on the amount of congestion on Newchurch road, particularly at peak times, adding not only traffic delays but added stress to pedestrians trying to cross the road.</p> <p>It is unclear from the plans where the access to these properties will be from off Newchurch Road, but the road east of Johnny Barn Farm becomes considerably narrower in parts, and has already been the scene of traffic accidents.</p> <p>There is at present an abundance of houses for sale in Rossendale, and so it can be assumed that any new residents would be from outside the area. The industries for which rossendale was once famous have now all gone, so again it can be assumed that these new residents would be commuters, thus adding to the congestion.</p> <p>The existing schools throughout the Rossendale Valley are all either at or nearing capacity, thus begging the question where would all the potential additional children be educated?</p> <p>Likewise, all the doctors' and dentists' surgeries are all full and stretched to capacity. As noise, air and light pollution would all be increased by the construction of these properties; there is every chance that the health and wellbeing of all the residents will suffer, adding even more pressure to these health services.</p> <p>I trust that these observations will be taken into consideration.</p>

690	William	Hutchinson	-	HS2.53, HS2.54, HS2.56, HS2.80, HS2.82, HS2.83, HS2.86	Not Applicable	The seven sites listed above are all within areas adjacent to Newchurch Road and the assumption can be reasonably made that future residents of the 228 units projected will use Newchurch Road as their principal access. This could account for in the region of an additional 450 vehicles regularly using what is already a very busy stretch of highway. Considerable numbers of pupils of nearby schools either walk or are brought in cars to the Newchurch Rd./Union St./Hurst Lane vicinity to make their way to these schools. The current volume of traffic makes it dangerous for these young people. Elderly residents find it increasingly difficult to cross Newchurch Rd. in this area because of the volume and speed of traffic. Whilst local residents in vehicles can experience danger and frequent difficulty when negotiating the roads and junctions for the same reasons. - In my opinion it should be a condition of any of the proposed development that 'traffic calming' measures must be implemented to protect the safety, convenience and general well-being of all who live in or pass through this location whether on foot, on cycles or in vehicles. To not do so will be doing all concerned a great disservice and will be a dereliction of the 'duty of care' which is incumbent on all who may be deliberating on these proposed developments. - In terms of such 'traffic calming': 'speed-bumps', lower speed limit, road narrowing with priority restrictions and advance warning signs would all be measures I would hope to see introduced.		No

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.053	Further comment
779	Alison	Squire	-		Object	<p>I wish to object to the above proposed sites for housing which are close to Newchurch Road on the grounds that: - i) increased traffic will be unacceptable on this main road through Rossendale - ii) erosion of greenfield sites instead of using brownfield sites in the Valley - iii) increased demand on already overloaded education and health services. - - As a resident of Waingate Village, I have objected several times to planning applications on a plot of land off Hurst Lane (Ref: 2015/0308) and am extremely displeased that this land has received planning approval despite it continuing to be beyond the Urban Boundary. There were no opportunities for local residents to raise further objections and no communications following approval having been given. I do not feel that the Council supported local residents and instead allowed developers greater importance. I am therefore worried that despite this opportunity to comment on the Local Plan, residents' opinions will not be taken into consideration. - - It appears that the Urban Boundary may be moved to Balladen Clough (a stream) to include a field behind Marl Pits road. An earlier application to build on this land was refused on the grounds of lack of road access. I hope that any future planning applications on this land will continue to be refused and the original Urban Boundary will remain in place. Any development on this land would further increase traffic onto Newchurch Road. - - Having witnessed the gridlock in Bank Street and Angouleme Way on Saturday I do wonder where the increased traffic from all the proposed new housing will go. I appreciate that it is National Government Policy to increase housing and that sites have to be found in the Valley but hope that more brownfield sites can be found, consideration of health and education demands and transport/traffic difficulties will be addressed before adopting the new Local Plan.</p>	-

1140	Cherry	Hughes	-		Object	<p>I have recently viewed the plans outlining proposals for housing (related to the Local Policy) in the Newchurch/Hareholme ward area and wish the following comments to be noted: - - * there is a proposed development of 7 - 9 houses at the top of St Peter's Road beyond St Peter's RC Primary School. A major concern is congestion particularly around school opening and closing times. The road becomes very congested as many children are dropped off/picked up by car (giiven the School's faith status and the catchment area). Frequently our driveway is blocked during the most congested periods as there is nowhere in the near vicinity for parents to park and walk their children the last few metres to the School Gate. Increased traffic past the School Gate will create a greater hazard. - - * the proposed site is part way down Seat Naze slope. There is already significant run off which impacts on the houses at the top of St Peter's Road and Heightside Avenue. There is also evidence of springs, one of which which percolates through the road that leads to the houses immediately above Newchurch Road. United Utililites has been called to this particular spot on numerous occassions and identified that it isn't a leak from a pipe. I am also aware of the proposed far more significant developments above Johnny Barn and below Marl Pits on land which has always been very wet (even in dry summers). How can developers guarantee good drainage both for the developments and for the existing developed areas downslope from them? How will that impact on the Irwell at the bottom of the Valley and the flooding dangers? - - * Finally I am really concerned that the area does not have the infrastructure to cope with the additional housing stock. Roads are already heavily congested at commuter times. The local primary schools have very limited capacity to take more students but there appears to be no planning for a new primary school. There is a 'play area' on Stacksteads, which I believe the Newchurch Village Association is planning to raise money to renovate, and this is the only one in the immediate area. The area is already due to have a significant development on what was the Rossendale Football Club Ground (up to 100 houses I believe) - and no mention has been made of infrastructure improvements for this development. - - * I live on a road where over the past 5 years, 3 properties were for sale and 2 of these were for sale for at least 4 years before they sold. The difficulty with sales does appear to have alleviated but there are always houses for sale in our immediate neighbourhood - so can we argue that there is a housing crisis in Rossendale (or at least in this part of Rossendale)?</p>

1303	JULIA	BARROW	-		Object	THIS IS ANOTHER RIDICULOUS PROPOSITION. THIS LAND IS EXTREMELY BOGGY WITH NUMEROUS NATURAL SPRINGS. ANYONE WHO WALKS LOCALLY WILL TELL YOU THIS AREA IS BOGGY EVEN IN THE DRIEST OF SUMMERS. THAT ASIDE, YOU REALLY ARE HAVING A LAUGH. GETTING DOWN NEWCHURCH ROAD AND OUT OF RAWTENSTALL CENTRE ONTO THE BYPASS MOST MORNINGS NOW CAN TAKE UPWARDS OF 20 MINUTES. OUR ROAD INFRASTRUCTURE JUST CAN'T COPE WITH IT - LORD ALONE KNOWS HOW ALL THE EXTRA CARS ARE GOING TO GET OUT OF THE VALLEY - AS MOST PEOPLE WILL BE COMMUTING TO MANCHESTER/BURY I WOULD ASSUME.		I AM VERY AWARE THAT IN ALL THE PROPOSED PLANS NOWHERE HAS THERE BEEN ANY MENTION OF NEW/IMPROVED ROADS/INFRASTRUCTURE? I REMEMEBER THE EDENFIELD BY-PASS BEING OPENED IN 1968 - TO CARRY TRAFFIC AWAY FROM EDENFIELD VILLAGE. IT WAS BRILLIANT, LIVING IN THE VILLAGE BECAME A JOY ONCE AGAIN! THE SAME SMALL BY-PASS NOW HAS ALL THE TRAFFIC FROM BURNLEY/BLACKBURN/HASLINGDEN/ HELMSHORE/CRAWSHAWBOOTH/RA WTENSTALL EMPTYING INTO IT ON A DAILY BASIS. GRANE ROAD NOW HAS AVERAGE SPEED CAMERAS INSTALLED - AN INDICATION AS TO HOW MUCH TRAFFIC THE ROAD NOW CARRIES. - ON ANOTHER NOTE, WE HAVE NO FREE DOCTORS OR DENTISTS, NO POLICE STATION, SCHOOLS ARE FULL AND WE NOW HAVE TO TRAVEL TO BLACKBURN TO GO TO HOSPITAL! AND YOU ARE PROPOSING TO PUT 4/5000 NEW HOUSES UP? WE HAVE NO PUBLIC SERVICES!! THE REFUSE SERVICES ARE STRUGGLING TO COPE WITH WHAT WE HAVE NOW. OUR ROADS ARE APPALING. - IT REALLY DOES SCARE ME! - I THINK WE HAVE MORE BROWNFIELD AREAS WHICH SHOULD BE EXPLORED BEFORE WE LOSE A LOT OF OUR GREEN SPACES, AND I WOULD LIKE TO SEE AN ASSESSMENT OF EMPTY PROPERTIES AVAILABLE IN THE VALLEY WHICH COULD GO TOWARDS THE 4/5000 PROPERTIES NEEDED?

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.053	Further comment
1308	Emer	Killeen	-		Object	This is a precious greenfield site to local residents and any building would spoil the local view. - - Also, RBC's infrastructure document also points out that as an already urbanised valley the transport infrastructure is already stretched and only limited improvements can be made. The traffic oncoming onto Newchurch Road morning and evening is already very busy, the road bends in parts and there is often parking on both sides which increases risks of collision. In particular, the junction of Dobbin Lane and Newchurch Road is already extremely dangerous and any increase in the number of junctions in the surrounding area would increase the risks of collisions and further slow down traffic using the route between Waterfoot and Rawtenstall through Newchurch.		
1537	John	McGuinness	-		Object	I object to this site allocation for the following reasons: - - Loss of greenbelt land - This is only the first stage in a gradual loss of land as more houses will be built further up the hill - Issues with flooding - Increased traffic on Newchurch Rd especially at peak times - Increased traffic will increase localised pollution leading to a potential health risk to the local population - Increase to overall traffic density in Rossendale creating extra strain on an already struggling transport network - Increased population creating a burden on health provision and school places		You seem to be trying to implement a plan where nearly all patches of green within the urban boundary are built on. The hillsides may be green (for now) but all small breathing spaces seem to be a target for building on. Sustainable; how can building more houses on any green area be sustainable? Once land is lost to development, it's lost forever.
1619	Michael	Onley	Planning Sense NW		Object	(...)Clients fear cherry-picking of the most desirable sites. This is reflected in the abandonment of density target of 50+ dwellings per hectare appropriate to urban renewal [Rossendale Core Strategy policy 2, RBC 2011] in favour of a suburban 30+ figure [Rossendale Draft Local Plan policy HS5, RBC 2017]. Clients oppose planning blight upon precious greenfield sites such as achingly lovely meadows east of Johnny Barn (variously identified as HS2.53 and duplicated as HS2.54), and cinematic quality, rail-side pasture at Haslam Farm (HS2.60). Access and road safety concerns have been raised in respect of allocation HS2.86 (St Peter's School) - photos attached. (...)•Draft policy HS2 and specifically the proposed allocations of sites HS2.54/54 (east of Johnny Barn, north of Newchurch Road) HS2.86 (St Peter's School) and HS2.60 (Haslam Farm) in respect of unnecessary greenfield allocations(...)		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.053	Further comment
1624	Michael	Gildert	Peter Brett Associates LLP		Support	<p>Thank you for the opportunity to submit comments as part of the consultation on the draft Rossendale Local Plan.</p> <p>As you are aware, we act for Hurstwood Holdings and have been promoting various sites in Rossendale as part of the consultation process on the new Local Plan. In June 2013, in response to the Green Belt and Urban Boundary Review consultation, we submitted a range of detailed development framework reports setting out how sites at Johnny Barn Close, Union Road and Hurst Lane could be sustainably delivered to provide much-needed new housing in the Borough.</p> <p>We followed up this work with a series of meetings with the Council and subsequently submitted two planning applications for the sites at Johnny Barn Close and Hurst Lane, together with a full set of supporting technical reports that demonstrate the suitability of these sites for development. The land at Hurst Lane now has planning permission for two dwellings (Ref: 2015/0308, granted on 22 June 2017). In September 2015 we also submitted further comments to the 'Local Plan Part 2: Site Allocations and Development Management Policies' document. This document was then abandoned in favour of the production of a new Local Plan, which is the subject of this consultation.</p> <p>We would therefore like to offer the following comments in relation to the new draft Local Plan, insofar as it relates to the land in control of our client at Johnny Barn Close and Union Road. We note at the outset that the Council is proposing to allocate the Johnny Barn Close site for housing (Ref: HS2.53), but only a limited part of the Union Road site (Ref: HS2.62).</p> <p>HS2.53 – Johnny Barn Farm, Cloughfold</p> <p>The planning application in relation to the Johnny Barn Close site (Ref: 2015/0517) is currently in the determination process, pending resolution of comments from Lancashire County Council (LCC) in relation to drainage matters. A drainage solution has now been agreed with United Utilities (UU) which will resolve the comments raised, and UU has confirmed its agreement in principle to the scheme. On that basis we anticipate that the Council will be in a position to take the application to committee with a positive recommendation, given that there are no other outstanding planning matters to resolve. A draft Section 106 agreement has already been agreed, and therefore we expect this site to be granted outline planning permission imminently.</p> <p>With this background in mind, we welcome the proposed allocation of this site for housing, together with the corresponding amendment to the settlement boundary to include this land within the urban area. The proposed allocation is for circa. 30 houses across the site in the next five years, which aligns with the current planning application.</p> <p>We fully support the Council's assessment that the site is suitable, available</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.053	Further comment
						<p>and viable for development. We have always maintained that the site could still accommodate a larger development without any significant adverse impacts, but nevertheless the current planning application accords with the proposed allocation in the draft Local Plan.</p> <p>We would therefore like to emphasise that the site is deliverable in the early stages of the plan period and that there is confirmed market interest in the land. This proposed site allocation is therefore capable of making a genuine contribution towards meeting the housing requirements in the Borough and its inclusion will help ensure that the plan is robust and sound.</p> <p>(...)</p> <p>We trust that these comments are helpful and will be taken into consideration. Please contact me if you require any further information, and in the meantime we trust that we will be kept informed of the next steps in the preparation of the Local Plan.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.053	Further comment
1632	Andrew	Ellis		Johnny Barn Farm	Object	<p>I have been a resident at X Newchurch Road, Higher Cloughfold since 1990 and would like to object to planning application 2015-0517 on the following grounds.</p> <ol style="list-style-type: none"> 1. Impact on the drainage infrastructure in Higher Cloughfold 2. Pedestrian Safety on Newchurch Road 3. Road safety at the Newchurch Road / Johnny Barn Close road junction 4. Impact on the Higher Cloughfold conservation area. 5. Ecology <p>1. Impact on the drainage infrastructure in Higher Cloughfold Surface water The drains on Edge Lane and at the junction with Newchurch Road cannot currently cope with existing volumes of water and on a number of times each year there is localised flooding on Newchurch Road in that location. There is at least one substantial culvert that runs across the proposed site but neither United Utilities nor Lancashire County Council have been able to trace the exact routing or source of these tributaries into the main culvert that feeds into the drains on, and the culverts under Edge Lane and the surrounding area. Foul sewers The sewers at the junction of Newchurch Road / Edge Lane cannot currently cope with the existing volumes during periods of significant rainfall due to this being a combined sewer. Any additional surface water or foul sewage that feeds into this system from the proposed development will exacerbate the existing problems. Any overflow from this sewer then discharges into the River Parrock in the garden of 449 and therefore into the Irwell with resultant impact upon the ecology of that stream.</p> <ol style="list-style-type: none"> 2. Pedestrian Safety Approximately 50m to the west of the Johnny Barn Close / Newchurch Road junction there is no pavement on the south side of Newchurch Road (adjacent to No. 459). This stretch of busy main road is used by unaccompanied children, some as young as 11, walking to and from the local High Schools such as Alder Grange and Bacup & Rawtenstall Grammar School, or by parents and children going to / from primary schools such as Newchurch St. Nicholas's and St Peters. Any additional volume of traffic around that area could therefore potentially endanger children. It should also be noted that the section of pavement on the south side of Newchurch Road for approximately 50m to the east of the above mentioned section is also very narrow. This is immediately opposite the junction to Johnny Barn Close and therefore any increase in vehicle accessing or leaving Johnny Barn Close will also pose a threat to pedestrians. 3. Road Safety 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.053	Further comment
						<p>In winter, when the morning sun is low, drivers of vehicles travelling in an easterly direction along Newchurch Road are often partially blinded by the low sun. The area where this appears to be worst is around the Johnny Barn Close junction as the vehicles ascend the gentle hill and turn slightly to the right. It is not uncommon to see cars travelling towards Waterfoot needing to slow to walking pace to negotiate the blind spot.</p> <p>This already makes that road junction dangerous, but with added ingress and egress from a further 30+ houses, this situation will be significantly worse.</p> <p>4. Impact on the Higher Cloughfold conservation area</p> <p>The proposed development will impact upon the Higher Cloughfold Conservation Area in the following ways:</p> <p>It will block views of the conservation area from the fields to the north east of Sion Baptist church as well as obstructing views looking towards the north east from Sion Baptist church and other properties within the conservation area.</p> <p>In the published documentation about Higher Cloughfold Conservation area, the views to the north from Sion Baptist church get specific mention 'where fields and moorland provide a rural setting to the Conservation area'. This is documented as an 'important view' from the Conservation Area.</p> <p>This proposed development will add thirty plus properties to the north east side of the conservation area. That will detract from the Conservation Area which only has approximately fifty residences in the large area covering Newchurch Road, Edge Lane and Dobbin Lane down to its junction with Peel Street. One of the key documented positive features of the Conservation Area is that 'spacious plot sizes and a low density of development in most of the Conservation Area retains a more open, rural character'. As such this development will have an immediate detrimental impact upon the nature of the area that it will adjoin.</p> <p>5. Ecology</p> <p>Any development in the proposed area will have a negative impact upon the local ecology, such as birds and bats.</p>		
1820	Kelly	Holt	Lancashire County Council		Not Applicable	HS2.53 – Johnny Barn – A new access via Newchurch Road appears achievable with the loss of 2 possibly 3 mature highway trees in the verge and mature trees within the site. A pedestrian/cycle link should be provided through the site to Johnny Barn Close and the surrounding links.

2	Matthew	Mackulin	-	SHLAA16174	Object	<p>Social and Environmental Impacts: the proposal to build 55 houses will have a major impact on local roads that at peak periods already frequently suffer from traffic delays & congestion, particularly Bacup Road and Newchurch Road, add to this and we will experience regularly congested routes. - This increases noise pollution and air pollution which is detrimental to the health and wellbeing of local residents. - Plus the condition of local roads is appalling and many roads contain unrepaired potholes, this will only become worse. - Conservation of Greenland: to the rear of properties on Newchurch road is a green corridor of over 1000 mature trees, a wide variety of flora & fauna, a rich habitat for wildlife such as nesting birds, bats and owls which promotes a biodiversity which will be at risk. - These types of habitat are continually lost for housing all over the Rossendale valley - once a green and pleasant land now overcrowded. - Geological considerations: the site sits on a series of deposits of silt, sand and fine clay, and studies have shown that these sediments have inherent structural weaknesses. - Previous resident requests to purchase land to the rear to extend gardens was refused on grounds that the area had to remain a green belt area. There appears to be a complete about turn by the Council on this point. - There are other brownfield sites (previously used for industry) that need to be prioritised ahead of this site. Has the Council truly exhausted these sites and if so where is the evidence? - If despite all the local opposition and objections outline above you still grant the proposal then I strongly urge you consider the plans such that the green belt stand of trees to the rear of properties on Newchurch road is preserved for a distance of 150m, allowing us to retain a green barrier and preserving all those wonderful trees and flora for the local wildlife - -</p>		Keep our valley a green and pleasant land not let it become an overgrown, congested extension of Manchester

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
47	Jeff	Stephenson	-		Object	<p>As residents of this property for nearly 20 years we wish to strongly object to the proposed private housing development of Greenland between Newchurch Road and Bacup Road notified as HS2.54 with the Hareholme Ward, Rossendale planning map. - - For background: - - Our family moved from a private housing estate in the North East of England to Rossendale, choosing to live in Newchurch Road and this particular house because of its beautiful views of the hills and rolling countryside which enjoyed a natural and non-estate setting for our growing family. We invested in this property for the long-term and were comfortable therefore with paying a premium council tax rate band for the privilege. At the point of purchase it was explained to us by the vendor that the house builder had applied for permission to extend the number of private properties to the rear but had this rejected by the council which we understand was on the grounds of the land being afforded protection both within its biodiversity policy and via an Act of Parliament. This was confirmed within our questioning and legal survey and as such, this gave immense comfort and assurances to us that our scenic views, any change of access to countryside and any subsequent turning of this beautiful Greenland in to another bland housing estate would never ever happen. - - Major concerns/objections: - - 1. The rear of our property which is accessible from an enclosed private garden gate is rich in wildlife and to date we have had badgers, hedgehogs, deer, squirrels, foxes, field mice, frogs, toads and numerous nesting birds visiting our garden. The hundreds of trees and steeped land to the rear do afford wonderful protection for animals but also create an exceptionally secure environment for residents as well as affording superb walks and an uplifting educational environment to access nature for our four young grandchildren on their regular visits. We even have pet names for trees and animals seen on our regular walks as each season changes. We feel this natural habitat would be completely lost by creating housing on the site and this should not be allowed to happen here. - - 2. The building site noise, pollution and utter mess will become an unwanted yet unavoidable disruption to current residents' lives because of the overall preparations, on-going building work and additional site traffic during all hours of the day and week and according to my reading of the plan, will last at least five years from the commencement of any work – this is entirely unacceptable and should not happen. - - 3. As the proposed plan for building so many houses is a major project we have little confidence that any proposal will be able to provide logical, properly researched and efficient (for all) geological considerations to ensure the site is suitable bearing in mind we understand previous historical studies show this land as unsuitable for building owing to potential subsidence and structural weaknesses going back over thirty years – no consideration should be approved until full safety evidence is published. A visual inspection will right now identify the numerous trees which have up-rooted in bad</p>	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
						<p>weather leaving their base of sand and silt - - 4. It is fact that often extremely heavy rain water running down each side of the valley is a regular occurrence as it finds its way from the top of the hills to the river outlet in the valley below and in order to get there the water must therefore flow through this proposed site. It should be a simple matter of common sense to question the legality and validity of building on potentially unsafe and unstable land with a marked sloping elevation. Therefore in any event we would expect the council to provide full disclosure including specific evidence that the site proposed has changed suddenly from previous data collected over the years and there by explain why on this occasion the new proposal is valid and therefore - causing a complete reversal of previously published council policies on Greenland building at this particular site. - - 5. We object to any proposed access for traffic to this proposed private housing development land from either Newchurch Road or Bacup Road owing to obvious disruption, noise and air pollution which we feel will no doubt be uncomfortable and even dangerous to the well-being of residents of all ages in an already congested part of Rossendale with only very narrow rural existing accessibility at present. - - Summary: - - The above objections and reasons are submitted to Rossendale Borough Council Planning Department in good faith and done so on the grounds of extreme concern over what may happen as a result of allowing central government to dictate to each of its residents that this wonderful Greenland has to become a cluster of houses. It clearly doesn't and there are many many other more appropriate sites which could be built on in order to meet any government led instructions. - - Please do not allow this destruction of a fantastic asset to the Rossendale Valley, something that heart breakingly can't ever be replaced and would therefore be gone forever. - - In the best interests of our Valley, our habitat and to maintain peoples' trust in the Council to do what is right and proper, then please reject this planning proposal once and for all. There are extremely legitimate reasons for doing so and we would ask that the Borough Council does not devalue previously held honest principles by agreeing to permit what can only be described as constructions of soul-less boxes designed to perhaps meet some ill thought through house building targets. -</p>

51	John	Sikora	-	H13	Object	<p>See attached letter and petition from local residents that surround the proposed site. - PETITION - - We the residents and ratepayers of the houses immediately surrounding the woodland area in hareholm ward, most strongly object to the proposed plans by Rossendale Borough Council (RBC) to destroy any this natural habitat between Newchurch Road and Bacup Road on the following grounds: - - 1. This land was subject to a compulsory purchase order by RBC and declared unsuitable for any residential or other building construction on the basis that this land is known to be unstable and unsuitable for residential development. RBC have rightly prevented previous proposals by builders to build housing on this land on this basis. - 2. Any change in the current use of this land would be contrary to the declared intention by RBC as part of it's CPO to maintain it as a natural environment and for which RBC was able to obtain a grant from the EU to re-establish this land as a woodland area. - 3. This woodland area is part of Rossendale's heritage and provides a natural habitat that is home to, and supports a wide array of wildlife that is enjoyed by us the residents of RBC. The proposed development would destroy this natural environment. - 4. We the rate payers have bought our houses at considerable expense in the area immediately surrounding this woodland area because it offers such beauty and any change in use of the woodland area will seriously undermine the value of our houses. This is one of the main reasons we chose to purchase our houses. Surely as existing ratepayer's it is our voice that should be heard and not those of non-residents/non ratepayers or builders. The later is motivated solely by personal financial profit. - 5. The local infrastructure is not sufficient to support the construction of residential property on this land. The schools surrounding this area are full as are doctor's surgeries. The roads are already very congested. To knock an existing residential property down to gain access to this area if opposite to Marl Pits will present a major road safety risk. There has already been several accidents on both Newchurch Road and Bacup Road and 2 of these in the last 2 years have been fatal. - 6. Since this land (a glacial overflow sediment site) is known to be unstable, we the residents would hold RBC and the builders accountable for any subsidence caused to our houses or property that is directly attributable to any construction work and which may become evident immediately or over the next 10 years or longer. - The letter outlining local residents objections is too large to attach here and I will send a separate hard copy along with the residents petition to the planning department. (199 signatures)</p> <p>Letter received 05.09.2017: I am writing to you regarding the RBC Local Plan site allocations. The proposed plan identifies site H13, the woodland area between Newchurch Road and Bacup Road as a potential site for housing development. Please find enclosed a copy of a petition signed by the residents surrounding</p>		A detailed letter outlining local residents objections and the Petition against the development of site H13 (Woodland area between Newchurch Road and Bacup Road) will be sent separately as this survey does not allow for such large documents to be attached.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
						<p>the woodland area objecting in the strongest possible way to the proposals put forward by RBC for the potential construction of housing on this site. I also enclose a copy of a letter outlining mine and other residents' objections to the possible destruction of the woodland area between Newchurch and Bacup Road.</p> <p>You will be aware that RBC when it issued the Compulsory Purchase Order (CPO) for this site stated that this land is unstable and is totally unsuitable for building purposes. RBC also obtained a grant from the EU to plant the woodland in order to help stabilise the land and create the natural habitat that now sustains a rich and varied wildlife.</p> <p>To destroy this woodland and to renege on the Councils previous declaration that this land is unsuitable for building is indefensible. It also goes against RBC's expressed commitment to maintain the woodland heritage of the Rossendale Valley.</p> <p>This woodland which provides a crucial natural habitat and amenity enjoyed us the residents (and rate payers) and our families.</p> <p>I and the other local residents hope that you in your role as Principal Planner will take due consideration of our objections and remove this site from the Local Plan.</p> <p>Yours sincerely, Letter dated 28/09/2017:</p> <p>Further to the information already presented to RBC Planning Department objecting to the woodland area between Newchurch Road and Bacup Road being included as a possible site for residential development, please find enclosed a Quaternary Deposits and Landslide Report from Dr Catherine Delaney (Senior Lecturer at Manchester Metropolitan University). This report clearly identifies this site as highly unstable and prone to landslides and adds to the other academic study information previously presented by Durham University.</p> <p>Added to this, the Lancashire Badger Group have also conducted a study of the current Badger sets within the woodland area of which there are 5 sets. The Lancashire Badger Group have identified that in order to maintain the foraging rights of the Badgers any destruction of the woodland area will have a serious impact on the survival of the Badgers that inhabit these woods. I have been assured that the Lancashire Badger Group will also be writing to RBC Planning Department regarding this.</p> <p>I trust that all of this information will be presented to the RBC planning department members and taken into consideration in subsequent discussions about the draft plan.</p> <p>QUATERNARY DEPOSITS AND LANDSLIDES IN THE UPPER IRWEIL VALLEY BETWEEN RAWTENSTALL AND NEWCHURCH</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
						<p>Introduction</p> <p>The Rossendale Valley between Rawtenstall and Newchurch consists of a bedrock-bounded trough, with an infill of sediments deposited during the last glaciation (the Devensian, 28-14,000BP). This report provides a brief description of the deposits and associated landslides.</p> <p>1. Quaternary Deposits in the Rossendale Valley</p> <p>Quaternary deposits within the Rossendale Valley date from the last glaciation. The Valley was covered by ice at the glacial maximum; subsequently ice recession caused the formation of an icedammed lake that persisted for some time, before draining during ice retreat (Crofts et al., 2010; Delaney et al., 2010). The lake acted as a sediment sink, and the bedrock valley was partly filled with a mixture of silt, clay, sand and gravel during its existence. Subsequently this infill was incised during lake drainage, and this process continued to a lesser extent during the Holocene (the last 11,000 years). This incision has resulted in a cliff, lying between the north bank of the Irwell River and the Newchurch Road (see figure 1 below). Between Rawtenstall and Rossendale, boreholes logs along the central axis of the valley (accessible at the British Geological Survey (BGS) GeolIndex site (below)) indicate that glacial sediments to a depth of up to 30m remains in the central part of the valley and consist mostly of silt and clay, with some diamictons. Along the northern margin of the valley, on either side of the Newchurch Road, the sediment is more mixed, with sand and fine gravel interbedded with silt and clay (borehole records from Grange Road, available through BGS GeolIndex). This variable particle size means that the hydraulic conductivity of the sediment changes with depth; in particular beds of silt and clay below beds with sand and gravel present are likely to act as aquitards and slow the downward movement of water, increasing the likelihood of sediment saturation and associated slope failures in this area.</p> <p>2. Occurrence of Landslides in the Rossendale Valley</p> <p>Landslides along the southern side of the Rossendale valley in the area were mapped by the BGS (Crofts 2004; Crofts et al. 2010). These large landslides are based in bedrock, and are unlikely to be active. Further landslides in the Quaternary infill have also been mapped by the BGS elsewhere in the Valley, using the NextMap Britain™ Digital Elevation Model and some fieldwork (OEM; Crofts,2004; Crofts et al.2010). The NextMap Britain™ OEM has a resolution of 5m per pixel, so smaller landslides are not easily identified. For this study LIDAR DTMs (Digital Terrain Models), available on open license from the Environment Agency (website given below) were used to map landslides in the area in question. Airborne LIDAR surveying involves the use of light pulses to accurately measure the height of the ground surface; using this technology height measurements have a vertical accuracy of +/-12cm and a horizontal accuracy limited by the pixel resolution; in this case horizontal resolution is 1m (Environment Agency 2016). As LIDAR pulses can penetrate</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
						<p>through tree canopies, the data can be edited to remove buildings so that the ground surface without vegetation and buildings can be shown as a DTM. The resulting DTM has been hillshaded (a model created as if lit by low angle light (35°) from 16 directions around the compass. The result is shown below (Figure 1). Figure 1: LIDAR DTM (1m resolution) showing Rossendale Valley between Rawtenstall and Newchurch. Landslides mapped by the BGS are shaded with diagonal red lines. Previously unmapped landslides identified using LIDAR are indicated with red arrows.</p> <p>The image clearly shows the cliff cut into the glacial infill immediately north of River Irwell has been modified by a number of landslides. These are indicated by red arrows in Figure 1, and are characterised by a scarp along the upper margin of the landslide, succeeded downslope by undulating and hummocky terrain. Figure 2 is a closeup of the area proposed for development. There is evidence of a landslide immediately to the east of the proposed development area. Figure 2: Area around the proposed development, indicating position of landslide. Newchurch Road is visible immediately to the north.</p> <p>It is not possible to say from the data used in this report whether this landslide is currently active. Even if has not been active in the recent past, it is likely that disturbance of the ground above the slide margins may reduce slope stability and either reactivate this slide or cause further sliding along the southern margin of the site.</p> <p>I am unable to comment further on the likelihood of slope failure, as my expertise lies in glacial sedimentology and geomorphology, rather than hazard assessment. However, it is clear to me that this site would need considerable investigation prior to any building work commencing, in order to full assess the likelihood of slope failure.</p> <p>Dr. Catherine Delaney Senior Lecturer School of Science and the Environment Manchester Metropolitan University Chester St. Manchester M1 5GD.</p> <p>References and Websites British Geological Survey GeolIndex. 323	Anne	Dixon		SHLAA16174	Object	<p>I am objecting to the proposed housing development on the site of Dubbin Wood for the following reasons:-</p> <ul style="list-style-type: none"> - a) Increased flood risk. By cutting down valuable mature trees from the hillside, you would be making the land more unstable, and removing a valuable resource that helps soak up excess water. - b) Wildlife and natural habitat loss. The area was planted up by the Council in the early 1980's to serve as a wildlife corridor for animals and birds. It is a fantastic resource for the area, and offers a valuable safe haven for, badgers, bats, deer, gold finches, owls, etc, etc, and helps animals move safely around the area. - c) The ground is structurally unstable. A geological survey was conducted by a Durham University scientist which highlighted that the ground is very unstable, and that once these sediments are exposed, then severe subsidence would occur. - d) Green space loss and ecosystem destroying. The area needs to maintain and cherish it's green spaces and its mature trees. It is it's nature and woodland environments that attract visitors to the area, and help combat pollution in the local area. The trees are the lungs of the town. <p>Email received 09/10/2017: Over the past few weeks I have been collecting on-line signatures to help save Dobbin Wood from the proposed building of 55 luxury houses. Dobbin wood was established by the Council in the early 80's as a valuable wildlife corridor, and is now home to deer, badgers, foxes and countless species of birds, trees and wild flowers. I believe this area needs protecting for its value to local wildlife, and it's beauty in the local community. I am also concerned that the land is not stable for houses, and, if houses are built on this land, then it puts houses lower down in the valley at increased risk of flooding. The trees currently help to stabilize the land and absorb some of the run off from the hills. This issue means a lot to me, and I am passionate to help preserve Dobbin Wood. Please view the petition by clicking on the link below. It currently has 81 signatures. https://secure.avaaz.org/en/petition/Alyson_Barnes_Council_Leader_Rosendale_Borough_Council_Alyson_Barnes_Save_Dobbin_Wood_Rosendale/?eUGQqfb I would be grateful if you could confirm that you have been able to view this petition on-line. Many thanks for your help with this important community environmental issue.</p>		<p>Rosendale is a wonderful area to live in, and I am passionate about preserving the heritage and character of the place. I am a volunteer at Civil Pride and help maintain the flower beds that so many people in the area appreciate. People need green spaces, trees and interactions with wildlife for mental and physical well being. Housing should not be built on green field or forest areas - it increases the risk of flooding and land erosion, and takes away the lungs and soul of the area. We need a local strategy for housing that takes into account existing housing stock and old mills, etc that could be made habitable, and looks at the local needs, not just works blindly to meet a target set by Government officers in Whitehall. We need to consider what the local infrastructure can cope with, and we need to ensure that the houses built are suitable for the needs of disabled, and elderly, and flood resistant, and in keeping with the local environment. We need balance. The proposed plan also needs to be publicised more widely. A lot of people in the area do not know that housing is being proposed near to them, and therefore cannot comment on your proposals.</p>

453	Rebecca	Eves	-		Object	<p>I live in one of the houses on Newchurch Road which backs onto this land. It is mainly mature woodland which is an essential habitat and wildlife corridor for a number of species, including badgers, jays and goldfinches, all regular visitors to our garden. If the site was to be used for the proposed housing development (55 houses, plus 27 off Dobbin Lane), this would undoubtedly be lost. - In addition to this, we and many of our neighbours purchased our houses specifically because of the outlook from the rears of our properties. The majority of us have paid a premium for this. The woodland not only looks attractive, but also screens us from much of the noise and views of the traffic and industry on Bacup Road. If the woodland is replaced by housing, I fear that our properties may become devalued significantly and we will no longer be shielded from the noise of the main road in the valley. There would also be significant light pollution from the houses and street lighting. This proposed development would impact the outlook from the conservation area around Dobbin Lane/Higher Cloughfold; I notice that a section of the proposed housing site is also within the conservation area. As at least two planning applications have been turned down in this area in recent years, as they were thought not to be in keeping with the 'look' of the area in terms of building heights and sizes, surely a decision to build further homes in the vicinity is also inappropriate in this respect? - One further concern is access to the site and potential increases in traffic on Newchurch Road and Dobbin Lane/Peel Street. There are few points at which the site could have access roads laid down and this will place additional pressure on the already busy surrounding roads. - Whilst I appreciate the need for additional housing and the financial benefits of this for the area, I do feel that far too many of the sites chosen for housing developments are greenfield; this one being a prime example.</p>		<p>I am hugely concerned about the number of greenfield sites being used as proposed housing sites. I am also quite annoyed that I only stumbled upon this draft plan by chance (and too late to attend the meetings); as a resident of Rawtenstall, I feel all residents should have been informed, by letter or other means, so that they could read the draft plan, attend meetings and make their views known in good time.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
501		Miles			Object	<p>1. The land at this site is a mixture of silt, sand and fine clay. Studies by Manchester and Durham Universities have shown this type of land to be structurally very weak. This is the reason why the Local Authority planted the trees that now give this land it's biodiversity. All planning applications to date have failed in part for this reason.</p> <p>2. The Woodland is host to a huge variety of natural species. These include but are not limited to: the Lesser Redpoll, House Sparrow (these birds are on the RSPB Red List of species of conservation concern, due to a greater than 50% decline in breeding population over the last 25 years), Dunnock, Bullfinch (these birds are on the RSPB Amber List of species of conservation concern, due to a 25-49% decline in UK breeding population over the last 25 years), Goldfinch, Sparrow Hawk, Robin, Greenfinch, Blue Tit, Great Tit, Coal Tit, Long-tailed Tit, and Great Spotted Woodpecker. Mammals include: Badgers, Roe Deer, Foxes, Pipistrelle Bats, and Squirrels. Also amphibians including Frogs and Toads. Destroying this woodland area is a disgrace and will result in the loss of many beautiful species which live amongst us. As the National Planning Policy Framework states; Section 11 part 109 'Protecting and enhancing valued landscapes...' apply to this precious woodland being not only protected from destruction but money spent on making it accessible for future generations to benefit from it.</p> <p>3. There would be a significant access problem. At the moment both Newchurch Road and Bacup Road are very congested especially at peak times, especially since Marl Pits Leisure Centre was upgraded. The addition of 90 houses to this area, with say 135 cars and an extra junction opposite Marl Pits is simply going to intensify an existing problem. Car accidents will undoubtedly increase (I personally can count 4 in the last 2 years I've lived here) one of which was at the Marl Pits leisure centre junction. Cloughfold does not have the road network infrastructure to safely cope with the amount of extra vehicles that would emerge from the proposed development.</p> <p>4. To destroy a thriving woodland for a development where each house will have a least 1 car is not in line with the national Government's environmental policies; NPPF Section 11 part 109 '...contributing to the Government's commitment to halt the overall decline in biodiversity...' and part 110 '...Plans should allocate land with the least environmental or amenity value...' and as it is self evident that this well established woodland has great environmental value it would be unfathomable to justify its destruction.</p> <p>5. The site is within a 3A Flood Zone and therefore not suitable for sustained development. In adverse weather conditions the future proposed development will be subject to significant drainage issues and possible</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
						<p>flooding, which is already a known issue in this area.</p> <p>6. The main reason many people choose to live in Rawtenstall and the surrounding areas is it's natural beauty. The mix of rural areas, outstanding views and industrial heritage are what make Rawtenstall special to all of us. People who move here are attracted to it's small town charm and want to escape the large towns and cities. If Rossendale Council choose to build on these beautiful green areas, the whole area will become built up and destroyed, and will most probably deter people from wanting to live here.</p> <p>7. A quick search on Rightmove reveals thirty seven 2 bedroom houses up to a value of £125,000, currently for sale in a one mile radius of this area. There are also forty six 3 bedroom houses between the values of £125,000 and £250,000 for sale. Other estate agents reveal additional homes for sale not currently registered on Rightmove. Again, all of them within a 1 mile radius of this area. Why exactly does Rossendale Council feel the need to build more houses when there is already a plentiful supply of local homes and many of them have been for sale for a long time? There are also businesses for sale that lie within residential areas that can easily be converted to homes and apartments.</p>

505	Rodney	Poucher	-		Object	<p>This is a greenfield site, designated early in the 1970s by the Council as important in terms of being a wild life corridor and walking amenity for local residents. The Council gave the area in question the name of The Cloughfold Greenway, planting hundreds of deciduous trees and enclosing the boundaries with fencing. - - The trees have now matured and several pathways have subsequently been evolved by users circumscribing the Greenway for dog walking, and various recreational purposes. - - The area continues to be the home for numerous wildlife species which over time has now grown to include roe deer, badger and fox as well as many nesting birds, most notably tawny owls. - Housing development on this area to the scale envisaged in the plan, some 55 houses in total, would be detrimental to the continuing presence of most of this wildlife. - - Another, and an extremely serious consideration that must be given concerns the vast number of land-drains crossing underneath the area from the northerly aspect, ie Chapel Hill, Marl Pits, and running down through the steeply sloping land to eventually empty into the river Irwell. Any disturbance of these land-drains will have an effect on the houses already built in the area to the northern side of Bacup Road, which includes several terraced rows, including my own house which has land-drains passing on either side of the property. An example of the effect of building anywhere in this area became apparent during the development in 1974 of the athletics stadium at Marl Pits. This construction work resulted in visible alterations to the water flow passing through and across the area. Even subsequent comparatively minor house extensions on Newchurch Road have made some impact on the water flow passing our property. The scale of development envisaged in the Plan could have serious consequences for a large number of properties. - - A final point to take into account must be the impact the occupants of 55 new houses would have on the existing infrastructure in the area, roads, access, schooling etc. Whilst these are points most of the developments in the Plan will need to consider, this proposal is geographically very close to the town centre and is in a position already chronically affected by volumes of traffic and over-subscription of schools. - - If you take these three points, wildlife, land-drains and infrastructure individually, they each provide a good case to scale down or abandon the proposal. Take them collectively and the case becomes compelling. I trust the Council will take this into serious consideration.</p>		No.

527	John	Howat	N/A	HS2.82,HS2.86,H S2.53,HS2.54,HS 2.58,HS2.54,HS2 .57,HS2.54, HS2.56,HS2.84 , Land at Marl Pits.	Object	<p>Observations on Proposed Local Plan for Rossendale. - - Having viewed the 2017 proposed Local Plan for Rossendale and discussing it with a member of the Planning Department at a recent local consultation meeting on Thursday 7th September, I feel obliged to make the following objections and following observations. - - Access. - There appears no have been no consideration of the extra traffic that the proposed developments will generate. From a personal point of view I am particularly concerned by those schemes in Rawtenstall, some requiring extending the Urban Boundary into the countryside, that are contiguous with and likely to be accessed from Newchurch Road. Principally these are: - - Dark Lane Football Ground, HS2.82 (58 Houses). - St Peters Road, Newchurch, HS2.86 (9 Houses). - Johnny Barn Farm, HS2.53 (30 Houses). - Land east of Johnny Barn Farm, HS2.54 (105 Houses) - Higher Cloughfold, HS2.58 (7 Houses). - West of Dobbin Lane, HS2.54 (27Houses). - Land at Conway Road, HS2.57 (5 Houses). - Land between Newchurch Road & Bacup Road, HS2.54 (55 Houses). - Hurst Platt, HS 2.56 (8 Houses). - Peel Street, Clough Fold, HS 2.84 (8 Houses) - - In addition the plan shows a proposal that Urban Boundary behind Marl Pits be moved north to Balladen Clough and although no actual figure or HS reference is given, a figure of 55 houses has been quoted informally in the past. - - Permission has recently been granted for two houses outside the existing Urban Boundary, in a greenfield site, (2015/0308). Although it appears that there is no intention to move the boundary to accommodate them. - - Potentially therefore there are 369 new houses planned that will have their main access via Newchurch Road. Assuming that each household has two cars (738 cars) each making just one trip out and one trip back each day (1476 daily journeys) for 323 days a year (allowing for six weeks holidays) this will be a minimum of 476,748 new car journeys along all or part of Newchurch Road each year. In addition there will be journeys generated by visitors, deliveries and services such as refuse collection. Newchurch Road, downhill from Marl Pits to Rawtenstall, will become exceptionally busy; entrance and exit from Union Street already difficult, will become virtually impossible; an intolerable situation. - - As long as I can remember (30 years or more) there have been problems with access to and from Chapel Hill via the Union Street /Newchurch Road Junction. In 1993, at the public enquiry into objections to the then proposed District Local Plan, it was noted that Rossendale Borough Council considered that Union Street was unsuitable and there were "... severe highway problems in the area" and "... that no additional traffic at all should be allowed to aggravate the situation". The Inspector, Mr D. Gill, added a comment to his ruling on Urban Boundary changes in the area, "... that the present arrangement (for traffic) is certainly below standard". - - None-the-less, over subsequent years, RBC has sanctioned further developments in the area including the making of a rear entrance to Alder Grange School with access via Union Street, which at</p>		I have not commented on individual sites as it is the effect that the sum of these sites will have on the traffic on Newchurch Road that is my concern.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
						<p>peak periods has worsened the situation considerably, both for pedestrians using the narrow pavements and vehicles dropping off or collecting children. -</p> <p>There are real problems with access from Newchurch Road up Union Street onto Hurst Lane and onwards onto Chapel Hill. Union Street is a steep hill with residents parking which only allows one-way traffic the majority of the time. It is treacherous in winter conditions and at times only four-wheel drive vehicles can ascend; descent too can be extremely awkward when the road is icy. - -</p> <p>The exit from Union Street on to Newchurch Road has become increasingly difficult, as traffic has inexorably increased. There is limited visibility to the east and the road the west it is compromised by the bus stops on both sides and cars parked outside the convenience store. The latter obstruct the carriageway causing vehicles leaving Union Street and turning down Newchurch Road to travel some distance on the wrong side of the road, at times in the face of oncoming traffic. Cars entering from Newchurch Road are often blind to vehicles descending Union Street and this results in awkward maneuvering, with traffic on the main road impeded by cars waiting to ascend Union Street as a result. This is a particular problem for those cars entering Union Street from the east. - - - The single track available at the bottom end of Union Street as a result of residents' parking, can be blocked by vehicles which stop half way up to unload passengers or goods. In recent years large lorries connecting with the conversion of the redundant public house, The Old House at Home, to housing and the (apparently never-ending) construction of the eight new houses behind Hurst Platt have added to the chaos at the bottom of the street as they negotiate the tight junction between Green Street and Union Street (often in reverse) or on to Newchurch Road.</p> <p>Newchurch Road is increasingly busy and joining it from Union Street is often very difficult, especially if traffic is backed up from the pedestrian crossing and traffic lights at the Rams Head/St Mary's Way. Frequently one is reliant on a good-natured driver giving way. - - There is real concern amongst the residents in Waingate that Fire, Ambulances and other emergency vehicles would at times be unable to reach their destination expeditiously. - - There are no alternative routes onto Chapel Hill. The continuation of Hurst Lane from the top of Union Street down hill to Newchurch Road is little more than an alley, a very narrow single track with no pavements. It cannot be considered as an adequate substitute for Union Street except in the occasional emergency. Only cars can use it. Waingate Road is no longer suitable for vehicular traffic. - - It would appear from planning application 2015/0308 that Lancashire County Council do not see a problem with the traffic on Newchurch Road and Union Street and access to properties on Chapel Hill. It is clear that none of their officers have lived in the area and to my knowledge no one has spoken to the residents. If they had, I suspect they perhaps would hold a different view. It seems that in allocating the various areas along Newchurch Road for extra housing in the Local Plan, there has been neither</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
						<p>recognition of the problems of Union Street nor consideration as to how they may be alleviated. - - A traffic census was seen to be carried out a few years ago but as it was during half-term, when there was no school traffic, its value therefore must be in doubt and of course it did not take into account those changes that will ensue should the current Local District Plan come to fruition along Newchurch Road as proposed. Should, as was intimated during the consultation meeting I attended, a further study on traffic in Rawtenstall be commissioned, can I urge you to involve to the residents of Waingate, Hurst Lane, Hurst Crescent and Union Street as part of the study? - - Facilities. - Other than to permit a surfeit of supermarkets, RBC appears to have given no consideration to the infrastructure required to support any major increase of housing/population. General Practice surgeries are struggling with the current patient demand and attracting Doctors into existing practices to fill vacancies proves very difficult. Recruitment to new practices is impossible. Currently there are insufficient Medical graduates choosing General Practice as a career. There is also dearth of NHS Dental Surgeries and it may necessary to travel out of the Borough to register for NHS treatment. There appears to be no possibility of extending existing primary or secondary schools nor is there the finance to build new ones. - - Alternative Sites and Uses. - In general I object to the use of greenfield sites to accommodate additional housing. There appears to be no map or register of brownfield sites, which should be completely replaced by residential schemes before any consideration is given to extending the Urban Boundary to provide building land. There are several large redundant buildings which should be sympathetically converted to residential use as apartments as has been done elsewhere both in Rossendale and neighbouring towns and cities. Examples include the old cinema on Bacup Road, vacant and available for many years. It should be converted, with compulsory preservation of the external structure, to two floors of apartments and the ground floor used for residents' parking. Similarly, St John's Church, Crawshawbooth, recently on the market, would make a fine block of flats. The abandoned Kwiksave/Poundland store by the railway station should be demolished and the site made available for new housing. It is not needed for an out of town retail site. - - The plan to move the Urban Boundary at Marl Pits should be abandoned. The area is crossed by a well-used and much-loved rural footpath which would be lost if it was subsequently urbanised. In any case the land at the west end of the plot slopes steeply to the brook and is unsuitable for building. There is currently no vehicular access to the area unless the RBC is to allow it through the Marl Pits car park, which would be unacceptable. A possible alternative use for this land, maintaining its greenfield status, would be as a campsite for tourists, with hard standings for touring caravans and pitches for tents. A dedicated domestic block close to the leisure centre would be acceptable; access could be through the leisure centre car park. An administrative office could be</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
						established in the leisure centre itself, or as part of the domestic block. This type of facility is sorely needed in Rossendale if, as the RBC professes, the tourist industry is to be promoted and developed. The campsite could be administered and promoted as part of the Leisure Centre. - - Suggested Action. - I am well aware of the pressure applied by Central Government to the RBC to provide affordable and new dwellings. However, now that the target has been reduced by approximately 50% to 2,100, I urge the Council to abandon any proposals for land outwith the Urban Boundary and concentrate development on redundant buildings, brownfield and other former industrial sites. - - 19th September 2017 -		
531	Ian	Davidson	-		Object	I wish to strongly object to houses being built on a site that is green belt land and adds to the character of rossendale. More houses and more people using already overstretched infrastructure and facilities are symptomatic of a short sighted plan for an area of the country renowned for its character and beauty.		-

551	John S. and Glenys	Holt	-	SHLAA16174 - SHLAA 2015 - H13	Object	Our Interest: - We have been residents of Newchurch Road since 1983 and our property backs onto green land, the proposed site of 90 dwellings and we have witnessed the changes that have taken place over the intervening years to this area. - The demise of the major industries, i.e. cotton; boot and shoe; felt and other manufacturing industries has allowed the valley to change to lighter forms of productivity whilst at the same time transforming the environment of the area. - - Planning Applications circa 1980 - With regard to application site H13 we are aware that an appeal by a builder to build houses at the east end of this site was refused due to the instability of the land. - This finding has been confirmed by a recent study carried out on a major part of the proposed site by both Manchester and Durham Universities which indicates that the site sits on a glacial lacustrine deposit of silt, sand and fine clay. - - CPO 1983 - Tree Planting - In 1983 Rossendale Borough Council Compulsory Purchased the site referred to in application site H13 for the purpose of tree planting. The financial support for this was a grant from the European Commission. Over a 1000 trees were planted including oak, willow, rowan and many others which are now well established. - - Environment (wildlife) - Site H13 has now been established as a biodiversity area not only regarding green land but also habitat to many wildlife species such as deer, badgers, foxes, rabbits, bats and an incredible variety of bird life. In addition, the area is affected by numerous water courses which create habitats for water based wildlife. - - Conclusion - The green land area that flows from Rawtenstall through to Waterfoot and continues through the Glen, following Newchurch Road to Stacksteads is an important corridor that must be protected. - Building on this site would cause the total destruction of this natural habitat. - We the residents of Rossendale rely on our elected Councillors to fulfil their duty and in view of the evidence provided from numerous sources it would be a dereliction of duty to approve this site for housing development. - To grant approval to this development would be the thin edge of the wedge which would give the green light for the Council to continue development along this corridor. - Reported in the Rossendale Free Press on 28th July 2017. The Council says – “As well as earmarking development sites, it proposes zones for environmental protection, including new and expanded conservation areas.” The public have been urged to have their say. - We ask why destroy well established Greenland sites, well habited by wildlife just to create elsewhere and at what cost when the Draft Local Plan seeks to acknowledge the importance of the Boroughs’ rural character? - More emphasis should be placed on seeking out Brownfield sites along the valley corridors. An example of which is the former Broadley’s Factory on Burney Road, Rawtenstall which some time ago planning permission was sought for over 150 properties. - Our lifetime spent in Rossendale spans from 1945 and, therefore, our concerns regarding the proposals are based on our		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
						desire not only to see the valley prosper economically but also to see that the work that has been achieved in recreating what was originally called The Forest of Rossendale is developed alongside any proposed developments whether they are for housing or for industry. - - - Please acknowledge receipt of this document to email address: - - 22nd September 2017 -		
690	William	Hutchinson	-	HS2.53, HS2.54, HS2.56, HS2.80, HS2.82, HS2.83, HS2.86	Not Applicable	The seven sites listed above are all within areas adjacent to Newchurch Road and the assumption can be reasonably made that future residents of the 228 units projected will use Newchurch Road as their principal access. This could account for in the region of an additional 450 vehicles regularly using what is already a very busy stretch of highway. Considerable numbers of pupils of nearby schools either walk or are brought in cars to the Newchurch Rd./Union St./Hurst Lane vicinity to make their way to these schools. The current volume of traffic makes it dangerous for these young people. Elderly residents find it increasingly difficult to cross Newchurch Rd. in this area because of the volume and speed of traffic. Whilst local residents in vehicles can experience danger and frequent difficulty when negotiating the roads and junctions for the same reasons. - In my opinion it should be a condition of any of the proposed development that 'traffic calming' measures must be implemented to protect the safety, convenience and general well-being of all who live in or pass through this location whether on foot, on cycles or in vehicles. To not do so will be doing all concerned a great disservice and will be a dereliction of the 'duty of care' which is incumbent on all who may be deliberating on these proposed developments. - In terms of such 'traffic calming': 'speed-bumps', lower speed limit, road narrowing with priority restrictions and advance warning signs would all be measures I would hope to see introduced.		No

732	Andy	Hardman	Lancashire Badger Group	H13	Object	<p>Dear Sir or Madam, I am writing as Vice Chair of the Lancashire Badger Group to object to the proposed development of the land between Newchurch Road and Bacup road Rawtenstall (H13 on the Future Plan).</p> <p>We have on our database a number of established badger setts within this piece of land. Any future development would have to mitigate for the presence of the badgers, their setts and loss of foraging area.</p> <p>The site has roads on all sides, the two main ones being Newchurch Road to the North of the site and Bacup Road to the South, these are main arteries up and down the Valley with considerable vehicles using them daily. To the East of the site is Dobbin Lane, this lane is used as a cut through from Newchurch Road and Bacup Road in both directions. To the West is Greenbank Park the least used of all the roads.</p> <p>In order to develop the site the existing badger setts would have to be closed down and artificial setts built to replace the existing setts. The badger would have to be using the artificial setts before the existing ones could be closed down. The site is approximately 10 hectares, which for an urban badger clan is on the limit of what they can survive on for foraging. Rural badgers foraging areas vary from 30 hectares to 300 hectares which is dependent on availability of food. Any reduction in their foraging area will impact on the badgers and may lead to them starving or being run over as they look for other food sources beyond their current range.</p> <p>Badgers are territorial and as such each clan keeps to it's area, any badgers that stray into a neighboring territory are usually attacked and chased out of the area. Our database shows badger setts North, South and East of the site, all of which are sufficiently distant to be separate clans so would not accept any badgers from these setts.</p> <p>I am unable to see a suitable piece of land within the immediate vicinity where an artificial sett could be built with enough foraging area to sustain these badgers.</p> <p>It is also illegal to build around the setts and reduce the badgers foraging area if a suitable foraging area does not exist.</p> <p>We feel that there may be more setts than we have on our database but at present due to the depth of the undergrowth surveying the whole site would be better done between November and March when the foliage dies back. We have a long history of dealing with badgers and developments in Rossendale and have a pragmatic approach, but in this instance I cannot see a good outcome for the badgers if the land is developed</p> <p>We would ask that this particular site be removed from the future plan to save the badgers on the site coming to any harm and would welcome your thoughts on the matter.</p> <p>We will obviously work with you to find a solution.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
779	Alison	Squire	-		Object	<p>I wish to object to the above proposed sites for housing which are close to Newchurch Road on the grounds that: - i) increased traffic will be unacceptable on this main road through Rossendale - ii) erosion of greenfield sites instead of using brownfield sites in the Valley - iii) increased demand on already overloaded education and health services. - - As a resident of Waingate Village, I have objected several times to planning applications on a plot of land off Hurst Lane (Ref: 2015/0308) and am extremely displeased that this land has received planning approval despite it continuing to be beyond the Urban Boundary. There were no opportunities for local residents to raise further objections and no communications following approval having been given. I do not feel that the Council supported local residents and instead allowed developers greater importance. I am therefore worried that despite this opportunity to comment on the Local Plan, residents' opinions will not be taken into consideration. - - It appears that the Urban Boundary may be moved to Balladen Clough (a stream) to include a field behind Marl Pits road. An earlier application to build on this land was refused on the grounds of lack of road access. I hope that any future planning applications on this land will continue to be refused and the original Urban Boundary will remain in place. Any development on this land would further increase traffic onto Newchurch Road. - - Having witnessed the gridlock in Bank Street and Angouleme Way on Saturday I do wonder where the increased traffic from all the proposed new housing will go. I appreciate that it is National Government Policy to increase housing and that sites have to be found in the Valley but hope that more brownfield sites can be found, consideration of health and education demands and transport/traffic difficulties will be addressed before adopting the new Local Plan.</p>

798	Margaret	Johnson	-	H13	Object	<p>1,Flora & Fauna - There are a multitude of trees and wildlife inhabiting this area. Any plans to build here would destroy an important part of the ecological system for ever. LCC are encouraging native trees which formed the Forest of Rossendale and it is nothing short of vandalism to build on this green corridor which is home to a wonderful variety of wildlife which we have a duty to protect. - - 2. Unsuitability of land - We purchased this house nearly 40 years ago from Mr H Bower of Modern Homes. He informed us that he had tried to continue Lambton Gates up to the Greenland but the land itself is unsuitable due to springs and sediment. This land was then subsequently purchased in the 80s through a government grant to preserve green spaces. I know building methods have moved on but if the methods employed on Whinberry View are anything to go by then the noise and vibration of piling will destroy the balance of the eco system. - - 3. Traffic & Services - Where will access be? No-one seemed to be able to give a definitive answer. We strongly object to our cul de sac becoming a rat run. In addition roads, schools and surgeries are already struggling to cope - the valley does not lend itself to further building unless it is on brownfield sites. - - We were originally attracted to Rossendale as we were close to amenities yet in a semi rural environment. Visitors to our house always comment how lucky we are to see such a varied amount of wildlife. Since houses have been built on Whinberry View the wildlife activity has reduced . Badger and fox tracks which had existed for many years have been eroded and destroyed. - The number of birds and small mammals has diminished .This Greenland should be protected -otherwise we are in danger of becoming another urban sprawl. There are plenty of houses for sale in Rossendale - we don't need more just to satisfy central government.</p>		- Please do not ignore the wishes of the council tax payers in order to provide builders with - big profits and risk destroying our heritage for ever.

1140	Cherry	Hughes	-		Object	<p>I have recently viewed the plans outlining proposals for housing (related to the Local Policy) in the Newchurch/Hareholme ward area and wish the following comments to be noted: - - * there is a proposed development of 7 - 9 houses at the top of St Peter's Road beyond St Peter's RC Primary School. A major concern is congestion particularly around school opening and closing times. The road becomes very congested as many children are dropped off/picked up by car (giiven the School's faith status and the catchment area). Frequently our driveway is blocked during the most congested periods as there is nowhere in the near vicinity for parents to park and walk their children the last few metres to the School Gate. Increased traffic past the School Gate will create a greater hazard. - - * the proposed site is part way down Seat Naze slope. There is already significant run off which impacts on the houses at the top of St Peter's Road and Heightside Avenue. There is also evidence of springs, one of which which percolates through the road that leads to the houses immediately above Newchurch Road. United Utililites has been called to this particular spot on numerous occassions and identified that it isn't a leak from a pipe. I am also aware of the proposed far more significant developments above Johnny Barn and below Marl Pits on land which has always been very wet (even in dry summers). How can developers guarantee good drainage both for the developments and for the existing developed areas downslope from them? How will that impact on the Irwell at the bottom of the Valley and the flooding dangers? - - * Finally I am really concerned that the area does not have the infrastructure to cope with the additional housing stock. Roads are already heavily congested at commuter times. The local primary schools have very limited capacity to take more students but there appears to be no planning for a new primary school. There is a 'play area' on Stacksteads, which I believe the Newchurch Village Association is planning to raise money to renovate, and this is the only one in the immediate area. The area is already due to have a significant development on what was the Rossendale Football Club Ground (up to 100 houses I believe) - and no mention has been made of infrastructure improvements for this development. - - * I live on a road where over the past 5 years, 3 properties were for sale and 2 of these were for sale for at least 4 years before they sold. The difficulty with sales does appear to have alleviated but there are always houses for sale in our immediate neighbourhood - so can we argue that there is a housing crisis in Rossendale (or at least in this part of Rossendale)?</p>

1303	JULIA	BARROW	-		Object	THIS IS A DESIGNATED WILDLIFE CORRIDOR APART FROM ANYTHING ELSE! THE LAND IS VERY STEEP AND UNSTABLE - I WOULD ASSUME. RIDICULOUS IDEA. THE EXTRA TRAFFIC CREATED BY THE PROPOSED DEVELOPMENTS WOULD CREATE MASSIVE PROBLEMS GETTING IN AND OUT OF THE VALLEY, OUT OF ALL THE PLANS PUT FORWARD NOT ONE OF THEM MENTIONS ROAD IMPROVEMENET SCHEMES OF ANY SORT - ARE WE ALL SUPOSED TO BE LEAVING THE VALLEY BY HELICOPTOR\ BY THE TIME THESE PROPOSED HOUSES COME TO BE? PATHETIC - BUT NOTHING I HAVEN'T COME TO EXPECT FROM RBC.		I AM VERY AWARE THAT IN ALL THE PROPOSED PLANS NOWHERE HAS THERE BEEN ANY MENTION OF NEW/IMPROVED ROADS/INFRASTRUCTURE? I REMEMEBER THE EDENFIELD BY-PASS BEING OPENED IN 1968 - TO CARRY TRAFFIC AWAY FROM EDENFIELD VILLAGE. IT WAS BRILLIANT, LIVING IN THE VILLAGE BECAME A JOY ONCE AGAIN! THE SAME SMALL BY-PASS NOW HAS ALL THE TRAFFIC FROM BURNLEY/BLACKBURN/HASLINGDEN/ HELMSHORE/CRAWSHAWBOOTH/RA WTENSTALL EMPTYING INTO IT ON A DAILY BASIS. GRANE ROAD NOW HAS AVERAGE SPEED CAMERAS INSTALLED - AN INDICATION AS TO HOW MUCH TRAFFIC THE ROAD NOW CARRIES. - ON ANOTHER NOTE, WE HAVE NO FREE DOCTORS OR DENTISTS, NO POLICE STATION, SCHOOLS ARE FULL AND WE NOW HAVE TO TRAVEL TO BLACKBURN TO GO TO HOSPITAL! AND YOU ARE PROPOSING TO PUT 4/5000 NEW HOUSES UP? WE HAVE NO PUBLIC SERVICES!! THE REFUSE SERVICES ARE STRUGGLING TO COPE WITH WHAT WE HAVE NOW. OUR ROADS ARE APPALING. - IT REALLY DOES SCARE ME! - I THINK WE HAVE MORE BROWNFIELD AREAS WHICH SHOULD BE EXPLORED BEFORE WE LOSE A LOT OF OUR GREEN SPACES, AND I WOULD LIKE TO SEE AN ASSESSMENT OF EMPTY PROPERTIES AVAILABLE IN THE VALLEY WHICH COULD GO TOWARDS THE 4/5000 PROPERTIES NEEDED?

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
1308	Emer	Killeen	-		Object	The proposed number of units of 55 is too many to be supported by the existing road network given that most households now have 2+ vehicles. Both Newchurch Road and Bacup Rd are extremely busy already. In particular, Bacup Rd area is densely populated and lots of children walk along the road to and from school. Any additional traffic will increase the risks to pedestrians on both main roads.		-
1323	Rachael	Gildert	Valley Heritage		Object	I feel this site has been put forward as a method to tidy up a scruffy site that is currently used for caravans and general 'waste'. It is bordered on 2 sites by a right of way and houses here would impede the views across the valley - St Peters is a busy school and access along St Peters Road and Newchurch Road at school times is really busy and already hectic for the existing residents. Adding 9 more houses to this site (and I imagine these would be 3-4 bed houses, each with around 3 cars) would significantly add to this trouble. St Peters Road is already often double parked too.		With regards to Conservation Areas, it was a shame Waterfoot Centre was not put forward. The town is slowly starting to regenerate and additional protection could help to prevent unsuitable shop fronts, UPVC windows and other inappropriate development
1384	Simon	Holland	-	SHLAA16174	Object	The proposed development on land between Newchurch Road and Bacup Road at Cloughold is unsuitable for a number of reasons. - 1) The area is a Green Belt area of Natural Beauty, home to Wildlife inc Deer, Badgers and Foxes. the land was previously labeled as unsuitable for building due to the nature of the soil and amount of water the land holds. - 2) The slope of the land rises to significant concerns of a land collapse as has been seen near Waingate close on a recent development - 3) Tree preservation are established in the area - 4) Newchurch Road is already extremely busy and would not sustain further traffic from this development. It is already unsafe to exit the drive by reversing into Newchurch Road. The Road infrastructure is insufficient, with Traffic lights at the junction with Boholt way already leading to congestion. - 5) the main Roundabout in Rawtenstall is insufficient for extra traffic and already causes congestion - 6) medical and Care facilities are insufficient for the influx with ST James Medical centre already over subscribed. - 7) lack of sufficient schooling in the local area. - 8) no parking facilities - 9) safety of school children walking home or via the sports centre due to increased road traffic - 10) increased Flood Risk to Bacup Road		There are significant Brownfield sites that are within the Rossendale Valley that should be utilised before consideration to using Green belt land is given. - - The infrastructure within the Valley in Terms of Public Transport, Road network, Care facilities and medical facilities are also insufficient to cope with significant increase in building and population. - - The targets given are unsustainable and represent significant damage to to the local environments and its population.
1537	John	McGuinness	-		Object	I object to this site allocation for the following reasons: - - Loss of greenbelt land. - This is only the first stage in a gradual loss of land as more houses will be built further up the hill. - Issues with flooding. - Huge increase in traffic on Newc		You seem to be trying to implement a plan where nearly all patches of green within the urban boundary are built on. The hillsides may be green (for now) but all small breathing spaces seem to be a target for building on. Sustainable; how can building more houses on any green area be sustainable? Once land is lost to development, it's lost forever.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.054	Further comment
1537	John	McGuinness	-		Object	I OBJECT TO THIS SITE ALLOCATION FOR THE FOLLOWING REASONS: - - Loss of green land - This area of land is not farmland so there must be greater biodiversity due to this fact. There are a large number of trees on the site which would be lost. - Increased		You seem to be trying to implement a plan where nearly all patches of green within the urban boundary are built on. The hillsides may be green (for now) but all small breathing spaces seem to be a target for building on. Sustainable; how can building more houses on any green area be sustainable? Once land is lost to development, it's lost forever.
1540	David & Margaret	Barnes		SHLAA16174	Object	Rosendale once known as "THE FOREST OF ROSSENDALE". Reasons listed below against the destruction of woodland and the building of unnecessary houses. 1) LOSS OF NATURE and natural flora and fauna - bats, deer, birds, foxes and badgers. 2) TREES maintain ground structure to insecure land - remove air pollution and reduce flood risks 3) TRAFFIC directed onto Newchurch Road would cause more congestion. This is a problem already, the exit from Marl Pits sport centre is a dangerous area and very busy and accidents will occur and new garden centre access! 4) BROWN SITES should be used before destruction of green land and woodland. 5) More schools and GP's will be required.		
1742	Ingrid	Rawlins	Rosendale Valley Gateway Club	SHLAA16174	Object	Rosendale Valley Gateway Club are objecting to the possibility of the development of the land known as Dobbin Wood. The building of houses would impact on the forestry landscape and its habitat and possibly also on the allotment site known as Whinberry Wood, which is used by people with disabilities. The land is prone to flooding and the development of it may exacerbate the issue. We were unable to submit our objections online and therefore attach hard copies.		
1820	Kelly	Holt	Lancashire County Council		Object	<ul style="list-style-type: none"> HS2.54 – The vehicular access appears limited to Dobbin Lane with a potential pedestrian/cycle access via Co-operation Street. The access may be considered suitable to accommodate a limited number of houses, however the 55 houses that are proposed appears unlikely to be feasible. Further detailed design is required.

527	John	Howat	N/A	HS2.82,HS2.86,H S2.53,HS2.54,HS 2.58,HS2.54,HS2 .57,HS2.54, HS2.56,HS2.84 , Land at Marl Pits.	Object	<p>Observations on Proposed Local Plan for Rossendale. - - Having viewed the 2017 proposed Local Plan for Rossendale and discussing it with a member of the Planning Department at a recent local consultation meeting on Thursday 7th September, I feel obliged to make the following objections and following observations. - - Access. - There appears no have been no consideration of the extra traffic that the proposed developments will generate. From a personal point of view I am particularly concerned by those schemes in Rawtenstall, some requiring extending the Urban Boundary into the countryside, that are contiguous with and likely to be accessed from Newchurch Road. Principally these are: - - Dark Lane Football Ground, HS2.82 (58 Houses). - St Peters Road, Newchurch, HS2.86 (9 Houses). - Johnny Barn Farm, HS2.53 (30 Houses). - Land east of Johnny Barn Farm, HS2.54 (105 Houses) - Higher Cloughfold, HS2.58 (7 Houses). - West of Dobbin Lane, HS2.54 (27Houses). - Land at Conway Road, HS2.57 (5 Houses). - Land between Newchurch Road & Bacup Road, HS2.54 (55 Houses). - Hurst Platt, HS 2.56 (8 Houses). - Peel Street, Clough Fold, HS 2.84 (8 Houses) - - In addition the plan shows a proposal that Urban Boundary behind Marl Pits be moved north to Balladen Clough and although no actual figure or HS reference is given, a figure of 55 houses has been quoted informally in the past. - - Permission has recently been granted for two houses outside the existing Urban Boundary, in a greenfield site, (2015/0308). Although it appears that there is no intention to move the boundary to accommodate them. - - Potentially therefore there are 369 new houses planned that will have their main access via Newchurch Road. Assuming that each household has two cars (738 cars) each making just one trip out and one trip back each day (1476 daily journeys) for 323 days a year (allowing for six weeks holidays) this will be a minimum of 476,748 new car journeys along all or part of Newchurch Road each year. In addition there will be journeys generated by visitors, deliveries and services such as refuse collection. Newchurch Road, downhill from Marl Pits to Rawtenstall, will become exceptionally busy; entrance and exit from Union Street already difficult, will become virtually impossible; an intolerable situation. - - As long as I can remember (30 years or more) there have been problems with access to and from Chapel Hill via the Union Street /Newchurch Road Junction. In 1993, at the public enquiry into objections to the then proposed District Local Plan, it was noted that Rossendale Borough Council considered that Union Street was unsuitable and there were "... severe highway problems in the area" and "... that no additional traffic at all should be allowed to aggravate the situation". The Inspector, Mr D. Gill, added a comment to his ruling on Urban Boundary changes in the area, "... that the present arrangement (for traffic) is certainly below standard". - - None-the-less, over subsequent years, RBC has sanctioned further developments in the area including the making of a rear entrance to Alder Grange School with access via Union Street, which at</p>		I have not commented on individual sites as it is the effect that the sum of these sites will have on the traffic on Newchurch Road that is my concern.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.056	Further comment
						<p>peak periods has worsened the situation considerably, both for pedestrians using the narrow pavements and vehicles dropping off or collecting children. -</p> <p>There are real problems with access from Newchurch Road up Union Street onto Hurst Lane and onwards onto Chapel Hill. Union Street is a steep hill with residents parking which only allows one-way traffic the majority of the time. It is treacherous in winter conditions and at times only four-wheel drive vehicles can ascend; descent too can be extremely awkward when the road is icy. - -</p> <p>The exit from Union Street on to Newchurch Road has become increasingly difficult, as traffic has inexorably increased. There is limited visibility to the east and the road the west it is compromised by the bus stops on both sides and cars parked outside the convenience store. The latter obstruct the carriageway causing vehicles leaving Union Street and turning down Newchurch Road to travel some distance on the wrong side of the road, at times in the face of oncoming traffic. Cars entering from Newchurch Road are often blind to vehicles descending Union Street and this results in awkward maneuvering, with traffic on the main road impeded by cars waiting to ascend Union Street as a result. This is a particular problem for those cars entering Union Street from the east. - - - The single track available at the bottom end of Union Street as a result of residents' parking, can be blocked by vehicles which stop half way up to unload passengers or goods. In recent years large lorries connecting with the conversion of the redundant public house, The Old House at Home, to housing and the (apparently never-ending) construction of the eight new houses behind Hurst Platt have added to the chaos at the bottom of the street as they negotiate the tight junction between Green Street and Union Street (often in reverse) or on to Newchurch Road.</p> <p>Newchurch Road is increasingly busy and joining it from Union Street is often very difficult, especially if traffic is backed up from the pedestrian crossing and traffic lights at the Rams Head/St Mary's Way. Frequently one is reliant on a good-natured driver giving way. - - There is real concern amongst the residents in Waingate that Fire, Ambulances and other emergency vehicles would at times be unable to reach their destination expeditiously. - - There are no alternative routes onto Chapel Hill. The continuation of Hurst Lane from the top of Union Street down hill to Newchurch Road is little more than an alley, a very narrow single track with no pavements. It cannot be considered as an adequate substitute for Union Street except in the occasional emergency. Only cars can use it. Waingate Road is no longer suitable for vehicular traffic. - - It would appear from planning application 2015/0308 that Lancashire County Council do not see a problem with the traffic on Newchurch Road and Union Street and access to properties on Chapel Hill. It is clear that none of their officers have lived in the area and to my knowledge no one has spoken to the residents. If they had, I suspect they perhaps would hold a different view. It seems that in allocating the various areas along Newchurch Road for extra housing in the Local Plan, there has been neither</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.056	Further comment
						<p>recognition of the problems of Union Street nor consideration as to how they may be alleviated. - - A traffic census was seen to be carried out a few years ago but as it was during half-term, when there was no school traffic, its value therefore must be in doubt and of course it did not take into account those changes that will ensue should the current Local District Plan come to fruition along Newchurch Road as proposed. Should, as was intimated during the consultation meeting I attended, a further study on traffic in Rawtenstall be commissioned, can I urge you to involve to the residents of Waingate, Hurst Lane, Hurst Crescent and Union Street as part of the study? - - Facilities. - Other than to permit a surfeit of supermarkets, RBC appears to have given no consideration to the infrastructure required to support any major increase of housing/population. General Practice surgeries are struggling with the current patient demand and attracting Doctors into existing practices to fill vacancies proves very difficult. Recruitment to new practices is impossible. Currently there are insufficient Medical graduates choosing General Practice as a career. There is also dearth of NHS Dental Surgeries and it may necessary to travel out of the Borough to register for NHS treatment. There appears to be no possibility of extending existing primary or secondary schools nor is there the finance to build new ones. - - Alternative Sites and Uses. - In general I object to the use of greenfield sites to accommodate additional housing. There appears to be no map or register of brownfield sites, which should be completely replaced by residential schemes before any consideration is given to extending the Urban Boundary to provide building land. There are several large redundant buildings which should be sympathetically converted to residential use as apartments as has been done elsewhere both in Rossendale and neighbouring towns and cities. Examples include the old cinema on Bacup Road, vacant and available for many years. It should be converted, with compulsory preservation of the external structure, to two floors of apartments and the ground floor used for residents' parking. Similarly, St John's Church, Crawshawbooth, recently on the market, would make a fine block of flats. The abandoned Kwiksave/Poundland store by the railway station should be demolished and the site made available for new housing. It is not needed for an out of town retail site. - - The plan to move the Urban Boundary at Marl Pits should be abandoned. The area is crossed by a well-used and much-loved rural footpath which would be lost if it was subsequently urbanised. In any case the land at the west end of the plot slopes steeply to the brook and is unsuitable for building. There is currently no vehicular access to the area unless the RBC is to allow it through the Marl Pits car park, which would be unacceptable. A possible alternative use for this land, maintaining its greenfield status, would be as a campsite for tourists, with hard standings for touring caravans and pitches for tents. A dedicated domestic block close to the leisure centre would be acceptable; access could be through the leisure centre car park. An administrative office could be</p>

						established in the leisure centre itself, or as part of the domestic block. This type of facility is sorely needed in Rossendale if, as the RBC professes, the tourist industry is to be promoted and developed. The campsite could be administered and promoted as part of the Leisure Centre. - - Suggested Action. - I am well aware of the pressure applied by Central Government to the RBC to provide affordable and new dwellings. However, now that the target has been reduced by approximately 50% to 2,100, I urge the Council to abandon any proposals for land outwith the Urban Boundary and concentrate development on redundant buildings, brownfield and other former industrial sites. - - 19th September 2017 -		
690	William	Hutchinson	-	HS2.53, HS2.54, HS2.56, HS2.80, HS2.82, HS2.83, HS2.86	Not Applicable	The seven sites listed above are all within areas adjacent to Newchurch Road and the assumption can be reasonably made that future residents of the 228 units projected will use Newchurch Road as their principal access. This could account for in the region of an additional 450 vehicles regularly using what is already a very busy stretch of highway. Considerable numbers of pupils of nearby schools either walk or are brought in cars to the Newchurch Rd./Union St./Hurst Lane vicinity to make their way to these schools. The current volume of traffic makes it dangerous for these young people. Elderly residents find it increasingly difficult to cross Newchurch Rd. in this area because of the volume and speed of traffic. Whilst local residents in vehicles can experience danger and frequent difficulty when negotiating the roads and junctions for the same reasons. - In my opinion it should be a condition of any of the proposed development that 'traffic calming' measures must be implemented to protect the safety, convenience and general well-being of all who live in or pass through this location whether on foot, on cycles or in vehicles. To not do so will be doing all concerned a great disservice and will be a dereliction of the 'duty of care' which is incumbent on all who may be deliberating on these proposed developments. - In terms of such 'traffic calming': 'speed-bumps', lower speed limit, road narrowing with priority restrictions and advance warning signs would all be measures I would hope to see introduced.		No
872	Derek	Cropper	-		Object	The urban boundary was originally set where it is to protect this area of historic farmland and countryside. The reasons I am objecting to building on this site are: - 1.It would add considerably to the parking and access requirements already at Marl Pitts Sports Centre - 2. There would be the loss of a great local area which is currently used prolifically by walkers, runners, cyclists, etc. - 3. There are also concerns from residents with regard to the issues of drainage and flooding from the stream running through the land		no
1028	Yvette	Cairns	-		Object	I have objected on previous occasions to this plan, will they be taken into consideration, I submitted a petition also to council. - I object on the grounds of access to this field and also to the risk of flooding. - I also object as there is a risk of contamination due to hospital waste which I believe was dumped at Marl Pitts when it was used as a tip some years ago. - -		-

Object	<p>Observations on Proposed Local Plan for Rossendale. - - Having viewed the 2017 proposed Local Plan for Rossendale and discussing it with a member of the Planning Department at a recent local consultation meeting on Thursday 7th September, I feel obliged to make the following objections and following observations. - - Access. - There appears no have been no consideration of the extra traffic that the proposed developments will generate. From a personal point of view I am particularly concerned by those schemes in Rawtenstall, some requiring extending the Urban Boundary into the countryside, that are contiguous with and likely to be accessed from Newchurch Road. Principally these are: - - Dark Lane Football Ground, HS2.82 (58 Houses). - St Peters Road, Newchurch, HS2.86 (9 Houses). - Johnny Barn Farm, HS2.53 (30 Houses). - Land east of Johnny Barn Farm, HS2.54 (105 Houses) - Higher Cloughfold, HS2.58 (7 Houses). - West of Dobbin Lane, HS2.54 (27Houses). - Land at Conway Road, HS2.57 (5 Houses). - Land between Newchurch Road & Bacup Road, HS2.54 (55 Houses). - Hurst Platt, HS 2.56 (8 Houses). - Peel Street, Clough Fold, HS 2.84 (8 Houses) - - In addition the plan shows a proposal that Urban Boundary behind Marl Pits be moved north to Balladen Clough and although no actual figure or HS reference is given, a figure of 55 houses has been quoted informally in the past. - - Permission has recently been granted for two houses outside the existing Urban Boundary, in a greenfield site, (2015/0308). Although it appears that there is no intention to move the boundary to accommodate them. - - Potentially therefore there are 369 new houses planned that will have their main access via Newchurch Road. Assuming that each household has two cars (738 cars) each making just one trip out and one trip back each day (1476 daily journeys) for 323 days a year (allowing for six weeks holidays) this will be a minimum of 476,748 new car journeys along all or part of Newchurch Road each year. In addition there will be journeys generated by visitors, deliveries and services such as refuse collection. Newchurch Road, downhill from Marl Pits to Rawtenstall, will become exceptionally busy; entrance and exit from Union Street already difficult, will become virtually impossible; an intolerable situation. - - As long as I can remember (30 years or more) there have been problems with access to and from Chapel Hill via the Union Street /Newchurch Road Junction. In 1993, at the public enquiry into objections to the then proposed District Local Plan, it was noted that Rossendale Borough Council considered that Union Street was unsuitable and there were "... severe highway problems in the area" and "... that no additional traffic at all should be allowed to aggravate the situation". The Inspector, Mr D. Gill, added a comment to his ruling on Urban Boundary changes in the area, "... that the present arrangement (for traffic) is certainly below standard". - - None-the-less, over subsequent years, RBC has sanctioned further developments in the area including the making of a rear entrance to Alder Grange School with access via Union Street, which at</p>		I have not commented on individual sites as it is the effect that the sum of these sites will have on the traffic on Newchurch Road that is my concern.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.057	Further comment
						<p>peak periods has worsened the situation considerably, both for pedestrians using the narrow pavements and vehicles dropping off or collecting children. -</p> <p>There are real problems with access from Newchurch Road up Union Street onto Hurst Lane and onwards onto Chapel Hill. Union Street is a steep hill with residents parking which only allows one-way traffic the majority of the time. It is treacherous in winter conditions and at times only four-wheel drive vehicles can ascend; descent too can be extremely awkward when the road is icy. - -</p> <p>The exit from Union Street on to Newchurch Road has become increasingly difficult, as traffic has inexorably increased. There is limited visibility to the east and the road the west it is compromised by the bus stops on both sides and cars parked outside the convenience store. The latter obstruct the carriageway causing vehicles leaving Union Street and turning down Newchurch Road to travel some distance on the wrong side of the road, at times in the face of oncoming traffic. Cars entering from Newchurch Road are often blind to vehicles descending Union Street and this results in awkward maneuvering, with traffic on the main road impeded by cars waiting to ascend Union Street as a result. This is a particular problem for those cars entering Union Street from the east. - - - The single track available at the bottom end of Union Street as a result of residents' parking, can be blocked by vehicles which stop half way up to unload passengers or goods. 1466	C/o Agent	C/o Agent	A Sutcliffe and Company		Support	<p>Please refer to letter submitted: CONWAY ROAD, RAWTENSTALL</p> <p>Rossendale Borough Council (RBC) is preparing a new Local Plan which will guide the future planning and development of the area. This consultation is the first public consultation stage in the production of the Local Plan (Regulation 18) and includes the Draft Local Plan (Written Statement) and its accompanying Policies Map (including the 6 area maps) and the Infrastructure Delivery Plan.</p> <p>Hourigan Connolly is instructed by A Sutcliffe and Company to submit and provide comment on the above in relation to land at Conway Road, off Edge Lane. We have previously submitted representations in response to consultation relating to the Local Plan Part 2 in 2015 and subsequently the 'Call for Sites' exercise relating to the preparation of the new Local Plan in 2016.</p> <p>Along with this letter, we also submitted an electronic consultation form via the Council's website and this letter should be read in conjunction with the submitted form.</p> <p>Submissions</p> <p>We note that within the draft Local Plan land Conway Road, Rawtenstall has been included within the settlement boundary for Rawtenstall. The changes to the Urban Boundary to include the subject site are welcomed. It has been demonstrated that the site, when assessed against the Urban Boundary Assessment Criteria results in a positive conclusion where the development could contribute to sustainable development in the Borough. In addition, it has been shown, within our previous representations, that the development on the site would not have a severe impact on highway matters.</p> <p>In conclusion, we agree with the Council's draft Proposals to include the subject site within the urban boundary. The site is capable of being developed for residential development without causing harm to neighbouring amenity. We have requested that the Conservation Area Boundary in this location be amended to reflect that of the Cloughfold Conservation Area Appraisal which identified the following within the Townscape Appraisal Map (Appendix 1): Fig 1: Extract from Appendix 1 of the Cloughfold Conservation Area Appraisal. The subject site is edged in red (the full extent of the site is not included on the Appraisal Map).</p> <p>Having regard to the recommendations contained in the Conservation Appraisal, it is submitted that the Council should redraw the Draft Proposals Map to accurately reflect the revised Conservation Area boundary for Cloughfold.</p> <p>We reserve the right to provide further supporting statements and evidence during the preparation of the Plan process and ask that we continue to be informed as the Local Plan progresses.</p>		Please refer to letter submitted

779	Alison	Squire	-		Object	I wish to object to the above proposed sites for housing which are close to Newchurch Road on the grounds that: - i) increased traffic will be unacceptable on this main road through Rossendale - ii) erosion of greenfield sites instead of using brownfield sites in the Valley - iii) increased demand on already overloaded education and health services. - - As a resident of Waingate Village, I have objected several times to planning applications on a plot of land off Hurst Lane (Ref: 2015/0308) and am extremely displeased that this land has received planning approval despite it continuing to be beyond the Urban Boundary. There were no opportunities for local residents to raise further objections and no communications following approval having been given. I do not feel that the Council supported local residents and instead allowed developers greater importance. I am therefore worried that despite this opportunity to comment on the Local Plan, residents' opinions will not be taken into consideration. - - It appears that the Urban Boundary may be moved to Balladen Clough (a stream) to include a field behind Marl Pits road. An earlier application to build on this land was refused on the grounds of lack of road access. I hope that any future planning applications on this land will continue to be refused and the original Urban Boundary will remain in place. Any development on this land would further increase traffic onto Newchurch Road. - - Having witnessed the gridlock in Bank Street and Angouleme Way on Saturday I do wonder where the increased traffic from all the proposed new housing will go. I appreciate that it is National Government Policy to increase housing and that sites have to be found in the Valley but hope that more brownfield sites can be found, consideration of health and education demands and transport/traffic difficulties will be addressed before adopting the new Local Plan.

492	David	Nuttall	Residents and friends of Townsend Fold	RCGL(GB)5 and RCGL(GB)4	Object	<p>1. SHLAA16248 AND SHLAA16249 FORMERLY RCGL(GB)5 –ADDRESS HASLAM FARM, RAWTENSTALL</p> <p>Introduction</p> <p>This formal response was first prepared June 2013 in response to the green belt review being undertaken at that time and was submitted to Rossendale Borough Council August 2013. Although the current review has changed some of the original proposals for the green belt situated at either side of Duckworth Lane and goes some way to recognise some of the points raised in the original submission there remains strong support in the area to leave the Green Belt boundaries unchanged. Many of the comments made in the 2013 submission responded to the documents issued at the time however they remain valid where they support the continuation of the Green Belt. The new proposals which leave the land to the South of Duckworth lane inside the Green Belt represent a significant improvement and are supported by the local residents. In addition the evidence collected by Forward Planning supports the continuation of the Green Belt.</p> <p>The new proposals for land to the North of Duckworth lane also represent a substantial improvement over the former assessment and recognise the value of the area and its importance as a “stepping stone” site.</p> <p>During the 2013 consultations proposal emerged which accepted the boundary for continuation of the Green Belt as Duckworth lane as this provided a natural conduit to the Rossendale green areas with green field on both sides and a country lane taking visitors into picturesque countryside providing open views of the Rossendale valley. The residents of Townsend Fold remain of the opinion set down in the report submitted August 2013 that the area is a natural green oasis and enhances the approach into Rossendale seen by road and rail (a view openly supported by East Lancashire Light Railway Co Ltd at the time who have stated:</p> <p>”We would object most strongly to any development in that area on the basis that it will degrade considerably the visual aspect of what is currently an attractive semi-rural location” (The full comments are reproduced as Appendix “A”).</p> <p>The area is one of natural beauty and of continuing importance to the development of tourism in Rossendale. Any change of use would damage this key approach into Rossendale and would be an act of environmental vandalism impossible to reverse. It is accepted that there is pressure on local councils to meet housing development targets; however, there are many sites which would provide these opportunities without damaging further Rossendale’s landscape and natural beauty.</p> <p>The following is a restatement of the report submitted and although four years have passed the comments in support of retaining the green belt remains as valid today as they did when the report was originally compiled.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>The residents sincerely hope RBC will appreciate the comments made in the original report which was supported by a petition which eventually exceeded 1000 individuals.</p> <p>Whilst appreciating forward planning have already amended the original proposals it is understood that the natural beauty of the area is attractive to potential developers and this update based on the original review is being submitted to ensure the opinions of the local residents are not overlooked. We also take note of the Rossendale Green Belt Review 2016 in which Land parcel 25 which includes the land to the South of Duckworth lane was assessed. The conclusion was that:</p> <ul style="list-style-type: none"> • Purpose 1 – To check the unrestricted sprawl of large built up areas. Rating Strong • Purpose – 2 To prevent neighbouring towns merging into one another Rating Strong • Purpose 3 – To assist in the safeguarding of the countryside from encroachment Rating Strong <p>The conclusions reach in the Green Belt Review substantially support the opinion of the residents that the Green Belt should be retained and we support the recommendation of the various reports which supports this position.</p> <p>THE FOLLOWING SETS DOWN THE COMMENT MADE IN THE ORIGINAL SUBMISSION AUGUST 2013. IN SUPPORT OF RETAINING THE GREEN BELT AND ALTHOUGH PARTIALLY OVERTAKEN BY EVENTS REPRESENT THE STRONG SUPPORT FOR RETENTION OF THE GREEN BELT GREEN BELT BOUNDARY ASSESSMENT CRITERIA</p> <p>Rossendale forward planning made a series of observations as part of their green belt assessment criteria. This took the form of a series of questions against which were set the forward planning departments' response. The responses are considered as incomplete and in some instances do not reflect accurately the position "on the ground".</p> <p>The following Table sets down the questions included in the forward planning appraisal document and a series of responses which reflects the opinion of residents and visitors to the area: (please see table in original submission)</p> <p>GENERAL COMMENT</p> <p>The "Appraisal".</p> <p>"Site has no special ecological status or wider constraints. It reads as part of the urban area and has no special value as part of the Green Belt. While it is Greenfield land it would contribute to the housing supply in Rawtenstall which is a Core Strategy priority"</p> <p>The "Response"</p> <p>The area is rich in ecological habitat, with buttercup meadows and bluebell woodland. It is home to numerous wildlife including butterflies, insects, bats,</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>badgers deer and owls.</p> <p>It is part of the green belt not the urban area and provides a hugely important and historical green setting to the village of Townsend Fold, the heritage railway and the Irwell Sculpture Trail.</p> <p>Rosendale is not without land suitable for development it has many Brown field sites, and in addition, there are substantial areas of land graded as countryside. It is our understanding that development should first use existing Brown Sites, then Countryside and finally (supposedly as a very last resort when other sources are exhausted and there is an overwhelming need) consideration may be given to use of the green belt.</p> <p>It is clear that Rosendale has not reached saturation levels where it is necessary to reclassify green belt land.</p> <p>RCGL (GB) 4 –BEHIND K STEELS</p> <p>The Forward planning proposal is to take some land from the Green Belt and bring it into the Urban Boundary, to enable it to be developed in the future. It is claimed that the present boundary is very difficult to read on the ground and that the proposal would represent a more logical and defensible boundary.</p> <p>The Green Belt Boundary assessment Criteria raises the same questions already set out in RCGL (GB) 5 and the responses to the questions in RGL (GB) 5 can therefore be considered as equally applicable to RCGL (GB) 4.</p> <p>The area included in RCGL (GB) 4 is divided from the proposed changes set down in RCGL (GB) 5 by the East Lancashire Rail line. Apart from this it is a contiguous part of the Green area accessed via Duckworth Lane. The ELR Timetable front cover for 2013 illustrates the continuous nature of the Green area as the photograph shows both sides of the area under threat.</p> <p>The Summary of the Green Belt Assessment statement prepared by Forward Planning makes the claim that the present boundary is very difficult to read on the ground and is confusing. This statement is refuted as access to the area via the level crossing at the bottom of Duckworth lane is clearly visible with footpaths well marked providing open access to the wooded area, grassland and the Irwell River pathway. There has not been any evidence of the delineation of the boundary creating any confusion other than the statement made by the Forward Planning department.</p> <p>Additional Comment- Response to Potential Developers Proposals General Statement</p> <p>Our detailed response and opposition to the Forward Planning proposals to release land set down on RCGL (GB) 5 and RCGL (GB) 4 apply equally to any proposals made by developers to build on these Green Belt areas.</p> <p>Area proposed by forward planning to excluded from Green Belt under RCGL (GB) 5</p> <p>It is understood that the land area set down in RCGL (GB) 5 represents approximately 1.6 ha (3.95 acres) and is considered by Forward Planning as</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>potentially suitable for development of up to 72 dwellings.</p> <p>Additional Area proposed by Turley Associates to be excluded from the Green Belt</p> <p>Turley Associates, acting on behalf of Peel Holdings (Land and Property) Limited made a submission to Forward Planning by Email on the 28th November 2012. In this submission reference is made to additional land to the south of the proposed Green Belt release that they state they believe should also be taken out of the Green Belt. The additional area of 1.9 ha (4.7 acres) is shown on the development plan submitted by Turley Associates under their reference PEEM2067 and is part of their development framework document submitted on the 28th November 2012.</p> <p>Turley Associates claim that the combined site represents a “logical” rounding off of this part of the urban area of Rawtenstall.</p> <p>The claim made by Turley Associates is difficult to reconcile (for all the detailed reasons set out in this response document) and is considered totally inappropriate by local residents.</p> <p>The proposed extension of Green Belt release takes a large piece of additional land which parallels the ELR and extends the exiting urban boundary.</p> <p>The Green Belt Boundary Assessment Criteria item number 3 (c) prepared by Forward Planning states that the Forward Planning proposal would “reduce distance within urban area but not between urban area”.</p> <p>The proposals made in the Turley associates submission is a clear breach of Forward Planning proposals and, if adopted, would impact the existing urban boundary by reducing the distance between the urban areas.</p> <p>The removal of any of the land situated In the Haslam Farm or K Steel area from the Green Belt is considered to be unnecessary to support the Core strategy and the request by Turley Associates that an extra piece of land is included for removal from the Green Belt is considered unacceptable for the following reasons:</p> <ol style="list-style-type: none"> 1. Simply because an area has been chosen for review and forms part of a Core strategy proposal does not mean that there should be an automatic presumption that housing development will go ahead or the land will be removed from the Green Belt. The consultation process, if it is to have any validity, must take into account opposing points of view and in particular those of the people of Rossendale and especially those of local residents most affected by any changes. 2. The site is an area of green land which would no doubt be of prime interest to any developer as it is an area of natural beauty and therefore a particularly attractive proposition to a housing developer. However, this does not make the area an appropriate location to achieve an early boost to housing supply as by doing so it removes permanently an area of Green Belt which is of particular importance to the locality and prevents the very urban sprawl for which the Green belts were first established. 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>3. The site is approximately one mile from Rawtenstall town centre and local schools are within reach however their ability to cope with a substantial influx of pupils is questionable. The proposal by Turley Associates to build 155 dwellings in the enlarged area will severely test the road infrastructure especially at peak times. In addition, weather conditions during the winter months necessitate parking of cars (by local Residents) on Bury Road. (See photo gallery). There is a shortage of suitable space for this purpose and an increase in population to the area would simply exacerbate the problem. For these reasons the area is not as well related as is being suggested.</p> <p>4. It is claimed the enlarged site shares many of the characteristics of RCGL (GB) 5. It may do so in that it is part of a contiguous area of Green Belt land. This land is the first (or last) defence of the urban boundary which prevents the encroachment of urban sprawl into the remaining Green areas bringing with it the environmental damage referred to in this document.</p> <p>5. Turley Associates make the point that the SHLAA concluded that site RCGL (GB) 5 is “within a wider area of good desirability and within an immediate area of excellent desirability”.</p> <p>This statement absolutely supports the view of the community that the area is of particular importance in maintaining the integrity of Rossendale urban boundary and ensuring it remains of benefit to current and future visitors and residents of Rossendale.</p> <p>It seems clear from points made by Turley Associates that the economic value of the site is considered as the primary reasons for changing its status. It is hoped that Forward Planning and the Local Council will accept that an important decision relating to the maintenance of the Green Belt will not be made primarily on the basis of the economic argument presented by potential developers.</p> <p>6. It is claimed:</p> <ul style="list-style-type: none"> • The area is not in a sensitive landscape – this statement is contested on the grounds that the area is visited regularly by many groups who enjoy the proximity and access to the local natural landscape. • It is clear that a change of status from Green Belt to Urban Development land would lead to development similar to that proposed by Turley Associates which would have a major impact on the landscape and the visual character of the area. • The local area contains many habitats including woodland, grassland and has its own ecological system with an abundance of bird life. The adjacent woodlands provide sanctuary to a range of animals including small deer which would be adversely affected by development. • The development would place a severe strain on local road infrastructure. <p>7. The existing landscape represents an area of natural beauty and does not need enhancement by development and landscaping and is best left unchanged as a barrier against urban encroachment on limited green space.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>8. Turley Associates have also stated that:</p> <ul style="list-style-type: none"> • The site does not perform a strategic Green Belt function: this point is strongly disputed for the reasons stated in this document. • They claim the development would not result in encroachment into the wider countryside- it is clear that the development will remove Green Belt land from the countryside so is clearly an encroachment into the wider countryside. • They claim it would not result in urban sprawl or lead to the merger of separate settlements- The proposed development is an example of urban sprawl and with the addition of the area shown in Turley associates plan reference PEEM2067 reduces the gap between settlements. • They claim that the proposals would create a logical defensible long term green Belt boundary- The existing boundary has been perfectly defensible since its inception and there is no logical argument to suggest this would not be the case in the future. To claim that a development (as proposed) and change of use as is being proposed by forward planning would improve the defensibility of the boundary is not credible. <p>Conclusion</p> <p>The Development framework document pack submitted by Turley Associates is an attempt to provide justification for a substantial housing development on land designated as Green Belt. The arguments put forward are fundamentally for the benefit of the developer and do not take into account current use and the views of visitors and residents to the area or the visual impact upon a major gateway into Rossendale.</p> <p>Petition (Appendix "B")</p> <p>Included in support of our response to the proposals is a copy of a petition signed by more than 800 individuals who are strongly opposed to any changes to the green belt at Townsend Fold. (Full details will be made available to Rossendale Borough Council)</p> <p>General Summary</p> <p>This document has been prepared for submission to Rossendale Forward Planning department in response to the proposed change to the Green Belt at the Haslam Farm and K-Steel area of Townsend Fold. It sets down the objections to the proposals based upon a survey of the views of the residents and visitors to the area.</p> <p>The Residents and Friends of Townsend Fold Association are submitting these objections on behalf of the local community and all those parties who have shown support to the objectives of the association to protect Townsend Fold Green spaces.</p> <p>Appendix "A"</p> <p>Received by: greenbelt@townsend-fold.org.uk email dated 22nd May 2013</p> <p>Subject: Objection to revision to Green Belt</p> <p>Sirs</p>

----	-----------	---------	--------------	-----------------	-----------	---------	---------	-----------------

Would you please accept this email as the East Lancashire Railway's formal position regarding Rossendale Borough Council's proposals to revise the green belt boundaries in the Townsend Fold area.

We would object most strongly to any development in that area on the basis that it will degrade considerably the visual aspect of what is currently an attractive semi-rural location and one that provides a pleasant outlook for our visitors and customers. Indeed, the location provides an important backdrop for our prestigious evening dining train service which pauses in the vicinity to allow the service of the main meal during the journey to Rawtenstall.

The railway has previously suffered a degradation of the visual aspect in the area when the properties adjacent to the line in Holmeswood Park were built a few years ago and we would object most vigorously to any similar proposals that would result in a further worsening of the overall product offering for the ELR. Considering that the local authority is a key stakeholder in the railway and are pressing to improve the visitor experience in regard to the area and Rawtenstall in particular we would dare to suggest that the two issues are very much in conflict.

We wish you every success with the petition and are more than happy to help further with these objections, wherever we can be of assistance.

Kind regards

Andy Morris

PETITION

PROTECT ROSSENDALE GREEN BELT

I am signing this in support of the campaign to prevent changes to Townsend Fold green belt.

I confirm I do not think the changes proposed by Rossendale forward planning are acceptable and I do not believe there should be any change to the present boundaries.

588	Diana	Peacock			Object	<p>I am writing to complain about the proposed building of new houses and therefore removing our part of our dwindling Green Belt. The two sites in question that I am concerned about are at Haslam Farm, Townsend Fold and the proposals by Peel Holdings to remove our Green Belt south of Duckworth Lane.</p> <p>My husband and I moved to this area as it was a beautiful and a relatively quiet and safe area to live, my husband having severe health problems made this essential to his well being.</p> <p>Loss of Green Belt sites, when there are so many vacant Brown Field sites seems both unnecessary and short sighted. Green Belt areas promote a sense of well being for the inhabitants and should be respected by local councils not seen as a way to make money.</p>		
599	Kirsten	Broderick			Object	<p>Dear Rossendale Borough Council, I wish to object to you proposals to remove our green belt at Townsend fold under your reference Haslam Farm HS2.60 and Peel Holdings proposals to remove our green belt south of Duckworth Lane as part of the new plan because there are plenty of vacant brown field and previously developed sites which should be used instead of sacrificing our green belt as well as there being many empty dwellings and buildings suitable for conversion.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
601	Greg	Farrow			Object	<p>I am writing with regards to the above mentioned planning proposal to remove green belt status around Haslam Farm and build new "executive" housing.</p> <p>I am writing because I wish to object, strongly, to these plans. I consider them to be entirely inappropriate and unacceptable.</p> <p>There are several reasons why I do not agree with these plans:</p> <ul style="list-style-type: none"> • Green belt land is a legacy and CANNOT be built upon for short term gain and especially not for purposes which do not directly benefit existing and future residents of the borough. Building "Executive" homes for wealthy Manchester commuters does not benefit the existing residents. • The East Lancashire Railway is the most important and positive asset this borough has. To diminish it by permanently spoiling one of its fine views would be short sighted and callous. Not everything comes down to money and the green fields around Townsend Fold are a particularly unique treat when travelling on the railway. • The M66/A56 road link between the borough and Manchester is already operating ABOVE CAPACITY. To consider building even more housing without having already solved the existing problems would be negligent. Before further housing is built in Rossendale each of the following should have been resolved: <ul style="list-style-type: none"> o Increased road capacity by means of a full third lane on the existing M66/A56 between Rawtenstall and Bury. o Improved bus capacity between Rawtenstall and Manchester, Rawtenstall and Burnley. o Massive improvements to traffic flow in Rawtenstall town centre during rush hour, which is critically over capacity. o A rail or Metrolink link to Manchester to help take commuter traffic off the roads. <p>Whilst I am sure this project would appeal to those members of the council who are managing increasingly pressured budgets as it may produce a little extra revenue, I would urge you to refrain from short-termist solutions and consider the wider picture. This project would in no way solve the budget issues but would PERMANENTLY destroy a beautiful part of our borough - a terrible legacy to leave.</p> <p>I am dismayed to think that you are considering allowing an enormous company, such as Peel Holdings, to stamp all over our lovely Green belt fields and destroy our heritage and our legacy. I cannot stress enough how utterly unacceptable this proposal is and that I hope you are able to see your way to making the correct and ONLY responsible decision and REJECTING THIS APPLICATION WITHOUT HESITATION.</p> <p>I trust you will make the correct decision.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
602	Caroline	Farrow			Object	<p>I wish to strongly object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm, HS2.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth Lane as part of the new Local Plan.</p> <p>I consider them to be entirely inappropriate, unreasonable and unacceptable for our borough.</p> <p>There are several reasons these plans should not be permitted to go any further:</p> <ul style="list-style-type: none"> • Our Green Belt prevents urban sprawl and serves a local beauty spot for future generations and the character would be irreversibly eroded. • Our schools, doctors and roads are already at full capacity • The M66/A56 road link between the borough and Manchester is already operating above capacity and this existing problem must be addressed before any consideration of any further new development in the borough. • The East Lancashire Railway is a tremendous asset to the borough, not only in supporting local businesses but it brings with it a proud community spirit, destroying a Green Belt area would only benefit Peel Holdings and would permanently destroy the unique setting when travelling on the railway. This in turn would no doubt severely damage Rossendale's tourist industry and have a negative impact on our wonderful community. <p>The proposed development would destroy a beautiful part of our borough forever - a tragic legacy to leave.</p> <p>I trust you will make the correct decision and reject this application immediately as it is completely unreasonable.</p>		
603	Gabriella	Denn			Object	<p>I am writing to object to your proposals to remove the above field at Haslam Farm, Townsendfold from our Green Belt and re-designate the land for a housing estate</p> <p>because there are plenty of brownfield and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion.</p> <p>The loss of our green belt would harm the important setting of the East Lancashire Railway and damage Rossendale Tourist industry which brings jobs to the valley.</p> <p>Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations.</p>

730	Chris and Rita	Purnell			Object	<p>Email received 29.09.2017</p> <p>I wish to object to Peel Holdings proposal to add the removal of green belt status and adding this land to the urban boundary to your Rawtenstall local plan 2 for South of Duckworth Lane for the following reasons</p> <ol style="list-style-type: none"> 1. A large area of the land is densely wooded supporting wildlife and does include a number of TPOs. 2. Extensive infrastructure will be required as a large proportion of the area is very steep and wet and suffers from running water. 3. There are no sewers near the land at the lower level therefore extensive drainage will be required and is very much lower than the Haslam Farm site the access to the lower level would be a single track road only using part of Duckworth Lane, if Duckwoth lane is used as access gaining access onto bury road is very dangerous 4 The site backs onto a number of residential properties. 5 The lower part of the site site borders the EL Railway which is used as a stopping area for the dining carriages because of the natural beauty of the green area and the woodland views.. 6 There is a mine shaft abandoned in the early 1800's within close vicinity of the south boundary which could tunnel under the area . <p>finally development of this area would increase traffic on Bury road.</p> <p>Letter Received 09/10/2017: Dear Rossendale Borough Council, I wish to object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm, HS2.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth lane as part of the new local Plan because Reasons below:</p> <ul style="list-style-type: none"> - Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations. - Our schools. doctors and roads are already at full capacity. - There are plenty of vacant Brown Field and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion. - Loss of our Green Belt would harm the important setting of the East Lancashire Railway and damage Rossendale's Tourist Industry which brings jobs to the Valley. 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
742	Janis	Wilson			Object	<p>I am sending this email to strongly object to the current proposals for development of green belt fields around Duckworth Lane, and Haslam Farm area for the following reasons:</p> <ol style="list-style-type: none"> 1. This area has been a local beauty spot and should be preserved for future generations. 2. There is not enough infrastructure to support this amount of housing, schools, Medical care, available parking in bad weather. 3. This area floods dramatically in heavy rain. Bury Rd is a death trap, and is known locally as Coroners ally. Speeding traffic is terrible. I live on Horncliffe close and it is literally pot luck if you are able to turn right onto bury road as you cannot see what is coming and the speed they are travelling at due to the amount of inconsiderate parking, and quantity of vehicles parked on bury road. 4. In the winter months Bury road is worse as traffic from Horncliffe Cherry crescent and surrounding areas park on bury rd as they are unable to get down very steep roads which do not get gritted anymore, grit bins are always empty and are not large enough for us to grit ourselves. Should further homes be built down hill off bury rd they will have the exact same problem and will have no chance of getting up a steep hill onto bury rd. <p>Members of the planning group should travel up horncliffe close about 6pm and see how difficult and dangerous it is trying to turn left and right onto bury rd. Likewise turning left and right out of duckworth lane.</p> <p>Edenfield village is, I would suggest at crisis point with the amount of traffic travelling through the village, how the busses manage to get through is amazing. At the end of clayton avenue is a roofer who parks three large commercial vans outside his house parking right at the corner, this is so very dangerous and traffic coming down meets traffic coming up is a nightmare as someone has to reverse and the only car that can has to reverse onto bury rd, an illegal manoeuvre. Someone needs to look into this irrespective of new dwellings being built.</p>		
750	Stephen and Angela	Nicholls			Object	<p>Rossendale is already over crowded, roads, doctors, schools etc are full and no plans to improve these or build new ones will make for a poor quality of living for existing residents</p>

783	Lucinda	Dudarenko	-	Haslam Farm SHLAA 16248	Object	Regarding Green Belt Land at Haslam Farm Ref: H23 Townsend Fold - - Would you kindly consider my objections to the above land being removed from its present 'Green Belt' status. Whilst I am aware that you are obliged by a Government directive to build houses, I am also aware that there are lots of Brownfield sites available around the valley and I respectfully say these should be considered first before robbing people and the future generations of what little green space we have. This area in particular is, in my opinion, too small to be used for any other purpose than what it is used for namely 'it is grazing animals and a beautiful wildflower meadow. It has a plethora of wildlife (Hares, Bats, Rabbits, Foxes, Badgers and many different species of bird) All this would be lost if you closed this gateway into Rawtentall. - - Another major consideration would be logistics – namely entry and exit onto the site. The site on one side is too steep and the other side too narrow (and both ways Dangerous!!!) Parking on Bury Road especially in Winter is nigh on impossible, the first sign of frost and cars from the neighbouring hilly roads have to find space somewhere on Bury Road, if – as is proposed – 45 properties are build most of which would own one vehicle (maybe two) it would cause even more congestion on a massive scale. - - Schools places would also present a problem; it is a genuine concern for parents to find a place for existing children without adding to the situation with more youngsters to find places for. - - Visitors coming into Rawtenstall on the train (hopefully to spend money here) would I'm sure rather see the entrance to a lovely market town than a 'housing estate'. We have already lost out cottage hospital and what was replaced by the Asda monstrosity. If this goes on I fear for our cricket pitches. - - But seriously this small 'Green Belt' site at Haslam farm is like the lungs of the valley and should be left alone for everyone to enjoy.		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
784	Doris	Paul	-	Haslam Farm SHLAA 16248	Object	The land at site ref H23 Haslam farm is currently legally designated as 'Green Belt' and I feel very strongly that it should remain so. It is currently grazed by sheep and provides a good harvest of meadow hay at least twice a year. I is a haven for native wildlife and It provides a beautiful backdrop to the East Lancashire Railway and the Irwell Sculptor trail, it is, without doubt, a beautiful gateway into the valley. - - Whilst I appreciate the need for the expansion of housing stocks in the next decade it would be tragic to trade in the 'Green Belt' of our green and pleasant land. Lancashire (and Rawtenstall) as a backbone of the Industrial Revolution still has a more than adequate number of Ex Industrial/Brown field site to more than supply the required number of properties as laid down by central government directives before we sacrifice the 'Green Belt' sites which are the lungs of our communities. - - The site itself is very steep and surrounded by protected trees (over 100 years old!). I personally feel access will be an issue especially in the Winter months when Bury Road is already clogged with vehicles who cannot ascend the hills of the surround housing developments, I just fail to see how Townsend fold could cope with this extra traffic. - - There are certainly currently insufficient school places within the catchment area and the lack of local employment opportunies will only exacerbate the already congested motorway links into Manchester and the surrounding cities. -		
997	Charles	Smethurst	-	Haslem Farm Site Townsend Fold	Object	It would be wrong to sacrifice valuable Green Belt land for the provision of Rossendale's Housing needs when there is already so much Brown Belt land available to be built on. There are also large numbers of unoccupied properties which should be used before any Green Belt land is built on! - - I understand that Ilex Mill is currently 20% unoccupied....would it not make sense to first use such vacant accommodation, - - The site in question is also not sufficiently supported with the required local infrastructure to make it viable.		I feel aggrieved that having invested large amounts of time and expense in this very subject c 4 years ago it is now being run out again!

1524	Robert	Bulman	East Lancashire Light Railway Co Ltd		Object	<p>Presently, the land between the railway-line and Bury Road around Duckworth Lane is pleasant green sloping farmland. It is immediately adjacent to the ELR railway track. The existing view is sufficiently attractive such that our 'Dining with Distinction' evening diner-trains stop and wait there for some time, while diners enjoy their meal. The ELR diner-trains attract visitors from all over the region, being constantly rated top on 'TripAdvisor' of over 5,300 restaurants in Greater Manchester. Presently, this view over the grassy farmland area is the 'first impression' of Rossendale for many new visitors. It's also the last view they have of rural Rossendale before entering the built-up retail-park areas approaching Rawtenstall Station. If this parcel of green-belt at the southern tip of Rossendale were to become building-land development, then the planned rural-stop for our prestige diner-train would have to be made around the still-green scenic areas north of Ramsbottom, in Bury. - - The East Lancashire Railway is a huge tourist attraction for Rossendale, having almost 200,000 visitors annually. We strive to bring in visitors to Rossendale from the urban areas of Rochdale and Bury, hoping that many will return independently of the railway to enjoy the rugged scenery of the Valley. Heritage-tourism is a significant part Rossendale's economy and the ELR is core to that. - - The National Planning Policy Framework argues that "The fundamental aim of Green Belt policy is to prevent urban sprawl by, keeping land permanently open. The essential characteristics of the Green belt are their openness - and their permanence". Giving-up this parcel of green-belt, adjacent to one of the region's major tourist attractions, would be a clear statement by Rossendale BC as to their (lack of) priority for sustainable tourism.</p>		
1566	Anne	Hulme			Object	<p>I wish to object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm. H52.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth Lane as part of the new local Plan because:</p> <ul style="list-style-type: none"> - Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations. - Our schools, doctors and roads are already at full capacity. - There are plenty of vacant Brown Field and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion . - Loss of our Green Belt would harm the important setting of the East Lancashire Railway and damage Rossendale's Tourist industry which brings jobs to the Valley. <p>All the above are valid reasons for saying NO to this application for planning.</p>

1619	Michael	Onley	Planning Sense NW		Object	<p>(...)Clients fear cherry-picking of the most desirable sites. This is reflected in the abandonment of density target of 50+ dwellings per hectare appropriate to urban renewal [Rossendale Core Strategy policy 2, RBC 2011] in favour of a suburban 30+ figure [Rossendale Draft Local Plan policy HS5, RBC 2017]. Clients oppose planning blight upon precious greenfield sites such as achingly lovely meadows east of Johnny Barn (variously identified as HS2.53 and duplicated as HS2.54), and cinematic quality, rail-side pasture at Haslam Farm (HS2.60). Access and road safety concerns have been raised in respect of allocation HS2.86 (St Peter's School) - photos attached.</p> <p>(...)Draft policy HS2 and specifically the proposed allocations of sites HS2.54/54 (east of Johnny Barn, north of Newchurch Road) HS2.86 (St Peter's School) and HS2.60 (Haslam Farm) in respect of unnecessary greenfield allocations(...)</p>

1641	Bob	Crawford			Object	<p>I write to object to the development of the above parcels of land within Townsendfold and Edenfield on the basis of the following;</p> <ul style="list-style-type: none"> • At a high level the core strategy plan made reference in the 2010 consultation of the importance of the development of a rail commuter link to Manchester and the current core strategic objective number 1, SO1-makes reference to public transport improvements; • Both of these aspects therefore have to be considered vital to the sustainable development of the area; • By developing the land parcel within Townsendfold/Edenfield we immediately reduce at best or even potentially remove any future option for the communication corridor alongside the M66 to be able to accept a tramline or trainline enhance commuter system; • This strategic level error also does not support other strategic objectives such as S07-enhancement/protection of natural environment- we destroy the natural environment by developing houses on greenbelt land-removing soil/habitat/biodiversity which is vital to the ecosystem should we build on these landbanks; • We also do not include narrative that states we will deliver "no net loss of biodiversity" in the acceptance criteria for developments-therefore the commitment to such aspects in the plan is simply not strong enough or indeed well aligned between strategy and implementation plans; and • The plan states that we have 122 hectares (2008)-which is obviously not been fully developed in the period. The document states states some 300 brownfield sites have been considered but many have significant constraints (no details are supplied),which I consider to be insufficient information; and • By way of background I work for a business that deals with Sustainable Development (SD) and if we accepted such aspects without bringing new ideas and innovation to such projects on how to overcome the constraints, we would have no business. <p>I would suggest that the Council fully address such aspects in relation to the brownfield area before any amount of area of greenfield land is considered-no matter what pressure is on to provide additional affordable homes.</p> <p>I would equally suggest that the issues indicated with the current housing stock be tackled-even if it means private business money to improve the energy/carbon/quality aspect of the stock before more affordable homes are built. It is simple too easy to build more and not face the problem, head on. There are businesses out there that would consider funding and delivering such projects should the Council seek dialogue.</p> <p>I hope the feedback is considered in a positive light. It is not meant to be any criticism of the Council in any way.</p> <p>But to deliver ecological development of human ecosystems an approach known as the "Stadt-schaft principle" is best practice and I would recommend</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						that the Council consider such within the current approach to SD. Red, amber, green type assessments for SD as exhibited within the plan do not go far enough-even at outline levels. I am afraid to say I am unable to accept your development proposals.		
1688	Duncan	Lee			Object	Dear Rossendale Borough Council, I wish to object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm, HS2.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth lane as part of the new local Plan because: - Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations. - Our schools. doctors and roads are already at full capacity. - There are plenty of vacant Brown Field and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion. - Loss of our Green Belt would harm the important setting of the East Lancashire Railway and damage Rossendale's Tourist Industry which brings jobs to the Valley. At the current rate of urban sprawl Rawtenstall will end up as yet another suburb of Manchester!		
1689	M	Doherty			Object	Dear Rossendale Borough Council, I wish to object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm, HS2.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth lane as part of the new local Plan because: - Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations. - Our schools. doctors and roads are already at full capacity. - There are plenty of vacant Brown Field and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion. - Loss of our Green Belt would harm the important setting of the East Lancashire Railway and damage Rossendale's Tourist Industry which brings jobs to the Valley. We need affordable homes for Rossendalians NOT 'executive' homes for city commuters.

1712	Chris	Speechley			Object	Dear Rossendale Borough Council, I wish to object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm, HS2.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth lane as part of the new local Plan because: - Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations. - There are plenty of vacant Brown Field and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion.		
1713	Charlotte	Collins			Object	Dear Rossendale Borough Council, I wish to object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm, HS2.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth lane as part of the new local Plan because: - Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations. - Our schools. doctors and roads are already at full capacity. - There are plenty of vacant Brown Field and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion. - Loss of our Green Belt would harm the important setting of the East Lancashire Railway and damage Rossendale's Tourist Industry which brings jobs to the Valley.		
1714	Moira	Speechley			Object	Dear Rossendale Borough Council, I wish to object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm, HS2.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth lane as part of the new local Plan because: - Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations. - Our schools. doctors and roads are already at full capacity. - There are plenty of vacant Brown Field and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion. - Loss of our Green Belt would harm the important setting of the East Lancashire Railway and damage Rossendale's Tourist Industry which brings jobs to the Valley. I have concern about the water that runs off the hills - currently, the fields will absorb some of this. Once built upon, the water could rapidly go to the river and cause excess flow and damage to the banks etc.

1727	Sean	Collins			Object	<p>Dear Rossendale Borough Council, I wish to object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm, HS2.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth lane as part of the new local Plan because Reasons below:</p> <ul style="list-style-type: none"> - Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations. - Our schools. doctors and roads are already at full capacity. - There are plenty of vacant Brown Field and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion. - Loss of our Green Belt would harm the important setting of the East Lancashire Railway and damage Rossendale's Tourist Industry which brings jobs to the Valley. <p>Bury Road already has a traffic issue and speeding cars and poor parking. These extra houses and increased traffic will add to this. Many people use the Duckworth Lane as an entrance for a nice stroll, this is handy for locals to work dogs. This is a nice county walk and enhances well-being and helps to destress. This area is known for the beautiful views that can be seen from Bury Rd - Duckworth Lane. All communities need green space for relaxation. Relaxation - county strolls have a good health benefit. Duckworth Lane also forms part of regular and event running evens.</p> <p>The train spotters also use the access area for quiet trainspotting on the East Lancs Railway.</p> <p>The East Lancs Railway is a toursit attraction, if you read Trip Advisor many of the comments refer to the beautiful views and county feel to the trip. This will also be lost.</p> <p>Why destroy something of natural beauty that gives joy to not just locals but tourists when there are so many disused - falling down buildings which could be used for example Stand Football Club. This building is falling down and dabgerous and an eye sore. Also the house "Horncliffe" again abandoned except for squatters.</p>

1766			Peel Holdings (Land and Property) Ltd		Not Applicable	<p>1. Introduction</p> <p>1.1 This representation is prepared by Turley on behalf of our client Peel Holdings (Land & Property) Limited (hereafter “Peel” or “our client”). It provides comments to Rossendale Borough Council (RBC) in respect of the Rossendale Draft Local Plan1 (July 2017) (‘DLP’) which is currently the subject of public consultation.</p> <p>1.2 This document relates exclusively to the promotion of land at Haslam Farm, Rawtenstall, as a development opportunity. It should be considered in conjunction with the overarching representation submitted by Turley on behalf of Peel.</p> <p>Draft Rossendale Local Plan</p> <p>1.3 As set out in the overarching representation submitted, Peel has continuously and historically engaged with the plan-making process for Rossendale. This has included the submission of detailed representations to the previous Core Strategy and the draft Lives and Landscapes DPD (since withdrawn), including Development Frameworks that set out the development potential at four sites:</p> <ul style="list-style-type: none"> • Land at Kirkhill Avenue and Moorland Rise, Haslingden (allocated in part) • Land at Haslam Farm, Rawtenstall (allocated in part) • Land at Blackburn Road, Edenfield (allocated) • Land at Burnley Road, Edenfield (not allocated) <p>1.4 Peel welcomes the progress which has been made on the emerging Local Plan and supports, in principle, the proposals for development within it. In particular, Peel strongly supports the allocation of land at Kirkhill Avenue in Haslingden, Haslam Farm in Rawtenstall, and Blackburn Road in Edenfield, which include some or all of three of the sites previously put forward (as above).</p> <p>1.5 It is noted, however, that additional work is required to ensure that the emerging Local Plan is capable of meeting the full development needs of the Borough. Additional land will need to be allocated for residential development, above that which has been identified in the DLP.</p> <p>1.6 This opportunity is being taken to make representations in relation to the sites previously identified by Peel as capable of accommodating development in the Borough that have not been put forward in the DLP for allocation and/or Green Belt release. Peel is preparing updated Development Frameworks which will promote and justify its landholdings within Rossendale. Matters addressed below and in the overarching representation which directly affect its landholdings will be discussed in detail in each Development Framework.</p> <p>Additional Site Allocations</p> <p>1.7 In the context of the need for the Rossendale DLP to allocate additional land for development, Peel wish to reiterate the development opportunities at each of the four sites previously identified, as well as proposing a further</p>

						<p>potential site at Rossendale Golf Club.</p> <p>1.8 These sites can each provide a deliverable housing development site in sustainable locations adjoining existing settlements. Initial reviews of site constraints and opportunities, landscape and highways have indicated that there are no significant barriers to development.</p> <p>Development Frameworks</p> <p>1.9 Further site appraisals are being undertaken to inform updated Development Frameworks which will be provided to the Council in due course.</p> <p>1.10 The updated Development Frameworks will:</p> <ul style="list-style-type: none"> • Provide analysis of the site constraints and opportunities. • Where relevant provide details of the findings of further technical assessment (such as highways, flood risk, ground conditions). • Consider the key principles for development of the site. • Present a proposed site layout plan illustrating development parcels, access, landscaping, etc. • Comment on the economic benefits of development. • Address comments / observations made within the recently published evidence base for the emerging Local Plan. <p>Proposed Development Opportunities</p> <p>1.11 In advance of the full Development Frameworks, the individual site representations are submitted providing initial reviews of the development opportunities.</p> <p>1.12 The Sites are represented as follows:</p> <ul style="list-style-type: none"> • Land at Kirkhill Avenue and Moorland Rise, Haslingden • Land at Haslam Farm, Rawtenstall (this document) • Land at Blackburn Road, Edenfield • Land at Burnley Road, Edenfield • Land at Rossendale Golf Course, Helmshore <p>1.13 This representation relates to land at Haslam Farm and includes:</p> <ul style="list-style-type: none"> • Section 2: A description of the site and its location • Section 3: Details of the consideration of the site in the Strategic Housing Land Assessment (SHLAA)2 and a review of the planning policy context including the Draft Local Plan • Section 4: A Green Belt appraisal, commenting on the findings of the Green Belt Review • Section 5: Concluding comments <p>1.14 Peel would welcome discussions with RBC and other stakeholders regarding the emerging Local Plan and the merits of the sites promoted here for residential development.</p> <p>2. Opportunity Site</p> <p>Site Description</p> <p>2.1 The land at Haslam Farm is located to the west of Bury Road and is</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>surrounded by built development on three sides. An existing industrial estate forms the northern boundary of the site beyond which is an area of housing. Residential properties and a public house fronting Bury Road run along the eastern boundary with further housing to the east of Bury Road. The East Lancashire Railway line creates the western site boundary, with industrial buildings on the opposite side of the tracks.</p> <p>2.2 Duckworth Lane divides the two parts of the site. South of this lane is a detached residential property and an open field. The northern part of the site extends to 1.6 ha (3.95 acres); the southern part extends to 1.95 ha (4.82 acres).</p> <p>2.3 The site is located in a river valley – the River Irwell lies west of the site, along the western boundary of the adjacent industrial site. In the wider context, land rises steeply to the north west and south east.</p> <p>Local Facilities</p> <p>2.4 The site is c. 1.5 km south west of the town centre of Rawtenstall which provides a number of traditional town centres uses including a supermarket, national banks and building societies, dental surgery, high street chemist and a number of restaurants and bars.</p> <p>2.5 The Rawtenstall Balladen Community Primary School is the closest primary school to the site, located c. 0.75 km east of the site. All Saints Roman Catholic High School is c. 2.5 km west of the site.</p> <p>2.6 There are a total of 5 secondary schools and 19 primary schools within 5 km of the site.</p> <p>2.7 There are bus stops located on Bury Road, c. 150 m north and 150 m south of the site respectively. These stops are served by the half hourly 482 and 483 bus services, which connect the site with Bury in the south and Burnley and Bacup in the north. The nearest train station is located 12 km south of the site in Bury. The site is well placed to take advantage of the aspirational reintroduction of passenger services on the East Lancashire Railway line which passes the site.</p> <p>2.8 The site is also well connected to both the local and national highway, with the A56 west of the site (connected via the A662, 1 km north of the site) which connects to the M66 (3.3 km) leading to the M62 and M60 (19 km).</p> <p>3. Planning Policy Context</p> <p>Consideration in SHLAA</p> <p>3.1 The Draft Local Plan evidence base includes the 2017 Strategic Housing Land Availability Assessment (SHLAA), which aims to identify the land supply for housing within the administrative boundary of Rossendale within the next 15 years (2017 – 2032).</p> <p>3.2 The northern part of the Site (North of Duckworth Lane) is promoted in the SHLAA (Site Ref 16248). The SHLAA Site Assessment confirmed that it is a viable and achievable site for up to 21 homes in the short term (1-5 years).</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>Peel consider the site could accommodate 72 units. It is noted in the SHLAA that the site has a moderate gradient up to Bury Road and requires new vehicular access. An ecological impact assessment would be needed to assess the ecological function and biodiversity value of the site. The SHLAA yield has been reduced by 50% to allow protection of the habitat; although this has not been justified and the site could accommodate an increased number of units.</p> <p>3.3 The southern part of the Site (South of Duckworth Lane) is also promoted in the SHLAA (Site Ref 16249) as viable and achievable site for up to 37 homes in the medium to long term (6-10 years, 10+ years), once the following site constraints have been addressed:</p> <ul style="list-style-type: none"> • the new vehicular access is provided with a limited felling of trees, • the ecological impact assessment concludes that the site suitable for a residential development with appropriate mitigation, • the land contamination report does not find any contamination or if it does that it can be adequately remediated • there is no land instability in relation to the presence of a tunnel on the site. <p>Local Plan Part 2: Site Allocations and Development Management DPD</p> <p>3.4 The Draft LP Part 2 was withdrawn however, it is worth noting that the plan proposed to release and allocate the northern part of the site – comprising 1.6 ha of land north of Duckworth Lane, with an estimated yield of 45 dwellings – for residential development (site ref. H23). The southern part of the site was proposed to be retained within the Green Belt.</p> <p>Saved Policies</p> <p>3.5 As the Local Plan Part 2: Site Allocations and Development Management DPD” (LP Part 2) was not taken forward by Rossendale BC, in relation to site allocations and designations, the Proposals Map and Saved Policies³ remain relevant as part of the development plan.</p> <p>3.6 The Proposals Map identifies the Site as outside the Urban Boundary (Policy DS1) and in the Green Belt (Policy DS3)</p> <p>3.7 However, Policy 1 of the Core Strategy states that the Urban Boundary defined in Local Plan Saved Policy DS1 and the Green Belt boundary defined in Saved Policy DS3, will be reviewed and where necessary amended in the Site Allocations DPD. The reviews would take into account criteria set out in Policy 1 including:</p> <ul style="list-style-type: none"> • Where small scale selective rounding off of Green Belt boundaries would promote sustainable development opportunities. • An extension/amendment to the urban boundary would not adversely affect aspects of the natural environment. <p>3.8 Core Strategy Figure 15 identifies Rawtenstall as an area for Green Belt review.</p> <p>Rossendale Draft Local Plan</p> <p>3.9 As discussed in the overarching representation, the Draft Local Plan (DLP) recognises that some release of Green Belt land will be required to meet the</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>housing requirements and the NPPF requirement for the Council to maintain a 5 year land supply of deliverable sites (DLP, page 12).</p> <p>3.10 The evidence presented in the DLP indicates that 4,425 dwellings will need to be delivered over the period to 2034. Considering the under provision of 425 dwellings since the adoption of the Core Strategy and the potential land supply from non- Green Belt sources of 2,907 dwellings, there is a significant gap of approximately 1,518 dwellings.</p> <p>3.11 The DLP proposes areas for release from Green Belt, allowing for a delivery of a further 715 dwellings. It is therefore evident that the Green Belt releases proposed by the DLP need to be more than doubled - to accommodate 1,518 dwellings - if the emerging Local Plan is to be found sound.</p> <p>3.12 In relation to this Site specifically the DLP identifies the northern section of the site allocated for housing development under Policy HS2: Housing Site Allocations, identified as: – Site HS2.60 ‘Haslam Farm, north of Duckworth Lane’, site size 0.71ha, 21 units, delivery in 1-5 years.</p> <p>3.13 This allocation would bring the northern part of the Site within the Urban Boundary and effectively remove it from Green Belt. Policy SD2: Urban Boundaries directs all development within such boundaries ‘except where development specifically needs to be located within a countryside location and the development enhances the rural character of the area.’</p> <p>3.14 The southern part of the site remains within the Green Belt in the DLP. The DLP notes the NPPF requirement for the Council to maintain a 5 year land supply of deliverable sites that can meet housing needs. It recognises that some release of Green Belt land will be needed to meet this requirement (page 12) and a Green Belt review⁴ forms part of the evidence base for the DLP.</p> <p>3.15 As above, it is clear that there is a significant gap between the housing land supply identified in the DLP and the demand, which cannot be met by non-Green Belt sites alone.</p> <p>3.16 This housing allocation HS2.60 is wholly supported by Peel, but it is considered that the designation should be expanded to include the land to the south of Duckworth Lane. This would conclude a logical extension to the development plot which will offer the opportunity for a greater number of new dwellings in this sustainable location, without compromising the wider Green Belt to the south.</p> <p>3.17 The following section considers this in greater detail.</p> <p>4. Green Belt Appraisal</p> <p>4.1 The Site is currently designated as Green Belt. A Green Belt review⁵ (GBR) forms part of the evidence base for the DLP which has informed the plan’s proposed removal of the northern part of the Site from Green Belt (Site Ref.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>HS2.60). The DLP does not propose to release the southern part of the Site from Green Belt.</p> <p>4.2 The strategic purpose of this area of Green Belt, is to provide separation between Haslingden and Rawtenstall in the north from Edenfield to the south.</p> <p>4.3 The Site sits on the western side of the Green Belt to the south west of Rawtenstall. The northern part of the Site (north of Duckworth Lane) corresponds with GBR Parcel P21. The southern part of the Site forms the northern most tip of a linear parcel P25 that meets the settlement of Edenfield to the south.</p> <p>4.4 The GBR rates the contribution of the land parcel to the five Green Belt purposes.</p> <p>4.5 It is important to note at the outset that there are very clear and accepted exceptional circumstances which justify the release of significant amounts of land from the Green Belt to meet Rossendale’s housing and employment needs. All land within the current Green Belt, fulfils at least some aspects of Green Belt purposes. As such, it will not be possible to meet the identified housing needs of Rossendale without some impact on the Green Belt.</p> <p>4.6 It is also important to note when considering what land to release from the Green Belt to be clear that the “golden thread” which runs through plan making and decision taking is the achievement of sustainable development. The NPPF confirms this at paragraph 84 when it states that “...when drawing up or reviewing Green Belt boundaries local planning authorities should take account of the need to promote sustainable patterns of development...”. In considering the release of land from Green Belt it is therefore essential to consider what releases of land will achieve sustainable development while minimising the impacts on the purposes of Green Belt.</p> <p>Purpose 1: To check the unrestricted sprawl of large built-up areas</p> <p>4.7 The GBR identifies that this is not applicable to P21 as the parcel lies adjacent to Rawtenstall, which is not considered to be a ‘large built up area’.</p> <p>4.8 In relation to P25, the GBR considers that the parcel as a whole plays a strong role in checking the unrestricted urban sprawl from Edenfield which is part of the large built up Land south of Duckworth Lane (approximate) area of Ramsbottom/ Bury to the south. It is noted that there are a limited number of urbanising features within the parcel; these include a small number of isolated detached houses. The influence of these urbanising features is very limited with the parcel displaying a strong sense of openness. However, the A56 dual-carriageway defines the western boundary and detracts from the sense of openness in parts.</p> <p>4.9 It is considered that, in taking the northern section of the P25 parcel in isolation, this land is discrete from the wider Green Belt and could be released from Green Belt for development alongside the land to the north of Duckworth Lane without significant harm to this purpose. The site is contained</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>to the east and west by the railway and Bury Road, and a landscape boundary to the south could form a new permanent and defensible edge to the Green Belt. The remainder of P25 would continue to check the unrestricted sprawl of the built up area to the south.</p> <p>Purpose 2 - To prevent neighbouring towns merging into one another</p> <p>4.10 The GBR considers that the role of P21 in this respect is weak. It notes that the parcel has a limited visual or physical relationship with the neighbouring settlement of Haslingden. Although it forms a gap between the settlement area of Wood Top and the Riverside Business Park; these are both of urban areas from part of Rawtenstall so not relevant.</p> <p>4.11 Peel supports this assessment and is in agreement that the development of this land would fit within the settlement of Rawtenstall and would not merge this with Haslingden when considering P25. For P25 the contribution is classified as 'strong'. The GBR notes that the north of this parcel forms part of the settlement gap between Rawtenstall and Haslingden/ Helmshore, which are within close proximity (within 1km) at this point and have good intervisibility across the parcel.</p> <p>4.12 For this reason it - along with neighbouring parcels to the west - is noted as being of 'critical importance and plays an essential role in preventing the erosion of the visual and physical gap between the two settlement areas'. It is considered in the GBR that the parcel forms the majority of the gap between the settlements of Rawtenstall and Edenfield, where new urban development could lead to the perception of reducing the physical and visual gap between the neighbouring settlements.</p> <p>4.13 Peel disagrees with this assessment. The release of the Site from the Green Belt, as part of a distinct and contained extension to Rawtenstall, would not result in significant harm to the contribution of remaining Green Belt land to this purpose. Remaining Green Belt land would sufficiently separate Rawtenstall from towns to the west and south. Separation from encroachment to the west would be maintained by the physical barrier of the East Lancs railway and the river beyond.</p> <p>Purpose 3 - To assist in safeguarding the countryside from encroachment</p> <p>4.14 The GBR found that there is a sense of encroachment within the P21 parcel (north of Duckworth Lane) as a result of the visual influence of urban development which bounds the parcel on three sides and therefore it is weak in respect of this Green Belt purpose. The parcel is a single agricultural field associated with Haslam Farm; it that contains no urban development, but lacks a strong rural character or characteristics of the open countryside.</p> <p>4.15 Peel agrees with this assessment.</p> <p>4.16 In relation to P25, the contribution was considered by the GBR as 'strong', although urbanising features of the A56 at the western boundary and residential properties in the north gave a limited sense of encroachment. Despite this, the parcel was identified as clearly displaying the characteristics</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>of the open countryside; set within river valley landscape comprising pastoral farmland and is rural in character. The Green Belt designation in this parcel was considered to be making an important contribution to safeguarding of a large area of open countryside to the east from encroachment.</p> <p>4.17 As above, there is logic to the release of the Peel site at the northern part of the P25 parcel in response to the GBR. Whilst it is accepted that a large proportion of parcel P25 does make a contribution to the open countryside, the northern part is where more urbanising features have the greater impact and have the opportunity to form part of the developed area of Rawtenstall, whilst leaving the more open countryside intact.</p> <p>Purpose 4 - To preserve the setting and special character of historic towns</p> <p>4.18 The GBR recognised that neither P21 nor P25 made any contribution to this purpose. As, in practice it would not be visible from the historic settlement area of Rawtenstall Town Centre (P21 and 25) or Ramsbottom (P25). The openness of the land within the parcels was not considered to be important to setting or historic significance.</p> <p>4.19 Peel agrees with this assessment.</p> <p>Purpose 5 - Assist in urban regeneration by encouraging the recycling of derelict and other urban land</p> <p>4.20 The GBR notes that all parcels make an equally significant contribution to this purpose.</p> <p>4.21 The DLP proposes to optimise the re-use of brownfield sites to meet development needs and in doing so support ongoing urban regeneration.</p> <p>4.22 As noted above, and in the overarching representation, the supply of deliverable brownfield land is insufficient to deliver the number and type of new homes and employment land required. As such, the extent of urban regeneration which can be achieved is not enough to meet Rossendale's sustainable growth needs and must be accompanied by development on Green Belt land. Exceptional circumstances to justify Green Belt release have been proven through the Greater Manchester Spatial Framework. The release of land from the Green Belt will not therefore undermine this purpose.</p> <p>Green Belt Appraisal Conclusion</p> <p>4.23 The strategic purpose of this area of Green Belt is to provide separation between Haslingden and Rawtenstall in the north from Edenfield to the south (with Ramsbottom/ Bury urban area beyond).</p> <p>4.24 Release of the entire site from Green Belt and allocation for housing would allow for a distinct and compact extension to Rawtenstall, which would not result in significant harm to the Green Belt. Green Belt land to the south, which has a greater value in maintaining openness and land of countryside character and in separating Rawtenstall from the towns to the south, would remain. The site has no bearing on historic towns.</p> <p>4.25 It is considered the Site is suitable for development and is in a highly</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>sustainable location. Its release from Green Belt will therefore contribute to a sustainable pattern of development which makes the most of proximity to nearby highway infrastructure. There are therefore clear exceptional circumstances to justify its release from the Green Belt as shown, in part, within the DLP.</p> <p>4.26 Peel strongly supports the allocation of the northern land and recommends the Council allocate the southern land to ensure sufficient land is allocated to support the housing needs of the borough.</p> <p>5. Conclusion</p> <p>5.1 In relation to Peel's land interests in the Borough, this document concerns one of four sites which have been subject of previous Development Frameworks and representations in the context of the Local Plan development. Updates to these frameworks will be provided to RBC in due course, setting out a clear vision and proposals for the development of these sites.</p> <p>5.2 This representation provides an initial review of the development opportunity at Haslam Farm, including details of the site and its location, consideration of the site in the Strategic Housing Land Assessment (SHLAA) and planning policy; and a Green Belt appraisal, commenting on the findings of the Green Belt Review which forms part of the evidence base to the DLP</p> <p>5.3 Peel would welcome discussions with RBC and other stakeholders regarding the emerging Local Plan and the merits of the sites promoted for residential development.</p> <p>5.4 The northern part of the Haslam Farm site has been allocated for housing development in the DLP. Peel strongly supports this allocation.</p> <p>5.5 The SHLAA identifies the remainder as having potential for development in 6-10 years subject to addressing site constraints. The Green Belt Assessment has included this land within a far larger plot extending to the south. The land to the south has a greater value in Green Belt terms, and considering the Peel site in isolation, release for development would not have a significant impact on the Green Belt. Peel supports the SHLAA conclusion and considers that the site should be included as an allocation in the DLP to meet the Borough's housing needs. The updated Development Framework to follow this representation will further illustrate the opportunity for a comprehensive development at Haslam Farm.</p> <p>5.6 Peel requests the designation of land at Haslam Farm in its entirety as a housing allocation.</p> <p>Please see appendix</p>

1777	Adam	Brennan	United Utilities		Not Applicable	<p>HS2.60 – Haslam Farm, north of Duckworth Lane</p> <p>United Utilities has various water and wastewater infrastructure assets through this site including significant water infrastructure with associated easements. All UU assets will need to be afforded due regard in the masterplanning process and you should be aware that complications could arise as the infrastructure passes straight through the site, which may impact future layout proposal or reduce the developable area.</p> <p>As this site has a timescale in the plan of 1-5 years, we would require early consultation due to the engineering difficulties that could be encountered.</p>		
1804	Anne Ruth	Graham			Object	<p>Dear Rossendale Borough Council, I wish to object to your proposals to remove our Green Belt at Townsend Fold under your reference Haslam Farm, HS2.60 and Peel Holdings proposals to remove our Green Belt south of Duckworth lane as part of the new local Plan because:</p> <ul style="list-style-type: none"> - Our Green Belt prevents urban sprawl and saves a local beauty spot for future generations. - Our schools, doctors and roads are already at full capacity. - There are plenty of vacant Brown Field and previously developed sites which should be used instead of sacrificing our Green Belt as well as there being many empty dwellings and buildings suitable for conversion. - Loss of our Green Belt would harm the important setting of the East Lancashire Railway and damage Rossendale's Tourist Industry which brings jobs to the Valley. <p>It would also affect the number of walkers who regularly visit the area and affect the wildlife. Our roads are also congested and dangerous.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
1810	Alan and Beatrice	Stocks		Haslam Farm	Object	<p>We welcome the Council's plan to maintain the Green Belt status of the land immediately to the south of Duckworth Lane, notwithstanding the attempts of Peel Holdings to have the land designated for housing. We own a very small part of this land, which contains many wild flower species including several self-seeded orchids. However, we must express our strong opposition to the proposed removal from the Green Belt of the Haslam Farm land to the north of Duckworth Lane. The following points are advanced in the hope that the Council will maintain the status quo:-</p> <ol style="list-style-type: none"> 1. Duckworth Lane itself provides an attractive and much used route between Bury Road and - across the East Lancashire Railway - the riverside footpath along the bank of the Irwell. It is popular, not only with walkers and joggers but with naturalists, photographers and steam railway enthusiasts. Any substantial housing development to the north of Duckworth Lane is bound inevitably to detract from this rural amenity provided through open countryside. 2. The sub-rural views afforded to travellers on the E.L.R. as trains approach and leave Rawtenstall at slow speed would become decidedly sub-urban should the proposed development take place. The E.L.R. is a steam heritage railway which, since its restoration and subsequent re- opening in the early 1990ies, has been a large component in the Valley's efforts to attract tourist business. 3. It is legitimate to query the alleged need for so much Green Belt development, for several reasons. Rossendale still has plenty of brownfield land and derelict properties (e.g., how much longer will it be before the derelict Horse & Jockey pub at Edenfield is demolished and the site developed?). On Bury Road itself the truly magnificent Horncliffe House is going to rack and ruin when it could be turned into a number of superb period apartments. One could go on. It is understood that Rossendale's current domestic property non-occupancy rate is considerably higher than the national average. The paucity of employment opportunities in the borough is well known to anyone glancing through the situations vacant columns of the local Rossendale Free Press. Without decent jobs to go to, what sort of people are likely to be attracted to the borough, however many houses we build? 4. So far as Bury Road is concerned, traffic volumes - especially at rush hour periods or as a result of any M66/A56 closures - are growing all the time. The proposed Haslam Farm development will merely augment the problem, wherever the vehicular access to it is located. The old Townsendfold Chapel site is rumoured to be the favoured option. Such an access would inevitably involve an uncomfortably steep descent from Bury Road. Should the 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.060	Further comment
						<p>access be via the area of Haslam Farm itself, the problems will be nearly as bad. Further traffic will of course be generated by the proposed housing developments elsewhere, especially those in the Edenfield area. In winter all these traffic problems will be exacerbated, since residents living off Bury Road understandably tend to park on Bury Road whenever ice and snow are forecast. This is because most of the side roads feeding onto Bury Road involve ascents or descents of varying gradients.</p> <p>THE WORST CASE SCENARIO</p> <p>If the worst comes to the worst and the Haslam Farm land is removed from the Green Belt, we recommend that serious consideration be given to a number of proposals designed to mitigate a few of the appalling effects of such a decision. The new houses must be quality builds commensurate with the character of this part of the borough. Holmeswood Park immediately to the north of Haslam Farm is a good example of the type of development which should be aimed at, though use of considerably more real local stone would help to enhance the attractiveness of the houses. New green screening along the north side of Duckworth Lane is vital and should be interrupted only by a well designed pedestrian access to the lane. Preservation orders should be used to protect most, if not all, of the fine mature trees in Duckworth Lane. The provision of traffic lights where Bury Road joins Rawtenstall's Fire Station roundabout must be a sine qua non, preferably in advance of the commencement of building works. It is astonishing to many present residents that this has not been done already, especially since the recent construction of the MacDonald's access road has made a bad situation even worse. Unless lights are provided there is no doubt that sooner or later there will be a dreadful accident at this roundabout. Bury Road is not only a major road but it also carries several bus routes. Driving safely into the roundabout is becoming more and more of a nightmare, especially at peak times. From Bury Road no fewer than three lanes must be crossed in order to access the town centre. In view of the race track speeds indulged in by some drivers and motor cyclists along Bury Road (in both directions), the speed limit along the whole length from Edenfield to Rawtenstall should be reduced to 30 m.p.h and effective speed cameras should be installed. In the past there have been serious accidents on this stretch, including one immediately outside our house: the latter involved not only damage to the property but the death of a completely innocent pedestrian. Finally, close scrutiny will need to be given to all the infrastructure implications. It will not simply be a question of providing a few extra drains and street lights - the additional pressures on local schools, medical facilities</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.062	Further comment
1624	Michael	Gildert	Peter Brett Associates LLP	Former Hospital	Not Applicable	<p>Thank you for the opportunity to submit comments as part of the consultation on the draft Rossendale Local Plan.</p> <p>As you are aware, we act for Hurstwood Holdings and have been promoting various sites in Rossendale as part of the consultation process on the new Local Plan. In June 2013, in response to the Green Belt and Urban Boundary Review consultation, we submitted a range of detailed development framework reports setting out how sites at Johnny Barn Close, Union Road and Hurst Lane could be sustainably delivered to provide much-needed new housing in the Borough.</p> <p>We followed up this work with a series of meetings with the Council and subsequently submitted two planning applications for the sites at Johnny Barn Close and Hurst Lane, together with a full set of supporting technical reports that demonstrate the suitability of these sites for development. The land at Hurst Lane now has planning permission for two dwellings (Ref: 2015/0308, granted on 22 June 2017). In September 2015 we also submitted further comments to the 'Local Plan Part 2: Site Allocations and Development Management Policies' document. This document was then abandoned in favour of the production of a new Local Plan, which is the subject of this consultation.</p> <p>We would therefore like to offer the following comments in relation to the new draft Local Plan, insofar as it relates to the land in control of our client at Johnny Barn Close and Union Road. We note at the outset that the Council is proposing to allocate the Johnny Barn Close site for housing (Ref: HS2.53), but only a limited part of the Union Road site (Ref: HS2.62).</p> <p>(...)</p> <p>HS2.62 – Former Hospital, Haslingden Road</p> <p>The previous draft 'Local Plan Part 2: Site Allocations and Development Management Policies' document included land behind the former hospital site off Union Road for residential development (ref: H27). The was proposing to remove this land from the Green Belt and bring it within the urban boundary, reflecting its proximity to the major developed site and the very limited impact this would have on the openness of the wider Green Belt in this location. The draft Local Plan anticipated the delivery of approximately 66 houses across the site, albeit in the middle part of the plan period (years 6-10). This was informed by the landscape and visual assessment undertaken by Penny Bennett Landscape Architects (February 2015), who concluded that the site was suitable for development with mitigation.</p> <p>Although it is difficult to decipher clearly from some of the published plans, it would now appear that only the extreme western part of this site is proposed for allocation as part of HS2.62, which also covers land outside our client's ownership. The remainder of the land is proposed to stay within the Green Belt. We are extremely concerned about this unexpected and unjustified</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.062	Further comment
						<p>change to the status of the Union Road site, and we must therefore object strongly to this part of the draft Local Plan.</p> <p>We previously supported the Council's decision to remove this land from the Green Belt, which corresponded with our previous representations and robust assessment that the site is performing a very limited Green Belt function. This land represents one of the most appropriate locations for the release of Green Belt, and this is clearly required to meet some of the development needs of the Borough. This accords with the Council's own published evidence base, whereby the site was assessed as part of 'Land Parcel 14' in the Green Belt Assessment (LUC, November 2016) as performing as follows:</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Purpose 1 – not applicable <input checked="" type="checkbox"/> Purpose 2 – strong <input checked="" type="checkbox"/> Purpose 3 – weak <input checked="" type="checkbox"/> Purpose 4 – no contribution <input checked="" type="checkbox"/> Purpose 5 – equally significant with all other parcels <p>The site was therefore found to perform a 'strong' function against only one of the five purposes of the Green Belt. The site was otherwise assessed to make either a weak or no contribution against two of the other purposes. One purpose was not applicable, and the assessment against the fifth purpose is the same for all sites and therefore this land fares no better or worse than others.</p> <p>The site was also assessed in the Strategic Housing Land Availability Assessment (SHLAA, May 2017) under site Ref: SHLAA16318 ('Kirkhill Rise (C), Land behind Hospital site, Rawtenstall). This concluded that the land is available, viable and suitable for residential development in the medium term. However, we also note that the site has recently been identified as a 'Wetland and Heath Stepping Stone Habitat', and that the area available for development was reduced by 50 per cent to protect part of the habitat. Firstly, we have serious concerns about the transparency of this designation – as far as we are aware there has been no published evidence to support this, or opportunity for our client to challenge the designation. Secondly, the SHLAA only reduces the site capacity by half, and does not suggest the entire site should be ruled out on this basis. With this in mind, there is no good reason why the Council should remove this previously proposed housing allocation in almost its entirety.</p> <p>Furthermore, we also question the decision not to extend the urban boundary around the wider former hospital site, which is now largely redeveloped for housing. This land is performing none of the Green Belt purposes following its redevelopment, and therefore we cannot understand why the Council has not taken this opportunity to propose a sensible amendment to the urban boundary to reflect the new extent of the built up area in this location.</p> <p>We would therefore request that the Council reconsiders its approach to this site, and reverts back to allocating the Union Road site as it did in the previous</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.062	Further comment
						<p>draft 'Local Plan Part 2'. To be clear, we consider that the Council should extend the urban boundary to include the former hospital site and the land to the rear in control of our client. The Council has previously recognised that the site is suitable for development, and we maintain that the site can accommodate a high quality scheme that will sit alongside the current development on the former hospital site. We also previously emphasised that the site is fully deliverable in the early stages of the plan period with confirmed market interest, and would like to take this opportunity to reiterate these points. This site is capable of making a genuine contribution towards meeting the housing requirements in the Borough and its inclusion will help ensure that the plan is robust and sound.</p> <p>We trust that these comments are helpful and will be taken into consideration. Please contact me if you require any further information, and in the meantime we trust that we will be kept informed of the next steps in the preparation of the Local Plan.</p>

Reference		HS2.064		Land at Oakenhead Wood				

319	Andrea	Cappelli	-		Not Applicable	<p>If the above housing sites are agreed then the following areas need to be addressed: - 1. Access to the sites and car parking space. Haslingden Old Road is already a very busy road especially in the mornings and evenings and when the schools finish for the day. Traffic is often queued back to where these sites are identified and more traffic will have an impact on this as well as on the access to and from Schofield Road. It is already difficult to move on and off local driveways at these times and can take upwards of 10 minutes for there to be a gap in the queue because of the quantity of vehicles and the traffic lights at the bottom of the hill. Sometimes it is not possible to enter or reverse into the driveways across from the schools because of the number of cars blocking the road. - 2. Despite being on a hill when there is heavy rain there have been occasions when the descending driveways of the houses at the lower end of Haslingden Old Road have taken the brunt of the overflow from the drains on the road. More housing, even further up the hill, is likely to create a situation where there is less land to absorb the water flow from the hills resulting in more water passing down the hill bypassing drains that are already struggling to cope and entering drive ways and possibly homes.</p>		<p>Whilst it is clear that more housing is necessary a priority must be to look at the infrastructure to support this. The roads and traffic flow is already a significant problem throughout the valley owing to the limited number of alternative routes.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.064	Further comment
814	Andrew	Marwood	N/A		Object	I strongly object that this site is included within the draft local plan for Rossendale. - - I enjoy walking in and around the Rossendale area and have done for many years - this site is bordered by two public rights of way which I use to gain access to Oakenhead Wood / Cribden End and Cribden Hill beyond. I believe this site and proposal to expand the urban boundary further into this rural landscape will erode the green space which is vital to both the local community and for recreational purposes. - - Currently the land and bordering public rights of way are protected in planning by the fact that they are designated as 'greenfield'. I am concerned that by including this plot so that it is within the urban boundary it will mean that the site is no longer acknowledged for its importance to the areas local character. - - There are a number of references to this area to promote tourism and recreation. Development of this plot will have a detrimental impact on being able to promote walking in this area, both during any construction period and following the sites completion. From starting a walk in Whitaker Park you only have to cross Haslingden Old Road to then use the path via Cribden view / Old Hall Barn - any housing development and associated access road would mean the rural feel to this walk is reduced. - - I am in favour of sustainable development on existing brownfield sites to address housing shortages but am strongly opposed to the movement of the urban boundary specifically in this location as part of the local plan.		-
1255	matthew	Waddington	-		Object	THERE IS NO SUITABLE ACCESS. - HASLINGDEN OLD ROAD IS GRIDLOCKED AT PEAK TIMES WITH TRAFFIC QUEUES FROM SKI SLOPE TO BURNLEY ROAD.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.064	Further comment
1314	Rebecca	Coombes	-		Object	<p>I strongly object to this site being included in the proposed local plan. - I live on Haslingden Old Road and regularly use the public right of way which allows access to Oakenhead Wood and further footpaths within the local area. I believe the Council should be protecting these footpaths and the adjacent rural landscape so that they can be enjoyed both by the local community and people who visit Rawtenstall. - By proposing to extend the urban boundary in this location and therefore creating an overall larger urban conurbation, I feel the Council are diminishing local cultural identity. I consider any proposed development on this land to be unnecessary and inappropriate, as this currently is an open 'greenfield' site which links to the green belt and important recreational land / farmland. Once converted to be within the urban boundary this land will no longer be protected and strictly controlled by planning regulations. In July 2014 the Council released the document 'Rossendale Local Plan Part 2, Lives and Landscapes' in this document it states on page 2: - 'The countryside around the settlements of Rossendale is highly valued and provides not just a setting for the urban areas but an important recreational resource, which has tourism value'. - Also Appendix A2 (criteria for Urban Boundary Changes): - 'Land will be considered for inclusion where; b) it would not adversely affect aspects of the natural environment unless it is capable of full mitigation, and e) it is capable of being developed without a significant adverse impact on local views and viewpoints, including where appropriate the use of appropriate mitigation measures'. - Also Appendix A2 point 3: - 'Open land on the edge of existing settlements will be excluded from the urban boundary where it has existing recreational or community value to ensure it remains undeveloped' - Inclusion of this land would therefore not be in keeping with the criteria set out in this document and further erode valuable green community land and recreational space. - To gain access to the site it is suggested by the Council's assessment sheets (Ref: SHLAA16229) that the access/egress, which is a public right of way, be widened. This I feel would further diminish the rural character of the area. The cobbled lane would be lost and adjacent farm buildings / existing house potentially demolished to provide an adequately wide highway, which meets the requirements for visibility from the Council's highway department. Any road to the site would also impact on the open countryside feel which starts behind the current row of houses on Haslingden Old Road. - The assessment form, referenced above also provides information on access to local services and amenities. As there is currently only a very infrequent (1 an hour, number 11 bus service) it is likely that the main transport use will be by private vehicle. This therefore makes access to and from the site by sustainable travel a problem and increases cumulatively (together with the adjacent site) vehicle trips on to Haslingden Old Road. - Crashmap.co.uk indicates there have been 8 accidents (1 serious, 7 slight since 2010) in close proximity to the proposed site entrance – adding</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.064	Further comment
						further trips by private vehicle into this location is therefore likely to also add to this poor safety record. - In summary I propose the Council removes this site from the local plan so that it can continue to be enjoyed by the local community, visitors to Rawtenstall and future generations as the 'greenfield' site it has always been and not absorbed by the urban boundary and any future development. -		
1437	Joanne	Finn	-		Object	I object to the proposed allocation of this site as housing land as it is what I consider to be within the countryside outside the urban boundary and so I also object to the redrawing of the urban boundary to include this. Aside from the potential access difficulties of this site it's development along with the proposed housing site to the rear of 173 to 187 Haslingden Old Road would put considerably more traffic onto Haslingden Old Road and cause potential accidents due to the lack of visibility onto the road and the speed at which traffic flows along it.		I'm not sure that this is the right place to put it but I'd also like to comment on the Consultation process for this and plans etc including Lives and Landscapes .Whilst I'm sure you will comply with the legal minimum requirements Most people I spoke to didn't know about the Consultation we only found about because a neighbour knew there was a proposal for the field but didn't know the process. We've found out about things retrospectively in the past. People generally feel this is deliberate to minimise likelihood of objections. I'd expect it to be better advertised, including more often in the local paper and on the front page on your website. Even knowing of it's existence you have to hunt to find it on the website.
1820	Kelly	Holt	Lancashire County Council		Object	HS2.64 - Vehicular access to Haslingden Old Road between 203 – 205 is unsuitable to accommodate the development traffic due to its narrow width and limited visibility splay onto Haslingden Old Road. The existing access between 191 – 193 is unsuitable for the same reasons

319	Andrea	Cappelli	-		Not Applicable	<p>If the above housing sites are agreed then the following areas need to be addressed: -</p> <p>1. Access to the sites and car parking space. Haslingden Old Road is already a very busy road especially in the mornings and evenings and when the schools finish for the day. Traffic is often queued back to where these sites are identified and more traffic will have an impact on this as well as on the access to and from Schofield Road. It is already difficult to move on and off local driveways at these times and can take upwards of 10 minutes for there to be a gap in the queue because of the quantity of vehicles and the traffic lights at the bottom of the hill. Sometimes it is not possible to enter or reverse into the driveways across from the schools because of the number of cars blocking the road.</p> <p>2. Despite being on a hill when there is heavy rain there have been occasions when the descending driveways of the houses at the lower end of Haslingden Old Road have taken the brunt of the overflow from the drains on the road. More housing, even further up the hill, is likely to create a situation where there is less land to absorb the water flow from the hills resulting in more water passing down the hill bypassing drains that are already struggling to cope and entering drive ways and possibly homes.</p>		<p>Whilst it is clear that more housing is necessary a priority must be to look at the infrastructure to support this. The roads and traffic flow is already a significant problem throughout the valley owing to the limited number of alternative routes.</p>
480	John	Grady		SHLAA16227	Not Applicable	<p>Re Document SHLAA 16227</p> <p>The land behind 173 to 187 Haslingden Old Road</p> <p>I would like to point out some incorrect statements in the above document as follows:-</p> <p>1. Topography: the report states the land is a "flat site or very gentle slope" when in fact a large part of the land is of a steep slope 1:4 according to the ordinance survey maps.</p> <p>2. Landscape value: the landscape impact would be High as stated in your own landscape assessment as referenced in the above document.</p> <p>I would also like to seek clarification as to the current land use being described as "grassland" as the field has and is currently used for the grazing of sheep and cattle as well as lambing and calving.</p> <p>Further to this I should also raise problems that have started to arise re the drop in water pressure which at various times of the day are now below the required minimum and have been decreasing. More houses in the immediate area would clearly add to this problem. This problem is being taken up with United Utilities.</p> <p>It would be appreciated if you would advise me of the outcomes/developments of the document SHLAA 16227</p> <p>Regards</p>

787	Ian	Stanney	-	SHLAA16227	Object	<p>I object to the construction of housing on the above site for the following reasons - . - The land slopes considerably in two directions. - The land is seriously waterlogged . - Their is no easy access and any access would have to be onto Haslingden Old Road which is conjested several times a day from Burnley Road and beyond Schofield Road , Drainage and underground services would put a greater strain on an already over stretched service. -</p> <p>Submitted 03/10/17: This site slopes in 2 directions and is completely water-logged. I would suggest this could be of great expense to rectify, but I would be more concerned as to where the land could be drained to. - Access to this land would have to be from Haslingden Old Road, which would mean a long access - road from Unity Way, or by the demolition of, or part of Spring Bank Farm. - This area, from Whitaker Park and the Ski-slope,down towards Crestmoor childrens home, gives an uninterrupted wild-life area which then continues to Crawshawbooth. The bird life in this area is - plentiful and varied. - All roads in Rawtenstall converge in two locations. Queens Square, and Haslingden Old Road,at it's - junction with Burnley Road. Congestion, not just at this location but throughout Rossendale, is making car travel slower and also more dangerous for children and parents at the two Primary schools, plus the children at Crestmoor childrens home, Further development would make matters far worse.</p>		No.
1241	Frederick Stephen	Tomlinson	-	(SHLAA 16227)	Object	<p>Having lived at 171 Haslingden Old Road for seventy three years I strongly Object to the proposed development listed. - On a personal basis my outlook and view of Cribden Hill and surrounding countryside will dissappear. - The loss of privacy in my garden and northern elevation of the house will be greatly compromised. - Coupled with the fact, I will suffer noise pollution from any development. - The loss of wildlife such as badgers, roe deer, foxes and numerous species of birds. - The local infrastructure is not able to cope at this moment in time. With Haslingden Old Road being used as a shortcut to and from Burnley Road avoiding the congested town centre and Haslingden Road, the subject of a similar development at the Hospital Site. - Traffic backs up from Tup Bridge to the Ski Slope on a regular daily basis. This is due to sheer volume of traffic caused by morning and evening commute along with the addition of school traffic for pupils attending St Mary's and St James' Primary schools and Crest Moor Children's Home. - Haslingden Old Road has become an Accident Waiting To Happen. Any Increased traffic can only make the situation more Dangerous. - I've also been informed that the two Primary Schools in question are already over subscribed does this mean to accommodate the families of the new development will there have to be increased development of the school sites, again causing more disruption to our local environment. -</p>		-

1251	Louise	Haworth	N/A	(SHLAA 16227)	Object	As a resident of Haslingden Old Road for twenty three years, I strongly object to the proposed development plan. - My grounds for objection is the amount of traffic on Haslingden Old Road which has considerably increased over the recent years. - Haslingden Old Road has become unbearably congested at peak times backing up from Tup Bridge to Whittaker Park on Haslingden Old Road. - Peak congestion occurring at morning and evening due to school traffic to and from St Mary's and St James' Primary Schools and Crest Moor children's Home. Also commuter traffic at these said times. - Haslingden Old Road is increasingly over used as a route to avoid congestion through the Centre of Rawtenstall. - My main personal concern will be the loss of view looking north, over Cribden Hill. Which will result in the loss of natural habitat and local wildlife such as badgers, roe deer, foxes and numerous species of birds. - I also have concerns that the land slopes in to my rear garden which floods seventy five percent of the year. A situation that is of concern to me regarding the proposed development.		-
1255	matthew	Waddington	-		Object	THIS SITE WAS ORIGINALLY EARMARKED FOR DEVELOPMENT IN PREVIOUS LOCAL PLAN AND WAS SUCCESFULLY OBJECTED. - THE DESCRIPTION OF SITE IS FULL OF FULL OF INACCURACIES. - THE PHOTO OF THE SITE IS NOT FROM WHERE IT IS STATED. - THE LAND IS GRAZING PASTURE NOT SCRUBLAND. - THE LAND IS NOT FLAT. - THE LAND HAS MANY LAND DRAINS. - HASLINGDEN OLD ROAD IS ALREADY GRIDLOCKED AT PEAK TIMES QUEUES FROM SKISLOPE TO BURNLEY ROAD. - WHERE IS THERE SUITABLE ACCESS TO THE SITE? IS THIS FROM THE SIDE OF 187 SURELEY NOT THROUGH THE SCHOOLS CAR PARK!! - THE LANSCAPE WILL BE SERIOUSLY AFFECTED AS THE LAND IS STEEP GRADIENT -		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.066	Further comment
1437	Joanne	Finn	-		Object	<p>I object to the proposed allocation of land behind 173 to 187 Haslingden Old Rd, as follows (and the proposed redrawing of the urban boundary to include it) . - Slope – I feel it is inaccurate to class it as a flat site or very gentle slope, it slopes uphill from S to N and particularly E to W impacting upon surface water, drainage and feeling overlooked and hemmed in as properties would be higher than mine. Planting a few trees etc wont mitigate for this or our loss of view which you may class as having low landscape impact but residents don't. - Re drainage as access is at the highest point I'd assume it would need to be pumped or some other complex solution. - Re surface water whilst it has been classed low surface water flood risk it is a boggy marshy field on the side of a hill and in heavy rainfall surface water can sometimes run down the hill and through the field like a small river. The grass in our garden rarely dries out. The road to the schools (Unity Way) is regularly under water with a small river flowing through the field behind Crestmoor , presumably some of it having run down from the proposed adjoining site. I'm concerned that once there is lots of hard landscaping this water has to flow somewhere possibly into our gardens. - We would suffer a substantial loss in the enjoyment of our homes which have an uninterrupted view up the hillside, no houses visible. I feel this proposal has a more substantial impact than many others because our main living areas face onto it. Many other houses have other properties around them and a new development is more of an infill in a gap , or they are above the development, face side onto it, are screened by trees etc rather than a complete loss of view. - The site is fertile pastureland , has many wild flowers, frogs or toads and is probably rich in insects which will all be lost and impact upon the environment. It is Greenfield and what I consider to be a natural boundary to the countryside. - -</p>		<p>I'm not sure that this is the right place to put it but I'd also like to comment on the Consultation process for this and plans etc including Lives and Landscapes .Whilst I'm sure you will comply with the legal minimum requirements Most people I spoke to didn't know about the Consultation we only found about because a neighbour knew there was a proposal for the field but didn't know the process. I'd expect it to be better advertised, including more often in the local paper and on the front page on your website. Even knowing of it's existence you have to hunt to find it on the website.</p>
1508	Rachel	Cornwell	-		Object	<p>I object to the proposed building of houses on this site. The land is part of the farm next door and is used for grazing - it should not be used for housing development. Haslingden Old Road (as well as most of the other roads in rossendale) is already massively busy without adding further traffic to the roads with this development and proposed site further up the road. The rear of the properties which face onto the main road is rural green land which offers a peaceful haven for residents away from the speeding vehicles or standstill traffic jams at the front of the properties.</p>		<p>Drainage/run off and flooding is already a problem for the valley and I feel all this building will increase that problem.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.066	Further comment
1652	Stacey Joan Brailsford	John-Luke Smith		Land between 173 & 187 Haslingden Old Road	Object	<p>We wish to make you aware of a number of strong objections that we have with regard to the proposed development on agricultural land.</p> <p>As a local residents living close to site of proposed development, we are of the view that the proposed developments on the agricultural land will have a serious negative impact on our standard of living and should be excluded from the plans. Our specific objections and concerns are as follows:</p> <ul style="list-style-type: none"> • The current potential access routes via Hollymount way and the access between 187 and 189 Haslingden old road is narrow and would not accommodate a safe access double lane road onto the proposed sites from an already busy main highway, further to this neither access route would allow safe passage for emergency vehicles or refuse vehicles to access via either of the routes. • A high number of properties on Haslingden old road do not have the benefit of off road parking and therefore there are a number of parked cars up and down Haslingden old road with a large volume of speeding traffic regularly travelling along the road. Increasing the amount of traffic and creating junctions along the road will increase the risk of serious incident and increase traffic noise to the area. Safety concerns regarding the road traffic has already been highlighted to Lancashire county council and the local MP. • Inability for surrounding roads to manage an increase in traffic and compromise safety. The core strategy plan has already highlighted this as an area of concern for the future. • The agricultural land proposed has had livestock continually use the fields, which local and hobby farmers utilise to keep sheep, cows and chickens. Wild deer, bats, owls and foxes have all been spotted in the area and the proposed building would lose surrounding natural habitats and reduce the free roaming space for these animals. • The current lightly used access road is also a pedestrian access to public right of way footpaths and the current access is not big enough to accommodate a road and path for pedestrians to safely gain access to these public right of ways. • Drainage and local flooding risk to Haslingden old road residents. The field is already boggy and current land drains passing underneath properties would be greatly affected, which would have potentially adverse effects to the residents due to the high water run off from the valley side loss of natural soakaways. • High density of housing in very small area would increase noise from the new homes. This would come from the added stop start nature of traffic noise behind and on the main road from new residents and visitors. There will be a total loss of privacy to front and back of the current properties from slow moving traffic at the front; and properties situated on the higher plain overlooking bedroom windows and living areas. There will also be a definite 		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.066	Further comment
						<p>loss of daylight and overshadowing to current properties due to the increased height of the land and then housing.</p> <ul style="list-style-type: none"> • The design appearance and chosen materials may not be in keeping with surrounding properties where the majority are stone. • There will be an increased risk on the current infrastructure like schools and medical facilities in the Rossendale area. • As local residents who would be directly affected by the proposed plans we have had no direct notification of the proposals and we're only made aware by local word and mouth. A simple letter drop to the homes backing onto the proposed development should have been completed. The only notification we were made aware of was planning permission to change the current barn to a same footprint , single level dwelling. The Rossendale core strategy already highlighted concerns about congestion of traffic in Rawtenstall and that boroughs landscapes need to be conserved. The building of these homes would increase traffic volume and lose part of the borough landscape and valuable space in which people gain access to the natural countryside and pursue outdoor activities.

1773	Stephen	McGrail		SHLAA16227	Not Applicable	<p>The current housing proposals for this site are the culmination of a series of previous decisions and documents from Rossendale Borough Council. Each stage in this process has contained significant errors and factual inaccuracies to an extent that I believe renders them invalid. The planning department are aware of these errors but continue to rely upon the documents as the basis for the proposals being submitted to the council for consideration. As such both the members of the council and the public that they represent are being knowingly misled. The documents to which I refer are as follows:</p> <p>1) Adopted Proposals Map for Rossendale Core Strategy DPD: The Way Forward (2011-2026) Adopted Version 8th November 2011</p> <p>This map has been referred to during public consultations regarding the Strategic Housing Land Availability Assessment and is posted on the RBC website in connection with that assessment. It has been used by the council throughout this process and the previous (now abandoned) proposals in 2015. It was published under the auspices of the Core Strategy for Rossendale which was adopted in November 2011. The key on the accompanying map used to produce that strategy had been updated in 2007 but the map itself was that used as the proposals map for the Local Plan that was adopted on 12th April 1995. However, even when used in 1995, that map was an older OS Map and considerably out of date.</p> <p>Examples of just how obsolete that map now is include:</p> <ul style="list-style-type: none"> ☒ Both the Valley Centre and Rossendale & Accrington College are still shown standing. ☒ The Ski Rossendale dry slope is not shown on the map despite having opened in 1973, some 44 years ago. ☒ The housing development at Holly Mount and the adjacent Asda store do not feature because the previous mill is still shown occupying the site. ☒ Unity Way does not exist because on the map, St. James the Less and St. Mary's primary schools have not yet been built, despite having been in their current locations for over 24 years. This is relevant to this particular proposed housing site because the landscaping assessment by Penny Bennett refers fields marked as 'Community Space' on this map; In fact that area houses the two schools in question. <p>This means that the current Rossendale Borough Local Plan, and the Strategic Housing Land Availability Assessment now being undertaken, are based upon mapping that is probably 40 or more years out of date. Not only has this caused confusion and errors (such as that by the landscape architect) it also means that decisions flowing from that strategy cannot be expected to withstand future legal challenge should either residents or developers wish to oppose them.</p> <p>It is not acceptable for the planning department to insist that current mapping will be used in any eventual planning development. The fact is that although</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.066	Further comment
						<p>this map is known to be factually incorrect, it is being used as one of the official documents in a process upon which decisions are made with significant repercussions.</p> <p>2) Landscape Assessment – Oakenclough, Rawtenstall Produced by Penny Bennett, Landscape Architects on behalf of Rossendale B.C. This document was produced in 2015 in support of the proposed housing site Ref. RCGL61 in the now discontinued Lives and Landscapes process. The first page of the document contains an aerial photograph and a map, both of which have been marked to show the site under assessment. However, the area marked differs considerably from the proposed site at that time. Penny Bennett had erroneously included the pasture forming part of Spring Bank Farm (that had been excluded by the council) in the map, aerial photograph and description of the site. However, most of the land that formed the extended grounds of the original Crestmoor children’s home, was excluded from the landscape assessment despite those grounds being included in the council’s proposed site (RCGL61). The architect had therefore produced a draft landscape assessment for a significantly different site to that subject of the council proposal. In doing so they had made numerous other factual errors in the report, rendering it so inaccurate that it should not have been regarded as fit for purpose. Full details of those inaccuracies were submitted to the council by me in my written comments on the Draft Local Plan (Part 2) in September 2015.</p> <p>3) Site Assessment – Site Ref SHLAA16227 Published by RBC in June 2017 The current proposal by RBC for housing on site ref. SHLAA16277 only relates to the single field of farm pasture that was wrongly included in the above landscape assessment. Appendix ‘A’ (attached) depicts the areas of the sites and the extent to which they differ. Conclusions reached by the landscape architect in respect of the whole area assessed (some of which were proven to be wrong) have now been taken out of context and referred to by the council in the current proposal for site SHLAA16277 despite the fact that the two sites are significantly different. The result is that statements in the current site assessment document are also incorrect. I note that, following my representations on these points to the planning officers at recent public consultation events, an ‘Errata’ document was published in September 2017. However, that still fails to correctly assess the site or to reflect the potential effect of the proposal. Specific items of note are as follows. ☐ The initial published site assessment stated that the topography of the site was “Flat site or very gentle slope”. This was amended by the errata document to “Gradient present but can be mitigated”. This conveniently fails to state</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.066	Further comment
						<p>that the gradient is very steep in places (as evidenced by Google Earth and O.S Maps), a condition which, under the council's own guidelines would have resulted in a 'Red' grading for topography, thus removing the site from further consideration. Furthermore, the topography cannot be mitigated (as suggested) without considerable landscape changes to the site. However, this option is precluded by the extensive land drains under that field which are necessary to cope with the many natural springs present.</p> <p>☒ The presence of the many springs, and the water rights in respect of them, are referred to in the house deeds of all of the residents whose homes adjoin the field in question. These are the subject of numerous legal documents dating back to the construction of the houses in 1920 and remain current. The previous owner of Spring Bank Farm regularly maintained the land drains under the field, but these have been neglected in recent years with the result that the lower areas of the field now contain reed beds, such is the extent of the water flowing through it. Water run-off from the field now regularly swamps my garden and the lower area of the field has been waterlogged for much of the year. As such the comments in the site assessment in respect of: i) Flood Risk ("low surface water"), ii) Land Instability ("No known issues") and iii) Constraints due to Utilities ("No known utilities infrastructure on site") are all incorrect.</p> <p>☒ The Landscape Value in the site assessment was "Low landscape impact". This was amended by the published errata document which lists it as "Medium". That reflects the overall assessment given by the landscape architect in their 2015 document, referred to previously. However, that assessment was aggregated from the differing impacts at the various places of the large site considered. In respect of the visual impact of the development, the landscape architect highlighted the fact that it would have a "Major Impact" on residents of properties on Haslingden Old Road where its effect cannot be mitigated, referring to this as the "Worst Case". Given that the current (greatly reduced) proposed site now only affects those specific properties on Haslingden Old Road, then quite clearly the correct Landscape Value is 'High', i.e. Major Impact as recognised by the landscape architect. Again this would result in a 'Red' grading for Landscape Value, thus removing the site from further consideration.</p> <p>☒ In respect of the Suitability Summary, the errata document refers to traffic around the schools being severe at school time. What has been omitted but should also be taken into consideration is the fact that traffic on Haslingden Old Road is severe during morning and evening rush hours. This is especially so between 17:00 and 18:00 on weekdays when stationary traffic queues down the hill from outside Spring Bank Farm all the way to the traffic signals at the junction with St, Mary's Way. The addition of further vehicles travelling to or from a new housing development would exacerbate that situation. The above points should be corrected in the document prior to it being</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.066	Further comment
						submitted as supporting material in the next stage of the planning process.		
						<p>Policy</p> <p>In July 2017 the RBC published the Rossendale Draft Local Plan - Regulation 18 Consultation. Included on page 5 of that document was:</p> <p>Policy SD2: Urban Boundary and Green Belt</p> <p>All new development in the Borough will take place within the Urban Boundaries, defined on the Policies map, except where development specifically needs to be located within a countryside location and the development enhances the rural character of the area</p> <p>The proposed site (Ref. SHLAA16227) is situated on what is currently a farm pasture located outside the urban boundary. The proposed housing development does not meet the required criteria that would justify it being located within the countryside i.e. farm diversification or certain types of tourism, and as such the site proposal is directly in contravention of the council's own policy.</p> <p>Three years ago, on 12th September 2014, I met with Mr Adrian Smith and Councillor Patrick Marriot to discuss proposed urban boundary changes. Mr. Smith accepted that the above field did not meet the government guidelines for inclusion within the Urban Boundary. The field was therefore removed from consideration of being included within the Urban Boundary when the boundary changes were being reviewed in 2015, hence its omission from the proposed housing site RCGL61 at that time. Since 2014/15 there have been no changes to that site that would justify any change to that status and as such it remains outside the urban boundary.</p> <p>Please see appendix for map.</p>		
1820	Kelly	Holt	Lancashire County Council		Object	HS2.66 – Vehicular access is limited to the access points as detailed above for HS2.64 and therefore is unsuitable. Vehicular access via Unity Way would require access through LCC owned land (Crest Moor Childrens residential home). The additional vehicle movements are unlikely to be supported by the Highway Authority due to the existing vehicle and pedestrian movements on Unity Way in connection with the 2 primary schools, children's home and employment site.

4	MICHAEL	MURPHY	-		Support	I would like the delivery timescale for this site to be 1 to 5 years, as opposed to the 6 to 15 years stated in the Draft Local Plan. As an owner of land within this Housing Allocation, we would make the land available for delivery within that timescale. - With regards to housing numbers, due to the topography of the land and the style and character of surrounding housing we would propose the number of dwellings achievable on this allocation is less than 5.		No

Edenfield currently has over 900 houses and it has taken several hundred years to reach this number. If all these proposed sites are developed this will represent an increase of approximately 55% in the number of dwellings in the village in a period of fifteen years. This is simply unacceptable.		Development on the scale proposed will cause enormous disruption to village life while it is in progress.
36	Paul	Bradburn		SHLAA16263	Object	Taken as a whole these proposals with other smaller sites around Edenfield represent development on an unprecedented scale. Edenfield currently has over 900 houses and it has taken several hundred years to reach this number. If all these proposed sites are developed this will represent an increase of approximately 55% in the number of dwellings in the village in a period of fifteen years. This is simply unacceptable.		Development on the scale proposed will cause enormous disruption to village life while it is in progress.

37	Angela	Bradburn	-	SHLAA16256	Object	I am using my husbands computer to make my comments. I object to the sheer scale of what is proposed for Edenfield incorporated in these particular sites plus anumber of smaller ones. This will transform the village and that is not what I want and I suspect most of my fellow residents.		I note that the Council insists as part of this document that an overall plan will be require but how will that be acheived with multiple developers? This (if carried out) would require considerable infrastructure work, sewers, water, electricity, gas and schools. How is that to be co-Ordinated?

38	Paul	Bradburn	Edenfield Village Residents Association	SHLAA16262	Object	As a group we object to the sheer scale of what is proposed for Edenfield. 489 houses will transform the village in several ways and not in our opinion for the better. In an assessment of possible sites for development in 2015 The Council assessment of the one off Exchange Street (SHLAA16263) said that the site should not be considered because it alone represented development of more than 5% of the existing village. Bearing in mind that this is by no means the largest site proposed, what has changed? - If these plans were implemented it would represent an increase in the size of the village by approximately 55%. THIS IS NOT ACCEPTABLE.		We deplore what is proposed in that if impemented it would seriously disrupt village life for years with the house building itself plus infrastructure improvements which would be necessary. And what is in it for existing residents? there is only a downside for them.

38	Paul	Bradburn	Edenfield Village Residents Association		Object	<p>We write to supplement our comments made online in September. You I am sure will appreciate that the provisions of the Draft Plan which affect Edenfield have come as a profound shock to people in our village and as a result we feel bound to ask a number of questions.</p> <p>1) What is the Greenbelt for? As laymen we understood that it is to protect towns and villages from excessive development which sounds very sensible until we discover that if the Council wishes it can redraw it to allow the building of up to 500 extra houses which would completely alter the character of our village.</p> <p>2) What is in this plan for the existing residents of Edenfield? On the positive side the answer is nothing! On the negative side there is much to weigh against it; their lovely village changed out of all recognition, up to an extra thousand cars on the village streets, the built up area almost doubled and the population increase by over 50%, several hundred more children to find school places for, almost certainly a set of traffic lights on Market Street and of course not forgetting probably twenty years of building with all the noise, muck, fumes and heavy vehicle movements which this will entail, can the Council seriously be claiming to represent this village if it wishes to visit all this upon us.</p> <p>3)The Plan includes a prominent section about a "Master Plan" for Edenfield we assume because the largest piece of Greenbelt in Rossendale scheduled for change of status is in Edenfield, (your reference HS2.71) and we pose the question, bearing in mind Rossendale's limited budget, has this borough the human and financial resources to manage this over the plan period? Or is it perhaps the intention to "tap" the developers to pay for the management as we understand has happened elsewhere. If that was the case how could these people, charged with managing this process be independent of the developers when it is those very companies who are indirectly paying them?</p> <p>4) Is there any evidence that there is a demand for up to 500, probably 3/4/5 bedroom houses in Edenfield. Are houses selling quickly, are prices rising steadily, if there is evidence it is news to us and if there is no evidence why allocate land here for all these extra houses.</p> <p>5) If we look at previous assessments of potential sites for new houses in Edenfield we find inconsistencies with what is included in this latest plan. For instance in 2015, "land off Blackburn road" was ruled out because of the effect development would have on "View and Setting" so what has changed? The site now designated "land off Exchange Street" had this following comment set against it; I paraphrase, development of this site would in itself increase the built up area in the village by more than 5% and should be discounted. Again what has changed when the whole plan seeks to increase the number of houses by over 50% and the built up area by almost 100%.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
						<p>We would add that completing the online consultation has proved difficult for many people who have reached for instance, question 4, Site allocation or Local Plan Policy and have been completely flumoxed and not pressed on. Only when they became aware that we could help were they able to continue, and of course we don't know how many have simply abandoned the exercise as a result.</p> <p>It may be thought by some that we are against all development in Edenfield but that is not the case, however we believe that the scale of what the Council proposes is "off the scale" and a more modest number of houses should be considered. To that end we would suggest that our Village could accommodate a similar percentage of new houses to the existing stock as the rest of the Borough which is around 12% and that would come to about 110 houses to be built over the 15 years of the plan. It is our opinion that such a figure is sustainable and could be achieved without affecting the essential character of the village.</p> <p>And to close, it should be clear to the Council that if they insist on implementing this plan they will be doing it against the wishes of the great majority of the people of who live here.</p>		
44	John	Johnson	-		Object	I object to the sheer scale of what is being proposed. This will transform the village, and not for the better.		I do not have a computer of my own and have completed this using Paul Bradburn's computer.
52	Jenifer	Mead	-		Object	I am objecting to the scale of development in this village. The infrastructure cannot cope with all the new properties which the Council is proposing to build. The village would lose it's character and the lovely green areas which surround the village will be 'lost'. The main reason given is that Edenfield is a desirable place to live, well that won't be so if we are inundated with all these houses. Why not spread them more evenly accross the Rossendale Valley? Also, what about all the empty houses in the Valley, can these not be used to reduce the figures? I guess that the developers will only include small quantities of 'affordable housing' and most of the properties will be 4/5 bedroomed detached houses as there is more money to be made from these large properties.		I strongly oppose the areas being brought out of 'green belt' as this would completely destroy the 'open' aspect which surrounds the village. - I realise that the main developers i.e. Taylor Wimpey Homes will push and push until they get permission to build on the 31 acres which they have purchased, but if local opinion is taken into consideration by the planners, then they should be denied approval to build on this land.
75	Peter	Valentine	-		Object	I object to sheer size of development that radically alter edenfield and the roads cannot cope with extra traffic		Roads will not cope with extra traffic
76	Lesley	Valentine	-		Object	Devastating effect on the village that totally change the place I live		This cannot go ahead
77	Jack	Valentine	-		Object	This will destroy this lovely quiet village .		-
78	Lucy	Valentine	-		Object	The village will be ruined and too busy		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
79	Janet	Campbell	-		Object	I object to the sheet scale of the proposed developments for Edenfield. Not only will the character of the Village disappear, from what was a desirable village will no longer be so. There is one road through the village which cannot cope with the sheer volume of traffic that already passes through it. Parking is already a huge issue in the village and this will be vastly exasperated with the addition of 489 houses. Doctors and dentists have no spaces. The infrastructure of the village just simply not cope with such a large amount of new houses being built.	-	
80	Ian	McAllister	-		Object	We object that the scale of what is being proposed for Edenfield is far too large and would ruin the village. - Some properties that families have invested a lot of money in would also be de valued due to the loss of countryside views. I also believe that the local schools would not be able to cope with an increase as large as suggested in the local population.	-	
81	kathleen	shaughnessy	-		Object	I object to the proposal to increase the size of the village by 50% and destroy Edenfield as a village and as a desirable place to live . - I also object to the planned destruction of green belt when there are so many brownbelt and derelict areas in Rossendale which would benefit from being built on (Edenfield seems to be the main development area proposed). The infrastructure in Edenfield simply will not support the planned numbers of properties or the amount of additional traffic that will be created. I live on the main road through Edenfield & it is already very busy, especially when the bypass is closed. Parking is already in short supply & will become extremely difficult. - Additionally, where would the children from the new properties go to school? I don`t see any planned increase in provision in the local plan.	-	
82	richard	shaughnessy	-		Object	I object to the proposal to increase the size of the village by 50% and destroy Edenfield as a village and as a desirable place to live. - I also object to the planned destruction of green belt when there are so many brownbelt and derelict areas in Rossendale which would benefit from being built on (Edenfield seems to be the main development area proposed). - The infrastructure in Edenfield simply will not support the planned numbers of properties or the amount of additional traffic that will be created. 83	Elizabeth	Latham			Object	I object very strongly to the scale of the proposals for Edenfield. It will completely alter the character of the village. How can you possibly substantiate increasing the number of houses by over 50 per cent. You have a duty to look after our village and Rossendale as a whole, you should not be taking away its identity. Also, the roads will be chaotic with so much extra traffic. It is already very difficult on roads around Edenfield, particularly Market Street. GPs and schools will also not be able to cope, which will affect us all. Please do not do this.		-
84	ADELE	FINNERTY	-		Object	I am objecting to the massive scale of these proposals and the effect this will have on our lovely village!!!! -		I am informed that Edenfield is being singled out as the main development area because it is a desirable place to live, well in my opinion it won't be very desirable if this goes ahead!!!! - This is an absolutely ridiculous proposal and needs to be terminated. There's nothing wrong with a few more houses being built here but who has come up with this plan..... obviously someone who doesn't live in the village!!! -
85	Trevor	Latham	-		Object	The scale of the proposals is completely unacceptable and would radically change the character of this village. Volume of traffic would unmanageable and parking in the village, already a major issue, would be impossible. The GPs and schools would not be able to absorb the additional numbers, our schools are already over subscribed. Please do not destroy our village.		-
86	Alan	Ridehalgh	-		Object	I object to the high number of houses proposed for such a small village, with limited facilities and roads that are unsuitable for the high volumes of traffic that would be created should these plans come to fruition.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
87	ERIC	FINNERTY	-		Object	I am objecting to this proposal mainly because of the sheer amount of houses being proposed. This would change our village for the worse in my opinion.		I understand the need for more housing but why has no one ever suggested that the derelict houses we already have in numerous area's be renovated. eg. Rawtenstall, Haslingden, Accrington, Burnley, Blackburn etc. These properties are already there so to renovate them would surely be cheaper and wouldn't upset anyone in the process. - I was born and brought up in Edenfield so I have seen all the changes that have already been made to my village, in my opinion if this plan goes ahead I won't be living in a village anymore I will be living in a TOWN!!!!
88	Ruth	Clayton	-		Object	I object to such a high number of houses for such a small village, which would drastically alter the character of the village forever. The roads are already too small for the vast increase of traffic that would ensue. Comment received via online questionnaire (14/09/2017): I wish to object to the scale of the proposed development. This is far too many houses to build in the small village of Edenfield. It would mean an increase of over 50% of the total housing stock.		We - do not have the infrastructure in place for such a large housing development. It would mean double yellow lines around the village and the parking is already at a premium. Also traffic lights somewhere on Market Street which is a very congested road already.
89	Philip	Kushner	-		Object	We strongly object to the very extensive scale of these proposed developments because they would completely change the entire nature and character of the historic village of Edenfield and destroy its heritage . There also seems little or no thought has been given to providing local services eg, schools, dental and GP practices, shops, to support such a massive extension of housing in such a small area. - - There are also serious problems with traffic flow and management through Edenfield and the construction of such a large number of additional houses would overwhelm traffic through the village and make it dangerous and unpleasant. What are the routes by which additional traffic, particularly in the rush hour and school times, would join and leave the main road ? Presumably there would have to be traffic lights which would cause additional congestion during busy periods - - We have lived here for 30 years and love the village life and the area but we would seriously consider moving out if these plans come to fruition in there current form. - - We do not object to some development but certainly not on the scale proposed and we would make strong representations to our elected politicians to defend the residents interests and that of the wider community		No but we trust common sense will prevail

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
90	Trevor	Boothman	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village		-
91	Jacqueline	Boothman	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village		-
92	Chris	McCool	-		Object	The quantity proposed for all of Edenfield is far too much for the current infrastructure to cope with. - I am not against new homes, but the number of proposed new houses is not realistic and is certainly going to alter the village in a negative view.		-
94	Gerry	Murray	-		Object	Firstly, I would like to state that I am not opposed to any development in Edenfield per se, but it is the sheer scale of the proposed plan and the resultant pressure on the villages infrastructure that worries me most. To increase the number of households in the village by 50% would require substantial investment in new roads, better management and maintenance of existing roads, a new school, services such as a GP practice, a dentist, etc, which would destroy the very reason why people want to live here in the first place. It is the unique character of the village, the peaceful location and the abundance of green space which makes this village so nice to live in. The current infrastructure just about manages as it is; any increased pressure to this would be extremely detrimental to the well being of the village as a whole.		-
95	Sandra	White	none		Object	I very much object to what the council is proposing to do to Edenfield. - The sheer scale of it is unbelievable. - The whole character of Edenfield would be radically altered. - Edenfield is an exceptional nice area of Rossendale of which the council is proposing to ruin with their unprecedented plans for this village. - In addition, as a full time, life long user of public transport the disruption this will cause for myself and other bus users in the village is beyond acceptance. Rosso Transport is the worst bus company I have ever had to use and I have used many around Lancashire and Yorkshire.		No thank you.
96	Brian	Sutton	-		Object	We object to the sheer scale of what is proposed for Edenfield.		No
97	Stephen	Roberts	-		Object	I own a property in Edenfield on Market st and have done for 25yrs which I am hoping to retire to and the sheer scale of the houses proposed is detrimental to human quality of life, its difficult with all support services being closed as it is, what will come to pass when the burden is doubled with less access to buses, Doctors,Schools et. - this cannot be allowed to happen.		-
99	Walter	Ogden	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		-
100	Robert	Affleck	-		Object	We Strongly Object to The Sheer Scale of What is Proposed For Edenfield And The Impact It Would Have On Our Village Which As More Than Enough Houses For A Small Village At This Present Time.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	Further comment
101	Derek	Brennan	-		Object	<p>The sheer scale of the proposals seem incredible to me. Apart from infrastructure issues such as school, GP services and the like, the additional volume of traffic is probably not manageable. - - If traffic lights and parking restrictions are put in place on Market Street, it would have serious implication for me. I am disabled due to a severe heart condition and it is bad enough now to park outside my house. If this became worse then i would be housebound as walking any distance carrying anything at all is impossible. - - Market Street itself already struggles with the amount of buses, wagons, tractors and general traffic and an increase in volume of even modest proportions would cause havoc. - - I live here because it is a village on the edge of green belt land and not in the center of a small town. - - I am sure surveys will be done to justify the increased traffic but nothing other than living through normal rush hours, or even worse with A56 bypass closure, would give you the scale of the impact on local people. - - Even the small development on the site of the Horse and Jockey will cause local problems. - - The scale is such that I would have to leave a village which my family has lived in for over 120 years.</p>	-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
102	GEOFF	BLOW			Object	<p>I object to all aspects of this proposal on the grounds that it would add almost half as much again to the number of houses and therefore traffic in Edenfield. This would drastically alter both the nature of the village and the desirability of it as a place to live. - The two local schools are already oversubscribed and the plan seems to contain no plans to expand them. The access to all the proposed sites is very limited and the plan seems to contain no plans to enhance it. - The plan seems to be asking the village to sacrifice its character with no quid pro quo. Whilst the land under the proposal may not be top grade agricultural land, it is useful grazing land. There is much more land only a short drive furthe into the valley which would provde similar housing opportunities whilst not removing grazing land from the green belt, and with more possibilities of satisfactory access.</p> <p>Comment received by email on 13.09.2017: Dear Sirs, having attended the consultation evening on the Rossendale Local Plan at Edenfield Community Centre last night I should like to make the following amendments to my previously registered objection.</p> <ol style="list-style-type: none"> 1. Whilst several of the council representatives were pen and helpful, at least one was seen hiding her ID badge beneath her clothes; 2. One of the more helpful representatives explained, if I understood correctly, that the reason there is as yet no suggestion for access and egress routes for the proposed development is that the Highways Committee will not discuss these unless there is a proven need. This seems to me to make a mockery of the “forward planning” part of your title. A lot of breath, time and anxiety was wasted last night on this very matter, which could have been saved if at least some plans had been suggested as to the traffic problems which the proposed development would inevitably cause; 3. The colouring of the map was appalling. The key showed housing and similar developments in three VERY similar colours. As a result, some people interpreted Housing HS2 areas as Gipsy and Traveller areas. This again caused unnecessary anxiety among those who studied the map online or at the consultation. A simple variation in colour-coding would have been much more useful and helpful to your representatives. 4. The online map was described as “with Street names”. This was patently not the case when I looked at it online. There was no facility to zoom in sufficiently to examine the proposal in terms of street affected. 5. One of the main causes for concern among residents is the lack of space in the local schools, both of which are, I believe, currently full, and projected to remain oversubscribed for the foreseeable future. When questioned on this matter, one of your representatives replied that you are in consultation with the Education Committee, and that there is capacity in the primary sector “within the borough”. She was unable to specify where this capacity is or will 		<p>I do not object to some development. My son has just bought a house in a very large new development in Huddersfield, as his first step on the property ladder. However, - 1. the land used for this development was poor quality pasture land for horses, not food livestock. - 2. the large development on the fringes of a University City comprises a far smaller proportion of the area of Huddersfield than the proposed development in Edenfield. - 3. there was an exiasting access infrastructure, which is not the case in Edenfield. - - A smaller development, in the region of 10% of the current number of homes would be perfectly acceptable in my view, but the overwhelming development proposed is far too large.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
						<p>be, but it is certainly not in Edenfield itself. Several matters arise from this reply:</p> <p>a. Perhaps the development should be where there is capacity;?</p> <p>b. Why is somebody so underprepared allowed to represent the council at such an important meeting?</p> <p>c. Why is the "Forward Planning" department allowed to put forward such suggestions without considering these matters?</p> <p>The only reason I can come up with is that the council is using base Scare Tactics regarding the number of houses to be built and the lack of facilities, so that when it inevitably has to reduce the number and improve the facilities, the residents can feel they have scored a "victory", or that the council has "listened to our concerns". The fact of the matter is that the council has fomented these concerns either deliberately or through crass inefficiency. I would like to repeat my assertion that I am not against SOME development, which the country needs. What I object to is the size of the proposed development in Edenfield, and the slapdash, lazy manner in which the council has presented it.</p> <p>I would like these comments added to those I made in my online objection, and I would like an acknowledgement that this email has been received.</p>		
103	Henry	Botham	-		Object	<p>I object to the scale of the proposals for the development of this land. I live on market street, the main road through Edenfield. This road is already extremely busy and more houses will result in greater volume of traffic. Edenfield is a beautiful village and to build more houses on our green belt land would completely ruin the character of the village and make the lives of existing residents considerably worse. I would seriously consider leaving the village I have loved living in for 10 years. I seriously doubt that the local schools, health service, public transport and other public services in the village could cope with the massively increased resident population. We are already busting at the seams and more populated than at any point in the villages long history. - Irwell Vale has flooded many times in recent years. There is a great deal of evidence to suggest that the prevention of natural drainage through land development causes flooding in low lying areas. The developers are proposing a massive development directly adjacent to Irwell Vale, on land situated above it in the valley. This development would have massive flood implications for Irwell Vale and the residents of the village would have legal recourse on the developers and the council when it inevitably happens. - No houses should be build on our precious, diminishing green belt. Rossendale council has been guilty of allowing some seriously questionable developments to go ahead in recent years, something I doubt neighbouring councils would have done. - Please don't allow this development to become the next hideous example of Rossendale's lack of foresight and chasing quick fix profits.</p>		<p>I am unavailable for the tiny 3 hour window you have allocated for consultation at the community centre but please don't take my non attendance as a sign that I don't feel strongly on the subject. I register my objections here and attend the event in spirit.</p>

104	john	Valentine	-		Object	we object to the sheer scale of what is proposed for Edenfield it would alter and radically change the village character of Edenfield	-	
105	SUSAN	VALENTINE	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically change the character of the small village of EDENFIELD.	-	
106	Elizabeth	Sanderson	-		Object	We object to the sheer scale of the house numbers that are proposed to be built. It would bring far too much congestion to the village, and change the character of Edenfield.	-	
107	Carol	Miles	-	SHLAA16262, SHLAA16256, SHLAA16255, SHLAA16263	Object	I object to the amount of houses being proposed for Edenfield on the grounds of additional traffic (each property perhaps having three cars) - the fact that Market Street has a traffic and parking problem already, and the two schools are already near capacity. The village is known as being a great place to live and these proposed developments will have a detrimental effect on the character of the village.		The joy of living in Edenfield is the access and views of open country and the prospect of this large development with its accompanying infrastructures i.e. sewers, water, gas and electricity and roads will change its character, and not for the better.
108	Glyn	Swain	-		Object	This objection is to the scale of the plan proposed for Edenfield which would change the character of the village to an unacceptable degree. - Questions are also raised concerning the provision of school places available locally and, not least, the management of traffic / parking which is already at saturation levels.	-	
109	Tom	Sanderson	-		Object	We object to the size of the proposed plan, it would build far too much congestion, change the character of Edenfield for the worst.	-	
110	Lisa	Sanderson	-		Object	We object to the sheer scale of the proposed plan for Edenfield, it would change the character of the village for the worst and bring far too much congestion.	-	
111	Sandra	Swain	-		Object	This objection is to the sheer scale of what is proposed for Edenfield. It would radically change the character of the village. Huge concerns are raised regarding the provision of schools and the management of traffic which is currently a major problem.	-

112	Colin	Mablesen	-		Object	I am personally horrified at the plans proposed by the council to convert Edenfield Village into a town. I object to the sheer scale of what is proposed, to turn a village which is already suffering too many parked cars on public roads, combined with the accompanying road noise into an even busier town. - - The removal of land from the Green Belt resulting in such a discontinuation of the green landscape that we live in is an unacceptable change to our environment. - - I feel the council have singled out the village of Edenfield in their overall plan for Rossendale, and the sheer scale of house building is disproportionate to the the rest of Rossendale. - - There is no existing infrastructure to support a further 489 houses, in terms of schools, doctors, roads etc and I would not welcome further larger schools and road traffic management schemes to support the increase in housing as this will completely ruin the existing character of the village. - - I feel our lives, community and surrounding landscape will be ruined and I find this proposal utterly unacceptable.		-
113	Leslie	Miles	-	SHLAA16262, SHLAA16256, SHLAA16255, SHLAA16263	Object	The number of houses being proposed for Edenfield will obviously mean that there will at least 3 times as many cars.as houses to provide accommodation for and if these are the all the modern trend of 4 x 4 cars that are being bought today then we will have a major shortage of road space in the area. Are all the houses going to be built with adequate on site parking space and, if not, where are the cars going to be parked? How many free car car parks are to opened and where will they be? - Edenfield may be a desirable place to live at the moment but if the proposed plans are allowed to go ahead then will the end of any reasonable hope for the future. - -		I do not think that much thought for the lives of residents has been taken into account because the very reason that Edenfield is the place that it has become is because nobody has come up with such a radical idea before. The area proposed requires a lot more work on providing facilities for all the extra inhabitants to be absorbed in this area. We have no Post Office, very little Public House space, a very inadequate bus service and not enough other local services to satisfy a lot of people who require more - in their daily lives. The extra number of people expected requires more infrastructure to support the housing planned.

114	David	Hudson	-		Object	We are objecting to the massive increase of housing numbers and vehicles this will bring to the village of Edenfield. The village already has traffic flow problems with large commercial vehicles from various quarries in the area without adding the potential for another 500 to 1000 cars (average of 2 per household these days). It can be stated that Edenfield is a desirable place to live but I doubt the extra housing will help this character one bit and will, in fact, detract from it's desirability. Development on this scale confined to a small village like Edenfield will have a negative consequences.		Our property and some of those each side of us are bordered by a small stream. The majority of bungalows on the northern side of Eden Avenue and a couple of houses further up have erected fences within their boundaries, in our case, to keep out intruders and dogs. - - According to law we are partially responsible for keeping this stream clear and disposing of cleared materials on our side of the stream, which effectively defines the land between the centre of the stream and our fence-line as being our property. This effectively defines the land, hedgerow and trees on the outside of our fence and on our side of the stream are ours. If a building contractor were to decide to culvert this portion of the stream we would object very strongly because it would open that small but contested portion of our land to being exploited by them. - - Our personal position on this is guided by my wife and I being naturist, e.g., a preference for being nude in our (currently) private and secluded garden when weather allows. If this hedgerow and the trees on what is our land were removed so would be our privacy. If houses were built close to this boundary, our privacy would be gone.
115	Jane	Adams	-		Object	I understand you are planning to ask the Government to remove large amounts of land around our village from the Greenbelt so that it can be built on. - - I object to these proposals on the grounds that the scale of the plans are far too large and if carried out would ruin the character of our village. - - There are not enough schools to meet this additional demand, Traffic will be a nightmare due to sheer volume of extra cars/traffic.		-
116	Joyce	Griffiths	-		Object	We do not have the inforstion in Edenfield to accommodate the number of houses you want to build also ther would be - Traffic problem as the roads would not take the volume of cars		-

117	Dominic	Rathmill	-		Object	I wholly object to the proposed building plans, the scale of the plans is far too large and would ruin the character of our village	-	
118	Kim	Roberts	-		Object	This plan is of too larger scale and would disrupt the area and fully spoil this beautiful village	-	
119	Tracey	Staines	-		Object	I absolutely object to using greenbelt land in Edenfield for building the amount of houses that is proposed. Edenfield is a much sought after area however it won't be once you have ruined it by a huge housing development. - Edenfield does not have the social/physical/educational/financial infrastructure to support that amount of houses. We don't have the road system, shops, schools or any other amenities to support that kind of development. - Greenbelt land is earmarked greenbelt for a reason and that is to preserve some environmentally green areas. Building that amount of houses will fundamentally undermine our sense of environment, community and potentially increase crime or introduce more unemployment. - Building that amount of houses will undermine the sense of village and most probably lead to a fall in the cost of house prices. This means that my house will be worth less than what is now. Some people may find themselves in negative equity. - I wouldn't mind but I expect that these houses are not 'affordable' so won't be contributing to the shortage that we have in housing. The shortages apply to those that can't afford to buy expensive houses. Why not build in more affordable areas that are currently already being invested in such as Rawtenstall. That would increase the appeal for people to buy in that area rather than detract from it.	No	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
120	Kirsty	Brennan	-		Object	<p>I would like to object to the proposed housing development plans for Edenfield, the reasons for my objections are: - - 1. Edenfield is a small village community and it is for that reason like many others that my husband and I moved here. Increasing the village by the level of development you propose means this will not be a village anymore but a small town. The little road through the village can't cope with anymore extra traffic on it. There is already a development to build 10 properties on the old Horse and Jockey site that is going to be bad enough. We do not have sufficient or sustainable parking for the residents we have now never mind what this development will create. The M66 is already overwhelmed and is a constant source of accident and traffic problems. We do not have a sufficient support network available in the form of bus services, doctors, dentists, schools especially nursery care and primary schools as Edenfield Primary and Stubbins are already fully subscribed. - - 2. My husband and I bought our house specifically for the rural nature of the property, especially the open views that we have out the front of the property looking over the valley from main street. I have often looked out of my window to see foxes and deer in the field opposite and watch the lambs in the springtime playing as the sun sets. This development will have a significant impact on our emotional wellbeing not only as we will lose our view, it will impact the local wildlife but the level of development will significantly increase the noise, dust and debris. I also believe that this will impact the value of our property as this is one of the main selling points of our house. - - 3. My husband has severe heart failure and other complex health issues and is therefore classed as disabled. This development will have a significant negative impact on his health. Firstly the noise, dust and muck from the building works will be excessive and inhibitive especially considering how long it will take to complete the work. Secondly, the level of vehicles and deliveries the site will need will limit our parking access – do the developers plan to compensate residents of market street with a long term private parking solution. Thirdly, my husband can't walk far so if he can't park outside our house potentially you limit his ability to get out and carry out normal daily activities, god forbid the day we may need to call an ambulance. - - 4. We experience enough road debris thanks to the Quarry traffic resulting in excessive window cleaning and also damage to our vehicles as we need to park on the main road. If the development goes ahead this is only going to get worse especially for the duration of the building works. Are the property developers prepared to compensate local residents for this? - - Please, I implore you to leave our green spaces alone.</p>		-
121	Stephen	Swift	-		Object	<p>I object to the erosion of green belt land, and the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.</p>		None

122	Norma	Hewitt	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village		The village of Edenfield has already got a traffic problem namely the vast number of tipper lorries and other heavy goods vehicles which are constantly running through the village from the quarry from early morning until early evening. Not all but quite a lot NOT observing the 30mph speed limit. To add more heavy traffic to the already high number of vehicles will cause untold damage to the roads and endanger the lives of other road users and pedestrians as the village roads are not designed for this amount of heavy traffic. Add to this the number of extra cars from the proposed houses and it will be catastrophic.
123	Graham	Hewitt	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village		At present following the trend in house sales in Edenfield village it is apparent that any properties for sale that are facing the proposed developments are now stalling. Adding more traffic to the already congested road through Edenfield by the tipper lorries from the quarry and other heavy vehicles is not acceptable and very dangerous to other vehicle users and pedestrians. The extra heavy vehicles needed in the building of these properties will only add to the vibration of the surrounding properties as well as the noise and pollution.
124	christine	Hemmings	-		Object	I wish to object to the sheer scale of what is proposed for Edenfield. This would radically alter the character of the village - in fact it will no longer be a village. - - I am not against the development itself - Just the sheer scale of what is proposed.		-
125	Lorna	Mcglynn	-		Object	We object to the sheer scale of what is being proposed for edenfield which would radically alter the character of the village.		-

126	Frank	Hemmings	-		Object	I wish to object to the sheer scale of what is proposed for Edenfield. This would radically alter the character of the village - in fact it will no longer be a village. - - I am not against the development itself - Just the sheer scale of what is proposed.		-
127	John	Ayers	-		Object	Edenfield is a village of approximately 1000 houses. Currently, there are problems with parking, particularly on Market Street and Exchange Street, that restrict vehicle movement that, in an emergency situation, could have a significant effect. - - Whilst any future development will no doubt provide for the additional parking requirements, the extra flow of traffic along the afore mentioned streets will only compound the already fragile situation. - - The proposals suggest the possibility of an increase in housing of around 50% in Edenfield. Whilst I appreciate that additional housing may well be required, I consider that the proposals will totally change the character of our village, and for that reason, I object to them. - - Furthermore, the requirements of additional school, medical and other social facilities need to be addressed.		-
128	Angela	Mead			Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		-
129	michelle	Letchford	-		Object	we object to the sheer scale of what is proposed for edenfield which would radically alter the character of the village. i live on bury road and we already have much traffic on this road where parking is on the street and cars have to stop at various points to let other car up or down, more traffic would make this road horrendous and very noisy. I also do not believe we have big enough schools in edenfield to cope with the amount of families that may move to the area.		-
130	james	Letchford	-		Object	i object to the scale of what is being proposed for edenfield which would radically change the the character of the village. I feel it would bring to much traffic into an already very busy village especially with the amount of quarry lorries that also drive through the village. There will not be enough school places meaning more people will have to commute their children out of the village for schooling.		-
132	Sarah	Vause	-		Object	The plan would completely alter the character of Edenfield village. The support services would be inadequate eg schools. The infrastructure eg roads would be overwhelmed. At present there is a distinct community within Edenfield, where families know and support each other. Such a large development would destroy this.		-

135	Rebecca	Gregson	-		Object	<p>I object to the sheer scale of what is proposed fro Edenfield which would radically alter the character of our village. Traffic is already a problem, not to mention the lack of space in schools and doctors and the effect on house prices. I live here as I want to be surrounded by fields NOT other houses and cars! The proposals are ridiculous and very disappointing.</p> <p>##### LETTER COMMENTS #####</p> <p>I am writing about the Council's Local Plan and how it will affect Edenfield. I understand that you are planning to ask the government to remove substantial amounts of land around our village from the greenbelt so that it can be built on. It was my misunderstanding that greenbelt land was such that it should be preserved and not built upon? How can it be that suddenly it is ok to release such land for building? The areas I am concerned about are covered by reference HS2.71 on the site map that accompanies the plan and are:</p> <ul style="list-style-type: none"> Land off Exchange Street, Edenfield Land west of Market Street, Edenfield Land off Blackburn Road, Edenfield Land west of Moorlands View, Edenfield <p>I attended a consultation yesterday evening which detailed the various plans for the borough and this only served to escalate my concerns when it is obvious from the maps that the scale of the plans for Edenfield are preposterous! There were various other developments around the borough highlighted but nothing on such a large as Edenfield and the most ridiculous point around that is the other areas are towns of considerable size with less development planned than our small village!</p> <p>The sheer scale of the plans for Edenfield are far too large and would not only ruin the character of our village but life in the village generally as we would lose our currently beautiful surroundings and there is simply no infrastructure to support the plans. The roads are already overcrowded with parked cars and traffic, the schools are full and small, there is no doctor for us already in the village, we must travel to various surgeries. There have been various small developments over the years and these are on a scale that is manageable and not destructive. The very reason it is a desirable place to live is the size and surrounding countryside. If this is lost then surely the current residents will see a considerable decrease in the value of their homes also. With all this in mind I would like to state my objection to these proposals.</p>		Save our greenbelt!
136	stephen	higginbotham	-		Object	<p>I strongly object to the magnitude of the proposals. They are completely impractical , particularly regarding traffic and parking , and would destroy the village character of Edenfield</p>		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
139	Granville	Barrow	-		Object	My family and myself are strongly objecting to the sheer scale of what is proposed for our lovely little village of Edenfield and the radical alteration to the character of Edenfield itself. We have lived here for almost 48 years and have seen many changes in this village but these plans would severely transform Edenfield into a "city like environment" causing untold problems to parking,traffic,overcrowded schools and wildlife, just to name a few of many problems this plan would bring.		-
140	Donna	Cryer			Object	I'm stunned by the Local Plan published by Rossendale Borough Council. Has anyone involved in this plan actually visited our village of Edenfield? - I find it very difficult to believe that anyone could propose a village of approx 900 houses could withstand a further 489!! - Edenfield village would change beyond recognition - and certainly not for the better. It would be unacceptable to allow this village to become a giant car park, to lose the village character and have a huge visual impact on the village. Our close proximity to the by-pass and motorway network should not mean that Edenfield lose what makes it a beautiful village. - This would also have a huge effect on the wildlife in the area. Each of these areas are full of wildlife, evident by taking just a walk around them! - It is evident that the country as a whole requires adequate affordable housing, and I'm certainly not against development - but on the scale planned? - absolutely not. Rossendale Borough Council would be truly foolish to allow this to happen. - - -		-
141	David	Cryer	-		Object	Each school day, I leave the house to drop our daughter at school in Ramsbottom. This is a 3.7mile journey which should take 16 mins. On numerous days this journey is hampered by the sheer amount of traffic that is a direct impact of traffic issues on the by-pass and motorway networks and has taken me up to an hour! The plan to increase housing in Edenfield by over 50% is a move of insanity. It's being driven by Edenfield's close proximity to the motorway network, without the slightest consideration to the full impact on local traffic, local infrastructure (complete lack of!!) and local people. - Edenfield would change beyond recognition. This beautiful village deserves more from it's local council. The loss of land, the noise disturbance and extra traffic would also have a huge negative impact on local wildlife. - Rossendale Borough Council seem to have completely forgotten what green belt means!		-
142	Patrick	Armstrong	-		Object	I am objecting to the size of this development and the lack of increases in local services it would inevitably need		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	Further comment
143	Christopher	Allen	-		Object	I strongly object to the sheer scale of what is proposed for the village of Edenfield which would radically alter the character, size and dramatically increase the population of the village.	<p>I have spent the past few hours retyping my thoughts on the proposed plans trying to put my views across unfortunately i dont seem to be able to calmly put across how outraged the proposed plans for the village make me. I am 33 and with a 9 year stint living away in the army but still returning when possible to the village i call home have lived here all my life and have unfortunately had to bare witness to numerous housing developments that have not only increased the size of the village but have also been dramatically outside the value of most of the residents, which has brought about the moving out people who have spent there lives here and brought in new people who dont seem to embrace the comunity spirit of village life. I am not agaisnt progress or bringing in new people i understand the village needs to change to embrace the future and grow as looking at historic photographs of the village and surrounding areas prove has happend dramatically in the past but this proposal is too much an seems to be more of a money grab by housing companies in the light of the governments decision to increase housing and open up greenbelt land rather than the progressive growth of the village and the valley as a whole. I understand this is slighty long winded and more than likely wont get read but on the off hand it does i thank you for taking the time to read my views</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
144	Jackie	Heffernan	-		Object	The scale of this development is too much for Edenfield village. Not only will it totally alter the character of the village, more importantly the infrastructure/amenities cannot support so many additional houses. There would be traffic chaos. I would also like to add that the land behind Crow Woods leading down to the bypass has been regularly monitored for slippage over the past few years and there is some evidence of subsidence. How can it be safe to build here?		I understand that council has to generate additional funds and have no objection to development in principle but feel that this is far too much in one small area. I would also be interested to know what percentage of the proposed 489 houses would be dedicated low cost/social housing or would all be high price council tax bands?
145	Barbara	Lewtas	N/A		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. The volume of traffic on Bury Road is already way above what it should be on an unclassified road and the additional building will only make the situation much worse.		No
146	Jane	Guarino	-		Object	As long standing residents. We object to the scale of proposal for Edenfield. In view of the fact that parking is already difficult. School is small and even the teachers have problems parking. the roads are not adequate to house another number of cars. Even more danger for the pupils. - The main street in Edenfield residents have no garages and they all have to park on the roadside. - This school would not be large enough to enroll any more pupils. - The character of the village would also be completely changed there are no local services such as dentist GP all adding to a proposal of future chaos -		-
147	Simon	Crabtree	-		Object	The scale of this proposal will destroy the character of Edenfield as a village and a green space and the consequential traffic and demand on the infrastructure will be far too great. Moreover, although doing it over a period of years will lessen the immediate impact, it will nevertheless have such an impact. - - These plans must be scaled back considerably unless the local plan is to destroy one of the areas which makes Rossendale a place of choice by reason of the quality of life on offer. Some development in every area has to be acceptable if the country as a whole is to build the housing stock in needs but construction on this unprecedented scale is unacceptable. - - The plan is also inconsistent with the general principle of promoting Rossendale as a place to visit. - -		-
148	Mary	Carroll	-		Object	I am opposed to this because of the shear scale of what is proposed, in my view it will totally change the character of the village for the worst.		I do not have a computer but Mr Bradburn has kindly agreed to let me make my comments on his computer.

174	Alex	Marsh			Object	<p>I am writing about the Council's Local Plan and how it will affect Edenfield. I understand that you are planning to ask the government to remove large amounts of land around our village from the Greenbelt so that it can be built on. In marche this year, the Prime Minister declared that protecting the Green belt is 'paramount'</p> <p>These are the areas about which I am particulary concerned and are covered by reference HS2.71 on the site map which accompanies the Plan: land off Exchange Street, Edenfield land west of Market Street, Edenfield land off Blackburn Road, Edenfield land west of Moorlands View, Edenfield</p> <p>I object to these proposals on the grounds that the scale of the plans are far too large and, if carried out, would ruin the character of our village.</p> <p>Access to proposed developments: Market street is the single route through the village and is typically double parked for most if its length, because many of the houses are old terraces with no rear access or space for a garage. Providing access to the proposed developments would greatly increase the load on an already well used route. 489 extra houses, some with one car, many nowadays will have two = 750 extra cars.</p> <p>Traffic through the village: Edenfield currently has reasonable transport links to nearby towns. Buses and cars travel reasonably freely. Adding 750 cars to the morning and evening "rush" periods would result in gridlock. Even those that go to the nearest bypass or motorway access have to get there through the village. When the bypass is obstructed by accident, bad weather or sheer volume of traffic, drivers always seek alternative routes - typically through Edenfield.</p> <p>Access to the proposed building sites: The land to the west of Moorlands View is currently accessed via a narrow lane, by the farmer who rents/uses the land. It is difficult to see how building contractors with large vehicles and (subsequently) how the traffic from an estate of 45 houses would cope. There are similar concerns regarding access ti and from the other proposed sites.</p> <p>School capacity: 489 extra houses = approx. 1000 extra people, plus children, say 1 per house on average = 500 extra children both primary schools serving Edenfield are full, as are other local schools in Helmshore and Haslingden. 500 children translates to at least 2 full primary school with additional impact at secondary level. I see no plans to build the necessary school accomodation. If parents choose to place their children in more distant schools, the impact on transport and road use is obvious.</p>		<p>I have a prior commitment on September 12th Please ensure that my views are represented at the consultation meeting, thank you.</p> <p>The Council needs to give consideration to the houses in Edenfield that are already within 200 metres of the bypass. Residents are already affected by the traffic fumes and noise levels. These residents pay Council tax and are surely entitled to have the Council and Lancashire County Council make efforts to improve the environment. - Permitting the relaxation of the Green Belt is no way to improve the environment, for current or potential future residents. - You may find that smaller scale developments, e.g. 50 or 100 houses, which would have a smaller impact on local services and transport, would meet fewer objections.</p>

----	-----------	---------	--------------	-----------------	-----------	---------	---------	-----------------

Amenities:

Local shops: no post office, one small convenience store, forcing increased use of local supermarkets which will contribute to traffic to and from Edenfield at all times of day.

There may be benefits for the butcher, the hairdressers, the bakery, the chip shop and Chinese takeaway - they may find they are over-loaded! We have small pharmacy, recently threatened with closure under government schemes to reduce costs.

Doctors' and dentists' practices are heavily used and probably have little spare capacity.

Air Quality:

I note that all of the proposed sites for development are close to the Edenfield bypass. They are in fact, mostly within around 200 metres of the bypass. The bypass is heavily used in morning and even peak periods, and has significant traffic throughout the day.

Recent studies have revealed approximately 40,000 excess deaths per year across the UK, and these are linked to living close to major roads.

Particulate matter (PM5 and PM10) from car exhaust plus tyre and brake wear are linked to asthma and other respiratory conditions. Nox gases in exhaust fumes also contribute. Children are likely to suffer more than adults as their lungs will be exposed during their development.

Noise is another factor, apparently linked to the development of dementia.

Our own house is approximately 110 metres from the bypass and most visitors comment on the traffic noise. Yes, we have double glazing, but nobody lives only inside their house, with all the windows closed. They enjoy gardening, sitting out in the sun, children are expected to play out their gardens. The section of the bypass that passes over the bridge over Blackburn Road is very poorly screened and is particularly noisy. This affects two of the proposed sites. Anyone who does venture outdoors on the sites of these proposed developments will be exposed to noise, traffic fumes and will be condemned to develop significant health issues as a result.

Please consider:

Your proposal is to remove these areas from Green belt status, with government backing, in the interests of allowing the construction of 489 homes. It is reasonable to suggest that, in a society increasingly fond of litigation, the authorities (local council, county council, government) could be sued for negligence because they saw fit to approve the construction of homes within areas known to cause health issues and excess premature deaths. This is borne out by studies in the USA and the UK. Is this a risk any competent, responsible authority should take?

Comment received via the online questionnaire (05/09/2017):

The scale of the proposal for Edenfield is unreasonable and prompts concerns

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
						<p>in several ways: - Access to and from the proposed sites would greatly increase traffic in and through the village, initially access for building contractors and subsequent traffic from 489 houses. - Amenities to support the extra families is not in place. The local schools are full, doctors' and dentists' practices are near capacity. Families who place their children in more distant schools will further increase traffic in the village. - ALL of the proposed sites are close to the Edenfield bypass, a busy commuter route, heavily used by goods vehicles throughout the day. There have been several studies showing that living within 200 metres of busy roads is detrimental to health, particularly for children. Exposure to exhaust fumes, PM5 and PM10 from exhausts, tyres and brakes, and high levels of NOx gases is known to contribute to asthma, respiratory failure and other conditions. - Noise is a further factor, NOT simply solved by double glazing. - The Council should bear in mind that their decision to relax the Green Belt and thereby allow construction of a large number of homes, brings with it a responsibility to families who purchase these homes. If the Councils decision is found to have increased the burden of ill-health within these families, which would fall on the local NHS, then those same families could consider litigation. - Apart from the practical matters outlined above, adding 489 houses to a village of 900 houses is no way to provide homes in a "desirable" location. The 489 extra house would destroy that same desirability.</p>

The proposed development of 489 houses would increase the housing by over 50% and result in a total transformation of the village. - Edenfield is a rural village made up of predominantly stone built terraced houses lining the main roads with a small number of newer brick or stone built developments dotted around the village surrounded by hills and farmland. There is a balance here between two up two down starter homes and larger houses, between stone and brick, between old and new, between farmland and gardens, between buildings and green spaces. Unlike many villages in this valley it is open and exposed with long views...it has a unique character. - I am not opposed to development, it is inevitable. Thirty years ago as well as the church and schools Edenfield had many shops, a bank, a post office, a doctors surgery, a garage and petrol station and numerous pubs. Over the years facilities have closed and many have been turned into flats and other types of houses. With each new development comes the extra demand on school places and surgeries, more cars on the roads, an increase in demand for parking and so on. But at least when the housing development is relatively small the community has had a chance to absorb these new demands. To a large extent this is what has happened in Edenfield and why it continues to be a "desirable place to live". - I am opposed to the sheer scale of these proposals</p>

180	Angela	Ashworth			Object	<p>I write about the Council's local plans and how it will affect Edenfield. I understand that you are planning to ask the government to remove large amounts of land lanf around the village from the green belt to enable building. The areas below are the ones I am particulary concerned about and they are covered by reference HS2.71 on the site map which accompanies the Plan.</p> <p>Land off Exchange street, Edenfield Land west off market st, Edenfield Land off Blackburn Road, Edenfield Land West of MoorLands View, Edenfield</p> <p>I strongly object to these proposals on the grounds that the scale of the plans would totally ruin the character of Edenfield and in particular the massive increase in traffic on the village roads would pose a threat to the safety of the residents, thinking particulary of the primary school which is located by the main rd.</p> <p>Please reconsider.</p>		
181	SW	Higginbottom			Object	<p>I write to object to the above plans in reports:</p> <p>Land off Exchange Street, Edenfield Land west of Market St, Edenfield Land off Blackburn Rd, Edenfield Land west of Moorlands View, Edenfield</p> <p>My objections are on the following grounds</p> <p>Traffic - The village is already a bottleneck, particularly market street. I have great difficulty exiting my drive onto market street. The congestion would be greatly accentuated if the proposed plan led to housing devleopment on the areas concerned, so I presume that the access to (i) and (ii) above would be onto market street.</p> <p>Parking - This is already a major problem. I often cannot get into/and off my drive. Further housing in the village, and the related traffic increase would only make the existing problem even worse.</p> <p>Character of Edenfield - If development proceeded as proposed, Edenfield would completely lose it's semi rural village character and would become an urban through flows (more in the nature of Brandlesholme)</p> <p>Schools, doctors etc - development on the proposed could not be adequately serviced by the existing infrastructure.</p> <p>Yours faithfully</p>

184	Sarah	Williams			Object	<p>I am writing in regard to the proposed building of 500 houses in Edenfield which I am definitely not in favour of. The reasons being are that not only will it be taking away the natural beauty of the area and will almost double the population but also I feel the road systems, school, medical care and other essentials will be lacking. In the 40 years I have lived here I have seen the demise of many of the essential commodoties. The doctors surgery is no longer here or the post office. At one time there was a park, a greengrocers and a paper shop. No longer do these amenities exist. It is a nightmare driving down Market Street, now with cars parked on either side and at school time is even worse. With even more traffic and school children attending the only primary school in the village it will be difficult.</p> <p>My own children went to stubbins Primary Schoolmany years ago which now a days also has cars parked on both sides of the road.</p> <p>In recent years there has been building of houses which I feel have been accomodated very well. I realise there is a need for housing but 500 I feel will be far too many and will destroy the character of the village.</p>		P.S I cannot attend the meeting next week due to other commitments so I am writing my objection

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
185	Ron	Williams			Object	I am writing in protest at your proposal to build 500 houses in the centre of Edenfield, Market Street is a nightmare as it is without any additional extra traffic. The two schools cannot accommodate large numbers of extra children and the village facilities are not what they were. In the past few years we have lost the post office, the newsagents, the doctors and the methodist chapel, the bank closed a while ago, surely people want to live closer to these amenities not to be dumped where services don't exist. The whole character of our lovely village would be changed for the worst, and whilst I acknowledge that people have to live somewhere until roads are improved, car parking made available, and the provision of essential services restored, your plans appear to be ludicrous to say the least, unfortunately I cannot be at next weeks meeting but I'. Openly encouraging my friends & neighbours to be present and object forcefully.		
186	Innocenzo	Guarino	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village	-	
187	Mark	Johnson	-		Object	Edenfield does not have the infrastructure to support such a development. I object to the scale of what is proposed which would radically alter the character of the village. There is plenty of brown field sites in rossendale, these should be optimised.	-	
189	John	Entwistle	-		Object	I object to the size and scale of these proposals. The impact would be severe and radically alter the character of our village for the worse.	-	
190	Dorothy	Johnson	-		Object	I object to the sheer scale of the plan which will radically alter the character of the village. - - No provision for extra medical treatment or schools. - - Parking would be impossible.	-	
191	John	Partington	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village	-	
192	Jennifer	Law	-		Object	This plan will affect the quality of life for the village which suffers now from parking problems, no doctors surgery or post office. The School is over subscribed. The scale of what is proposed is going to alter the village detrimentally and the infrastructure and traffic problems will be significant and not possible to manage. Smaller sites for improvement of the area should be used not valuable green space.	-	
193	Richard	Hesketh	-		Object	I object to the proposed removal of Greenfield land in the plans above as this would significantly alter the character of and benefits to the residents. - The size of the proposed development would impact hugely on local amenities, utilities and infrastructure. It is hard enough obtaining small improvements to local roads etc without suddenly introducing a massive physical, geographical, environmental and social change like this one.	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
194	Paul	Garner	-		Object	I object to the sheer scale of the proposed developments in Edenfield which will radically alter the character of the village. To increase the size of the village by over 50% is irresponsible and will put pressure on roads, schools, parking.		-
196	Paul	Dugdale	-		Object	I object due to the huge size of the proposed development, the village of Edenfield could not cope with further traffic going through an already congested road. When the Bypass gets blocked how would you propose to keep traffic moving? Also ask your bus drivers from Rosso, what it is like trying to keep to a time-table going through Edenfield.		-
197	Di	Laycock	N/A		Object	I strongly object to the sheer scale of what is proposed for Edenfield, which would radically alter the character of our village.		-
198	Lynda	Dugdale	-		Object	We have only been residents here for less than two years and have regularly observed the village to be a bottle-neck, especially at peak times and also an influx of vehicles when schools open and close. - Buses are also unreliable due to my above comments.		Build on your own doorstep - NOT OURS.
199	Julie	Fortune			Object	<p>I object to size and scale of this development project. This will completely change the character of Edenfield village. The village is currently at capacity with the amount of vehicles that park along Market Street. Adding more homes will increase the amount of traffic and bring this small village to a stand still. Parking is all ready a problem and that will be unbearable making residents begin to mark there homes with no parking signs and the like. - - Schools are a major concern too as all the surrounding primary and secondary schools in the area being full and appeals for places are constant. Are there plans for a new school too?</p> <p>Comments received by letter (06/09/2017): I writre about the Council's plans and how it will affect the Edenfield Village. I understand that you are planning to ask the government to remove large amounts of land around our village from the greenbelt so that it can be built on. These are the areas wich I am particular concerned and covered by ref HS2.71 on the site map which accompanies the plan. Land off Exhance Street Edenfield Land off Market Street Edenfield Land off Blackburn Road Edenfield Land off Moorlands View Edenfield I object to these proposals on the grounds that the scale of the plans are far too large if carried out would ruin the character of the village</p>		<p>Below are a list of disadvantages to village if this proposal goes ahead. - - Traffic Overflow on Market Street and other main throughways - Traffic accidents - Damage to residents vehicles due to double parking - - Neighbourhood tension as parking grows into a daily issue for residents - Lose of character to Edenfield village making it no longer a desirable place to live - Down grade of the village - - Impact on house pricing due to over population of houses - Possible residents moving due to changing factors - Schooling both primary and secondary - Doctor/ dentist issues -</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
201	John	Crossley	-		Object	I object to the number of proposed dwellings that must be planned on a proposal of this size. There are about 1000 dwellings in the village at the moment and this proposal would mean an increase of roughly 50% thus radically changing the character of the village. - Have the following points been considered if so I would be delighted to know the answers - - The increase in children, with only one small primary school (already full) - The increase in car parking required on Market street for the extra traffic, at least 500 cars. Traffic on the main road is a problem now with cars parking on both sides. - The general state of the local roads without adding the extra traffic during and after the building of these extra properties. - The potential increase in crime within the area with no increase in local policing. - The current problem with the lack of any local medical and dental practice would only increase the pressure in Rawtenstall. - -		On the surface it looks like a badly thought out plan with no thought given to the infrastructure required. I think the bean counters have thought, 500 extra council tax incomes, wonderful, bugger the local community lets get the cash.
202	Barry	Padgett	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village		-
203	Stuart	Crompton	N/A		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. With the location of Merlewood in the Village, sandwiched between Rochdale Rd and Bury Rd we are constantly troubled by heavy traffic during the day, and when the Edenfield Bypass is blocked, very often with accidents and to a lesser degree road works, we are assaulted 24 hours a day with the amount of traffic noise and vibration that has no option but to pass through the village. - - Enough is enough, the village cannot take any more traffic, and neither can we! -		The village does not have the required facilities, in every sense, to cope with quantity of houses proposed, it is not just the cost of house building to consider. The council cannot cope with what exists now.
204	Kenneth Frank	Holden	-		Object	I object to the sheer volume of new proposed housing - The 2 schools in the village are already over subscribed. - All traffic from the proposed developments will have to be funneled on to the already very busy road through the village - The proposed development will radically alter the character of the village		None
205	Barbara	Holden	-		Object	I object to the sheer number of house that have been planned - The 2 schools in the village are already full - The road through the village is at peak times very congested - The sheer scale of the proposed developments will drastically alter the whole characture of the village - Land drainage and existing sewers will also be affected		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
207	Claire	Diack	Resident		Object	<p>I am objecting to the enormous number of houses to be built. There will be a huge strain on local services to the point of strangling the viable community that we have. - In recent years we have seen our GP Practice be taken away, the reason at the time was the community was not large enough to keep the one we had. - We have seen Edenfield Primary School enlarged numerous times to accommodate an increase of pupils, with this in mind, do you propose to halt access for those residing outside the village to ensure those children who do reside in the village have access to their local school, or have you got plans to build another school in what would become an overcrowded village. - If you build 489 houses, you can estimate that this could increase vehicles per residence to about 733, this calculation is made on an average of 1.5 vehicles per household, the affects of these vehicles moving around the village will cause traffic issues, we already have problems with parking, problems which are exacerbated when there are either, road works, the bypass is closed due to incidents. - The whole village main road has long rows of terraced houses, no where in the village are parking provisions made for these homes, in the row I live in there are five houses and eight cars. If there was yellow lines placed where do you think we will park? - If these houses are built, we will not be a village again, we will be a village of houses constantly for rent for people to take advantage of, we will see an increase in crime, we are a hop away from the motorway network, we don't have community police anymore, who will look after us and protect us, and investigate our crimes. - -</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
210	Karen	Lester	-		Object	<p>The plans do not meet the needs of the existing village residents of Edenfield- - Maintaining rural villa character - The proposed developments will damage the special character and setting of the village. The urbanisation on such a scale will mean the village becomes a small town. To build houses on such a large scale will turn Edenfield into another suburb from which to commute. Helmshore is a good example of how local rural villages in Lancashire are being over developed - Housing - There is no demand locally for such large areas of housing development. The plans for Edenfield are completely disproportionate with the rest of Rossendale, yet there is no evidence that Edenfield has such a high need for housing. - Green Belt - Edenfield will loose a huge proportion of its green belt. There are no exceptional circumstances or special cases which warrant any release of such a large area of green belt for development.Green belt is there for a purpose and any reduction means fewer areas are safeguarded to prevent urban sprawl. Building on Green Belt land should not be considered, especially in an area so close to the Manchester conurbation. It is important that these areas are protected from development. For years people have lived in Edenfield in reliance of the existence of Green Belt land. They have had assurances from the Government that green Belt land will be protected. The decision to release Green belt is contrary to guidance by the NPPF. and any development on the Green Belt is wholly inappropriate. - Services - Developing areas of dense housing will impact on the life in the village.Infrastructure will be put under great strain, roads in particular, but also schools, health services and utilities. There is no access to the By pass (joining the M66) at Edenfield so traffic tends to go through the village rather than bypass it. Any housing development would potentially, lead to more road development, school expansions, and other road management controls such as traffic lights - Well being - Living in a semi rural area brings health and well being benefits. People benefit from the green open scenery and views, something they have lived with for years. To urbanise the village to such an extent will make living in the village more stressful and bring with it all the associated social problems of urban living. Access to open countryside will be reduced and the attraction of living in Edenfield will diminish - Property Value Property will be devalued as views of expansive hills and woods are blocked by urban sprawl and the village becomes a less desirable place in which to live - Costs - Local Tax - Costs to the general public will increase for more highway maintenance, refuse removal, sewers and water services- all met by the public, directly or indirectly, through higher demand for services. Rossendale Council will have to find more money for the services they provide through local taxes.</p>		-

212	Charles	Morrison	-		Object	<p>I have been a resident of Edenfield throughout most of my life - moving here aged 6. I now live here with my young family. - - It is a small and characterful village with modest facilities such as shops and services, but with the benefit of being surrounded by green space. - - The proposal for the wholesale removal of the protected greenbelt down the west side of the entire village, and the construction across this space that would inevitably follow is a great concern to me and I would like to object most strongly to the proposals named above, and state that the scale of change is far too large for the village. - - I understand the pressures on councils to support the building of new houses across the country, and I do not object to the building of new houses, but I believe passionately that it should be done with integrity, and with careful consideration given to existing infrastructure and residents, and not just on the basis of availability of land. - - I also understand that these changes could, and will most probably result in the building of up to 489 houses on large estates that will transform the very nature of where we live. I understand Peel Holdings and Taylor Wimpey have vested interests in much of the land in question, and I'm sure will be lobbying hard for these changes to go through. - - I believe that these changes to the greenbelt would change - negatively and irreparably - the character, attractiveness and rural nature of our small village. It would put strain on the roads - already congested, it would cause problems with the local schools - already oversubscribed. The village has also experienced cuts to services - post office, GP, and bus services have all gone / reduced massively over recent years. This is not a village geared up to support a 50% increase in its population and changes at this scale would be unfair, and affect negatively existing residents. . - - I write to ask you to please prevent this from proceeding on this scale. There is the potential for building in Edenfield without removing the greenbelt, and in a way that would be sympathetic to the surroundings. Removing the greenbelt will have so many negative impacts on Edenfield - please help its residents with your decision and stop this wholesale reconstruction of our village. - - Sincerely and with thanks</p>		-

213	Grace	Barmak	-		Object	I absolutely object to all of this. - How can this lovely small village cope with such an invasion of houses and people? - The only benefit of this proposal is that it would put more money into the pockets of the greediest people who do not care about our land, our people or our country. You cannot destroy this area of greenbelt. - It would DESTROY further our: - ROADS - which are already under the strain of the trucks that hurtle through and the traffic that often comes off the motorway and bypass; - DOCTORS - as they are already full with patients from the area and it would be hard to cope with such an influx of people. - SCHOOL - which is already full to capacity and has around 30 children per class and so could not accommodate any more children. - AIR POLLUTION - which is already bad enough with the trucks coming through and the motorway being so close by. - FLOODED AREAS - which would just become worse! This is an area of great vulnerability and is prone to flooding - and Irwell Vale is proof of this, as is Chatterton, Stubbins and Nuttall Park it is crazy to think that we would dig further into this fragile hill and think that there would be no problems - are you mad? - TRAFFIC SITUATION - so approx. 500 more houses = 2 cars per house = 1000 more cars per day up and down the village. How could this benefit anyone????? It would be gridlock everyday. - NO - STOP THIS PROPOSAL NOW PLEASE.....PLEASE HAVE SENSEEDENFIELD VILLAGE SAYS NO.		This area is desirable for a reason - - If you did this to this beautiful area and the village of Edenfield then it would soon become undesirable and it would attract 'undesirables'. - Rossendale Council should start to make some good decisions instead of selfish and greedy ones - just look at the Asda and the McDonalds in Rawtenstall - they should never have been allowed - please be stronger, and better and think about your people and communities for once instead of always thinking about the dosh!
214	Paul	Hancox	-		Object	I object strongly to the scale to what is proposed for Edenbridge which would totally destroy the village and its surrounding area causing major traffic, parking and pollution issues which are already an issue for the local residents. - Traffic volumes, noise, speed, vibration and pollution caused by quarry and farming vehicles would be dramatically increased and only add to an existing major issue.		Traffic volume, speed and noise are of major concern to us locals in Edenfield. In our section of Bury road we must have at least one incident a month regarding damaged cars from quarry and other very large lorries. The volume of additional cars which would be generated by these plans would cause gridlock, frustration and above all, make the roads a major safety hazard!
215	Jeffrey	Yates	-		Object	I object to so many houses being built in such a small village when the roads around us are so busy already. the schools are already full and traffic comes to a standstill children are going to and from school .the village cannot tolerate any more traffic . we do not mind small developments eg 20 to 30 houses but come on 500 ridiculous		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
216	Paul	White	none		Object	I feel that the sheer scale of what is proposed for Edenfield is far too much. It would considerably, in fact radically alter the whole character of Edenfield. It would be detrimental to Edenfield and it's residents. - Therefor I object most strongly to the council's proposals to allow 489 houses to be built in Edenfield. - I do not/cannot drive, I do not own a car therefor I am dependant upon public transport for all aspects of life...doctors, dentists, hospitals, groceries, social events, etc. - I feel sure that the bus services provided by the Rosso bus company for Edenfield will be greatly affected both during the proposed building of these houses and afterwards. - In this day and age my family and I (four adults in total) are somewhat in the minority...all being non-drivers. - Image the additional number of cars in Edenfield if 489 houses are built! - In fact the 482, 483, 484 bus services from Accrington, Haslingden, Rawtenstall and Bacup to and from Bury will be greatly affected as all these services run through Edenfield. - Market Street, the main thorough fare through Edenfield is a bootle neck now with parked cars on both sides of the street, running the full length of the street. - In respect to schools...Edenfield has one small Primary School. There is one more small Primary School located nearby Stubbins village which takes some Edenfield children. - Neither of these schools are for the sole use of Edenfield (or Stubbins) residents. - To repeat, I object most strongly to the council's proposals to allow 489 houses to be built in Edenfield.		None.
217	Paul	Clarke	-		Object	I object to the sheer scale of what is proposed in Edenfield. - This would radically alter the character of the village. - Traffic would increase dramatically in what is already extremely dangerous with all the lorries that travel through it		-
218	Bronwyn	Langley	-		Object	I object to the scale of the plan proposed as I feel it is too large and will adversely affect the character of the village		Parking and traffic on Market Street is already a problem and what plans are there car parks, schools, doctors etc.
220	Susan	Crossley	-		Object	I am objecting to the size of the building and the affect that this will have on the village of Edenfield. The massive scale of what is proposed for Edenfield would cause so many issues with parking, schools, doctors, and the amount of traffic especially when there are problems on the bypass through to Rawtenstall which causes huge problems through the village. - This would also have a knock on effect to Helmshore, Haslingden and Rawtenstall ! - - -		- - A very badly thought out plan ! - -

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
221	Julia	Hancox	-		Object	I strongly object to the scale that is proposed for Edenbridge which would totally disrupt the village and the surrounding area creating major traffic, parking and pollution issues which are already an issue for the local residents and would make things much worse. - Traffic volumes, noise, speed, vibration and pollution caused by quarry and farming vehicles would be dramatically increased and only add to an existing major issue not to forget the health and safety aspect.		Traffic volume, speed and noise are of major concern to us locals in Edenfield. In our section of Bury road we must have at least one incident a month regarding damaged cars from quarry and other very large lorries. - The volume of additional cars which would be generated by these plans would cause - gridlock, frustration and above all, make the roads a major safety hazard! - Pollution again is an major issue in the area and to remove the greenfield restriction which will result in a huge increase in pollution would be insane and reckless to say the least.
223	Jennifer	Barnfield	-		Object	The scale of this development would radically alter the nature of the village . The infra structure in terms of road access,would be overloaded . There is one main road through the village which is already busy at peak times. If traffic is re routed through the village because of problems on the Edenfield by pass there is a constant stream of vehicles . - Cars are parked on each side of Market Street already . More houses on the scale suggested would make the traffic flow on Market Street horrendous . - Local schools would not support a large influx of pupils so that schools would inevitably have to be enlarged and it seems there are no plans to increase their size at present . - Local G. P. Services are already stretched and it is difficult to see how so many new residents could be served by existing services . - All the latest research suggests that living so near a major by pass causes increases in asthma and other health problems so that the quality of life offered to these new residents might leave a lot to be desired . Noise pollution from the by pass would undoubtably be a problem for them . - As resident of 45 years it is not that I object to the development of land per se but that the proposed scale of this development fundamentally alters the nature of this village .		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
224	William	Barnfield	-		Object	Whilst the government continues to pay lip service to maintaining the Green Belt it will give councils permission to erode it, so in effect they are inviting councils to do their dirty work for them. - In order to increase Council Tax revenue, and for whatever other inducements, Rossendale CC are prepared to 'sacrifice' Edenfield, downgrading it from a pleasant village to a teeming suburb. Is this a Council fit to represent us or should we be with Ramsbottom? - The present schools, roads, parking etc are only just sufficient for the existing population. The proposed housing is right next to the motorway, condemning the new residents to an unhealthy and noise-ridden existence. Current residents will be living in a less pleasant place. - The whole plan smacks of Council's desperation, developers' greed and Tory hypocrisy. -		Our village is already being blighted by the fortress the developers have erected around the Horse and Jockey car park. The pub itself has been left to rot for years. Just shows the sort of "people" we are dealing with!
225	Jill	Sutcliffe	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		-
226	Steven	Sutcliffe	-		Object	I object to the sheer scale of what is proposed for Edenfield which could radically alter the character of the village		-
227	Fiona	Lewis	-		Object	I object to the sheer scale of what is proposed for Edenfield. - The infrastructure cannot support further housing at this scale due to the following reasons: - - The floods we experienced in Irwell vale came from surface water coming down the hill, having inadequate drainage by having more housing and losing the green fields, shrubbery and trees etc will only make this much much worse. - - The transport infrastructure cannot support additional vehicles in the village, there is already parking problems. - The m66 at peak hours is a car park already. - - Schools are already full, traffic is bad on the small narrow roads. - - Edenfield's characteristic charm is of a small village with a small and strong community. This scale of housing will alter this drastically. -		-
228	Ashley	Lewis	-		Object	There are sufficient brownfield sites in Lancashire to develop before we begin desecrating the green belt. The green belt was hard won and it is more important than ever that it should be protected. Who really stands to gain from this development? Not the poor of the area who won't be able to afford these homes, nor the local residents who's environs will be irreparably diminished by having the village 's resources squeezed. Allowing this development is incredibly short sighted and driven purely by greed on the part of the developers and one wonders why any councillor would ever support it unless they stood to gain personally.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
229	Ryan	Chan	-		Object	This is a ridiculous plan to think that a small village like Edenfield can support this many proposed housing, it will be totally spoilt by the huge influx of cars moving in and out of the village. - - The development of larger housing with poor travel infrastructure can only mean larger cars (probably two per household) spoiling the air quality travelling to work and to schools in the next town because the smaller schools nearby are over subscribed. - - Added to this the flood risks to the houses further down the hill. - - There are many unused industrial units and older housing which can be developed and should be considered first before turning to green fields for development.	-	
230	Margaret	Entwistle	-		Object	I object to the huge scale of proposed housing for Edenfield, which would radically change the character of the village. - Stubbins and Edenfield Schools are almost full to capacity, and increased traffic along Market St. would be unable to cope at peak times. Parking in the village is already difficult and this would be greatly exacerbated. -		I am not against housing development in Edenfield but just the proposed number of dwellings.
231	Owen	Gregson	-		Object	I object to the large numbers of houses proposed for Edenfield which would render the village unrecognisable. - Moreover the main gripe here is it is on Greenbelt land. The whole idea of greenbelt land is the it is to stay GREEN and not be built upon! I have lived here for 10 years and spent a lot of money and effort improving my house within the village and it would not be the same place to live if these plans go ahead. It is very upsetting to think this may happen to our village. - There is not enough space for the cars we have now and the small school can certainly not accommodate more residents. - It is unbelievable to think that this is even being suggested when it is obvious the infrastructure is not there to cope with the plans		I can only re-iterate that Greenbelt land should not be built upon and our village will be ruined with the proposed plans. Whilst there is a need for more housing, more suitable sites need to found.
232	Sarah	Hardman	-		Object	Edenfield is a small village. We no longer have a Post Office. Most of the local pubs have closed down. The chemist is under threat. We have no doctor or dentist. - - The village school is already heavily oversubscribed (my five-year-old son attends) and should family housing be built on such a large scale, it will be unable to cope. Stubbins school is also very oversubscribed. - - Parking is an issue in the village and there is currently a very high volume of traffic passing through. Double-parked vehicles make access an issue; a potential extra 500-1000+ cars will create serious problems. - - In short: we lack the infrastructure to support such a massive potential development. I grew up in Helmshore and it is almost unrecognisable now due to huge overdevelopment. I understand that the council wants to develop the more 'appealing' areas of Rossendale as they can ultimately pocket more money in council tax. However, by effectively doubling the size of the village it will lose its character and sink under the extra demands made on it. - - It seems to me that the only ones set to benefit from such an over development are greedy landowners and the council coffers. Please leave our green spaces alone, look at more suitable sites and reconsider Edenfield becoming the next Helmshore.		No

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
233	carol	hanson	-		Object	I object to the sheer scale of what is proposed for Edenfield, not only can the infrastructure not sustain such growth, this will take a large amount of greenbelt land away. This will also alter the village so much, it will no longer really be a village. - There are already traffic problems in Edenfield, especially when there are problems or road works on the M66 or A56, how much more do you think these roads can take. Given the lack of public transport that services Edenfield the people who would be living in these new homes would need cars to get them anywhere.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
234	Lucy	Reynolds	-		Object	<p>I would like to strongly object against the release of Green Belt land in Edenfield for housing development in excess of 300 properties. - The development of this land would result in pressure on land and local infrastructure in A56/M66 corridor and have a significant impact both environmentally ? losing areas of ecological value ? and visually on the landscape and character of the local area. - The additional population would increase demands on already overstretched infrastructure such as schools. Families from the Edenfield area ? including ourselves ? already have to send our children to school in the Bury area as the schools in Edenfield do not have the capacity required. - The Council should not be unduly pressurised into releasing Green Belt as it is a preferred option for interested developers due to higher margins - they should consider using suitable brownfield sites and reviewing density policies to increase the number of dwellings achievable in existing land supply as a priority. The council should be able to demonstrate robust assessments of the capacity of brownfield and other land to accommodate growth across the whole of the Borough. - The Council should also demonstrate fully that it has consulted with neighbouring local authorities to understand if they could accommodate some of the new homes, particularly where it shares a housing market area ? for example on its borders with the Bury authority. - The National Planning Policy Framework states that Green Belt boundaries should not be changed except in exceptional circumstances. The loss of Green Belt is tremendously significant due to the negative impact on the environment with loss of natural habitats, agricultural land (of which Lancashire has some of the highest quality), rural landscapes etc. The aspiration for future growth does not constitutes an exceptional circumstance in itself, as economic growth is a perennial and constant desired outcome of public policy. - The NPPF states that ?The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of the Green belt are their openness and their permanence?. - However, the fundamental issue about the Green Belt is its integrity as a whole. It is important to identify the cumulative impact of any removal of areas from the Green Belt, both on the overall openness of the Green Belt and on the five purposes, which are: - 1. To check the unrestricted sprawl of large built-up areas; - 2. To prevent neighbouring towns from merging together; - 3. To assist in safeguarding the countryside from encroachment; - 4. To prevent the setting and special character of historic town. - 5. To assist in urban regeneration by encouraging the recycling of derelict and other urban land - If a parcel performs well against ANY of the five purposes OR that it can clearly be considered to contribute to the openness of the Green Belt it should be eliminated from consideration for release. - The council?s own commissioned Green Belt Review of 2016 states that the parcels of land under consideration ALL</p>		No.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
						perform strongly in some areas and will create at least a ?medium? degree of harm to the Green Belt if they were lost. - The report states that ?releasing the parcel is likely to have a substantial negative impact the integrity of the wider Green Belt? in all of the three parcels! - With direct reference to the draft local plan and policies: - ?Policy SD2: The Urban Boundary and Green Belt? states that ?except where development specifically needs to be located within a countryside location and the development enhances the rural character of the area? ? the council should demonstrate how this development of over 300 houses could possible enhance the rural character?! - ?Policy HS3: Edenfield? also states that ?Any proposed development must make a positive contribution to the local environment?. I firmly believe this is impossible given that the development necessitates the destruction of 26ha. of Green Belt land by its very essence. - In summary, the councils own research and review demonstrate that the areas of Green Belt should not be released for development and other options within the urban and brownfield areas of the locality should be fully exhausted as a priority. -		
235	Faye	Weldon	-		Object	The proposals under HS2.71 will completely change the character of Edenfield village. This is a quaint village that Rossendale should be proud of! Not try to ruin!	-	
236	Sandra	Garner	-		Object	I object to the fact that Edenfield seems to be the main area for development despite it being so small. There is no support in the village for such a lot of houses. the road through the village is narrow and at some places you need to stop to let cars past due to all the parked cars. We have one tiny school, no doctor, no post office, very few shops. We have got a sex offenders unit nearby, I don't suppose that will be mentioned in the promotional material to potential buyers? I appreciate the need for well planned affordable housing in all areas but should such a large number all be put in one small village?	-	
237	Adrian	Maddocks	-		Object	Edenfield village struggles to cope with the current houses and cars in the village, the sheer scale of these proposed additions would cripple the village.	-	
238	Samantha	Rorke	-		Object	I feel that this many houses in Edenfield would make the village a very different place. Driving through Edenfield at the moment can be tricky with parked cars and school traffic. Better buses are needed at the moment without adding another 489 households. - I also feel that houses built on green belt will not be affordable to the majority of people needing a home, it feels like they are going to be built for the benefit of developers rather than the benefit of the local population.	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
239	David	Fisher	-		Object	I should first say that I am not an out and out objector of development in Edenfield per se but what I do object to is the sheer scale of the development that could ensue from the removal of the above areas from the Green Belt. - Edenfield currently consists of approximately 900 houses and it is immediately apparent that to increase this number by anything like the 489 (54.3%) houses this proposal may result in will change the character of the village beyond recognition, a position that will never be recoverable. - I am not inclined to go into the detail this would have on facilities (traffic - parking- schools - medical) but save to say it is clear that all these will be severely impacted and indeed many are already under more pressure than they can sustain. - Over the 300 hundred or so years there has been an Edenfield Village the changes that have been made have by and large moved in a way that embodied new community requirements but not at pace that would devastate the village to the extent the above changes would, moving us us to position where the word "village" would no longer fit the description of what would result from such manifest changes. - I have been a resident of the village for over sixty years and have never had cause to air my views on matters of change in the past - perhaps this is some measure of how seriously I now view this current matter? - - -		-
240	A	Teague	-		Object	- - Further development in the Village is not desirable. Traffic congestion is at an unacceptable state now.		-
242	Sandra	Fisher	-		Object	The main thrust of my objection is the sheer scale of development that could take place if the areas mentioned were removed from the Green Belt and released as building land. - In my view this would radically and totally change the character of the village for ever to a point where it would not really be a village. - I have lived here over forty years and have never felt the need to put to print any objection in respect of the any of the various changes that have come to pass in that time but this really is too much.		-
243	Judith	Aquino	-		Object	I am objecting to the large scale of what is proposed for Edenfield for the following reasons: - 1) Traffic would be a huge problem, it only takes a small incident on the by-pass and there is a traffic jam through Edenfield. The village cannot cope with potentially 1000 extra cars. - 2) The two schools would not be able to cope with the massive influx of children. - 3) The character of the village will be completely transformed. It would no longer feel like a village.		-
244	Adrian	Finbow	N/A		Object	I object to the sheer scale of what is proposed for Edenfield as the planned development(s) would radically alter the character of the village. I am not opposed to reasonable, sustainable, sensible development provided that the appropriate supporting infrastructure (eg: roads, access, schools, local facilities etc) are fully implemented BEFORE any developments but a proposed 50% increase in the village housing over the period to 2034 is, in my opinion, excessive, inappropriate and wholly unwanted.		This proposed increase in the size of a small village is ridiculous and should be stopped as soon as possible.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
245	Helen	Finbow	-		Object	I object to the sheer scale of the proposed development in Edenfield. This would radically alter the character of our lovely village apart from the fact that Edenfield does not have the infrastructure to support such a huge development.		-
246	Gabriel	Dench	-		Object	I object to the scale of the plans as this would dramatically transform the village to something which would be unsustainable for the villagers.		-
247	Rebecca	Merrills	-		Object	I object to the sheer scale of the operation to build houses on the land that surrounds us as it would make living harder as there will be more traffic and the population of the added persons would increase too much for our village to cope with we do not have enough schools or other services to provide for more people		-
248	Mark	Welsh	-		Object	I have lived in Edenfield for 14 years. Moving here with my family was determined by many factors not least of which was the nature of the village, its scale and surrounding countryside whilst still being handily placed to access larger towns and cities via relatively good transportation links. - - During our time here we have seen massive disinvestment in the locality including a departing GP surgery, loss of the post office and an ever worsening local bus service. Council tax has increased year on year despite the loss of local services in the same time period. Roads continue to be in a general state of disrepair and on occasion the nature of traffic does bring the village to a halt. I see little evidence that if the proposed removal of greenbelt protection was to be made as per the locality plan there would be any improvement in the village infrastructure. Evidence of surrounding areas and their expansion over the last few decades would support this perspective. - - There are currently around 900 houses in the village. There are a considerable amount of properties for sale or for rent in the immediate area which doesn't appear to suggest a housing need for the village. - - Whilst my children are now of an age where school is not an issue for them directly I understand that both local schools are busy and any further development in the area would clearly impact on school provision. Seeing the daily chaos on the roads around the schools I suggest that housing increase on the scale suggested in the plan would only exacerbate this significant problem. - - Access to any of the proposed sites doesn't seem to be particularly straightforward without adding to the already busy times of the day in the village. Travel plans would no doubt be developed at some juncture but simple observation suggests that traffic chaos would ensue at key times in and around Edenfield. I do not think that this is easily resolvable or affordable to developers going forward. - - In conclusion I would like to register my objection to the proposals set out in the Council's Local Plan. Specifically my objection is based on the scale of the proposals (which are far too large) and on a simplistic level in that the character of the village and local area would be destroyed by the scale of the proposals outlined.		Local infrastructure is not sufficient to sustain the scale of development proposed in the Local Plan for Edenfield. - -

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
251	M	Teague	-		Object	- The new development plan will add to the serious traffic congestion we have in Edenfield all ready. The village cannot cope with this amount of new housing / cars. - 1 Village School. No Doctors surgery. Plus its questionable to build family housing in close proximity to a Sex offenders unit at the Chatterton Hey House location.		
252	M J	Coyne	Chartered Architect		Object	I strongly object to the Site Allocation on the following grounds: - The character of Edenfield is that of a small linear village developed slowly over many years as a natural response to the requirements for trade and communication. - The size and scale of the proposals are totally unsympathetic and will destroy both the existing character and the setting of the village. - There are small sites within the village which would lend themselves to logical "infill" development, an example of which is the Horse and Jockey, and any further development should be limited to such sites in order to preserve the character. - The infrastructure cannot support the size of th proposals and there is no indication as to how this problem could be satisfactorily resolved. - As a matter of principle the Council should ensure that any development within the borough exhausts the available brownfield sites before consideration is given to greenfield development.		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
253	Richard	Barrington	-		Object	Having grown up in Edenfield (my parents still reside there) I have massively benefited from the environment, both natural and social, that the village has created and is surrounded by. The greenbelt space surrounding the village is a fantastic reminder of the rural nature of the North West and the natural environment cannot be taken for granted. The sheer size of the proposed development will indefinitely impact the environment for those living within the village in such a negative way. - - The fact that the proposed development is earmarked for greenbelt land is a real worry for me personally (I work in Sustainable Development and so have an active interest in the environment) and and whilst I appreciate the country as a whole requires housing, greenbelt land was designed for specific reasons and the sheer size of this proposal would effectively remove the greenbelt from existence. The removal of such a large area of greenbelt would in my opinion be another example of the start of the end of greenbelts across the county. This would be a travesty and further highlight the reason why greenbelts were initially created. - - Further to the destruction of greenbelt the sheer scale of the proposed development will have indefinite impacts upon the village and its residents. The village already has issues with traffic and parking availability along Market Street due to the nature of the Victorian terrace houses, which is magnified when the bypass is closed and traffic comes through the village. To add in the proposed number of houses, and the associated cars, would make the village increasingly inaccessible and gridlocked with traffic. There simply is not another way round the village if the bypass is also gridlocked. The additional residents would also have a detrimental impact upon the amenities already in existence with education and health facilities already at full capacity, where are these additional children going to be educated? How will these residents have their health needs met? - - I very much object to the proposals being submitted for such a radical development. The well-being of the village, environmentally and socially, is in serious jeopardy by these proposals and believe the another approach is viable and more suitable.		
254	Ann	Rae			Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village - The roads will not cope with the amount of new traffic		
255	Ann-Marie	Coyne	-		Object	I strongly object to the proposals due to the scale and size which will conflict severely with the existing character and setting of the village. The infrastructure cannot support the size of the proposals and no indication is given as to how the matter would be resolved. Whilst I appreciate that there may be a need for additional housing within the borough I believe that priority should be given to the development of brownfield sites and that until such sites are exhausted no further development of greenfield sites should be permitted.		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
256	Ian	Corless	-		Object	Housing in Edenfield currently comprises of approximately 900 properties. Your draft local plan details the land you wish to remove from the green belt to enable developers to build on these sites. These areas could have nearly 500 extra houses built which would be an increase of over 50% on the current number of homes. Developments of this size would ruin the character of Edenfield. What provisions are being made in your plan for the extra traffic, the extra school places that would be needed, the extra GP and dentistry services required ?? I object to this proposal in the strongest terms as the scale of these plans are far too large and as previously mentioned would totally change our local environment.....	-	
257	John	Davies	-		Object	I object on the grounds that so many properties would make Edenfield completely gridlocked - There are no facilities schools are more than full ,no doctors etc	-	
259	Karen	Hawkins	-		Object	I object to the number of houses that is proposed, half as much again for the whole of the village is ridiculous. It will no longer be a village. The village only has a few shops, a school, very little parking for the existing residents, through traffic from Rawtenstall, Haslingden to Ramsbottom and Bury. The pollution will be a problem. There are no new reservoirs. The drainage and power required would be too much to add to the existing utilities. More delivery vehicles, dustbin vehicles, visitors, people = just too much for this area. The number of houses should be spread out amongst the Rossendale Valley/Lancashire. The use of derelict factories and empty boarded up houses should be utilised as first priority. Builders prefer to new build than renovate - hard luck. Use existing stock first.		Edenfield is a village not a town. How many residents would still constitute a village?
260	David	Cowan	-		Object	I wish to register my comments about the large scale of proposed housing plans for Edenfield - which is not large enough to absorb the increases of housing that is being planned. -	-	
262	Claire	Mableson	-		Object	Edenfield is a village community the scale of the proposed housing on these sites would drastically change the village and its community. - The resources available to the local community e.g. Schools, doctors, transport links are not big enough to cope with the increase of cars and people you are proposing. - Parking in the village is already an issue and so is the amount of traffic passing through despite the bypass. Even the bypass cannot cope with the volume of traffic in the local community adding to this will only make transport issues worse. - The whole of the feel of this community would change, the proposed changes would also affect the tourists this area attracts. - There are also environmental impacts habitats will be destroyed something we should be protecting.		Please read previous comments
263	Ian	Summers	-		Object	This is a very large number of houses and the village already has problems with traffic and parking. schools, shops and could not cope with such an increase as it would SPOIL the village.		Please do not ruin our village with overcrowding.

266	Joanne	Ash			Object	<p>I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. - I fail to see how the village can cope with the influx of vehicles with the proposed number of houses. There are already problems with vehicles being parked on bends and at junctions, within the village, which clearly causes current problems with traffic and this will be exacerbated. Edenfield is a sought after area? as it is a village with an impeccable and enviable traffic safety history but the increase of traffic will change this and put the elderly and young children at risk. - There have been numerous times when the traffic on the by-pass has been forced to use the village due to incidents; this has caused the village to become gridlocked. Based on this, the evidence is that the proposed number of houses will increase the traffic to result in daily gridlock within the village roads and will force vehicles to take shortcuts through the smaller streets which will increase the accident rate within the village. - The houses on Bolton Road North currently shake when heavy goods vehicles and quarry vehicles pass. This problem can only increase and worsen when the number of heavy vehicles increases within our village for the construction work which, in turn, is likely to cause structural problems to the houses. The Local Council must then accept responsibility for same. The roads in the village are not designed for continual and extensive use by heavy vehicles. The state of repair for these roads is not without issue and, with the proposed additional vehicles in the village, will also become costly to the Local Council in repair bills and claims for damage caused to resident's vehicles. - The air quality in the village [with increased traffic and fossil fuels being burnt in the village] will also change and will be detrimental to the health of the elderly and the young in particular. - The scale of the proposed Council Local Plan is extensive and is not sustainable within such a small area. -</p>		No further comments - please see previous comment box.
267	Peter	Dawson	-		Object	<p>I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. - There is not the infrastructure in place to allow for additional houses to this large scale. The increase in traffic and air pollution would be detrimental to health and environment.</p>		Comments in previous comments box.

269	Jean	Davies	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the Village. - - At present the traffic parked on Market Street is now already double parked with buses struggling to get through. Any increase in the volume of traffic would only exacerbate this current problem. - - Presumably there will be a substantial amount of children involved with the building of these houses. Has anyone considered the schooling situation in Edenfield and Stubbins already. Where are these children going to be accommodated for schooling purposes with Edenfield's tiny school already at full capacity and Stubbins is the same. - Has enough consideration been put to all this and would the intention be to build a new primary school or double the size of Edenfield Village primary school? - - Furthermore, has consideration also been given to doctor and dental facilities that would need to be available? - - In conclusion, not enough thought has been given to the above facts mentioned that is why this proposed development as it stands is totally out of the question for our small Village. -		I think I have already made my views known on previous question.

270	Stephen	Terry	-		Object	This whole plan is unacceptable as the scale of the development and the number of houses proposed would radically change the character of Edenfield village		Hi, I am a resident of Edenfield and have been horrified to find out about the development proposals to add around 500 new 'units' or homes to our village, as it will destroy the village as we know it and much of the Greenbelt land that generations of residents to Edenfield and surrounding communities have enjoyed. I also do not see any proposals to help the local schools cope with the extra influx of pupils or any plans to deal with the extra traffic this will inevitably cause. Also the ecological impact will be devastating and irreversible! With the land in question being used by Dear that I see on a regular basis as well as other wildlife such as birds of prey As well as the destruction of plants and trees that provide the community with a much need link to nature. The only reason I can see that this development is even being considered is so the council can make money off selling the land and then continue to reap the extra revenue of extra council tax payments with no consideration to the current residents of the village or the future of the community this development will destroy. Regards,
271	susan	harrison	-		Object	we object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. I also feel it will cause problems for roads, schools and other basic facilities.		-
272	Karen	Corless	-		Object	I object to the sheer scale of what is proposed for Edenfield. Edenfield is a village and the proposed plan would radically alter the character of the village. There is no provision for additional services ie schools, doctors, dentists. Traffic congestion would also be an issue.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
274	Elizabeth	Danks	-		Object	Edenfield is a lovely village but it is fast becoming a difficult place to travel through. There is already much heavy traffic and local traffic polluting our streets.. The building of 400 more houses will only add to the traffic chaos. During the consultation, time must be spent considering the effect of 400+ new houses (potentially 1,600 persons,800 cars) on the infrastructure. Edenfield cannot support the parking, school places, bus routes (goodness - the village cannot even support a bus to Manchester!!!) that such a venture would involve.And the term "village" as applied to Edenfield would be erroneous. The sheer scale of your plans is ridiculous and not 'thought through'. Please consider carefully the effect of such plans before progressing further Thank you.		-
275	Sue	Bellass	-		Object	My husband and I have been residents of Edenfield for over thirteen years and feel that our three children have grown up in a perfect location, with minimal traffic, good schools and beautiful countryside on the doorstep. Our children are now heading for young adulthood, and we would like them to have the option to buy affordable housing in the village if they wish, and, therefore we support SMALL scale, tasteful housing development. However, it is NOT possible to build 489 houses in Edenfield, increasing its size by over 50%, without radically changing the nature of the village we call home. The infrastructure could not cope with an influx of people of that magnitude, and the proposed development would cause utter chaos on the roads and in our schools. People in the village already have difficulties with parking, and in the time we have lived on Eden Court, it has become harder and harder to exit the court turning right because of traffic congestion. - - The proposed development would absolutely destroy the wonderful character of our quiet village. Edenfield would no longer have its green spaces; it would become congested, noisy, polluted and be bereft of the charm that makes it such a desirable place to live. I object to the proposed developments in the strongest terms.		-
276	Alison	Heaton	-		Object	my objection is the sheer scale of proposed development. The roads around the Village are already congested in peak times and very busy at other times. On average it already takes me 15 / 20 mins to travel from Edenfield to the motorway slip road onto the M66 south in the rush hour. This distance is only two miles. The M66 north sliproad and stretch of motorway are often at a standstill as it stands now. Another 500 if not more car users will affect this adversely if no additional infrastructure is to be provided. - I am concerned about the loss of the greenbelt on environmental grounds also - greenbelt was originally established for very good reasons. - As a local Governor our local primary schools are already oversubscribed every year and this would add pressure to get places and frustrate families trying to get their children at a local school. If they cannot get in - once again families will be forced to take to the roads to travel to schools further afield.		no

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
277	James	Martin	-		Object	This development will completely change the small village of Edenfield and devalue the lifestyle of the community.		There are many public footpaths and walks for families and dogs that would be lost if this plan were implemented. We must protect this green belt site for the appreciation of its history and for future generations to appreciate.
278	Kathleen	Martin	-		Object	The plan is to increase the housing in our small village by 100 per cent which will completely destroy the character of this historic area.		The village of Edenfield has long been established as a small quaint area of historic interest. This description would be obliterated by increasing its size with modern housing.
279	Jodie	Rowbottom	-		Object	Having recently moved to the local area and paying for this area for the quiet nature and village atmosphere, I object to the sheer scale of the proposed plan for Edenfield which would radically change the character of the village and the environment I'm bringing my young family up in.		The proposed plan will double the traffic and routes from edenfield. Parking will be an issue for residents and you will be adding to already busy roads that the speed limits are not enforced on. This alongside waggon and lorry traffic which could daily goes through the village will be a nightmare
280	Ian	Rowbottom	-		Object	The scale of the proposed plan to more than double the current housing is extreme and is not taking current local people into consideration. People including myself moved and live in the village for the character and village feel to the area. Bringing up a young family we want to keep the character of the village and buildings in the area which will be radically changed with the pure scale of proposed plans		We already have passing traffic in the village and gridlock on roads due to bigger vechiles lorries etc coming through up to the quarries. Add double the car traffic the roads will be terrible not to mention parking, safety and road crossings

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
281	John and Sylvia	Gibson	-		Object	We object to the sheer scale of this proposal as it would radically alter the character of the village. Also the traffic and parking would be more chaotic than it is at the moment.		We have lived in Edenfield since 1971. We didn't know anything about the area as one of us is from Surrey and the other from Yorkshire. However, we drove around the area and also did a lot of research. There were so many pluses - a beautiful rural village with wonderful views and most importantly - lots of greenbelt areas. - - Over the years there have been several developments which have not spoilt the village. We have a great community spirit with so many activities throughout the year for all ages. If these plans are approved village life will change for ever and not for the better. - - We already have traffic problems through the main street and parking is difficult. It is not easy to get children into the village school now so goodness knows what would happen if we had all these extra homes. - Edenfield is a desirable place to live because of the size, views, amenities (school, church, shops - places to eat, community centre etc) It really would be sad if the council approve all these plans by removing greenbelt in our village when there are other areas within Rossendale where homes could be built without removal of greenbelt.
282	deborah	farrow	-		Object	I have lived on Moorlands View all my life with my parents and now with my own family - most of the residents of moorlands view have been here over 25 years and are now friends and we are a small community of friends - this developemnet will change the feel of the village and the roads and schools would not be able to cope with a large increase of homes and people all with cars		if this goes ahead we will no longer be a nice village where people look out for each other but just another housing estate

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
283	Paul	Farrow	-		Object	I have been a resident of Moorlands View for 30 years and have enjoyed the peace and quite this part of the village offers. Allowing a major housing development to be built at the front of our house will impact on the feeling of living in a rural setting not to mention the amount of traffic in what is already a small main road running through the centre of our village. - - Our house price will be affected as the houses proposed are going to effect our views of the countryside and increase both pollution from light and noise. - - The access roads to this new development will increase road congestion and make local travel longer to accomplish. - - Developing our village is going to destroy our quality of life and lead to many locals moving away to find the peace and quite we currently have in what is a small but happy community. - -	-	
284	Carl	Robinson	-		Object	I object to the sheer scale of this proposed development.	-	
285	William	Robinson	-		Object	I object to the sheer scale of this proposed development.	-	
287	Philip	Pye	-		Object	The objection is to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.	-	
288	Margaret Valerie	Pyett	-		Object	I object to the size of what is proposed for Edenfield on the grounds that the scale of the plans are far too large and if carried out would alter the character of the village.	-	
289	Dorothy	Downey	-		Object	These areas are too vast and would completely spoil the open aspects now enjoyed in this village. The numbers of houses proposed to be built are far more than the village can cope with. The roads would not cope with the extra traffic and parking is now at a premium on all the main roads. There is no room in the two local schools, we have no doctor's surgery and the surgeries in Rawtenstall and Ramsbottom are fully subscribed. -		I think the planners should think again about this scheme and distribute the housing needs more evenly over the Valley.
290	Hazel	Hardie	-		Object	The proposal is far too large for the size of the village and the infrastructure cannot support this. For instance, schools, roads, parking, shops etc. The sheer scale of this proposal would radically alter the village.	-	
291	J	Scholes	-		Object	I object to the sheer scale of the proposal for Edenfield which will radically alter the character of the village.	-	
292	P	Scholes	-		Object	I object to the sheer scale of the proposal for Edenfield which will radically alter the character of the village.	-

293	M.	Duckworth			Object	<p>I write with reference to the Council's Local Plan on the proposed development of Edenfield. I understand that you are planning to ask the Government to remove large amounts of land from the village which is considered a "greenbelt" area.</p> <p>These areas which I am particularly concerned about are covered in by reference HS2.71 on the site map which accompaies the said plan.</p> <p>Land off exchange street - Edenfield Land - west of Market street - Edenfield land off Blackburn Road - Edenfield land - west of Moorlands View - Edenfield</p> <p>Not only do I object to the building on these areas of outstanding beauty I would like you to consider the effects of traffic pollution to the inded residents of these properties - as the main A56 Bypass is getting considerably busier by the day. Need I say more about the poolution this will bring our lovely village. Not to mention the chaos this will cause to traffic going through the Village - At peak times it is difficult to manoeuvre at the best of times. Also have you thought about the schools in the area.... Two village schools that would not be able to cope with the admissions - from residents throughout the valley. The nearest health centres are located in either Rawtenstall of Ramsbottom, The nearest hospital(s) are eutger Royal Blackburn Hospital or fairfield in Bury, do you think this is really acceptable for people living in Edenfield.</p> <p>Also Edenfield has a great bird and wildlife inhabitants -do you think that wrecking the "greenbelt" is going to help them - No - where are the wilflife and birds going to inhabit then? Or are you jjust going to hope that this will go away ???</p> <p>So are you going to turn our lovely village in to a polluted Town - I object to these proposals as it would damage the environment and character of our village.</p>	HS2.071

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
294	M	Bennett			Object	<p>I am writing in relation to the draft local plan and the impact it will have on the quality of life and human health for my family and the residents of Edenfield. This letter is to protest against any proposal to remove areas of land from the Greenbelt.</p> <p>I have attached a plan that demonstrates that parts of Edenfield are currently within an Air Quality Management Area - meaning the air quality within this zones does not meet national Air Quality Objectives. By definition this means that the air quality in these areas is likely to affect Human Health.</p> <p>The areas that concern me are covered by reference HS2.71 on the site map Land off Exchange Street, Edenfield Land west of Market Street, Edenfield Land off Blackburn Road, Edenfield Land west of Moorlands View, Edenfield</p> <p>By building houses on these Areas, there will be additional pulltants emitted into the environment from boilers and cars. On average, each house will have two cars, and I understand that upto 450 houses could be built. This will not only change the character of the village, but will significantly affect the air quality in the village.</p> <p>The air quality will significantly decline in the existing Air Quality Management Area, and the Air Quality Management Area will then expand into the village affecting many more people's air quality and human health.</p> <p>Is this what the local authority wants for Edenfield? A decline in air quality and an expansion of areas where emissions affect human health. If these plans go ahead then the future of Edenfield will be a village where air quality targets failed to be met.</p> <p>I hope that you appreciate te strength of feeling in the village and that you refuse to accept the destruction of the greenbelt in Edenfield.</p>		
296	Joyce	Stopford			Object	<p>I am most concerned with regard to the possible building of 72 houses on land which surrounds Chatterton Hey.</p> <p>I have lived in Exchange Street for over 18 years and have experienced the increase in traffic and problems with parking. How exchange streeet could deal with the increase of more traffic I can't imagine. We have a park and large field for children to use relatively safely at the moment but this would not be so should this development go ahead. I appreciate we need more houses but not on this scale in a village that can't provide the services of more schools etc.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
299	Renee	Wilson			Object	<p>I write in regard to the Council's Local Plan and how it will affect Edenfield. I understand that you are planning to request the government to remove large amounts of land around the village from the Greenbelt so that it can be used for housing.</p> <p>These are the areas about which I am particularly concerned and are covered by reference HS2.71 on the site map which accompanies the plan;</p> <p>Land off Exchange Street, Edenfield Land west of Market Street, Edenfield Land off Blackburn Road, Edenfield Land West of Moorlands View, Edenfield.</p> <p>I object to these proposals on the grounds that the scale of the plans are far to large and if carried out will irrevocably destroy the character of our village, which has been described as a picture postcard village.</p>		
300	B	Garvey			Object	<p>I have lived in the delightful village of Edenfield for over thirty years in that time some houses have been added so I am not against change. But the proposed addition of over 400 houses taking greenland and changing the character of the village is not acceptable.</p> <p>We have lost the post office and the news agent, our two schools are full but it is the though of at least 400 more cars on the road that is not acceptable.</p> <p>I look forward to the meeting on Tuesday September 12th to show my opposition</p>		
301	B	Whittaker			Object	<p>I write in protest at the draft local plan removing large amounts of land around the village, so that the greenbelt can be built on. I am an elderly villager who enjoys walking around these areas namely land off Exchange Street, West of Market Street, Blackburn Road, Moorlands View. The proposed building of all these houses will totally change the character of this village - and I do wonder how the schools, large increase in traffic will be accommodated for future families this very pleasant area would become virtually an urban sprawl</p>

307	Gillian	Heywood	-		Object	I object to the sheer scale of what is proposed. This would radically alter the character of the village and there is already an issue with traffic through the village not to mention the problems with parking. There are many people in the village who would like to see smaller dwellings in the village to help the younger generation to afford to live in the village or for those retiring to down size.		-
308	Elizabeth	Summers	-		Object	I object to the size of the proposed development for Edenfield which will add to the present traffic problems, both the number of cars driving along Market St. and Bury Rd, and the number parking on these roads. At present they are often reduced to single track by double parking, leading to hold ups by tractor, buses and difficulty for ambulances and other emergency vehicles. At present driving onto Market St. from the side roads is very dangerous because approaching traffic is hidden by parked vehicles, this can only become worse if more cars are based in the village. - I also feel there is not an adequate infrastructure (schools, medical surgeries etc) to support this number of houses which will completely change the nature of the village.		-
309	Ken	Parkes	-		Object	As a resident of the village for the past ten years one of the things that attracted us most to Edenfield was the sense of community and history clearly in evidence through its buildings and its people. The proposal to build 489 additional houses would drastically alter the essence of the village and completely destroy the very thing that makes Edenfield such a unique place to live. The proposed expansion of housing stock on what are limited sites would put intolerable pressure on the existing roads and access points resulting in regular incidents of gridlock, especially in times when the M66 is blocked or closed. In addition with the proposed increase in population there would need to be available places at local schools neither of which could immediately accommodate an influx of extra pupils. - Notwithstanding, I fully appreciate the need, nationally, to expand housing stock and most importantly to provide affordable housing to allow first time buyers to get a foot on the housing ladder, and I would welcome a planned, incremental building plan that created a limited number of additional homes which allowed the village to adapt and adjust to an increased population. The current plans are far too drastic and seem to place an undue emphasis on Edenfield as a target for planned development in Rossendale. - I would urge the council to reconsider the extent of this plan allowing the village to retain some of its green belt and ensure it remains a popular and desirable place to live.		I understand the pressure that all local councils must be under from central government in their quest to build more houses but the fact that successive administrations have failed to meet even modest house building targets does not mean we should attempt to somehow make up for this failure by destroying local communities with unrealistic expectations of what they can cope with. - Please stand firm in the face of external pressures and respect the integrity of the communities that make up the Rossendale Borough and make this area of East Lancashire such a special place.

310	Carole	Higginbotham			Object	I wish to object to the sheer scale of what is being proposed for Edenfield. Edenfield is a village and would no longer be one if the number of houses proposed are built. There is one primary school in Edenfield which is - oversubscribed always, there are no Doctors surgery to accommodate the vast influx of people. Parking at the moment is a massive problem, Market Street becomes gridlocked when there is a problem on the bypass so goodness knows what will happen when there are new access roads to accommodate the new properties!!		I think Rossendale Council need to strongly look again into what is being proposed for the village of Edenfield. There are many other areas in Rossendale that could be used for the building of new homes that would enhance rather than ruin a village that is already full to capacity!
311	Margaret	Filkins	-		Object	My objection is the sheer scale of the proposed development. The character of the rural village would be lost and the current infrastructure would not support the proposed increase in people numbers. My main concern is flooding. At present a heavy downfall of rain turns Market St into a stream. The drainage system cannot cope and our garden is often under standing water which seeps under the back door. I am concerned that the proposed development would result in the surface water being greater than at present as the fields would no longer be there to soak up excess water.		Whilst I appreciate there needs to be an increase in housing stock for future generations, consideration of existing roads and amenities should be a priority to determine how many more people could comfortably be accommodated in this area in order to maintain an equilibrium of lifestyle currently enjoyed by existing residents.
312	Julian	Butterworth	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the Village		-
313	rebecca	gillett	-		Object	I object to the sheer scale of what is proposed for edenfield which would radically alter the character of the village. I feel that it would have a major impact on the traffic within the village and therefore majorly disadvantage the residents. In respect to the land off exchange street that surrounds chatterton hey; this land has been used by the community for many years and I enjoying this land myself. Building on this land would take away a piece of land utilised by the community and would be a great shame		-
314	Julie	Butterworth	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		-
315	Chris	Barlow	-		Object	I object to the shear scale of edenfield which would radically alter the character of the village. I feel that the increase of traffic would cause major disruption to the narrow streets of edenfield which would also increase pollution to what is a clean and healthy environment. With increase of 489 houses, the local primary schools would suffer with the influx of children wanting to attend by parents. children wouldn't be educated to the high standard which already exists at the moment.		-
316	Phillip	Dawber	-		Object	The size of development would change the village of Edenfield beyond recognition. - The proposed building works would not sit well within the infrastructure of the village. - Traffic and parking are already problems in Edenfield. - There is no space in primary schools in the village.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
317	Susan	Scott			Object	I object to the sheer scale of proposed development, and feel the infrastructure of the village, already overstretched, will never cope, and would radically alter the character of the village.		-
318	Tony	Garner	-		Object	Development on this scale would DESTROY the character of the village. An increase in housing of more than 50 per cent threatens the very nature of village life and is completely unsustainable in terms of highways, public services (schools, doctors, dentists), amenities and parking. - - Edenfield appears to have been singled out for development unjustly compared to the restive Rossendale		-
320	CHRISTINE JOAN	Blow			Object	I object to the above developments for a number of reasons. There appears to be no provision for extra infrastructure and access to these developments. traffic and parking will become a huge concern with the expected extra vehicles using the now, already congested roads, especially Market Street. - The two, oversubscribed, primary schools could not cope with the added numbers. - An added 400 or so houses would alter the nature of the village beyond all recognition, making it a much less pleasant place to live for all concerned. - I believe that there is more suitable land, with better infrastructure further up the valley. - A smaller development would be acceptable, it is the sheer scale of the proposal which is deeply worrying.		No
321	Frank	Quigley	-		Object	I write about Council's Local Plan and how it will affect Ednefield. I understand that you are planning to ask the government to remove large amounts of land around our village from the Greenbelt so that it can be built on. - - These are the ares about which I am particularly concerned and are covered by reference HS2.71 on the site map. - - I am not against small development, but the sheer scale of these proposals would ruin the village. If these proposals were to go ahead, Edendfield would go from a desirable place to live, to a very undesirable place. Due to the lack of school places, the fact there are no shops, doctors and the roads being continuously blocked with the amount of traffic, these houses would add to the amount of traffic which goes through the village alongside the wagons which pass through to Scout Moor Quarry, leading to people on foot being unable to cross the roads safely. - - Edenfield Parish School is settled in the middle of the proposed development sight which would endanger the young people who walk to school everyday.		-

324	Tracy	Finney	-		Object	The council plans for Edenfield are ridiculous given the sheer scale of the plans. Basically you want to develop and take away all the green belt land that makes Edenfield what it is and what attracts people to live within the borough. - If we wanted to live in heavily built up areas then we would live in Ramsbottom and have cheaper council tax under Bury Council. The village and its roads and facilities are not equipped to be able to cope with the proposals and Rossendale council have little interest in the village that is at the extreme of the borough boundaries. Edenfield is a forgotten village unless of course the council can make more money by allowing an excessive amount of houses to be built on the greenbelt that it doesn't care about. - - The proposals will, if agreed, would radically alter the character of the village and would most certainly be to the detriment of the village and it's current population that have in fact already paid for the privilege of living in an area surrounded by greenbelt.		-
325	William	Finney	-		Object	This proposal would have serious detriment to the village and would radically alter the character. - - We do not need more houses and we want to keep our green belt land.		-
326	Kieron	Finney	-		Object	This land should not be built on and should remain as green belt. The plans would cause serious detriment to our village and would radically alter it's character		-
327	Kristofer	Finney	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village		-
328	Clifford	Kenyon	-		Object	The plans for Edenfield village are preposterous and should not be allowed to proceed. The sheer scale of the plans will drastically affect the village and radically alter it's character.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
329	Madge	Kenyon	-		Object	I object to the sheer scale of what is proposed for Edenfield Village. - The village does not have the infrastructure to support these plans and the roads around the village and in particular the schools are terrible without adding more problems. - - The village is just not equipped to cope and these plans would significantly alter the character of village.		-
330	Corinne	Littlewood	-		Object	<p>I appreciate new houses are required but feel strongly these developments should happen on brownfield sites. I choose to live in Edenfield because of its rural surroundings and believed it was protected by green belt.</p> <p>##### Letter comments #####</p> <p>I am writing to the councils Local Plan and how it will affect Edenfield. I understand that you are planning to ask government to remove large amounts of land around our village from the Greenbelt so that it can be built on. The areas I am particularly concerned about are covered by reference HS2.71:</p> <p>Land off Exchange Street, Edenfield Land west of Market Street, Edenfield Land off Blackburn Road, Edenfield Land west of Moorlands View</p> <p>I object to these proposals on the grounds that the scale of the plans are far too large and if carried out would ruin the character of our village. The local infrastructure will not cope with such an increase in population, the roads are all ready congested, the school is full and it is extremely difficult to register with a doctor as Rawtenstall's GPs claim they do not cover the Edenfield postcode</p>		-
331	Alan and Carole	Riley	-		Object	We object to the sheer scale of the proposed house building for Edenfield, which would radically alter the feel and character of the village.		-
332	Heather	Hayden	-		Object	<p>I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. It would no longer be a village.</p> <p>##### LETTER COMMENT ###</p> <p>I write about Council's Local Plan and how it will affect Edenfield. 333	JULIE	MUNRO	-		Object	I object to the sheer scale of this proposal. Not only would it radically alter the character of the village, but add immensely to the numbers of vehicles (both during completion and afterward by new residents). - The sheer numbers of properties that have been proposed throughout the whole village would without doubt have a significant detrimental effect on the natural landscape, peace and beauty of the area. Not withstanding the absolute necessity for larger schools, GP's and other healthcare providers.		I also believe that the proposals will have a significant detrimental effect on the value of my property as a large number of properties being proposed are to the rear of my house. I purchased just under 4 years ago with the understanding that nothing that would ever be built on the land to the rear because it is protected by greenbelt. -
334	Joe	Littlewood	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the Village. - Also the Infrastructure is hardly adequate at present. Too many vehicles blocking the main road (A56)?, how will it cope with another 100, never mind potentially 1000 plus ?. - Lack of Medical/Dental provision. Also Bus service is already drastically reduced. - I am informed that the Schools are already full.		Not at the moment.
336	Sharon	Canavan	-		Object	Edenfield doesn't have the capacity nor the infrastructure to support this many houses. - Increase traffic would add to the burden already endured by villagers. - Green Belt land should not be used for such a scheme.		-
337	Margaret	Bispham	-		Object	The infrastructure in the village would not be able to cope with all of this extra housing development. The roads are already grid-locked; the two local schools are full; we have no G.P. surgery or bank/post office. - The lovely open aspect would be completely lost if the green-belt land were to be swallowed up by housing which would be detrimental to the lives of the people who already reside here.		Why have the planners decided to put most of the development in Edenfield? - Surely other areas in Rossendale should be considered. Maybe the developers could sell property better in this area but other areas should be sought and encouraged to bring their areas up to somewhere that people might want to live and that developers might want to build. - Is this the easy option to centre such a large development in Edenfield?

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
338	Janine	Hartley	-		Object	<p>I object to the sheer scale of development proposed for Edenfield, particularly the sites mentioned above. - I understand that Edenfield has been chosen as the main site for new housing in Rossendale, due to its perceived desirability. However, this desirability is largely due to the fact that the area is not overcrowded or dominated by housing. Should these plans go ahead, this will no longer be the case. - I firmly believe that these proposed plans would have a radical, detrimental effect upon the character of Edenfield. It is a small village and simply will not cope with such a vast amount of new housing.</p> <p>Letter received 18/09/2017: I write about the Council's Local Plan. It is my understanding that you plan to ask the government to remove large amounts of land around Edenfield from the Greenbelt, so that it can be built on. I am particularly concerned about the following areas: Land south of Wood Lane Land west of Market Street Land off Exchange Street Land off Blackburn Road Land west of Moorlands View These are covered by references HS2.73 and HS2.71 in the local plan I object to these proposals on the grounds that the scale of the plans is too large. If carried out, these plans would ruin the character of our village and put unmanageable pressure upon schools and health services in the area. While I understand that there is a need for additional housing in Rossendale, I feel it is unfair that Edenfield should be singled out as the primary area for this, particularly as it is such a small village, which would suffer significantly under such wide-scale change</p>		
339	April	Barker	-		Object	<p>I object to this proposal of a build of nearly 500 houses. The village can not sustain this amount of houses. The school could not handle to influx of extra children as it struggles now with the amount of children attending. The traffic flow and build up would be terrible, our roads can't cope with the heavy traffic as it is. Resurfaced regularly due to high influx of traffic. This is a village, not a town. It is a beautiful place and you are going to destroy our beautiful countryside.</p>		
340	William	Barker	-		Object	<p>I object to the proposal of building an extra 500 houses. I have lived in edenfield all my life and have seen many changes to the village. This proposal will not enhance the village it will destroy it. We are a small village and cannot cope with the extra influx if people and traffic. The school can't cope with more children, the roads can't cope with more traffic. We are a small village and not some big town, you will destroy this community by building these house so I strongly object to this proposal</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
341	Peter	Ash	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. There are already on-going problems with traffic in the village when the Edenfield by-pass and M66 have traffic problems. Living on the main road the smell of diesel fumes is sometimes overwhelming (can smell it in the house) and this will become a daily occurrence with the planned number of houses (huge increase in traffic). The air quality will decrease and the village will become gridlocked affecting the quality of life for those living here.		No - as per previous comments box.
342	Christine	Ash	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. I moved here as I am in ill health and the fresh air is far better for me than the town where I used to live. The scale of the proposed build will mean that the village will be inundated with vehicles. The green land that I walk to assist with my health will be gone (I cannot walk hills and rely on the flat areas around the fields). A pleasant village atmosphere will change and it will no longer be a sought after area, likely to become gridlocked with traffic.		No - as per previous comments box.
343	Alan	Heywood	-		Object	I object to the sheer scale of what is proposed for edenfield which will radically alter the character of the village		The plans would totally change and ruin the character of the village. Traffic/ parking would be a huge concern it is difficult now to park near the shops in the village and the volume of traffic already causes question at peak times.
344	Gordon	Worth	-		Object	It is accepted that new affordable houses have to be built to meet Government targets and to meet the needs of future generations. - I am supportive of this concept but object to the massive scale of the proposed development as outlined in the current plan. - The building of 489 properties in Edenfield if implemented would destroy and radically alter the character of the village. - An alternative plan needs to be formulated with less houses thereby protecting the village amenities and the value of its current housing stock. - Should the current plan be implemented then there is the potential for a significant increase in the population of say 900 people minimum plus their children. - Without vast improvements to the village infrastructure then the pressure on schools, doctors, traffic, roads, parking and public amenities would be unsustainable. Presumably even more green belt land would have to be released resulting in a further adverse affect on the character of the village. If this was to happen then it would added weight to my objections.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
345	Denise	Langrish	-		Object	I strongly object to this huge amount of land to be used for building it will ruin a village community for ever. The traffic will be horrendous, we have too much traffic already trying to get through a narrow village. The few shops need car parking as it is. Edenfield will no longer be a village. We have local horse riders regular going through the village it is risky as it is, more traffic will enhance the problem. With a huge estate coming out onto Market Street it will create huge problems. We need more trees on the land in Rossendale for the environment not buildings.		Only that so many houses will absolutely ruin an old village & spoil the environment for the wild animals around. Sheep have grazed on the land around here kept it so green for far longer than I have lived here & I have been here 31yrs. The reason people live in Edenfield is to be in small populated places if we wanted to live in populated areas we would move to the city. Why does councils not care about pre existing public that have paid into the place for years. Just want to ruin the surroundings by getting too big.
347	Peter	Entwistle	-		Object	I would like to object to the proposed plan which would radically alter the character of the village, increase congestion and be destructive to village way of life.		-
348	Jill	Entwistle	-		Object	I object to the scale of what is proposed for Edenfield that will radically change our Village increasing traffic which is already heavy through Edenfield x spoil our green belt area and wildlife.		Residents views should be taken into account as we live in this village

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
349	Jonathan	Casey	-		Object	<p>My objection is to the scale of development proposed for Edenfield. - I understand that the area has been singled out as the main site for new housing in Rossendale, because of the desirability of housing in Edenfield. - In my opinion, this desirability is largely due to the fact that the area is not overpopulated and has a significant amount of green belt land, which comprises unspoilt scenery. Should the proposed plans go ahead, this would be ruined. This would destroy the character of Edenfield (as it is only a small village to begin with) and would reduce the value and desirability of housing in the area. - There would also be a detrimental impact upon schools, dentists and GP services in the area, as the village simply isn't large enough to cope with such a sudden increase in its population.</p> <p>##### LETTER COMMENTS #####</p> <p>I write about the Council's Local Plan. It is my understanding that you plan to ask the government to remove large amounts of land around Edenfield from the Greenbelt, so that it can be built on.</p> <p>I am particularly concerned about the following areas: Land south of Wood Lane Land west of Market Street Land off Exchange Street Land off Blackburn Road Land west of Moorlands View</p> <p>These are covered by references HS2.73 and HS2.71 in the local plan</p> <p>I object to these proposals on the grounds that the scale of the plans is too large. 350	Carl	Hayden	-		Object	<p>I object to the sheer scale of what is prosed for Edenfield which would radically alter the character of the village. - -</p> <p>##### LETTER COMMENTS #####</p> <p>I write about councils local plan and how it will affect edenfield. I understand that you are planning to ask the government to remove large amounts of land around our village from the Greenbelt so that it can be built on. These are the areas about which I am particularly concerned and are covered by reference HS2.71 on the site map which accompanies the plan: Land of Exchange Street, Edenfield Land west of Market street, Edenfield Land of Blackburn Road, Edenfield Land west of Moorlands View, Edenfield</p> <p>I object to these proposals on the grounds that the scale of the plans are far too large and if carried out would ruin the character of the village.</p>		I am concerned that we have not got the amenities to support this amount of people also we have problems when the bypass closes the village gets gridlocked. This development would add to the problem.
352	Margaret	Gastall	-		Object	As a weekly visitor to Edenfield. I feel that this proposal will alter the entire village and it wouldn't be a village anymore. - The traffic will be dreadful.		-
353	Victoria	Giles	-		Object	I object to the scale of the development which will radically alter the existing character of the village and destroy its setting. - The infrastructure cannot support the sheer size of the proposals and I do not believe that the shortfall can be satisfactorily resolved. Local schools are oversubscribed and health facilities are at stretching point with no future prospect of improvement on the scale necessary to cope with the demand that would be generated. - Priority should be given to the redevelopment of brownfield sites before greenfield development and the borough should ensure that all unoccupied dwellings are fully utilised. -		-
354	Susan	Heyes	-		Object	With the volume of new housing proposed, traffic, schooling, medical establishments would all be a problem and the character of Edenfield would be would be radically changed.		-
355	Bonnie	Littlewood	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village, not being able to cope with the traffic and parking of 1000 more cars as its already at a premium and the amenities to cope in terms of the schools, GP services and dentists with the influx of children and adults.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
356	Robert	Dunne	-		Object	I have lived in Edenfield for about 10 years on bury road, the amount of traffic is already fairly untenable and dangerous. - There is nowhere enough parking in the village and outside houses. - There is very little infrastructure in Edenfield, our post office closed, the schools are full etc, so nearly doubling the amount of people seems ridiculous. - Overall the sheer scale of expansion would radically alter the complexion and feel of the village. - I feel I should point out I don't object to all of the plans just the ones listed and I do appreciate change will cause upheavals.		-
357	Sheila	McIntosh	-		Object	I wish to object to the sheer scale of the proposed development for Edenfield village, which will radically alter the character of the village. It appears that because of the desirability of living in a village has singled Edenfield out as the main development area for Rossendale. - Traffic volume would increase with the prospect of up to 1000 extra cars on the village roads. Trying to get to Manchester at rush hour is difficult now but without improvement in the road network it will be a nightmare. Any problems on the Edenfield Bypass/M66 can and does cause serious congestion on the village roads. - I am concerned that the local schools would not be able to cope with a massive influx of school age children. Catholic families who live in Edenfield are in the parish of St. Josephs' Ramsbottom and there have been problems in the past for families in Edenfield to get places at the parish school. There is no GP surgery in Edenfield or Dentist and it appears there are no plans to increase those services in the surrounding areas or introducing new services to the village.		I accept that there is a need to build more houses especially affordable ones but it is not acceptable to almost double the size of our village. I sincerely hope that the proposals will be reevaluated.
358	Gill	Hillel	-		Object	I wish to object as the size of the village will not support such an influx of new homes. As it is, there is a shortage of parking within the village and the residents on Boundary Edge have to put up with other residents parking on our small development as it is. We have no dentists, doctors, post office and other services in the village. Traffic can also be a problem on Market Street. The proposed developments would massively increase the size of the village which would be catastrophic and would change the dynamic and character of the village.		-
359	joseph	Bowden			Object	we object to the extent of what is proposed for Edenfield as it will radically alter the character of the village.		The sheer scale of what is proposed would cause immense disruption to the village for an extended period of time making the lives of we residents unbearable.
360	Richard	Hillel	-		Object	The size of the proposed development will completely destroy the character of the village of Edenfield. It will be a continuance of the urban sprawl linking Bury and Ramsbottom without a break until Rawtenstall. Consequently it will detrimentally impact the character of the Valley.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
361	paula	Bowden			Object	we object to the sheet scale of what is proposed for Edenfield as it would destroy village life.		The volume of traffic would utterly change the nature of Edenfield and would be dangerous in what is already a very tight area for road traffic.
362	alan	smith	-		Object	I came to live in Edenfield some 26 years ago for a number of reasons but the main one was it's village nature and size.. The proposed scheme to increase the number of houses by more than 50% would simply destroy the whole character of the village.Parking is already difficult and often dangerous in Market St. I am lucky to live in such a beautiful place and am quite happy for some new limited expansion so others can enjoy this lovely environment. However the proposed scale of the expansion is outrageous. I thought Green Belt was protected and could not be destroyed at the whim of the Council. We need a plan to enhance the village not destroy its character.		The Council should be working on improving the environment not destroying it. - Some examples. - The new street Lights in Moorcroft which are dangerous and ineffective along with the pavement surfaces. No money I suppose. - Withdrawal of direct bus to manchester - No Post Office
363	Sidney	Aston			Object	I am objecting about the scale of the proposed housing increases for the Edenfield area; the size of your proposal would completely alter the character of this lovely village, one of the reasons I originally moved here.		-
365	John	Pilsworth	-		Object	I object to the sheer scale of what is proposed for Edenfield which is far too many properties for this area.		-
366	Ann-Marie	Fare	-		Object	I object to the sheer scale of what is proposed for Edenfield because it would drastically change the character of the village. Roads would not cope with the volume of traffic and we do not have the amenities to cope.		-
367	Pauline	Littlewood	-		Object	Having been to the meeting to view the plans I am horrified by the scale of the proposed development of this tiny village compared to the plans for the rest of the borough. - I cant imagine where the children will go to school, which doctors they will attend or how they'll drive or park in this already congested VILLAGE.		To top it all its supposed to be greenbelt, or does this not matter any more in this day and age.
368	Susan	Popland			Object	It's ridiculous at the volume of houses you want to build! Alter the village completely. The traffic this would cause is utter madness! The bypass easily gets backed up now & parking is already bad. Schools, dentists & doctors aren't being increased, so again another chaos in the making! - I hate the fact you wish to change the character of the village, the scale of the plans are far too large for our little village to cope!		I want our child to grow up around countryside, not a built up village with no fields & walks to go on.
369	Dominic	Popland	-		Object	I object to sheer size of the proposal. It would nearly double the village of Edenfield in size. The bypass can't currently cope with volume of traffic at rush hour. The road in and out of Edenfield gets backed up now too. Doctors and dentists are already pushed, it takes days to get an appointment! What about schools? I don't see any plans to build anymore? How will they cope with the massive influx of children? Simple answer they wouldn't. I don't see how this could possibly be entertained!		There are enough old mill sites littered around the Valley that could be redeveloped first! Why take the cheaper option and ruin the place we live in? The reason most people live in a valley is that its surrounded by countryside if i want to live in a big town or a city I'd move to one!

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
370	Ruth	Lord	-		Object	The scale of the proposed developments is far too great for what is basically a small village (Edenfield) and its delightful and unique character would be lost. The infrastructure of Edenfield is barely sufficient for existing traffic, schools are full, there is no doctor, dentist or vet. Flooding of Market Street at the bottom of Fish Rake Lane is becoming depressingly frequent. More building increases run off as you will be aware. Loss of green spaces runs counter to current opinions about physical and mental health. If this housing is built, even if it is 'social' or 'affordable', I am doubtful that people from the Rossendale valley will be able to afford to buy. I suspect Edenfield would become commuter belt for Manchester and the M66 will be gridlocked 24/7 - I accept that some new housing may be required, and encourage you to make sure it goes to locals. However, it must surely be the highest priority to redevelop brownfield sites before greenbelt. Thank you for your attention.		-
371	Kathleen	Davey	-		Object	I object to this proposed development due to its sheer size and the detrimental way it would alter the character of this village. I have serious concerns for the increased vehicle traffic through the village, the lack of infrastructure to provide school places, doctors facilities as these are currently oversubscribed.		my major concerns are the sheer size of the proposed plan in what is a small village, and using precious green belt land. the number of houses proposed would result in a enormous an increase in traffic on an already congested road through the village.
372	Paul	Kelly	-		Object	I am not a NIMBY and I can see the need for some controlled housing development. However it is the sheer scale of the proposed development that is of the utmost concern. It will change the character of the village enormously and not for the good. The number of houses proposed would put an enormous strain on local services and the extra vehicles and traffic that is bound to follow would lead to traffic congestion and chaos. I am also concerned that should outline planning permission be given the number of housing units would be increased from the proposed number of 489 in order to maximise profitability. These proposed figures would lead to a 50% increase in the housing stock in Edenfield. No place can withstand such a huge and rapid development.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
373	Ann and Linda	Stephenson	-		Object	size of proposed development and lack of infrastructure to support same.		Yes - before any decision is made about this plan I suggest that councillors and relevant council officials visit Edenfield in the evening - and try to park on Market Street and when they've managed that look at the accesses to the land in question. My own suggestion is that all estate roads should lead directly onto the bypass - McDonalds have already set the precedent.
374	Lisa	Sanderson	-		Object	I have attended your planning information event at Edenfield Community Centre- located in the heart of the land that I am objecting to the transfer of green belt land for the purpose of building new homes. I have several concerns and objections that after speaking to the forward planning team has not been allayed. 1) The area is green belt and should be protected. The land is part of the heritage of the village, it is a community assets that has been enjoyed by countless generations. 2) I find the sheer volume of houses proposed to be preposterous. Looking at the plans the proposed widening of the belt will increase the village by over 50% 3) I can't see how exhausting infrastructure could support the number of proposed houses- particularly GP, local Highways and primary schools. 4) the potential disruption to the village which as I understand at a building rate of 30 homes a year could last 10 yrs + 4)		-
375	Abbie	Suthers	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. -		-

377	Marie	Suthers	-		Object	<p>We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.</p> <p>Comments received by letter (04/09/2017): Draft Local Plan - Edenfield I write regarding the Council's Local Plan and how it will affect the small village of Edenfield. I am aware that you are planning to ask the government to remove large amounts of Greenbelt land from around our village for development. These are the areas which I am very concerned about and are covered by reference HS2.71 on the site map which accompanies the Plan. Land off Exchange Street Edenfield Land West of Market Street Edenfield Land off Blackburn Road Edenfield Land off West Moorlands View Edenfield I am writing to object strongly that on the grounds that the scale of the plans are far too large and if carried out would ruin the character of our village. There are also a number of other objections that I would like to make. Firstly the extra traffic a potential 489 new houses would bring to the area with average household having a least 1 car but in most cases 2 -this could see an increase in traffic in the area by approximately 978 cars. There is literally no room either in the village or on "the bY'pass for this many additional cars. When the by-pass is closed due to an accident which is getting a far too a regular concurrence, all of the traffic diverts through our little village, causing traffic chaos, damage to our roads and increased air pollution. Secondly again with potentially another 489 houses being built and the average family having 2.4 children this would mean that an additional 490 places would be required within the schools surrounding Edenfield. The schools in Edenfield are already oversubscribed and this includes the local High School which again is full with a waiting list. Where are these additional children meant to be educated?? This is the same for the local Doctors and Dentists which again are already full. I have to queue at 7.30am outside my doctors to have any chance to get an appointment. The idea that this small village could increase by 50% without firstly improving the local services and infrastructure is absolutely ludicrous. We do not even have a bus link to any major city now in Edenfield. Furthermore the property value in Edenfield is at a premium because we have greenbelt land and it is a small village. Will the Council compensate any sellers who could potentially loose a property sale or have to drastically reduce their house value due to this black cloud which is having over our village? There are many more issues/concerns which could be made against your Draft</p>

						<p>Local Plan which I am sure will be raised at the meeting on 12th September 2107. I just hope the Council Leaders who attend and probably don't live in Edenfield will listen.</p> <p>The whole village is against the Plan which would potentially see our village increase by 50%.</p> <p>I have never had reason to write to my MP but I feel so strongly about this matter that I will be sending a copy of this letter to him.</p> <p>I hope that you will take all of the objections raised by local residents in Edenfield into consideration before you ruin the local countryside forever.</p>		
378	Patricia	Turck	-		Object	<p>Edenfield is a mainly through village The scale of development will drastically change the whole character of the village. We have already had our views and neighbourhood destroyed by the ugly Turbines that sit high above us. The villages around Bury and Rawtenstall are there for everyone to enjoy and allow a bit of escapism for those wishing to visit who may wish to otherwise live near work. We have cyclists motorists and walkers that all flock here to enjoy the views and peace and quiet. Where are they to go otherwise. There are always properties for sale of varying prices if people want to come and live here. So please don't destroy this village that everyone can enjoy there are plenty of run down areas in this region that can be redeveloped to improve and increase available housing. Careful planning and implementation of projects can help to preserve beautiful environments for all and not just be so to line the pockets of FatCat developers who will be here and gone and not have to live with Edenfields destruction.</p>		I feel happy to have the horse and jockey site in Edenfield to be sympathetically developed as it is an eyesore at present. But please reserve the natural beauty of the rest of the village for everyone. Thankyou

380	Jennifer	Durham	-		Object	<p>I have been a resident of Edenfield for over 15 years. I believe the local plan will change Edenfield dramatically for the worse. It will affect the lives of all residents and negatively impact the life of the community. - I understand you are planning to ask the government to remove large amounts of land from the Greenbelt so large housing estates can be built. I am concerned about- - Land off Exchange Street, Land west of Market Street, Land off Blackburn Rd, Land west of Moorlands Road. - I object to these proposals. Edenfield will change from a village into a small dormitory town. The country outlook will change dramatically. The infra structure and services will not support the growth in population which will be more than 50%. Having gone to the consultation tonight, it was clear that there were no plans for new schools, GP surgeries, dentists, car parks, road widening etc. - Edenfield is already a busy village with traffic using the main road through the village as a "rat run" - an alternative to the M66. Cars and heavy goods vehicles speed through the village well over the 30mph limit. Drivers are impatient if residents attempt to park, get out of their car etc. I am amazed that there has not been a fata accident yet. Imagine these already crowded roads with 1,000 more local cars (average 2 cars for each of the new 489 households).In addition it is bound to put even more pressure on the current difficult parking situation. It is already very difficult to park anywhere near our houses. - I am concerned that so many houses are planned in one small village. I understand that Edenfield is the only town/village in Rossendale where the plan is to enlarge it by 50%. I imagine this is because this is where the housing developers expect to make most profit. Once again it seems profit comes before people. - I hope the council will review it's plans and scale back the planned developments considerably. - -</p>		Please please reconsider for the sake of local residents
381	Nigel	Cartmell	-		Object	<p>I object to the excessive number of houses being proposed in the village of Edenfield which if built would completely change its 'sleepy' character that drew us here.</p>		-

382	Alistair	Green	-		Object	I object to the sheer scale of the what is proposed for Edenfield which would radically alter the character of the village. - The village already suffers from parking and traffic problems with the current volume of vehicles, with fairly frequent minor accidents on market street involving parked vehicles. An increase in vehicles in the area will only make things worse and the plan does not appear to address the current problems, let alone improvements for the increase. - There appears to be an assumption that a lot of the housing will work locally, however the good motorway links make this a good commuter location for Manchester, and I doubt this will change. We are not well served for public transport to Manchester so this will clearly increase road traffic. - The schools in the area are at capacity and with little scope for further growth, similarly doctors and dentists. Such a significant increase in this area would require an increase to the services available, and again I see no evidence of this in the plan. There was a comment about possible use of services in Bury, but I don't believe services there are any better. -		-
383	Michael	Jones	-		Object	I strongly object to what is proposed for the village of Edenfield, the proposal would completely alter the character of the village. There is not an infrastructure to support development on this scale, there are no doctor's, dentist, parking or roads equipped to handle a double in volume of traffic. The schools are already over subscribed and the area is already being targeted by people wishing to commit crime such as burglaries.		-
384	Helen	Jones	-		Object	I strongly object to the proposed changes to the Edenfield village and its surrounding countryside, this would double the size of an already heavily populated under resourced village. The plans would damage the character of the village and put immense pressure of already strained schools and other local services.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
385	Rebecca	Green	-		Object	I object to the sheer scale of the what is proposed for Edenfield which would radically alter the character of the village. - The village already suffers from parking and traffic problems with the current volume of vehicles, with fairly frequent minor accidents on market street involving parked vehicles. An increase in vehicles in the area will only make things worse and the plan does not appear to address the current problems, let alone improvements for the increase. - There appears to be an assumption that a lot of the housing will work locally, however the good motorway links make this a good commuter location for Manchester, and I doubt this will change. We are not well served for public transport to Manchester so this will clearly increase road traffic. - The schools in the area are at capacity and with little scope for further growth, similarly doctors and dentists. Such a significant increase in this area would require an increase to the services available, and again I see no evidence of this in the plan. There was a comment about possible use of services in Bury, but I don't believe services there are any better. - I also object to the reduction in green space and increase in air pollution resulting from such an increase in houses. I am also concerned about the potential for flooding due to the reduction in fields to drain away the water which flows down from the moorlands substantially in heavy rain		-
386	Samantha	Seeley	-		Object	I am completing this survey to object to the proposed housing plan in Edenfield village.		-
387	Carys	Boyle	-		Object	I strongly object to these proposals. The scale of the plans is too large for such a small village. It would dramatically alter the character of Edenfield. I have great concerns regarding the environmental impact of potentially a further 1000 extra vehicles on the village roads, including both noise and air pollution. Access and parking would also be of concern.		I am not against the development of new houses, only the numbers proposed is far too excessive for the size of the village.
388	Liam	Pickering	-		Object	The scale of the proposal is far too great, and would potentially ruin the character of the village. It would significantly increase the number of vehicles passing and parking in the village, resulting in further congestion and difficulties in parking. I live on the main road through Edenfield, and this would only add to the level of noise and air pollution generated by the extra traffic.		No

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
390	GEORGINA	UNSWORTH	-		Object	THE SCALE OF THE BUILD EDENFIELD IS A VILLAGE THIS WOULD TURN IT INTO A TOWN. - THE ROADS ARE NOT LARGE ENOUGH TO SUSTAIN THE BUILD, WE HAVE NO DOCTORS, SCHOOLS PLACES AVAILABLE TO ACCOMODATE THE POPULATION , THE HOUSES THAT WOULD BE BUILT ARE NOT BE AFFORDABLE FOR LOCAL PEOPLE, BUT FOR PROFFESIONAL. PEOPLE WANTING EASY COMMUTE TO MANCHESTER VIA THE MOTORWAY NETWORKS		WE NEED TO KEEP OUR GREEN AREAS AND NOT BUILD ON THEM, THERE ARE ENOUGH BROWN AREAS THAT COULD BE BUILT ON AND DELAPIDATED BUILDINGS THAT COULD BE REDEVELOPED THESE OPTIONS SHOULD BE LOOKED INTO FIRST - GREEN AREAS ARE THERE FOR PEOPLE TO ENJOY !!!!! - THERE ARE NO AMENATIES IN THE AREA TO ACCOMODATE THE AMOUNT OF PEOPLE, LOCAL PEOPLE CANT GET APPOINTMENTS AT DOCTORS AND DENTISTS AS IT IS, SCHOOL PLACES ARE FULL AND THE ROADS ARE SHOCKING
392	Susan	Hayden	-		Object	We object to the scale of what is proposed for Edenfield which would radically alter the character of the village,and which would not be able to support the volume of traffic or the vital services		-
393	Doreen	Clark	-		Object	The main reasons I wish to object to the proposals are that Edenfield roads are not equipped to deal with all the extra traffic which will be generated if this scheme is approved. Also, the two schools are already at maximum capacity and the quality of life for the residents already living here would be impacted in a detrimental way.		The scale of proposed development is far too large for the village infrastructure to cope with. - I agree that extra housing is required but definately not on this scale.
394	June	Kenyon	-		Object	I am objecting to these proposals mainly because of the increase in traffic this proposed development will cause. The roads are already in a bad state of repair and quite often the main road is at a standstill, particularly if the by-pass is closed. Another maybe up to 1,000 cars will cause grid-lock. Letter received 05/10/2017: I am writing about the Local Plan to build approximately 261 houses behind Market Street towards the by-pass. As you can see, I live on Market Street and am concerned about the volume of traffic such a development would bring. Not only the volume of traffic, but where are the points of access going to be to such a large development? Market Street is the main North/South road through Edenfield, and is already a bottleneck on busy mornings, Friday evenings and especially when the by-pass is closed through accidents. It is not wide enough now and at all times can barely cope, an extra couple of hundred cars does not bear thinking about. I object to the proposals on the ground that the scale of the plans are not too large but downright impossible.		I would also like to point out that the two local schools are full to capacity; the village does not have a bank/post office or doctor's surgery. - The scale of development is far too large for the village of Edenfield to cope with, perhaps if the numbers were scaled down considerably then a much smaller development may be viable.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
395	Daniel	Giles	-		Object	I strongly object to the Site Allocation. - The scale of the proposals is grossly excessive and will destroy the existing character and setting of the village. - The proposals will result in a dormitory development for commuters and consequently will bring no "added value" to the community and cannot therefore be justified. Development should be sited within reasonable distance of areas of employment. - The existing infrastructure is already overstretched, cannot support the size of the proposals and no solution to the problem is indicated. - All available brownfield sites must be exhausted before greenfield development is permitted.	-	
396	Anne	Farmer	-		Object	I object to the size of proposed development of Edenfield Which would radically alter the character of the village.		Edenfields roads are extremely busy currently - and could not cope with the increased traffic the proposed development would - create . - .The two schools which serve Edenfield could not cope with a large influx of children.
397	Elaine	Engel	-		Object	The scale of the proposed development is far too large for the village to cope with. - The roads would not take the extra traffic which would be generated. - The two local schools are already full to capacity and we do not have a doctor's surgery or bank or post office.		The area would become like Helmshore which has been over-developed by the planners and also the site at Rossendale General Hospital. - I accept that we have to have some new housing development in Edenfield but not on the scale proposed at present.
398	Andrew	Nicholls	-		Object	The proposed development is for far too many properties. I am not against small, gradual development but 489 houses is far too many for the roads and facilities to cope with. I live on Market Street and traffic can be very bad, especially around the bottle neck near the mini roundabout opposite Gincroft Lane. Adding up to 1000 extra cars using this route daily would cause chaos and gridlock. It simply won't work. - - We also lost the post office a couple of years ago, have only a small, massively over subscribed school, no doctor, no dentist etc.. It is already almost impossible to get an appointment at the local doctor, almost 500 new households will make it even harder and could impact on the health of people who can't access much needed care. - - There are hundreds of quarry wagons already going up and down Market Street at all hours, each one making the house shake. The extra construction traffic during building would cause dirt, pollution, damaged and traffic issues possibly for two decades. It would be hellish to live here during this, never mind after. This is all without even getting to what would happen to the character of the village. The location has been selected as it is a nice place to live with plenty of green space and countryside. It goes without saying what would happen to all of this if 489 new houses were added to the 900 already here.	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
399	Keith	Butterworth	-		Object	<p>I strongly object to Edenfield being singled out for such a massive increase in housing .It would be entirely disproportionate and constitute by far the largest impacted area in the whole of Rossendale.The area of greenbelt lost in one allocation would completely destroy the essential character of the village, which has managed to retain a rural feel for 500 years, or more. In this respect, the shape and position of this area of greenbelt could hardly be worse, in terms of the impact on the village character. It stretches almost the entire length of the village, running parallel to existing housing lines, rather than extending radially (which would at least preserve some of the adjacent landscape. - - The plan proposes virtually 50% more housing in a village with a current infrastructure supporting only about 900 houses. There is talk of a new primary school and the fact that Exchange St would (ludicrously) become the only access road for a huge, elongated swathe of new housing. Beyond these plans, what others are there, to alleviate the impact factors such as increased demand for education, healthcare, utilities, road usage, loss of on-street parking etc?</p>		<p>It seems that RBC is interested only in taking the line of least resistance to getting greenbelt removed by government. Planning officers at the consultation event were talking about 'saleability' of proposed housing and 'proximity to existing villages' to justify these site allocations. Is the housing stock needed or is it not? Assuming it is, I would like to see more emphasis on reduced impact on village residents, more recovery of brownfield sites, more respect for Rossendale's rural character and less attention to planning for the largest, quickest financial return for the Council. In some areas of the borough, some creditworthy considerations seem to have been applied in the Local Plan. Edenfield, however, appears to be being massively and thoughtlessly 'dumped on' for convenience and profit. COME OFF IT! Are we still not past the 20th Century era of destroying small villages? Incremental growth of already urbanised centres must be a far less disruptive process for the population, contiguous greenbelt areas and wildlife habitat.</p>

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
400	Jill	Giles	-		Object	I object to the sheer scale of the proposals for Edenfield which would radically alter the character and setting of the village. - There are small sites within the village which provide opportunities for infill development - the development of which would be in keeping with the existing character and not impose unreasonable pressure on the existing overstretched infrastructure. - The proposals will result in a dormitory development for commuters to Manchester and surrounding areas instead of supporting the economy of the local area. A no win situation for the borough. - All existing unoccupied residential accommodation, and structures suitable for conversion to residential use, must be brought back into use before further new build is permitted. - All brownfield sites must be developed as a priority before consideration is given to greenfield development.		-
401	Edith	Barker	-		Object	This will become a problem with parking issues, the village will become a commuter network whereby the village will turn into an unsocial area to live, family life will be destroyed. We will see the area decline in the way of distruction to the local area not only with the increased housing but the sheer number of houses and the number of people and vehicles that will cause a lifestyle being destroyed.		There will be issues with housing allocation, the homes will be sold to town/city people after a 'quick buck', the houses will be purchased to be used as 'to let' homes where we will see a decline in who resides in them causing anti-social behaviour and other criminal activity. There will also be an increase in vehicles, turning a busy road into caos.
402	Margaret	Wilson	-		Object	I am objecting to the scale of the proposed development. The village of Edenfield could not cope with the proposed number of houses. The roads are already extremely busy with the existing traffic using them and if the by-pass is closed the traffic grinds to a halt.		I accept that some houses will have to be built in the village but not on this scale. - The two schools are full to capacity and we do not have a doctor's surgery, bank or post office. - The whose area would be changed and the village would loose the lovely open green-belt spaces which now exist.
403	Paul	Fitton	-		Object	The scale of the development is out of proportion to the existing size of the village, and would destroy its character.		I am a regular visitor to the village and have a number of friends and associates living there.
404	Kay	Akpinarlioglu	-		Object	I object to the sheer scale of the proposed development in Edenfield which would radically alter the character of this village		-
406	Robin	Platt	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village		-
407	Greg	Webster	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
408	Julie	Horsfall	-		Object	Objections to the sheer scale of the proposed development in Edenfield which would radically alter the character of the Village. Edenfield would cease to exist as a village and the infrastructure is not suitable for development.		No development on green belt sites in Edenfield Village there is plenty brown belt sites to develop.
409	Sandra	Lang	-		Object	I am objecting to the scale of what is proposed, 489 more houses on an existing stock pf about 900 will adversely affect the character of the village.		I do not have a computer myself but Mr Bradburn has kindly agreed to let me use his to make my comments.
410	Barry	Lang	-		Object	I object to the scale of what is proposed for Edenfield. This will completely change the Character of the village for the worse.		I do not have a computer but Mr Bradburn has kindly agreed to allow me to use his to make my comments.
411	Brenda	Henderson	-		Object	I object to the scale of the proposal which will increase the number of houses in the village by over 50% and increase the size of the built up area by almost 100%. in my view this is wrong.		I do not have a computer and Mr Bradburn has kindly agreed to let me use his to make my comments
412	Christine	Bishop			Object	The scale of this proposed development in Edenfield is far too big. It would totally transform the village, as it will increase the number of houses by over 50%, and there is no infrastructure in place to deal with this massive expansion. - Market St cannot cope with the volume of traffic at present, so it would become totally gridlocked once the proposed expansion has taken place. When the M66 is closed due to an accident, all the traffic is automatically diverted through Edenfield - nothing would be able to move if this occurred. - Edenfield has only 2 schools, and I'm not aware of any plans to increase this number - where will all the extra children get their education? - There is no doctor or dentist working in the village, so will all the new residents be able to register with other local GPs and dentists? I doubt it, as it is already very difficult for people to register with these medical services. - Parking in Edenfield is a nightmare at present. Market St has parking on both sides of the road, which means that 2 lanes of traffic cannot pass, where the road is narrow. Where will all the extra cars park if the proposed expansion goes ahead? On the streets causing even more chaos? - I have lived in Edenfield for 28 years, and I appreciate that there must be new development throughout Rossendale, and Edenfield must have it's fair share. Having seen the maps and diagrams at The Consultation last night, it became apparent that Edenfield has been singled out as the main development area, which I think is totally unacceptable. -		-
413	Robert	Henderson	-		Object	I object to the scale of what is proposed for Edenfield which will completely alter the character of the village. What might become 500 more houses in our small community will chang it beyond recognition.		I do not have a computer but Mr Bradburn has kindly allowed me to use his to make my comments.
414	Peter	Bretherton			Object	WE UNDERSTAND THE PROPOSAL TO REMOVE GREEN BELT STATUS WILL ENABLE THE BUILDING OF MANY (400 PLUS) HOUSES IN THE VILLAGE WHICH WOULD CREATE HUGE PROBLEMS WITH ADDITIONAL TRAFFIC, PARKING ON MARKET STREET IN THE VILLAGE, AND EFFECTIVELY SPOIL THE VILLAGE LIFE WE ENJOY AT PRESENT.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
415	Alan	Ashworth	-		Object	The number of houses in the Borough is approx 34000 with 4000 being proposed in the new fifteen Year Plan. (This equates to an increase of 11.76%.) In Edenfield the Plan proposes 489 extra houses to be built against the 900 that currently exist, this equates to 54.3%. This is disproportionate and totally unacceptable. - I am not against growth in the Village we have to provide housing for our Younger people and for people who are employed locally. However this growth needs to be in line with the growth predicted for the Borough as a whole. - I believe we can find sites in our Village to cope with a sensible level of growth without destroying our Green Belt. - The proposed plan will destroy the Village in the way that Helmsore has been destroyed and devastate our Green Belt. There is no demand for this number of Houses in the Village and the infrastructure could in no way cope with what is being proposed. - The road is already congested and under the proposed plan a further 1000 cars will be added to the current numbers. Additionally, there will be several hundred more cars from the Plans proposed for the expansion in Irwell Vale, Ewood Bridge and Townsend Fold, we will come to a total standstill. - We have been advised that the Sewers are operating at a maximum level, the two local Schools are already full and the local NHS Doctors and Dentists are struggling to provide an acceptable service.		We would be able to cope with the growth predicted for the Borough but anything in excess of this would destroy our Village
416	Carol	Ashworth	-		Object	I attended the consultation yesterday and it confirmed my worst fears that our village is being destroyed. We have a lovely village of approx. 900 houses and the plan proposes to build close to 500 houses. This is an increase well in excess of 50 % and totally disproportionate in terms of the Borough itself which is only 11.76% as a whole. - We cannot cope with an expansion of this size, it will decimate our green belt and bring our roadways to a standstill as well as putting our children and elderly people at risk when crossing the road. - The rest of our infrastructure, particularly the sewers are operating at maximum capacity, our doctors and dentists are struggling to cope with life expectancy in the valley being very poor. - We need the Council to rethink the plan, to allocate the growth equally throughout the area and look to utilise existing brown field sites and only small pockets of our precious green belt land.		I believe the Council should look to utilise this opportunity to improve the deprived areas in the Borough, making them a more desirable place to live instead of taking the easy way out and spoiling the jewels of the Borough.
417	PHILIP	JOHNSON	NONE		Object	THIS PROPOSED DEVELOPMENT, IRRESPECTIVE OF GREENBELT, IS JUST TOO LARGE FOR A SMALL VILLAGE LIKE EDENFIELD. A POTENTIAL INCREASE OF 50% WOULD ALTER THE CHARACTER OF THE PLACE AND OVERWHELM LOCAL SCHOOLS AND SERVICES.		INEVITABLY THERE WILL BE HOUSES BUILT HERE, PEOPLE, INDEED THE COUNTRY NEEDS MORE HOUSES. I HOPE WHEN THIS HAPPENS WE WILL HAVE A MIX OF HOUSES AS WE HAVE NOW. THAT IS DETACHED, SEMIS, TERRACED, SOCIAL AND HOMES FOR THE ELDERLY.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
418	Eric	Whittle	-		Object	The scale of this development is massive and the infrastructure could not cope with this influx of properties. The roads are in a bad state of repair and parking on Market Street and around the village is at a premium. The road is grid-locked if the traffic off the by-pass is diverted through the village. - The schools are already fully subscribed and we have no G.P's surgery, bank or post office.		Why has the majority of building in Rossendale have to take place in Edenfield? Surely other areas could be found which would not have as significant an impact on the surroundings. Edenfield would turn into another Helmshore which has been over-developed by the planners.
420	PAMELA MARY	BROWN	-		Object	I OBJECT TO THE SHEER SCALE OF WHAT IS PROPOSED FOR EDENFIELD WHICH WOULD RADICALLY ALTER THE CHARACTER OF THE VILLAGE. I ALSO FEEL THAT THE EXISTING INFRA STRUCTURE WOULD NOT BE CAPABLE OF SUPPORTING ALL THIS DEVELOPMENT. EG ROAD TRAFFIC, SCHOOLS, PARKING, DOCTORS AND SEWERAGE/SURFACE WATER.		-
421	HARRY WORSLEY	BROWN	-		Object	I OBJECT TO THE SHEER SCALE OF WHAT IS PROPOSED FOR EDENFIELD WHICH WOULD RADICALLY ALTER THE CHARACTER OF THE VILLAGE. I ALSO FEEL THAT THE EXISTING INFRA STRUCTURE WOULD NOT BE CAPABLE OF SUPPORTING ALL THIS DEVELOPMENT. EG ROAD TRAFFIC, SCHOOLS, PARKING, DOCTORS AND SEWERAGE/SURFACE WATER.		-
422	Helena	Whittle	-		Object	I object most strongly to the massive size of the development. The village cannot take all the extra houses which are being proposed to be built. Parking and traffic flow are horrendous at present but with maybe another 1,000 vehicles on the roads.		The two local schools are full to capacity, we do not now have a G.P's surgery, Bank or Post Office. - The loss of green belt land would have a significant impact on the village and the lovely open views across the Valley would be lost.
423	Gillian	Hulme	-		Object	I object most strongly to the sheer scale of the plans proposed for Edenfield and to the huge number of houses the Council envisages being constructed. Should these plans go ahead, there will be a very negative impact on the village, the whole character of which would be changed and certainly not for the better!		The infrastructure in the village could not cope with such a huge increase in population and, inevitably, traffic. The schools could not accommodate such an increase in pupils. The road through the village could not cope with the extra traffic. It can hardly cope now and when the bypass is shut because of an accident, there is total gridlock!
424	Olive	Ellis	-		Object	We object to the sheer scale of what is proposed for Edenfield. The character of the village would be completely altered, for the worst. We feel that such a large amount of extra housing is unwarranted anyway as there are insufficient local jobs for the people who live here now.		My views are shared by my husband, Mr Gordon Ellis.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
425	Jamie	Irwin	-		Object	These plans will destroy the village of Edenfield. The village does not have the infrastructure to deal with a 50% or greater increase in housing and population. The road network already suffers due the large volume of traffic adding over 1000 cars would cause grid lock. - - The amount of development in Edenfield is much larger than all other areas, even though it is only a small village. - - The plans are also irresponsible when it comes to looking after the environment. Almost all the development is on greenbelt. Across the borough there is a large amount of brownfield sites that should be repurposed. - - I very strongly oppose the plans for Edenfield.		
426	elaine	howard	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		The road along market st is already fully congested and trying to park for people who live along the street is a nightmare. BUT THERE IS NO ALTERNATIVE PARKING ANYWHERE. Extra traffic along this road will bring more chaos than there already is. Every week someone gets their wing mirrors knocked off. - - Are the council or the contractors going to find land for the residents of Market St to park? The answer is no, because there is nowhere to put a car park!!!!!! - - We only have two schools in the area, so how they are going to cope with a massive influx of children, goodness only knows, plus there are no plans for increasing GP services and Dentists in the area. - - It is not VERY GREEN for such a small village to put up with all the emissions from cars etc which will come with the houses.
427	Peter	Ward	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. Also the infrastructure for a plan of this magnitude is not in place to support this plan		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
428	Rita	Hudson	-		Object	I object to the number of additional houses being planned for Edenfield. - The extra vehicles alone could be about 1000 which will congest the village even more than it already is. The building contractors vehicles, whilst work is progressing, added to lorries from the quarries near here will congest our roads further. - Access to the site/new homes by families will probably mean even more restricted parking for people presently living on Market St. or Exchange. - 'Affordable housing' was mentioned several times by the council officers present, carries with it the potential for 'buy to let' and a subsequent downgrading of the villages 'desirability' mentioned in the plans. I noticed that one paragraph in the plans suggested some green belt sites may be 100% 'affordable' housing and therefore a target for 'buy to let' landlords. I would hope that 'affordable' means young new home-owners, preferably subsidised and helped the local council, not landlords. - Bearing in mind the location of our home we will be over-looked by any new housing built off Exchange St. Our reason for picking this as our home was that it offered views (which will be gone) up the valley and it gave us privacy for being naturist in our garden.		I sincerely hope that we will all be consulted further as this process goes forward...and not have to learn about it from our village residents association. We certainly never received notice from the council about the 'consultation'.
429	Alan	Ridehoulgh	-		Object	The scale of the development is on too massive a scale for the small village of Edenfield. There is no infrastructure in place, the roads are grid-locked already and the schools full.		I wonder if this has been the 'easy option' for the planners to propose so many houses in this area. I can accept some development but not on this scale. Why don't they look to improving some other areas in the Rossendale Valley?
431	Graham	Moxon	-		Object	I think this proposal for 489 more houses in Edenfield is far too massive a scale and will in effect more than double the existing housing stock. - Although I live in Ramsbottom, I spend a lot of time in Edenfield and also journey through many times, the village would lose it's lovely open aspect if this green-belt land were to be developed.		The roads would not cope with the extra burden of say 1,000 more vehicles and the two local schools are already full to capacity.
433	daniel	Butterworth	-		Object	.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
434	Jacqueline	Gaynor	-		Object	I wish to object to the enormity of the scale proposed for the removal of land from the Green Belt around Edenfield to allow developers to build on these sites. - According to the draft consultation the plan is to release land to build nearly 500 homes. This is totally disproportionate in a village that currently has 900 homes. There is no infrastructure in place to support such huge numbers. - The development would bring about 1,000 more cars to a village that already struggles for access along Market Street and for parking. - We are having to fight to keep the pharmacy, there is no bank and we recently lost the post office. There are no GPs or dentists and the two primary schools at either end of the village are already oversubscribed. Public transport links are appalling and the nearby bypass is frequently gridlocked at peak times. - The scale of the developments proposed would change Edenfield from a village to an urban sprawl and would totally destroy its character. - I understand from your officers at the consultation event no other individual settlement in Rossendale has been singled out for a 50% increase so why Edenfield? - For all the above reasons I wish to lodge my objections.		I am not against development per se, but I do object to the sheer scale of the proposals.
435	Carl	Gaynor	-		Object	I object to the proposals for the release of Green Belt land for development because of the huge scale of the plans. Edenfield is a village of 900 homes and the draft plan proposes a 50 per cent increase which is totally disproportionate and will destroy the character of the village. - There is no infrastructure to support such a massive increase. The roads cannot support the extra 1,000 cars that would no doubt be the result, the two primary schools at either end of the village are already oversubscribed and could not cope with the massive influx of children. Parking is already a struggle in the village and public transport links are very poor. In short, Edenfield would cease to be a village under these proposals such is the enormity of the scale.		I understand no other area in Rossendale has been signed out for a 50 per cent increase in size so why Edenfield? Would it not be more fair for other areas of Rossendale to share the allocation of land released for housing?

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
436	Craig	Finn	N/A		Object	<p>I can see no clear demonstration of 'exceptional circumstance' to justify proposed amendments to existing Green Belt. As part of the Council's own evidence base in support of the Draft Local Plan content, I note that: - "The NPPF attaches great importance to Green Belts and stresses that their essential characteristics are 'openness and permanence'. It also advises that, once established, Green Belt boundaries should only be altered in exceptional circumstances through the preparation or review of a local plan. - It is important to note that the relatively poor performance of land against Green Belt purposes is not, in itself, an exceptional circumstance that would justify release of the land from the Green Belt".(Rossendale Green Belt Review, November 2016). - I have an interest in HS2.71 (and parcel 34 as per the Green Belt Review in particular) and also note the following report comments: - "Release of this parcel [parcel 34 within HS2.71] from the Green Belt would push development further north which would not relate well or form a coherent extension to the current settlement edge. Development within the north of the parcel would introduce an element of sprawl and would negatively impact on the openness of the neighbouring parcel of P25 <a notable 'STRONG' performer against the NPPF's Green Belt 'purpose' and not identified as potential development land]. Removal of this parcel from the Green Belt would make the neighbouring P25 vulnerable to further ribbon development along Bury Road as developers may wish to 'fill in' the gap between the northern tip of the parcel and the road. Releasing this parcel is likely to have a negative effect on the performance of neighbouring parcels and the integrity of the wider Green Belt" (Rossendale Green Belt Review, November 2016). - Surrounding infrastructure is a key concern and the contents of the Infrastructure Delivery Plan are also noted. Geotechnical issues with the A56 embankment in Edenfield have been identified and would need to be addressed and there are no guarantees that the next Road Investment Strategy (RIS2) would identify funding to improve transport links in particular or that Highways England would likely grant construction of new access onto its network. (Rossendale Infrastructure Delivery Plan, July 2017). - Whilst the Draft Local Plan includes methodology to explain how the proposed number of 'housing/units' per site has been arrived at, there is no clear assessment of the number of potential occupants, assuming a mix of housing supply to complement the existing design of the village, thus the potential increased demand on services cannot be quantified. As the Rossendale Infrastructure Delivery Plan notes, there is no guaranteed (NHS) funding streams for either staffing or premises expansion for GP or Dental Practices. Equally, Department of Health bidding rounds for funding may not take place in the future, nor is a Rossendale practice guaranteed funding should it apply. In these austere times, similar scenarios can be cited for Education, Social Services and Public Services generally. - It is acknowledged that New Homes</p>		None

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
						Bonus arising from implementation of the Local Plan may act as a funding source to Rossendale Council (but realistically only replacing Central Government Grant) but I wish to object to the Draft Local Plan as I believe the suggested locations for potential development, and the number of units proposed therein, are not viable for the reasons set out above. -		
438	Fiona	Keir	-		Object	I object to the scale of the development proposed for Edenfield. I understand that development is needed but the number of houses proposed would not match the local amenities, for example no GP surgery in Edenfield, only two already fully subscribed schools in the area. The access from Exchange St would be a concern, there is usually only room for single file traffic along this road day and night currently due to the lack of parking in the area. Traffic flow would increase with many new houses and the road would be congested. The local park is on this road, and local preschool with young children frequently having to cross.		-
439	Jane	Howard	-		Object	I am concerned about the volume of houses proposed for the listed areas. Edenfield can only manage some housing in the area, it is a small village with no GP surgery and two full schools. A vast increase in traffic on side roads would lead to a congested village. Market St is usually double parked meaning slow traffic.		-
442	Ian	Fletcher	-		Object	I object to the proposals on the sheer scale of the proposed developments within Edenfield, which would completely ruin the character of the village. Increasing the housing by over 50% will destroy the village character and feel. - Traffic through Edenfield is already congested and insufficient areas to park and cannot cope with the substantial increase in traffic that this would incur. - - The local facilities, schools, Doctors, Emergency services could not cope with an influx of families to this scale. - - Access to these sites is also very restricted which would also add to congestion and difficulties within the Village. All of the above destroying the Village atmosphere and making it an undesirable area to live. - - For the land west of Moorlands view there is also a colony of Bats and although not sure where these live it is essential they are not disturbed.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
444	Dorothy	Jones			Object	Should this plan go ahead, the sheer size of it will completely alter the character of the village. - - Both Edenfield and Stubbins junior schools are at capacity and unable to expand further, so where will the children in these houses go to school? And where will older children go to school - Woodhey is at capacity. - - We have been informed that there will be no access to the by pass so all traffic will have to use Market Street which is already extremely busy, particularly in the morning and again in the early evening. - How do you propose to accommodate up to 1000 extra vehicles, working on at least two vehicles per house? - Is it true that the access to the main road will be through the space revealed by the demolition of the Horse and Jockey? At present the majority of houses in Market Street have to park on the roadside as there is no access to the rear of their properties - the proposed increase in traffic will cause chaos and road safety will be a thing of the past. - - There is no doctor in the village - where will the extra villagers go for medical and dental help? - - Will there be green spaces among the houses to enable children to play safely? - - Will the houses be executive 4 and 5 bedroom houses rather than affordable houses for the youngsters of the village? We need to keep young people in the village.		Please give serious consideration to the comments of the villagers, Edenfield is and always has been a village. With your proposals it will just become a huge housing estate with a continual traffic jam. Do you care? I sincerely hope you do give serious consideration to all the objections to your plans, After all there are other areas in Rossendale to develop, why ruin Edenfield? Some development of residencies could happen here, but not on the scale proposed by you.
445	Margaret	Hardman	-		Object	Although I do not reside in Edenfield, I spend a great deal of time there, as I am associated with Edenfield Cricket Club. - I love the open spaces around the village and think the proposed planned development is far too large for the village. There is no infrastructure in place, the roads are horrendous and parking is at a premium.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
447	Christine	Petterson	-		Object	<p>- I understand that you are planning to remove large areas from the Greenbelt so that the land can be built on. - - I object to the sheer scale of the proposals which would radically alter the character of the village. - - Policy HS5: Housing Density - An increase in housing of around 50% would obviously have a “detrimental impact on the amenity, character, appearance, distinctiveness and environmental quality” of the area. It would remove regularly used recreational land and drastically change the appearance of the village as the sites proposed spread the length of the village. The increased traffic would have a significant impact on the environment. - - Policy ENV1: c) Being sympathetic to surrounding land uses and occupiers, and avoiding demonstrable harm to the amenities of the local area. - The amenities in Edenfield are already fully stretched with no GP surgery, no Post Office, one small local grocery shop and the two primary schools fully subscribed. - - Chapter 6: Transport Policy TR1: ...Proposals which reduce the need to travel will also be encouraged. Edenfield is already a “congestion hotspot”, particularly at peak times. When there are hold-ups on the Edenfield by-pass, which happen on a regular basis, traffic diverts through the village creating gridlock and is hazardous for pedestrians who have difficulty trying to cross the roads. - •Promoting sustainable transport solutions to address congestion and air pollution; - •Ensuring that development that generates significant movement is located where the need to travel will be minimised and the use of sustainable transport modes can be maximised. ; - Bus services in the area are constantly being reduced with access to surrounding areas meaning that car travel has often become necessary. There is now no direct link with Manchester and limited bus services in an evening. Should the East Lancs Railway ever start to be used for commuter travel, this would not have an impact on Edenfield as a car/bus would be needed to reach the station. - An increase of almost 500 homes will almost certainly mean in increase in, possibly around 900, cars accessing the narrow roads in the area. - - - - -</p>		-
448	Bill	Dust	-		Object	<p>I object to such a large scale proposal which would double the size of the village of Edenfield. A village which is already bursting at the seams in terms of too many vehicles with insufficient safe parking. A main street which is virtually a single line of traffic with passing places due to car parking and a dangerous place at school times due to even more parking problems. - Facilities and services are already in short supply eg. schools bursting at the seams, no doctor, no dentist, no library etc.. - The proposal is too big and would add to the already stop start nature of the bypass at busy times by drivers trying to commute south.</p>		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
450	Carol	Mitchell	-		Object	I object to the sheer scale of the proposal. Apart from the fact that it will radically alter the character of the village, I do not feel that the village can cope with the inevitable influx of cars and people. - The infrastructure isn't there to support it. The roads are already completely full of parked cars making driving through the village difficult at the best of times. We are talking about the possibility of a further 1000 cars or thereabouts. - The tailback, in all directions, at the Rostron's Arms during the rush hour is already a nightmare. Imagine that with all the extra cars. The cottages round the junction will have a constant stream of vehicles outside their windows. They already suffer from terrible dirt on their frontages from the traffic that currently passes. It will be like pre bypass days. - There are only two primary schools in the village which are both already fully (if not over) subscribed at every new school year. Where will all the extra children go? - There is no doctors surgery and it is difficult to get doctors appointments in any of the surrounding areas. - I am completely against building on greenbelt until every scrap of brown field is developed and every empty or substandard house is either refurbished or demolished and replaced. Once gone greenbelt can never be returned. I also think the loss of the fields will increase the problem of flooding lower down the valley.		-
451	Karen	Duckworth	-		Object	Impact of such a large scale development on the character and amenities of the village, such as the school. Edenfield is not a town like Bacup or Rawtenstall so this large development will impact greatly and change the nature of the place. - - Market St is now problematic. There is heavy traffic and there are quarry lorries at one end. When the bypass is closed, traffic through the village grinds to a halt. Increased traffic from new developments feeding into Market St would be a nightmare adding to the number of vehicles significantly and to existing difficulties. - - So much removal of land from green belt would change the character of the place, a place which is enjoyed by ramblers and walkers. -		-
452	Barbara	Dewar	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. - The road through the village is already very busy, extra traffic would make this much worse. The two local schools are oversubscribed at present and are unable to expand further. Doctors' lists are full. - I hope this is not just a routine exercise, I was concerned when I attended the consultation evening at the community centre - the standard reply from the council representatives was " We need more housing". - I appreciate there is a national need for more housing but looking at the county plan there are other sites around the area which could be developed to provide a more balanced response to this need.		-

457	David	Wilson			Object	<p>I write in regard the Council's Local Plan and how it will affect Edenfield. I understand that you are planning to request the government to remove large amounts of land around the village from the greenbelt so that it can be used for housing. These are the areas about which I am particularly concerned and are covered by reference HS2.71 on the site map which accompanies the Plan;</p> <p>Land off Exchange Street, Edenfield Land West of Market Street, Edenfield Land off Blackburn Road, Edenfield Land west of moorlands view, Edenfield</p> <p>I object to these proposals on the grounds that the scale of the plans are far to large and if carred out will irrevocably ruin the character of our village.</p>		
458	Carolyn	Duncan			Object	<p>I am writing to strongly obkect to the draft local plan as proposed for Edenfield which entails removing significant areas which are of particular concern to me are covered by reference HS2.71 on the site map which accompanies the plan and are as follows:</p> <p>Land off Exchange Street, Edenfield land west of Market Street, Edenfield land off blackburn Road, Edenfield Land west of Moorlands View, Edenfield</p> <p>The proposals contained within the plan would significantly and detrimentally affect both the character of the village and daily functioning of the village. I believe that the scale of the proposed development would produce negative impacts in terms of traffic congestion, parking issues, access to schooling and health services.</p> <p>I lived in the village for over 20 years and regularly return to visit family and friends. Parking and congestion within the village worsens year on year, currently making access from one end of the village to the other a significant challenge given the volume of traffic and the number of parked cars. Such proposed development would only add to this chaos and place further strain on various local services.</p> <p>I am also concerned about the environmental impact that this proposed development would have the area, destroying large areas of Greenbelt land. Given that there are several Brownfield sites within the rossendale area that could be developed for housing I fail to see the justification for developing on Greenbelt land at the expense of fundamentally and permanently changing the character of the village of Edenfield.</p> <p>I strongly object to these proposals and urge the council to rethink allowing such large scale development within this rural village.</p>

494	M.D	Borkus			Object	<p>Thank you for the very informative consultation even at the Local Community Centre today.</p> <p>It is a great concern regarding the Council's Local Plan, and how it will affect Edenfield.</p> <p>It is obvious that since the previous consultations approximately 2 years ago that the Council has bowed to pressure from national developers to release larger plots of "Green Belt" land, and I am concerned that you will be recommending the removal of these large areas of "Green Belt" to the government.</p> <p>As the land in question has already been purchased by these developers they are obviously confident that this will be the case.</p> <p>The areas of concern are covered by reference HS2.71 as per the tabled site map.</p> <p>Land of Exchange Street Land West of Market Street Land off Blackburn Road Land West of Moorlands View. All above in Edenfield</p> <p>I object to these proposals based upon the following:-</p> <p>A) The sites are too large and will destroy the character of the village in effect "urbanising" a community that wishes to retain its rural character.</p> <p>B) There is insufficient local amenities to sustain the increased community i.e school size, Doctors etc.</p> <p>C) The developments would not be sustainable. I.e Car usage.</p> <p>A development of say 200 houses with 2/3 cars on plot produces 400-600 car movements. The sites ear marked combined will have a greater density.</p> <p>Bus usage:- Buses are non existant after 19:00. The vast majority of the new residents would work in Manchester - with no public transport links. Even with a new road link to the A56/M66 (which the developers would probably offer to contribute to the costs) would not alleviate the traffic issues that will develop. The main road through Edenfield at present gets highly congested through the day compounded by heavy goods vehicles such as Quarry vehicles</p>

496	K	Scranage			Object	<p>As a resident of Edenfield for over 50 years I am appalled at proposals these will have on the village.</p> <p>In 1965 the "main" road was overwhelmed by the quantity of the variety of traffic which had to pass through Edenfield - in 1968 the by-pass was opened! It had taken many years for this to be achieved. However, from the local roundabout access was provided for northbound traffic to the valley - none to the south to manchester; is a big mistake! In 2017, gain entry to the feeder road at rawtenstall and traffic is the progressed to the M66. in a short time traffic from Haslingden merges into both lanes.from there on. Beyond Edenfield etc are obliged to use the slop road on the the M66. there is the development of gridlock!!</p> <p>Authorities of the past - looking after the interests of the valley- had the foresight to designate Brown and Green areas to protect the rural landscape for future generations.</p> <p>It now needs the residents to challenge proposals which threaten the very heart of, and character of Edenfield.</p> <p>We have had to sudder facility losses via post office, bank, newsagents and others whilst media and educational are stretched RETAIN THE GREEN BELT which PROTECTS EDENFIELD</p> <p>FIGHT FOR ROSSENDALE</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
497		Whittaker			Object	<p>We feel we have to write to you to register one strong objection to the Council's local Plan to remove large amounts of land around our village, greenbelt land, so that it can be built on - the proposed site allocations. The sites covered are those designated by the reference number HS2.71. We are concerned about the swallowing up of all sites, and especially those West of Market Street, Off Blackburn Road and West of Moorlands View, as well as land off Exchange street, i.e. the field below the recreation ground, which surrounds chatterton hey on two sides. We herewith wish to object strongly to the policy and site allocations.</p> <p>We feel - along with most of the village residents - must not be beshrouded with unwanted houses which would bring unwanted problems for those of us already living in Edenfield - problems with gridlocks, and more pollution, if another thousand or so vehicles use village roads, not to mention drivers frustrated by the futher congestion brought by an increase in vehicles. We do not want to see a massive influx of families living in four hundred plus houses. Villagers love their villages, and their well-being in a harmonious community, as we have at the present time, in of paramount importance to them.</p> <p>Proposed "development" - so called! - stems from the developers money fuelled and focused operations benefitting themselves, and to be frank, the council also. Consequences of the coice, and the effects of the present (any future villagers, too) people of Edenfield, have not been thouroughly thought through. The preserving of the present character of the village deserves to be, and must be continued.</p> <p>Such as the local plan policy and the proposed site allocations, which would, because of its outrageous scale and its lack of consideration for a healthy, integrated and harmonious community for the villagers of Edenfield - some of us have lived here for hundreds of years - destroy the fabric of a quintessential english village.</p> <p>We trust our objections will be taken on board and respected.</p>		
499		Butterworth			Object	<p>We object to all the listed applications on the grounds that local roads particularly hall street can not cope with the increase in traffic these extra houses would bring.</p> <p>Also services such as schools. G.Ps etc would not be able to serve an increase in populaton</p>		
500	John	Clements			Object	<p>Approximately 500 more houses in Edenfield may well cause more flooding in the valley including irwell vale (which already has a very bad flooding record) - due to faster surface water run off from additional roofs, tarmac, roads and drives)</p> <p>Also unacceptable congestion on roads, medical centres and schools. In the Edenfield area.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
504	Simon	Hampson	-		Object	There are no plans for infrastructure improvements. The sheer scale of the planned development will change the character of Edenfield beyond belief. No increase in school or medical facilities. Where will all these people park? Bypass..A56/M66 will also need widening. It can't cope as it is! Please, see sense and scrap this nightmare plan?		I am not against change. This plan can't work and Edenfield doesn't yet have the infrastructure to support it.
506	paul	hopwood	edenfield resident		Object	We object to the sheer scale of what is proposed for edenfield .To increase the population by 50% will change the character of our village. The pollution is already at high risk. The roads are very poorly maintained. The schools are full.We already have too many trucks,hgv's and other large vehicles on our narrow roads.We do not want to live in a building site for 10 years.Also we have no police prescence in the village.		-
507	moyra	franklin	-		Object	with regard to this draft plan I object strongly as the whole amount of development will alter both the area and character of what is a Ribbon village. The houses already create massive traffic problems and this would add some 1000 more vehicles which would add to danger and pollution as we currently have the quarry waggons going through all day. We do not have facilities including schools doctors or anything else and we have know where to put all this added requirements. It would completely change the status of the village and as we already suffer the problems of being on the edge of greater Manchester this would make life impossible. The sheer scale of this amount of housing I feel would be opposed in any similar area around the country. - There are many brown sites with in Rossendale that I'm sure would be better equipped to improve the housing shortage with less destruction to areas and population.		-
508	Sheila	Dust	-		Object	Far too much land being given over for housing development. It could create doubling of the village size which would totally spoil the village. - There is already a severe parking problem in general but at school times chaos and danger reigns. - At any time traffic is down to single file through the village with passing places here and there depending on parked cars. - Houses already for sale in the village are not selling so why more? - Car parking space is what is urgently needed to free up Market St as things stand at the moment without a further c800 cars to contend with.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
511	Greg	Willetts	-		Object	I object to the proposed plan due to the scale of development compared with the current size of the village of Edenfield, this will destroy the feel and nature of the current village and the scale is unacceptable. Of particular concern is the lack of infrastructure, roads, access points and amenities, schools, community centre, public transport etc. The village cannot cope with the increased numbers proposed - - The proposals talk of contribution being made by developers to contribute to amenities, however there is mention of Mark Pits, Haslingden sports centre , that is not acceptable. Edenfield will take the pain and brunt of the development, while other communities further up the valley get the benefit. Developers must be forced to pay for upgraded facilities and amenities in Edenfield, like a new community centre , playing fields and school upgrades. The community centre to be clear needs raptors be funded by the council and operated by the council over the duration of the development. - - A new junction onto the A56 would also be a benefit if we are forced to have this to avoid traffic congestion		The plan as outlined is unfair and feels disproportionately targeting Edenfield, rather than the developments being spread around the valley.
512	Karl	Denton	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		-
513	Philip	Leake	-		Object	I am concerned regarding the Council's Local Plan which will involve changing the above land from Greenbelt status to building land. Surely there are enough Brownfield sites within Rossendale to build on rather than losing more of a valuable resource for the whole community. - I have been advised that the need for sewers etc will be investigated by United Utilities but I find it hard to believe that current capacity will be sufficient to cope with what will be nearly double the usage. Worryingly the answer may be to dig up much of the area to increase capacity. - Access to the majority of the site would presumably be via Market Street, the heart of the village. Already there is congestion at both ends of Market Street where the road narrows and buses and commercial traffic are struggling to get past one another. Large amounts of construction traffic would increase this problem several fold. - The road network is insufficient to deal with initially all the construction traffic, and later up to an extra 1000 vehicles belonging to new residents. - I object to these proposals on the grounds that the scale of the plans are far too large and would turn the village into a building site for several years, whilst irrevocably ruining it's character. -		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
514	Keith	Openshaw	-		Object	To increase the size of the village by the number of houses will completely change the whole fabric and in my opinion destroy the character of the village. - - When you look at the plan the proposed area of greenbelt being taken out of protection amounts to approx. 85-90% of the current residential area (using the dimensions from your maps). Surely this borders on the ridiculous by any standards. This is going to result in a population not far from double the current one. - - The main road (Market Street & Bury Road) is currently parked almost end to end on both sides with responding bottlenecks. - - I would also like to ask why all green belt on the west side of Market street is ear-marked for removal from green belt while east side not , you would have thought with the majority of the traffic going south in morning the east side would be a better bet (ie: turnng left into traffic) + it might make the village a little bit more balanced.? - - Edenfield is going to be an on/off building site for years to come, any drop in house demand will leave projects half done & looking a real mess with the council unable to do very much about it (in my experience). - - The traffic is going to be a nightmare it is already difficult to get thru the village when cars & vans parked both sides of Market St. & Bury Rd. this is only going to get worse, I remember talking to one of the planners regards-building near community centre many years ago when he said then 'the thing Edenfield needs most is more parking space not houses'. - - What plan is there for the additional school places that will be required? - What plan for a doctors surgery to be incorporated as the village will have enough people to expect one?		-
516	Chris	Bishop	-		Object	The Housing developments proposed are too intense for the village. It would not be able to cope. It increases the stretched resources, transport issues and changes the whole nature of the village.		There are no medical facilities in the village, Transport, when the Bye-pass is closed (accidents, maintenance etc) is awful. Parking would be a serious issue. Could the schools cope?

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
517	Margaret	Rostron	-		Object	The proposed sheer scale of development planned in my opinion would radically alter the character of our village, Whilst acknowledging the need for new housing the proposed plans for Edenfield are on a scale that would mean: - 1. Increased traffic on an already saturated road, there is already double parking through the main part of the village and this results in traffic jams throughout the day and at peak times . - 2. In addition to this there is no longer a doctors surgery in the village and people have to go to either Rawtenstall or Ramsbottom and there are already issues around a shortage of healthcare staff which is currently an issue in Rossendale. - 3. Furthermore the two local primary schools are already over subscribed thus increasing the pressure on the schools to accommodate extra pupil numbers in future if these proposals are approved. - 4. The village contains approximately 900 houses and the proposal being considered is for a further 489 houses, this would change the whole village beyond recognition and there is no real infrastructure to cope the increased demand for services in Edenfield and the surrounding areas. -		I am not against new small housing developments but they need to be in context with the current size of the village and efforts should be made to retain the overall appearance and character in line with the current housing stock that runs along Market Str
518	Norma	Pilkington	-		Object	I am objecting to the scale of the proposals for Edenfield because it would radically alter the character of the village. I am also objecting on the grounds of school and GP capacity, parking and traffic problems which would be caused if the proposals were implemented. ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
522	Kathryn	Hopwood	-		Object	I object to the plans which are wholly too extensive for this village and its infrastructure. Market Street and the surrounding roads between Edenfield and by-pass junctions will simply not cope with the volume of traffic that will come of adding so many new residents. Public transport is insufficient and the school and medical provisions are insufficient for that many new residents. The project will simply change the village into a town and not only reduce its desirability and our current house prices but ruin the very nature of our little village. Talk of using the East Lancs railway as additional public transport is not only horrifying as it will ruin a main tourist attraction in the area but will have knock on effects on Ramsbottom as there is insufficient parking for such use, and all the surrounding areas that have a station on the line (crossing the county borders) will need massive upgrading and overhaul, ruining the East Lancs line all together. The By-pass is already prone to great disruption and a single incident on the whole stretch can leave Edenfield in grid lock already. The by-pass will not cope with more traffic. - - Our crime rates are low, our children play on the fields and dog walkers can be found all over the village all the time making full use of those green spaces we would lose. We would need more police, more places to walk dogs and more places for our young people to play and socialise. Edenfield playground has needed upgrading for such a long time for the current numbers of children, there will be nothing suitable for even more children and youths which will inevitably lead to more social and criminal issues, which will again knock on to reducing the quality of the lives of current residence.		-
523	Sharon	Exton	-		Object	The village cannot sustain this amount of extra housing. Most households have 2 cars & we have one main road through the village it will be chaos. The primary schools in the area will not be able to support all the extra children. Aesthetically the sheer amount of proposed houses will ruin our beautiful views of the surrounding hills & countryside.		-
528	Theresa	McGowan	-		Object	I object to the scale of what is proposed for Edenfield, which would radically alter the character of the village.		I am concerned about the effect all this new building if approved would have on the level of traffic going through the village, which is already high.
530	Shirley	Taylor	-		Object	To add so many houses to such a small village would vastly alter the character of the village At present the traffic through the village is very congested at busy times. The two schools are full and we have no bank, post office, doctors or dentists in the village.		-
532	Ian	Quigley	-		Object	Having reviewed the proposed plans at the councils consultation event. I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village		I am concerned that this proposed plan is wholly disproportionate. ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
533	Lesley	Quigley	-		Object	Having viewed the plans at the councils consultation event I object to the sheet scale of what is proposed for Edenfield which would radically alter the character of the village.		I am concerned that this proposed plan is wholly disproportionate. We do not have the infrastructure or amenities in place to accommodate such a large scale plan.
536	Paul	Harrison	-		Object	I object to the sheer scale of what is proposed for Edenfield. It would radically alter the character of the village. There is no infrastructure in place to cope with such a drastic rise in the number of houses in the village. There are already very few school places available and the roads are already congested.		-
537	Leona	Tarnowski-harrison	-		Object	I have checked the sheer scale of what is proposed for Edenfield Village. The roads and schools would not cope with such an expansion.		-
538	William	Hamblett	-		Object	To many new houses in centre of village will cause congestion on roads, put pressure on schools, and other services. It will also change this very friendly village and is surely not nessecary with so many brown field site around Rossendale		no
541	Susan	Whitehead	-		Object	I object to the sheer scale of what is proposed for Edenfield. This would radically alter the whole character of the village and the roads, schools and other services would not be in a position to cope with the magnitude of such developments.		-
542	Graham	Exton	-		Object	I can't believe the planning application has got this far, nearly 500 houses,a thousand cars and adults and two thousand five hundred children will completely destroy the village. The roads and motorway will become completely gridlocked, the schools will not be able to cope, it will put unbelievable pressure on the doctors,dentists etc and their will be hoards of bored kids roaming the streets as there are no playgrounds,clubs or fields to play in. I urge the councillors not to be narrow minded yes men/women and do the right thing and reject all these insane plans.		-
546	Doug	McIntosh	-		Object	I object to the sheer scale of what is being proposed for Edenfield as it will radically alter the character of the village. - Traffic/parking in the village will become a major concern with the potential for an extra 1000 cars on the village roads. Any problems on the M66 or Edenfield Bypass has a major knock on effect on the village roads particularly Market Street and Bury Road. At rush hour the bypass south bound to the M66 resembles a car park most mornings with the reverse in the evening. unless the intention is to widen both the Edenfield Bypass and the M66 the congestion will only get worse. For people who work in Manchester there is no direct public transport from Edenfield. - The two schools would not be able to cope with an influx of children, parents struggle now to get their school of choice. The same applies to GPs and Dentists. -		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
547	Mark	Wood	-		Object	I am objecting to the sheer scale of development proposed in Edenfield which will add 50% more housing to a village community and change the character of the village for the worse. I have just bought 57 Blackburn Road in Edenfield in August 2017 for the benefit of my family and in particular my two young girls. The views and village feel is a key part of my decision to return and live in Edenfield and this will all be lost should these plans be approved. - - I strongly oppose these plans and want to be notified about future consultations.		-
549	Susan	Leake	-		Object	I object to these proposals on the following grounds: - The scale of the plans are far too large and would negatively alter the character of the village. - The road network would be unable to deal all the extra traffic that would be generated by an increase of approximately 1000 cars belonging to new residents. - There is already a problem with backlogs being caused by commercial traffic at busy times (Market Street and Bury Road can be gridlocked when there are problems on the bypass). - The amount of upgrading of existing utilities to service the increased demand, and the excavation work necessary would put more pressure on the village and road network. - It is a lot of Greenbelt to turn over to building plots. -		-
550	Michael	Murrell	-		Object	I am not against new development in Edenfield but it is scale of the proposed development to which I wish to object. To consider increasing the number of houses by almost 50% would fundamentally change the traditional linear characteristics of the village and turn it into a modern dormitory town and involve a significant loss of land used by the village for recreational purposes. I do not object to reasonable infill development which has always taken place in the village. - I attended the Consultation Event but no details were available for any of the proposed sites so it is not possible to comment on traffic and congestion issues but these are bound to be very significant in view of the existing traffic flows in the area.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
554	Michele	Hanson	-		Object	Not only is the land part of Green Belt but the size of the village would not be able to withstand that amount of additional housing as firstly the roads can't cope with the volume of parking and road use. There is a lack of public transport as is, which means majority of people will have to use cars. When it snows, their roads won't be gritted so therefore their vehicles will have to be parked along the main road where there is a lack of space already. This will then mean more traffic through the village which in itself should be reason enough for the plan to not go ahead. The trucks from the surrounding areas are already damaging the houses and foundations on a daily basis, so any extra trucks during building works will cause more issues. the drivers of the trucks that are already using the roads don't slow down or pay attention to other road users and I feel this would be exacerbated if additional traffic is added. - The schools and doctors surgeries and dental practices probably wont have the space for the amount of additional people. the NHS is already under pressure and the surgery I use in ramsbottom is full to the point where it takes over 10minutes to make an appointment which can only be made on the day in most cases. - The sewers and drains are not built for the amount of additional housing proposed and what would happen with water and electricity supply? - Appreciate the area needs more housing but Edenfield is a small village and cannot cope with the extra housing proposed by this plan		-
559	Hannah	Convery	-		Object	I object whole heartedly to the scale of the development that is planned for Edenfield. - - 1. We do not have enough schools, both primary and secondary to support this expansion. - 2. Transport is already an issue around the village as the main road becomes a car park at busy times. - 3. We do not have the amenities as a small village to support such a vast expansion - no GPs, dentists, etc. to support these individuals. - 4. Edenfield has always been a small tight nit community and expanding it so greatly would damage the character of the village and also the community that has developed there.		-
565	Charles	Hart	-		Object	We object to the scale of what is proposed for Edenfield which would radically alter the character of the village.		There is too much traffic going through the village already and to add more houses will make it a nightmare trying to get through the village.
566	Jason	Horsfall	-		Object	I am objecting to large scale building in the village and on proposed green belt land. There is enough brown land for small developments. Leave the village alone and there is enough parking issues without more vehicles.		Keep green belt alone. Leave the village alone. Find brown belt for small developments.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
567	George A.	Rogers	-		Object	I wish to object to the green belt land being released for development. The village, as it stands at the moment, is surrounded by lovely open views across the Valley, but if this development is allowed to go ahead all these green spaces would be lost. - The infrastructure too would not stand this amount of new houses. The two schools are already full and the roads are quite often grid-locked at present and with another maybe 1,000 cars using them would be unsustainable.		As I do not have a computer, I have asked J.M.Mead to complete this questionnaire for me on the information I have given.
568	Pamela R.	Rogers	-		Object	The infrastructure in the village would not cope with the proposed number of houses. All our lovely green fields would be lost to the developers and would significantly affect the lives of the residents who already live here. - The roads would not cope with the extra traffic and the schools are full already.		As I do not have a computer, I have given my comments to J.M.Mead who will submit my objection for me.
569	Bertha	Heys	-		Object	The village could not sustain this level of development. The village would lose its lovely open aspect with views across the Valley. - The roads could not cope with an extra 1,000 vehicles and the two local schools are already full.		As I do not have access to a computer, I have asked Mrs. J.M.Mead to complete the objection form with my own comments.
574	Paula	Tehrani	-		Object	we object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village		I just hope that the council does not allow for this to take place. The people that live in Edenfield live here because of the rural location and do not wish for any other properties to be built in the area that will spoil this. To add also that our small roads will not allow for heavy traffic nor will our schools be big enough to take in more children. This is a village with a small capacity of people and we wish this to remain so
575	james	Halligan	-		Object	we object to the sheer scale of what is proposed for edenfield which would radically alter the character of the village		Edenfield is a quite village set within a lovely rural location. This was what attracted me to Edenfield in the first place. If the council is to go ahead with these plans it will devastate the community
576	Luke	Tehrani	-		Object	I have lived in Edenfield all my life, for 22 years. I have grown up here and loved the rural location To build as many houses as you are proposing would spoil the character that edenfield has. People come to live here because of the rural location and the village life, if the plans go ahead this will all be spoilt		I would urge you to reconsider your plans and think of the people in the village. Please put them first

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
580	Stuart	Dearden			Object	<p>I write with the upmost concern the Councils Local Plan for future potential housing developments in Edenfield Village. I understand you are planning to ask the Government to remove large swathes of land around the village from Greenbelt control so as to build large housing estates.</p> <p>The areas causing the most concerns are covered in your reference document HS2.71 with the site map of the plans for development off</p> <p>Exchange Street Market Street Blackburn Road West of Moorlands View</p> <p>Whilst I'm not against future development within the village your plan doesn't seem to take into consideration any provision for additional local services ie. provision for Schools, Health Care ,or additional road congestion, which at all times within the village verges on dangerous with cars parked on both Bury Road, Market Street, and Burnley & Bolton Road creating bottle neck condition and danger to life and limb.</p> <p>Subsequently I must object strongly to any proposal of this scale which potential will double the population of Edenfield without any consideration to the character or social conditions and general quality of life enjoyed in or village.</p>		
583		Barett			Object	<p>I write regarding the councils local plan and how it will affect Edenfield. I understand that you are planning to ask the government to remove large amounts of land from around the village from the greenbelt so that houses can be built on it.</p> <p>The areas I am particularly concerned are covered by your reference HS2.71 on the site map.</p> <p>Land off Exchange Street, Edenfield Land West of of Market Street, Edenfield Land off Blackburn Road Land west of Moorlands View</p> <p>all in Edenfield, I object to these proposals on the grounds that the scale of the plans are far too large and if carried out would ruin the character of the village</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
585	Arnold	Wilcox-Wood			Object	<p>I am writing about your local plan and how it will affect my village of Edenfield. You propose to ask the government to remove large amounts of land around the village from the greenbelt so houses can be built on it. The areas I am worried about are covered by your reference HS2.71 which is with your plan, this is:</p> <p>Land off Exchange Street, Edenfield Land West of Market Street, Edenfield Land off Blackburn Road, Edenfield and; Land West of Moorlands View</p> <p>I object to these proposals on the grounds that the scale of the plans are far too large and if carried out would ruin the character of Edenfield village. The infrastructure would not cope with increased traffic & parking problems. The school could not cope with the increased demand. The village is blocked up now at school time and if the bypass is blocked up the village is the only escape route to Bury and Manchester. More thought is needed in the plan because once the greenbelt is gone it can't be replaced.</p>		
587	Shirley	Wilcox-Wood			Object	<p>I am writing about your local plan and how it will affect Edenfield. I understand that you propose to ask the government to remove large amounts of land around the village from the greenbelt so houses can be built on it. The areas I am worried about are covered by your reference HS2.71 which accompanies your plan</p> <p>Land off Exchange Street, Edenfield Land west of Market Street, Edenfield Land off Blackburn Road, Edenfield Land West of Moorlands View, Edenfield</p> <p>I strongly object to these proposals on the grounds that the scale of the plans are far too large and if carried out would ruin the character of Edenfield village.</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
597	Sheila	Rostron			Object	<p>I understand that, in your local plan, you are considering an approach, to government, to remove large amounts of greenbelt land in Edenfield. The following areas of concern to me personally, are covered by in the site map by the above reference.</p> <p>Land off Exchange Street Land west of Market Street Land off Blackburn Road Land wet of Moorland View</p> <p>I object to the scale of the proposal as the infrastructure of the village is not suitable for such an extensive building plan. The character of the village has already been affected by the loss of medical facilities, heavy traffic, over subscribed schools and the large amount of parked cars preventing pedestrians use of the footpaths. We also have to bear in mind that the village borders the greater manchester boundary and no doubt they will have their own local plan which would have a knock on effect in the opposite direction to the proposed areas listed above.</p> <p>The council has the responsibility and duty to consider alternate sites before using the greenbelt areas. Please notify me of future considerations on the local plan</p>		
619	Melanie	Read	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.	-	
620	Nicola	Fletcher	-		Object	<p>I object to the proposals on the sheer scale of the proposed developments within Edenfield, which would completely ruin the character of the village. Increasing the housing by over 50% will destroy the village's unique character and feel. You will in effect be destroying it. - - Traffic through Edenfield is already congested and there are insufficient areas for the current residents to park and without a doubt we cannot cope with the substantial increase in traffic that this proposal would incur. - - The local facilities; school, doctors and emergency services could not cope with an influx of families to this scale. Furthermore we don't have a consistent, reliable and extensive public transport network to accommodate. - - Access to these sites is also very restricted which would also add to the congestion and difficulties within the village. All of the above destroys the village atmosphere and then makes Edenfield and UNdesirable area to live. - - For the land west of Moorlands View there is also a colony of bats and although we are unsure to their exact roosting it is essential that they are not disturbed. - - My final point is i believe green belt land should be preserved especially when they are multiple brown land sites around the area which could be used in the place of green belt. Edenfield is desirable as we maintain a country village feel, there is countryside and farm land however by taking away the green belt status you risk creating a environment that is very urbanised, - -</p>	-	

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
622	Mark	Whitehead	-		Object	I object to the size of the development proposed especially concerning the use of green belt land when there are old industrial sites that could be utilised first.		The consultation event that took place in Edenfield seemed to be scheduled for a time that deliberately excluded the many people who would be at work - - It would be sensible to host these type of events over a longer time period (similar to a polling station) in order to allow the maximum number of people to attend
623	Clare	Whitehead	-		Object	I object to the scale of the development proposed and especially the use of green belt land.		-
624	Ethan	Whitehead	-		Object	I object to the sheer scale of the development which would radically alter the character of the village.		-
626	Harriet	Flynn	-		Object	We object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village. - - The traffic through the village would be awful and the building process would be very disruptive		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
632	Nicola	Rollo	-		Object	<p>This is disgraceful. How you can think that a village such as Edenfield and its infrastructure can cope with the number of additional houses you are proposing is absurd! There are two schools which are already oversubscribed, there is no longer a Dr's surgery in the village as this relocated to Rawtenstall, the village roads will not be able to cope with construction traffic never mind the additional number of vehicles if the proposals go ahead - I challenge you to try and get down Market Street during rush hour/school pick up and drop off times. The M66 is an abomination and travel times in and out of the valley are already ridiculous. Bus services have already been withdrawn connecting Rossendale with Manchester - how do you expect so many people to get in and out of Edenfield with one road in and out?! One miserable little park which has been the same for the last 30 years and little else for children. No longer a post office or a bank. In fact a lot of local bank branches are closing down in local towns. - - As far as Helmshore is concerned, my objections are largely the same - poor infrastructure will not cope with additional number of people. - - And then there's the environmental costs. The Edenfield sites run adjacent to the bypass with poor air quality. You are proposing ruining/destroying areas of our countryside. - - I have lived in Rossendale for 39 years - grew up in Edenfield and now live in Helmshore. What you are proposing will wreck the places I consider to be home and you should be ashamed of yourselves. Do not ruin our valley, none of your proposals will improve it and you will remove the aspect most residents love the most - the fact we live in a rural setting with plenty of green spaces. I want my kids to have the childhood memories I did. My daughter attends Helmshore Primary - this school can't take the extra number of pupils it would be required to. - - Your money would be better spent on dealing with the vast number of empty properties across the borough and developing brownfield sites.</p>		-
636	Christine	Murrell	-		Object	<p>I object to the sheer scale of the proposed development for Edenfield. - Its size would - 1) radically alter the character of the village - 2) Increased traffic through the village - 3) Access to the proposed site off Market street (road already congested) - 4) Parking space implications for the village which is already at a premium. - 5) increased pressure on local schools,GP's etc. There are no plans for expansion of these services</p>		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
637	Hilary	Bowden	-		Object	I must start by saying I am not against some development in the village BUT the number of houses proposed in the Local Plan cannot be supported by the size and structure of the village . - - The sheer number of cars generated from the building of 489 houses that will need to be accommodated into an already bottleneck of traffic through the village does not bear thinking about. The Edenfield bypass is also a bottleneck at peak times more traffic chaos there and although this is not Rawtenstall's problem, traffic going down into Stubbins past the school and then on into Rambottom will inevitably result in more traffic problems. - - I am sure the two primary schools Stubbins and Edenfield are already up to maximum or near maximum numbers so is there land available to cater for another school for an influx of children? - - Nursery and pre-school places would be required as additional accommodation. The Community Centre would be totally inadequate. - - I am sure there would eventually be other problems, but in conclusion, a one street village is surely not the place to site such a large number of new houses. - -		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
638	James	Lester	-		Object	<p>I grew up in Edenfield and have carefully observed the changes the village has undergone. Whilst I accept due to the national immigration policy (that no one I know has voted for) there will need to be a increase in housing to accommodate the ever increasing population. Rossendale should bear the weight as every borough must to meet the need. - - Rossendale council has attributed a large proportion of the proposed houses to be built in Edenfield, which seems to be at the behest of the developers. Edenfield is one of the few remaining villages in the borough. Developers will stand to gain and who can blame them. Of course properties built in a village will sell quicker and for more money. However we rely on the council to ensure development is always in the longterm interests of residents. To relinquish Green Belt land on mass is a short sighted approach and one which threatens to drastically reduce the quality of life for the majority of the current residents. As Winston Churchill remarked, we shape our buildings, thereafter they shape us. The same is true for planning and development. - - Fairness and alternative sites - - As acknowledged Rossendale and Edenfield should take on a fair share of developments inline with the national targets. This can be done in a much less obtrusive manner than releasing greenbelt as currently suggested. Off the top of my head there are a number of sites which could see development, these include: Ewood Bridge where Stand Athletic Football Club and the opposite industrial land has stood vacant for many years. The road provides good connections to Manchester would not lead to traffic passing through any busy residential areas. There are a number of micro plots which could also be developed within the village that would not impact the current residents in such a violent manner. - - Health - - I work in the health industry and follow closely the impacts of increased air pollution on communities. Research has suggested those living close to or on busy roads have a higher chance of developing dementia and are more likely to die of strokes. I see no research from Rossendale Council about the impacts of the increased traffic on the quality of lives for residents living on Market Street or elsewhere in the borough. Further to this it seems our roads are already in poor condition. - - Education - - Edenfield primary school has already undergone 3 extensions since i was a student. The poor children barely have a playground to play on. What will the impacts be on the quality of education these pupils receive? Does anyone care? - - Future Value - - All to often grown adults are drawn to the short term gain, whilst ignoring the longterm outcome. Edenfield is set to become another satellite town like Helmshore. While the council and developers stand to gain. The quality of life for the average resident will decline and the longterm value of properties will suffer. Its a scenario from George Orwell's 1984. The question is who has the vision and foresight to prevent yet another characterless estate being built?</p>		<p>I grew up in Edenfield and have carefully observed the changes the village has undergone. Whilst I accept due to the national immigration policy (that no one I know has voted for) there will need to be a increase in housing to accommodate the ever increasing population. Rossendale should bear the weight as every borough must to meet the need. - - Rossendale council has attributed a large proportion of the proposed houses to be built in Edenfield, which seems to be at the behest of the developers. Edenfield is one of the few remaining villages in the borough. Developers will stand to gain and who can blame them. Of course properties built in a village will sell quicker and for more money. However we rely on the council to ensure development is always in the longterm interests of residents. To relinquish Green Belt land on mass is a short sighted approach and one which threatens to drastically reduce the quality of life for the majority of the current residents. As Winston Churchill remarked, we shape our buildings, thereafter they shape us. The same must be true for planning and development. - - Fairness and alternative sites - - As acknowledged Rossendale and Edenfield should take on a fair share of developments inline with the national targets. This can be done in a much less obtrusive manner than releasing greenbelt as currently suggested. Off the top of my head there are a number of sites which could see development, these include: Ewood Bridge where Stand</p>

640	malcolm & maureen	Lowerson	-		Object	We object to size of the project proposed for Edenfield - 453 houses =680 cars =225 children approximate - ONE SCHOOL - ONE CHEMIST - ONE BUTCHERS - ONE BAKERY - ONE HAIR SALON - TWO PUBS - NO POST OFFICE - NO DOCTORS - NO BANK		foresight to prevent yet another characterless estate being built? Extra traffic through village existing parking not adequate
642	Eileen	Hinson	-		Object	My objections are based on the following: - - 1) Site location & issues with additional car movements. Edenfield is already suffering from the large number of cars and lorries travelling through it which would be exacerbated by new housing development - - 2) Use of Green Belt when there remain significant areas of brown land		No
644	Karen	Burns	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		None
646	Erena	Pillitteri	-		Object	I object to the plans as the sheer scale of what you are proposing to Edenfield will radically alter the character of the village. - - I attended the consultation and it was clear no real thought had gone into this apart from how many houses could fit in the space. There was no plans for road improvements, increase in schools, doctors or dentists. When I quizzed the representatives they could only answer that you were in talks with relevant authorities but there was nothing concrete. - - There is only one road into Edenfield and I cannot imagine how bad the traffic will be with such an increase in population. When there is an accident on the M66 traffic travels through Edenfield and the roads are very very busy. There was an accident recently and a 5 minutes journey from home to the motorway took 25 minutes, this is what it would be like every day. - - I strongly object to these plans and urge you to reconsider. - - Kind regards - - Erena Pillitteri		no
647	David	Dewhurst	-		Object	I write about the Council's Local Plan and how it will affect Edenfield. I understand that you are planning to ask the government to remove large amounts of land around our village from the Greenbelt so that it can be built on. - - These are the areas about which I am particularly concerned and are covered by reference HS2.71 on the site map which accompanies the Plan; - - land off Exchange Street, Edenfield - land west of Market Street, Edenfield - land off Blackburn Road, Edenfield - land west of Moorlands View, Edenfield - - I object to these proposals on the grounds that the scale of the plans are far too large and if carried out would ruin the character of our village. - - Yours faithfully - - David Dewhurst		No

654	Frances	Hartley	-		Object	I object to the these proposals on the following grounds: - a) The sheer scale of the plans are far too large and would radically alter and ruin the character of the village. - b) The scale of the plans would increase traffic and vehicle numbers to a level which the village would be unable to cope with. - c) The scale of the plans would increase traffic pollution radically. - d) The scale of the plans would impose dramatically on services and amenities e.g. school places - e) The scale of the plans would destroy the green space and wildlife habitats surrounding the village - - Edenfield is a village community, the size of the proposed plans would destroy that community.		
656	Lindsay	Marcroft	-		Object	I object to the scale of the development proposed. Edenfield is already a busy village, and I am concerned about the increase in traffic, as well as the loss of the greenbelt land. Our village would be a village no longer, and this development would hugely alter the local environment. I do support progress and development, but not on this scale.		
663	Pauline	du Plessis	-		Object	I object to the sheer scale of what is proposed for Edenfield village which would radically alter the character of the village. - - The schools are full so another school would have to be built taking up more land from the green belt. - - Traffic through Edenfield main street (Market street) is a nightmare at times and parking is also a big problem. - We have no doctor surgery in Edenfield anymore.		The scale of these plans are far too large and if carried out would ruin the character of our village which attracted me to the area in the first place. I have lived here for over thirty years and although I appreciate more housing is probably necessary, to undertake this scale in one little village is unacceptable.
670	Melvin	Britton	-		Object	I object to the scale of the plans because it would ruin the character of our village and also cause dangerous escalation of road traffic.		
671	Lindsay	Britton	-		Object	I object to the scale of the plans which would radically alter the character of the village and cause a dangerous increase in traffic.		
672	Mark	Tweedale	-		Object	I am objecting to the proposed development in Edenfield and the allocation of current 'green belt' land to housing. - The scale of the proposal would catastrophically affect the semi-rural character of the village and is completely out of proportion with the current size of the village and the available facilities. - - Edenfield already has problems with traffic congestion/parking on the main road routes through the village and on the wider M66/A56 network. The size of the proposed development will massively increase this problem and create regular gridlock situations in the village. Public transport is currently very limited and hence most commuters have no choice but to use a car - the proposed development will obviously exacerbate this problem - - Current school, health, shopping, public transport and leisure facilities are limited in Edenfield. The proposals do nothing to improve the current situation, but worse than that they do not attempt to alleviate the obvious impact of the scale of the new development. -		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
678	Alison	Bentley	-		Object	I do not want large amounts of land around the village of Edenfield being removed from Green belt in order that it can be built on. The results would be catastrophic to village life and ruin the character of the village. The sheer scale of the proposals for Edenfield i.e. An increase of about 50%... is ludicrous. - We would become another suburb of Greater Manchester as people move out of the city for 'village life'. However they then travel back in to work every day and the increase in vehicles on our already suffering roads would cause even more traffic congestion, delays, and air pollution all around the valley. - Traffic turning out of all all these sites ...which are all on the west side of the village would make the main road a nightmare. That's not even considering the heavy lorries etc which would be the first to arrive whilst building goes on for quite a length of time. Many of the houses on the main road through the village are old cottages that have no rear access or car parking available and therefore park on the main road. They would be seriously disadvantaged if double yellow lines were introduced onto Market St because of the increase in turning/joining traffic. - The 2 local schools could not cope with increased numbers of children. - Looking at the overall plan for the valley it would seem that Edenfield is bearing the brunt of the changes. (possibly because we are nearest to Manchester, possibly because Wimpey have been buying up the land in advance!) There are numerous brown field sites around this valley which are an eyesore and I believe that they should all be brought back to better use (housing) first, before resorting to the use of green belt, for once its gone it's gone for ever for future generations.		Strongly Object
686	Alan	Ogden	-		Object	I feel that the scale of the development is far too large for Edenmfield village to cope with. The roads are already very, very busy and if the by-pass is closed then the traffic through Edenfield is grid-locked. Also the schools are fully subscribed and we have no medical practice etc.		I have given permission to Mrs. [...] to submit my objection on my behalf as I do not have access to a computer.
687	Cynthia	Ogden	-		Object	The village of Edenfield would lose it's lovely open aspect, with the green spaces swallowed up by development. I realise Edenfield is a desirable place to live in the Rossendale Valley, but it won't be if all this development is allowed to take place. - The roads could not cope with the extra traffic and the two local schools are already full to capacity.		I have given my comments to Mrs. J.M.Mead to submit as I do not have access to a computer.

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
688	Ian	Lord	-		Object	The Plan proposes that over 15ha of greenbelt land in Edenfield is released for development. Greenbelt areas were established many years ago for good reasons. Those reasons are just as applicable today as they were then if not more so. Greenbelt areas must be retained to ensure an acceptable quality of life for both residents and visitors. - The total number of proposed additional houses is 489 (of which 450 are on greenbelt land) which is a 55% increase on the existing housing stock. This compares to an average increase of approx. 12% for the entire Rossendale area which is extremely inequitable. - The scale of the potential development in Edenfield will totally change the character of the village and overwhelm existing facilities and infrastructure. In particular traffic congestion (which is not addressed in the Plan) will become horrendous. The additional housing will mean that there would be approx. an additional 1,000 cars located in Edenfield most of which will travel through the village at least twice per day. Whatever improvements are made to the road network the existing bottlenecks (in the village centre and by the school) cannot be resolved. A new primary school or substantial extensions to the existing schools will be required due to the increased population further adding to the traffic congestion.		-
689	Janet	Desprez	-		Object	I object mainly to the huge scale of the project, whereby the number of houses in the village, and therefore, the number of people, would increase by almost 50%. There is no way that the amenities within the village could cope with this. There is no mention of any increase in facilities, (or where, for that matter, they could go!), nor of access roads. There is no way the current roads could cope with this influx of vehicles, also making it more dangerous for the children of the village. I, myself, have a horse which I frequently ride in, around, and through Edenfield and Irwell Vale, and have first hand knowledge of how busy the roads can be without an influx of, potentially, 1000 more vehicles. (On my own estate the majority of houses have two cars, and several have more, including vans and other 'work' related vehicles.) - - Having moved to a newly built house myself, in 1979, I cannot in all conscience object to new houses being built for people to live in and enjoy the overall rural peacefulness of this lovely village. But to decimate its character with such a huge build is totally unacceptable. -		No
693	Joanne	Garner	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		-
694	David	Garner	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		-
696	Beverly	Cocks	-		Object	I object to the sheer scale of what is proposed for Edenfield which would radically alter the character of the village.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
702	Darryl	Rae	-		Object	We object to the proposed plans due to the impact it will have on the surrounding countryside . The affect on the roads which are barely able to cope with the traffic flow as it is now . Also the impact it will have on the village as a whole. These plans would ruin the character of the village and change it so drastically in our opinion ruin Edenfield forever and what everyone holds dear about this village.		-
709	Andrew	Manley	-		Object	The proposal to build 489 houses in Edenfield is too large a development for the small village of Edenfield. The lovely open green belt fields would be lost and Edenfield would become like Helmshore which has been over-developed by the planners. - The condition of the roads is very bad now, but with an expected 1,000 extra vehicles through the village the roads would be unsustainable. - The schools are now full to capacity as well. - I understand the need for some new housing but not on such a large scale in a small area.		This objection has been completed, using my comments, by J.M.Mead as I do not have access to a computer.
710	Carol	Smith	-		Object	The scale of proposed development is far too large for a village of this size. - The roads are already very busy and if the by-pass is closed then traffic is at a stand-still through the village. - Both local schools are fully susscribed and there is no medical practice/post office/bank facilities. - Whilst I accept that extra houses will have to be built to conform to the Government's proposals, this development in Edenfield is extremely large and will do away with the lovely green open spaces residents so enjoy.		My objection has been submitted by Mrs. [...], using my comments (as I do not have access to a computer)
713	Patricia	Dodd	-		Object	I do not object to some development within the village. I am objecting to the sheer scale of the proposed development which will radically alter the character of the village, making it no longer a desirable place to live. Edenfield is a ribbon development with one main street running the length of the village; this road is already congested with cars parked on both sides, so that we have to make way for oncoming traffic, including buses and trucks from the quarry. Already if there is a problem on the bypass, the traffic spills over into Edenfield and local roads are gridlocked. The village cannot cope with another 500 or more vehicles. - - The infrastructure is not there to support a large scale development - there are two oversubscribed primary schools, no doctor or dentist and a few small shops. If the main attraction for the developers is easy access to Manchester and the motorway network, then traffic from the development must at least be directed straight onto the bypass and not through the village. Even so, the loss of such a large area of green fields for housing development will spoil a longstanding attractive village and is grossly unfair on the residents.		-

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
716	Alan	Dodd	-		Object	My objection to the proposal is based on the size and scale of the plans. The proposed development is far too large and if carried out will dramatically alter the character of our village. - Edenfield village is a "ribbon" development with a single main road through its centre. There is already limited parking availability in the village. This will not be improved with the introduction of such a large scale development and the attendant increase in vehicle numbers. When the by-pass closes, as it does from time to time, the only alternative route is through Edenfield village. This currently results in traffic congestion, delays and inconvenience to residents which can only be exacerbated by the introduction of many more vehicles. Nor does it take in to account the volume of heavy goods vehicles such as that from the local quarries, a primary bus-route and delivery vehicles. Furthermore, the infrastructure of the village does not lend itself to even a modest development. Its two primary schools are fully subscribed. The village does not have surgery, clinic or dentist or other similar services such as a post office. There are, in fact, very few shops in Edenfield village. For these reasons I strongly object to the large scale of the proposal.	-

737	Paul	Formby			Object	<p>I write further to Rossendale's draft Local Plan (the "Plan") and the ongoing consultation process.</p> <p>I have reviewed the information available on the Council's website including:</p> <ol style="list-style-type: none"> 1. the Plan and the accompanying policies map; 2. the sustainability appraisal of the local plan 2017; and 3. the habitats regulation assessment 2016. <p>I also attended the consultation meeting at the Edenfield Community Centre on 12 September 2017 with a large number of other residents in the village when I was also able to consider the Lives and Landscapes Assessment for Rossendale Borough Council (dated December 2015 and prepared by Penny Bennett Landscape Architects).</p> <p>I am horrified by the proposal to remove from the greenbelt significant areas of land from around Edenfield village in order to facilitate the building of 489 new houses.</p> <p>The areas which I am particularly concerned about are set out within reference HS2.71 of the policies map which accompanies the Plan and include:</p> <ul style="list-style-type: none"> - the land off Exchange Street, Edenfield; - the land west of Market Street, Edenfield; - the land off Blackburn Road, Edenfield; and - the land west of Moorlands View, Edenfield. <p>The purpose of this letter is to set out my objections to these proposals.</p> <p>The need for new housing in Rossendale</p> <p>At page 6 of the Plan under the title 'Chapter 1: Housing' the Council's policy HS1 is set out in relation to meeting Rossendale's Housing Needs.</p> <p>The Plan states:</p> <p>'The need for new housing in Rossendale has been assessed in the Council's Strategic Housing Market Area Assessment (SHMA) (2016). This study, which is consistent with the Government's current policy position, examined a range of housing, economic and demographic evidence to assess housing need and demand in Rossendale.'</p> <p>Further to the SHMA the need for additional housing is estimated at 3,975 new homes over the period covered by the Plan (2019-2034).</p> <p>Objection 1</p> <p>In relation to Edenfield the Plan proposes that 489 new houses to be built which equates to 12% of the new housing required under the SHMA.</p> <p>It is inconceivable to me that Edenfield as a village of approximately 900 homes at present should bear such a significant proportion of the overall burden of new house building in Rossendale. The current population of Edenfield is significantly less than 12% of the overall population of Rossendale.</p> <p>Objection 2</p> <p>As set out above when the SHMA was undertaken it was 'consistent with the</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
						<p>Government's current policy position'. I note that the Government's policy in relation to new housing has now changed to such an extent that it appears that the SHMA is no longer consistent with Government policy. On 15 September 2017 the MP for Rossendale and Darwen, Mr Jake Berry, published a post on Facebook which confirmed that under the Government's new plans which were announced on the same day that the number of new houses required to be built in Rossendale had been reduced to 2,120. Under same post Mr Berry called upon the Council to suspend and proposal to remove land from the greenbelt and to prioritise new developments on brownfield and former industrial sites. The proposed development in Edenfield would therefore constitute almost 25% of the housing need for the whole of Rossendale. In these circumstances it is clear that the SHMA and the Plan are now inconsistent with central government policy and I would invite the Council to suspend the current consultation pending a review and a redrafting of the Plan.</p> <p>The Lives and Landscapes Assessment for Rossendale Borough Council (dated December 2015 and prepared by Penny Bennett Landscape Architects) ("LLA") At the consultation event in Edenfield Village Hall on 12 September 2017 hard copies of the LLA were available to be reviewed. I note that the LLA is not available on the Council's website in relation to the Plan. Is there any reason why this document has not been published online in the same way as the habitats regulation assessment 2016? I note that the LLA states that it was commissioned by the Council to be incorporated within the Council's Site Allocations and Development Management Plan Document. At section 3.2 of the LLA a description is given of 'Settled Valleys Landscapes Type' and the report states: 'Early on in this assessment it became clear that the single definition of Settled Valleys as 8a Irwell, while entirely appropriate for the northern part of the Borough and Whitworth, was not an accurate description of the landscape of the southern section of the Irwell Valley between Rawtenstall and Edenfield which is more rural in nature and importantly has little or no development in the valley bottom. It was decided to create a new Settled Valleys character area: 8b Irwell Valley south which more accurately describes this situation' ... 'Settled Valleys LCT, extending from the valley bottom in many areas to elevations of 300m or more, can be an appropriate location for development, though dense development on the valley floor is not appropriate in 8b Irwell Valley South because of the much more rural nature of the Valley.' The LLA therefore acknowledges that the area described as 8b Irwell Valley south (which includes Edenfield) is rural in nature and is not appropriate for</p>		

ID	Firstname	Surname	Organisation	Other Reference	Statement	Comment	HS2.071	Further comment
						<p>dense development. Given the relative size of the proposed development and the current size of Edenfield I would characterise the proposed development as 'dense'.</p> <p>At the end of section 5 of the LLA is a map of the area covered by the Plan titled 'sites overview' and described as 'figure 6'.</p> <p>That map highlights the proposed sites being considered for development by the Council and categorises them as either: (1) undevelopable, (2) developable with mitigation or (3) developable.</p> <p>I note that in relation to the area covered by HS2.71 in the Plan the vast majority of the proposed land is described as undevelopable with some small areas referred to as developable with mitigation. None of the land is described as developable.</p> <p>This appears entirely inconsistent with the proposed development in Edenfield.</p> <p>Exhibited to the LLA at volume 4: appendix 9 is the supporting information for the assessed sites (the assessment of the areas around Edenfield are set out at pages 88 to 122 of the same).</p> <p>I have set out the conclusions reached by the LLA in relation to these specific sites below:</p> <ol style="list-style-type: none"> 1. The outcome of the site assessment for the land at Blackburn Road (pages 88 to 89) is that the land is not suitable for development on landscaping grounds. 2. The outcome of the site assessment for the land at Burnley Road (pages 92 to 93) is that the land is not suitable for development on landscaping grounds. 3. The outcome of the site assessment for the land at Eden Mill (pages 96 to 99) is that the land described as A- C is suitable for development with mitigation but that the land described as D is not suitable for development on landscaping grounds. 4. The outcome of the site assessment for the land east of the motorway (pages 110 to 114) is that the land described as A is not suitable for development on landscaping grounds, the land described as B (being the site of the House and Jockey public house) is suitable for development and areas described as C – D are suitable for development with mitigation. 5. The outcome of the site assessment for the land at Pinfold (pages 116 to 120) is that the land described as A suitable for development with mitigation, the land described as B is not suitable for development and area described as C is suitable for development (this land is a small section of open space between 2 existing plots). <p>Objection 3</p> <p>Further to the LLA significant areas of the land which under the Plan as drafted will be released from the greenbelt in Edenfield have been described as unsuitable for development. The Council therefore appear to have disregarded a report which they have commissioned regarding the suitability</p>

						<p>of the land in Edenfield for housing.</p> <p>I am aware that the Council is already facing significant criticism and embarrassment as a result of the failed empty homes scheme which is estimated to have cost £4 million. I understand that one of the numerous criticisms of the Council in a report prepared by auditors was the Council overlooked or overrode its internal financial and legal procedures and the opinions of senior officers were ignored.</p> <p>I trust that lesson have been learned as a result of the same and that the Council will now urgently review the proposed changes to the greenbelt referred to above.</p> <p>The habitats regulation assessment 2016 (HRA")</p> <p>At paragraph 1.3.2 of the HRA a description is given of Rossendale as follows: 'Its main settlement areas are Bacup, Haslingden and Rawtenstall and there are a number of smaller villages including Facit, Crawshawbooth and Weir.' It is telling that Edenfield is such a small village that it is not even referred to by name within the HRA yet under the current Plan it is proposed to permit the building of 489 new properties (which is almost a third of the new properties required to be built in the entire valley.</p> <p>At paragraph 1.4 of the HRA it states: 'RBC [the Council] have presented Lepus with a list of sites which have been identified as being suitable for housing, employment, tourism, retail, green infrastructure and mixed use development.'</p> <p>It would therefore appear that the Council had already taken the decision to ignore the conclusions of the LLA (which predates the HRA) when referring the land surrounding Edenfield set out in HS2.71 for consideration for development.</p> <p>At paragraph 1.5 of the HRA the policies under which the sites have been considered have been set out.</p> <p>I note that this includes the requirement to meet Rossendale's housing requirement. For the reasons set out above this housing requirement has materially changes since the HRA was commissioned and published. The conclusions of the HRA should therefore, in my opinion, be reviewed as a result.</p> <p>At paragraph 3.6.3 of the HRA it states: The large developments proposed at sites Land at Alder Bottom, Land to the South East of Edenfield and Area of Search to the East of Edenfield may reduce this characteristic linear settlement form and vastly increase the size of Edenfield.'</p> <p>The HRA therefore acknowledges that the proposed development will significantly alter the characteristics of Edenfield.</p> <p>At paragraph 3.6.5 of the HRA it states: 'Development at these sites [Land to the west of Moorland View, Land west of</p>

						<p>Blackburn Road, Land between Chatterton Hey and Nursing Home and Land at Alder Bottom] may result in the loss of linear settlement pattern and/or possible urban sprawl.'</p> <p>At paragraph 3.6.21 of the HRA it states:</p> <p>'A watercourse runs through Land at Alder Bottom, Irwell Vale Mill and Acre Meadow; and Area of search to East of Edenfield and Land to the southeast of Edenfield. Contains springs. The boundary of Edenwood Mill, Land at Market Street, and Land of Blackburn Road (A0 are at high risk of surface water flooding. Areas of surface water flooding are also located inside the boundary of the following sites:</p> <ul style="list-style-type: none"> - land at Alder Bottom; - Acre Meadow; - Land between Chatterton Hey and Nursing Home; - Area of search to East of Edenfield; - Land to southeast of Edenfield; - Land off Blackburn Road (A); - Land west of Blackburn Road; and - Plunge Mill. <p>Development of these sites would be at high risk of surface water flooding. Given the impact of the flooding over Christmas 2015 and New Year 2016 I am surprised that concerns regarding potential flooding have been overlooked. At paragraph 3.6.25 it is acknowledged that all sites within Edenfield are over 1km from a GP and over 8km from a hospital. It is also acknowledged that the capacity for GP surgeries to take the residents of these developments is unknown. I note that under the Plan no provision has been made for additional facilities such as a GP surgery.</p> <p>Reference is made at paragraphs 3.6.30 and 3.6.31 to the location of primary and secondary schools.</p> <p>As far as I am aware Edenfield Primary School is already full subscribed and there is only one road from the village to the nearest Secondary School. No reference is made in the HRA to the capacity of these schools to take pupils from the proposed developments and I note that under the Plan no provision has been made for additional facilities such as schools.</p> <p>Objection 4</p> <p>The facilities available in Edenfield do not have the capacity to cater for the increased population of Edenfield if the proposed development proceeds.</p> <p>Objection 5</p> <p>The HRA sets out a number of reasons for the land contained in HS2.71 being deemed unsuitable for development which do not appear to have been given due consideration.</p> <p>The Plan</p> <p>The details of the Plan relevant for Edenfield are set out in HS3: Edenfield of</p>

						<p>the Plan.</p> <p>I note that the proposed development for Edenfield is dependent upon a number of factors including a comprehensive development of the entire site. Given the intention to disregard the advice received by the Council regarding the unsuitability of large parts of the area to be developed in Edenfield I presume that the development of the site (26 hectares) would be undesirable or uneconomical if only smaller sites (such as the land at the Horse and Jockey public house) were released for development.</p> <p>HS3 also sets out requirements for a scoping study, transport assessment and travel plan to be agreed with Lancashire County Council.</p> <p>Reference is also made to ensuring the development promotes the use of public transport, walking and cycling.</p> <p>Objection 6</p> <p>Whilst if it proceeds, any development may have plans to maximise the use of public transport, walking and cycling, no consideration appears to have been given to the fact that the vast majority of facilities used by residents are in either Ramsbottom, Haslingden or Rawtenstall. Journeys to these areas require the use of cars. Given the size of the development in relation to the size of the village the road infrastructure will not be able to cope with the resulting increase in vehicles.</p> <p>Objection 7</p> <p>Even at the moment (before the significant additional traffic which will be created by the new development) at peak times, such as morning and evening or during the weekend, traffic on Market Street is heavy. During these times Market Street effectively becomes a single track road outside of the shops at the south end of the village for cars and for the whole length of Market Street when buses or lorries are travelling through the village. The infrastructure of the village simply cannot cope with development on the size proposed.</p>

744	Elaine & Brian	Pritchard			Object	<p>We write about the Council's Local Plan and how it will adversely affect Edenfield. We understand that you are planning to ask the Government to remove large amounts of land around our village from the Greenbelt so that it can be built on.</p> <p>These are the area's about which we are particularly concerned and are covered by reference HS2.71 on the site map which accompanies the Plan; Land off Exchange Street Edenfield Land west of Market Street Edenfield Land off Blackburn Road Edenfield Land west of Moorlands View Edenfield</p> <p>We wish to object to these proposals on the grounds;</p> <ol style="list-style-type: none"> 1. That the scale of the plans are far too large and if carried out would ruin the character of our village. 2. Parking and passing through the village by vehicles is already a problem. 3. Amenities within the village are poor. 		
752	Antonia	Farrell	-		Object	<p>I am completely opposed to the sheer scale of the proposed development. If this is to go ahead (regardless of the strength of opposition from the residents) the face of Edenfield will change forever. My primary concern is that the village cannot cope with that amount of development and the amount of traffic that it will bring. Firstly, there is effectively one road through the village. When there is a problem on the bypass the village is gridlocked. The addition of 489 house with possibly two cars per home would leave the village permanently gridlocked. What is more, the level of pollution that this would bring would mean that the residents here would be living with dangerous levels. My second reason for the objection is that the village has no infrastructure to service the needs of another 489 houses. We do not have a doctor, dentist, post office and the local school is already at capacity. That means new residents have no alternative but to use their cars to access these services as local transport connections to our village are abysmal. - - If you look at the proposed development in Rossendale, Edenfield has clearly been targeted as a desirable place to live but the disproportionate scale of development is outrageous. I do not think you would have the same level of opposition had you opted to build small developments around the area but the scale of the proposal means that the character of our village which we cherish will forever be lost and we will no longer be a village. - - I understand the need for new housing and I am not opposed to new developments per se however Edenfield has been unfairly targeted with the number of houses proposed. As this is a council wide strategy the development should be spread around the area and not concentrated in just one area. -</p>

753	Peter	Farrell	-		Object	I live in Edenfield, and have done for last 10years as well as when a child. I came back to Rossendale, and specifically Edenfield due to it being a quiet village with plenty of greenfield space and very friendly close knit community feel. - - The proposals not only directly impact me and my young family but also the whole village, as the scale of what is proposed for Edenfield is far too large and is grossly disproportionate to the size of the village. - - Not only would the scale of the plans, if carried out, ruin the character of Edenfield village, they would also severally impact on the day to day quality - especially with the increased vehicles on the road, and loss of important green fields for rain water absorption. - - Edenfield village infrastructure is already stretched, the schools are full, we now have no post office, there are no doctors surgeries, the M66 is gridlocked, and Market street is extremely busy with double parked cars, lorries and busses. Adding the proposed scale of houses will bring further gridlock and more worryingly pollution to the village, and local services will not be able to cope. - - During the heavy rain storms of recent winters the fields surrounding Blackburn Road and other of the pre-1900 houses including Market Street helped protect the local houses from worse impact by absorbing much of the heavy rain fall, if this had been roads and houses significant flooding damage would not have been avoided. - - Reviewing the proposals as a whole across the Rossendale valley, Edenfield is being disproportionately targeted with a massive increase in proposed housing, rather than a more acceptable incremental growth plan, keeping within the character and nature of the village.		-
760	Sarah	Cotton	-		Object	I am objecting to the sheer scale of the proposal for Edenfield which will radically alter the character of village. Releasing green belt for development has the potential to double the amount of houses in the village. I'm concerned that any proposed improvements to the infrastructure will not be able to cope with such a significant increase in traffic. The current infrastructure is already under considerable strain.		-
765	Andrew	Keir	-		Object	Too many houses proposed. I'm not disputing the need for more housing, but the number is too much for a small village to house. Not enough school places, and I think the entrance via Exchange St to the proposed site there would not withstand the traffic, it is usually double parked and the road could not be widened as the recreation ground is protected (as I understand it).		-
